L. J. Q., Carmel, N. Y.—Lake trout were put in Lake Glenada about fifteen years ago, and have never been seen since. At the same time they were placed in several lakes in Putnam county, including Mahopac. This spring one of 9½lbs. was found dead in the latter lake. The water is very deep there, 100ft. in places, and we would like to know what kind of a trolling spoon to use for them, and what kind of bait to offer them when still-fishing. Can you tell us? Ans. The dead trout is presumptive evidence that there are living ones. Troll for them with any good spinning spoon or minnow; weight it with from 2 to 2½ ounces of lead and let the boat move at the rate of three miles an hour. This, with from 150 to 175ft. of line out, should let the lure down 50 to 60ft. The fish will readily see the spoon at 20ft. above the bottom, and you must gauge your sinker and speed by the depth at which you wish to troll. If you bring up weeds you are trolling too deep and must use less lead or more speed. This is a point on which you must use your own judgment. For still-fishing take a boat and sound the depth of a chosen spot. Then anchor a buoy there to mark it and scatter chopped minnows about it for two or three days before fishing it. By this time the fish will have found it a good feeding ground, and you can try them with a live minnow.

COMPANION WANTED.—Philadelphia, Pa.—Wanted, a companion or two camping, hunting and fishing for health and pleasure in Idaho, Washington Territory or British Columbia, to start about the latter part of August.—H. R. S., care FOREST AND STREAM.

A VOLAPUK DICTIONARY.—C. N. Caspar, of Milwaukee, Wis., announces the early appearance of a Volapük-English and English-Volapük dictionary in two parts at the very moderate price of $2, cloth $2.75. Judging from the sample page which we have received with the prospectus, the new dictionary is the work of a scholar, and indicating as it does the origin of the Volapük roots, will greatly facilitate the acquisition of the language. The only Anglo-Volapük dictionary now in the market was hurriedly prepared by a Frenchman, who labored under the disadvantage of having only a superficial knowledge of English.

PRICE, POSTPAID $1.00.
For Sale by the Forest and Stream Pub. Co.

The St. Lawrence Gang.

This cut shows No. 1-0 (or Black Bass size) with living Minnow attached.

MANUFACTURED IN ALL SIZES FROM No. 5-0 TO No. 4, SUITABLE FOR
Muskallonge, Pickerel, Black Bass, Lake Trout, Etc., Etc.

All have patent treble hook with baiting needle, adjustable lip hook and treble swivel, and best silk metal wound gimp.
This is the most ingenious invention and radical improvement in trolling tackle yet made. Its manifest superiority to all gangs now in use is evident to every expert angler. A few of its peculiar excellencies are:—It is the only gang on which a bait can live. It is the only gang which can be adjusted to any sized minnow instantly and perfectly. It is not only the simplest but also the strongest gang made. It does not scare away the big and wary fish by a long array of treble hooks. The treble swivel insures perfect revolution of bait and reduces to the lowest possible limit the liability of kinking the line.
If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180 page fully illustrated catalogue.

The Audubon Magazine

BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

For other means of reaching the grounds see daily papers.

CANVAS CANOES;
AND
HOW TO BUILD THEM.
By PARKER B. FIELD.
The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.× 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.
FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

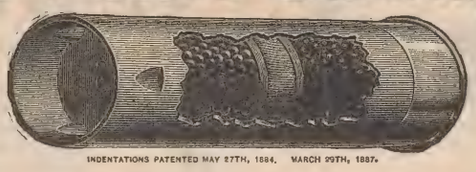
DOG TRAINING:



BY

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

For sale at this office. Price $1.00.

The Old "CRIMP," like the Muzzle-Loader, MUST GO.

The Peters Cartridges

INDENTATIONS PATENTED MAY 27TH, 1884. MARCH 29TH, 1887.

Are loaded by the Peters Patent Cartridge Loading Machine, the most rapid, scientific and accurate cartridge loader in existence. It is run by steam, is entirely automatic, and each machine has a capacity of 4,000 per hour. The wads are of pure and elastic wool felt, perfectly lubricated. They are cut several sizes larger, and compressed into the shell by the powerful machinery, and being so large hold back and develop the gases in guns of all makes. No SPECIAL loads are required for SMITH, LEFEVER or PARKER guns. The machine having a steady and regular movement, the wads are seated level and with proper pressure, while the charge is always uniform. Being fastened by the **PETERS PATENT INDENTATIONS**, the charge when fired passes out unobstructed, giving a WONDERFULLY FINE PATTERN WITH INCREASED PENETRATION. The RECOIL is greatly diminished and the GUN LEFT CLEAN. Sportsmen give their hearty approval. Fred Erb, Jr. made his wonderful score of 490 out of 500 with them. Chas. W. Budd used them the entire first day of the Detroit tournament without a miss, and many others have done their best shooting with PETERS CARTRIDGES.

Try Them for Yourself. For Sale Everywhere.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abija Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.
DAVIES & CO., London, England.

STANDARD TARGETS.

Standard Targets

Can be used without any change in Blue Rock traps, as they are of exactly the same dimensions.

Standard Carriers

Can be attached to the arms of all Blue Rock, Peoria and American Clay Bird traps.

TESTIMONIALS.

MESSRS. VON LENGERKE & DETMOLD, NEW YORK.—*Gents:* We have used your Standard Targets at our last tournament in our Blue Rock Traps, and find they work to perfection. There is no difference noticeable excepting that the general breakage was much less with the Standard than with the Blue Rocks.
(Bridgeport, Conn., May 13, 1888.) HARRY NICHOLS, WM. LONGDEN, } Managers.

Many other clubs can testify to the same superiority. The **STANDARD TARGETS** are made by A. H. Hebbard's Patent Automatic Target Machine, guaranteeing even size, even weight and density, and are *superior in quality to either "Blue Rocks" or "Cleveland Targets."*

Standard Targets are the Cheapest and the Best made.

NEW YORK AGENTS:
VON LENGERKE & DETMOLD.
843 Broad Street, Newark, N. J. 8 Murray Street, New York.

THE STANDARD TARGET CO.,
CLEVELAND, O.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.
Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.
The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.
The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.

Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

The Atlantic Ammunition Company's Amateur Championship Sweepstake Tournament, 1888.

New England States, a Diamond Badge, costing - -	$200.00	Virginia,	Diamond Watch Charm Trophy, costing		$50.00
New York State, Diamond Watch Charm Trophy, costing	50.00	N. C. and S. C.,	" " " " "		50.00
New Jersey State, " " " " "	50.00	Ga. and Fla.,	" " " " "		50.00
Penn., Md. & Del., " " " " "	50.00				

The above Trophies and Badge are to represent and establish the Amateur Championship of each locality named. We shall do all within our power to guarantee fairness and satisfaction to all.
Must be shot at Blue Rocks. To gauge your skill in shooting you can only do so by using a bird that is **STANDARD IN FACT BUT NOT IN NAME**, it is the **BLUE ROCK.**

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting,* edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of our best English gunmakers.

Price of *Shooting,* postpaid, $3.25 per annum. Send post office order to the Publisher, 182 Strand, London, England.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JUNE 21, 1888.

VOL. XXX.—No. 22. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. ANSWERS TO CORRESPONDENTS

THE DEMISE OF THE GRIZZLY.

IT has become our unwelcome duty to chronicle the death of one of the FOREST AND STREAM'S grizzlies. The record of a bear's death usually has in it a flavor of exultation at the triumph of human skill and daring over brutal strength and ferocity. A different sentiment pervades this record; rather is it tinged with sorrow and regret. No arduous pursuit by hunter over long and rugged trail had its final crown and reward when this bear died; no fateful combat was terminated in victory for man over brute when our grizzly gave out his life.

He died a captive, far from the home that had given him birth. It might partake of the romantic and the pathetic to write that his spirit was broken and that behind the bars he languished and pined away, until death came and set him free; but reverence for the truth compels us to record that our grizzly died not of a broken heart, but of the blizzard. Dr. Conklin advises us that in the ever memorable storm of last March this bear—who had come from a blizzard land—contracted a severe cold, which settled on his lungs, and developing into acute pneumonia has carried him off.

Though the circumstances of this bear's death lack the picturesque elements which have rendered noteworthy the last scenes in the career of many another of his kind, his life was in a peculiar degree eventful and worthy of a passing note. At an early age this cub abandoned the home of his fathers, and thenceforth his ways were not their ways. Other grizzlies might live and die ursine Selkirks, monarchs of all they surveyed: holding themselves aloof, remote from the haunts of men, in sequestered fastnesses, amid the awful solitudes of the mountains, spending their days in ignoble grubbing for roots and sordid rooting for grubs, holding converse with the cataract and growling in sullen answer to the thunder. Our bear was endowed with higher aspirations; a broader plane of experience was his. He was domiciled in a spacious den in the Central Park of the largest city on the continent, and his life was one continued, never ceasing levee. The multitude flocked to him. As he grew in bulk and length of claw, the wonder faded from his eye, and a cynical cast took its place; philosopher that he was he improved his opportunities and was a student of human kind as it presented itself before him. And what opportunities for study they were. Youth and age came there, the handsome and the plain, the beautiful and the ugly, the rich and the poor, the ignorant and the learned, the wise and the foolish, the cultured and the coarse, the mayor was there with the mob, the cut-throat with the clergyman, the priest with the pick-pocket, the matron with the outcast. There were winsome little girls with peanuts in their pockets and the blue of heaven in their eyes, and he took the peanuts and would have taken the little girls with the heavens' blue in their eyes too if he could. And there were bearded men with blood in their eyes and in their hands canes, which they pointed at him and squinted along, after the manner of bear hunters with guns, and these men too he fain would have drawn near unto but that the bars forbade. There came also men who were moved by the sight of this bear to relate incredible encounters with grizzlies wherein they had played the parts of star performers, and their long lies never ended until the surly policeman who stood outside of the cage (but ought to have been inside) hustled them away. There were other hunters, too, who spent long hours studying caged grizzly anatomy, that they might know where to aim when they encountered uncaged grizzly anatomy.

So in all its varied phases of pride and abasement humanity passed before him; and as the thousands and tens of thousands and hundreds of thousands filed in review before him, he sometimes wearied of the innumerable caravan, and what wonder that then he beheld it not. Now and then a captive lion in his cage in the open air halts in his restless pacings to and fro, lifts his head, and with a regal and magnificent spurning of the throngs before his cage, looks over and beyond them and fixes on the distance a gaze, intense, steadfast, far-piercing, as if his vision extended to the shores of that other continent, in whose green jungles lions roam at large. So have we seen an imprisoned Apache, squat on his haunches on the battlements of old Fort Marion, in Florida, hands clasped over knees, crooning the wild melody of a savage song and gazing intently toward the setting sun, where lay his desert home. So looked our grizzly beyond the people, the parks, the houses and the city smoke away off, perhaps even to that Montana mountain park, where, the old she bear having been slain, he and his sister were kidnapped by Cut-Bank John and shipped thence to the FOREST AND STREAM.

In their conception of a future life the Indians make provision for those wild creatures which are man's brothers and are like him immortal. The hide of our bear is here in a New York taxidermist's shop, but a Blackfoot would tell you that his soul had taken the trail to the setting sun and pursuing its rapid course over fields and forests, past populous cities and far stretching prairies, had found its way at last to the Sandhills, and there, in company with the shades of its fathers, it is to day "rustling for grub' through the shadows in pursuit of shadow beetles, or feasting on the phantom remnant of a phantom buffalo slain by phantom brave.

A CHAPTER OF ACCIDENTS.

THE big fish that pulls the fisherman into the water has long been a favorite theme with the humorists. The occurrence actually happened near Jeffersonville, Ind., the other day in all seriousness. An angler from that town who was fishing for catfish and had made his line fast to his wrist, was dragged down in the rapid current by a big fish and drowned. The newspaper report estimates the weight of the catfish at 250 pounds, but a much smaller fish might very well have overcome the unfortunate fisherman's stability, in a rapid flow of water where footing is precarious at the best.

On Silver Lake, N. Y., last Sunday morning a young man was out in a boat trolling for pickerel. His companion was a young woman to whom he was shortly to be married. The pickerel fisherman was seen to stand up in the boat as if to haul in a fish, when the boat capsized, and both its occupants were drowned.

The papers of Monday reporting this catastrophe contained also an account of the death of four residents of Port Philip Bay, Australia, who, bent on a week's fishing and shooting trip in a yacht, were drowned by the foundering of the craft and were presumably devoured by sharks.

From Missoula, Mont., comes a story of what befell a party of campers on Six Mile Creek. One of their number went down to the creek to capture some fish for supper. He had no pole nor rod nor line nor hook, but an abundant supply of giant powder, and the untoward ending of his endeavor to get some fish for supper illustrates not the perils of angling but the hazard of fishing with fire. When his companions discovered this unhappy wight he was armless and his body and face mangled beyond recognition. The fate of this man differed not in swiftness and degree from that which overtook the youths who said "Go up thou baldhead."

SNAP SHOTS.

WE print two communications respecting the Tomahawk Lakes of Wisconsin. Both writers assert that there are fish to be caught in those waters, but there is a difference of opinion as to the measure of patronage that sportsmen, with due regard for their own self-respect and their principles, should bestow upon the Messrs. Mann. If a half of all that is alleged of the Manns be true, they certainly cannot ask much consideration at the hands of anglers. These men are not, however, peculiar in their double characters of fish netters and sporting resort keepers; the North Woods of this State and many other popular hunting and fishing regions will furnish examples of men whose greed has prompted them to skin game out of season and sportsmen in season, as long as the supply of victims held out.

The fate of the wild pigeon is under discussion: and a very widespread opinion appears to prevail that because these birds are not seen in many sections where they formerly abounded, they have disappeared from this continent. It is probable that this hypothesis can be proved an unsound one, and the wild pigeons may still be found in scattered flocks in the far West, their flight and nesting grounds changing with the fluctuations of the mast supply on which they depend for food. Such flocks have been reported within a few years, and since that time there has been no event which might be accepted as an adequate explanation of their extinction. The fact remains that the wild pigeon has not held its own, nor stemmed the current of settlement and civilization which has swept it from the great areas where its hosts once darkened the heavens.

In this connection interest attaches to a resolution adopted by the Owl Gun Club, of Toronto, which is to the effect that the club discountenances the trap-shooting of pigeons between May 1 and Sept. 1, that the birds may have an opportunity to breed. This is quite opposed to the usual custom in pigeon shooting, which is to take the game whenever it can be secured and preferably at the nesting ground, because there most readily captured. In live-bird shooting, however, tame birds are generally used; these are bred expressly for the purpose; and their destruction has no bearing whatever on the wild pigeon supply.

The columns of this journal from time to time contain accounts of new hunting and fishing regions, whose discoverers describe their advantages for the benefit of our readers. It would be difficult to find anywhere else so valuable and reliable a store of information of this nature. Not only are the descriptions of these favored resorts remarkable for their number and variety, but they have in them the element of truth; they may as a rule be accepted as the genuine article, written not to puff transportation line nor hotel, but to give acceptable aid to the shooting and fishing fraternity.

The New York game protective system has been smirched with politics, and a very suggestive admission to that effect was made by Governor Hill in the memorandum he sent in with the new law, when he said that he had concluded to sign the bill "notwithstanding the fact that this change deprives the Executive of the selection of some sixteen officials." If the proposed change were likely to secure more efficient service, there ought not to have been any "notwithstanding" about it. The legal fences that shield game and fish cannot be constructed of political wires.

The Sportsman Tourist.

REBA.

SERENELY slow,
Faint flushes come and go
In cheeks that fade from rose-leaf pink to snow.

Deep eyes of brown;
Now sadly drooping down,
Where all thy maiden fancies seemed to drown.

Spun fire and gold
Tumultuous, fold on fold,
The glory of thy wondrous hair is rolled.

Oh! tender face;
Last of a radiant race;
Veiled in the twilight's soft gray lace.

Thy star is set
Far in a firmament of jet;
Thou art so far, so near, so sweet, dear heart—
And yet!

SPRINGFIELD, Mass. E. H. LATHROP.

IN THE MOOSE RIVER COUNTRY.

TO the many readers of FOREST AND STREAM who are considering where they will go for the approaching vacation some description of a part of northwestern Maine may be of interest.

For nearly eighty miles the goodly stream Moose River flows from the mountains along the Canada border eastward to Moosehead Lake. Gathering its volume from countless springs that trickle from the rocky, spruce-covered mountains or bubble up in the ravines, its pure, cold waters flow unpolluted and unobstructed till they merge in the waters of Moosehead. Excepting a few hay clearings and a little village thirty miles above Moosehead, called Moose River Village, there are no farms or habitations along its shores. At favorable points trout may at all times in the summer be found, and to its upper waters moose, bear, caribou and deer come, while the beaver yet builds his house and floods his meadows on many of its tributary streams. To the east and northeast lies a great wilderness, extending through the Penobscot, St. Johns and Aroostock River basins. To the south is the Dead River country, and the waters of Spencer stream, a tributary of Dead River, may be reached by a carry of four miles from a point on Moose River about twelve miles above the village. It was near this Spencer stream that the great "Jumbo" and other moose were killed last fall, and in October Fred Henderson, the Moose River guide, killed a fine bull moose near the Spencer carry. The Dead River, while apparently a favored place with the big game, does not usually afford good trout fishing.

Comparatively few sportsmen have visited the Moose River region, nor can much be learned about it from any guide books the writer has been able to find. The way to reach Moose River has been by canoe up the stream from Moosehead Lake, or by stage or private team seventy-six miles from Skowhegan, via the forks of the Kennebeck. From this season, however, the quickest and easiest way will be to go in via Sherbrooke, in Canada, leaving the new road running from Sherbrooke down Moose River at a point about twelve miles above Moose River Village, and close to the best hunting and fishing grounds of the region. By arranging ahead guides from the village will come up, bringing by canoe camping outfit and provisions.

I visited this country for the second season in August, 1887. The guides engaged for a friend and myself, and who had been with me the previous trip, were Will Redman and Fred Henderson, of Moose River Village. Redman is thirty-four years old, and the son of the man of the same name mentioned in Farrar's guide book as living on the shores of Long Pond. He stands nearly 6ft., weighing 175lbs., without a pound of surplus flesh. Strong, fearless and tireless, he is a typical woodsman, skilled in all manner of woodcraft. Fred Henderson is about 26 years old, small for a woodsman, but with muscles like bands of iron. Brought up on the shores of Moose River, he has been accustomed to handle a canoe all his life, and is exceedingly expert with that graceful craft. These men are both teetotalers—no small recommendation for guides. Any sportsman who engages either of them cannot fail to be satisfied, and come away with a very kindly feeling toward the man who has so faithfully sought his pleasure.

It was Aug. 12 last when the Doctor and myself took our places in our canoes at Moose River Village and in a steady rain headed for Long Pond, fifteen miles from Moosehead Lake. It wss a great delight to be once more afloat in a canoe, and a little summer rain did not seem to detract from the pleasure. On our way, by making a few casts at the mouth of each little stream we passed, we caught a dozen trout, including two that weighed over 3lbs. together. Continually the rain increased till, by the time a "headworks" on Long Pond was reached, water could not make us much wetter, bills in the inside pocket of a vest having to bedried over the fire. Here we camped in the "headworks" five nights, making daily excursions to fishing places in the vicinity.

Several small streams flow into Long Pond, and at the mouths of these the best trout are caught. Two larger streams, Parlin and Big Churchill, afford good sport for a considerable distance up their courses, where a canoe can be run, although the trout average much smaller than in the Pond. A family of beaver have dammed the Churchill, making a considerable pond where trout are very numerous. This is an excellent place for a novice to cast his flies and gain the practice necessary to acquire the knack of hooking trout when they rise. The trout here run five or six to the pound, with an occasional larger one, and are more difficult to hook than larger fish.

There is an old logging dam below the beaver dam, and from that to Long Pond about twenty rods of rapid water. Last year the water was high, covering the rocks in the bed of the brook, making one sheet of foam the whole distance. Our guides ran this water in empty canoes, giving us an exhibition of their skill in quick water and showing the possibilities of the canvas canoe when guided by the quick eye and steady hand acquired by long practice. The fifth day we returned to the village, taking in several trout caught at the mouths of brooks along the way. In the lot were four from 1lb. 10oz. to 2¼lbs., making 7¾lbs. together. At the village the unpretending Colby House affords a comfortable place for the sportsman at a very moderate charge.

From here we next went a day's journey up the river. To cut off a big bend a carry of one and a quarter miles is made, from Atteau to Holeb Ponds. The new railroad is to run along this carry, and the foreman of the men at work there very kindly let his team take our camping rig across. I was almost ashamed to be going into the wilderness with such an extensive outfit. The body of the double wagon was well filled with our two tents, great rolls of blankets, cooking kit and boxes of provisions. At the mouth of Barrett Brook a few trout, including a plump 2-pounder, were caught the first night, and we went into camp near by on the bank of the river. Here, for the first time, our tents were set up, and the party slept under canvas.

The first nights in camp are always interesting. If camped by running water, the murmur and gurgle of the stream mingles with the sighing of the wind through the trees of the forest. Gradually the restless city life ceases to pulse through our being, the hurry of eager crowds loses its effect; business, with its anxieties, its toils and ambitions, is forgotten, the calm of the woods fills our minds, the peace of the eternal hills like a mantle covers us, and the soothing voices of the forest lull to sleep. No voice of bird or beast disturbs the camp's repose. From this life in the woods one may look back to their home life as from a future world we shall look back to this—so entire is the change, so different the thoughts, the pursuits, the mode of living, and the conversation.

The day after going into camp at Barrett Brook we went up the stream, catching from two great holes in the rocks just below a logging dam a lot of 4oz. and 6oz. trout, finding quantities of large ripe blueberries and examining the fresh tracks of a large moose. Before noon the rain drove us back to camp, where the afternoon was passed very comfortably under shelter of the canvas. The next morning we were again at the mouth of Barrett Brook, and while fishing here Redman discovered a cow moose feeding down the brook toward us. The wind was favorable, so keeping very still we watched with intense interest this great reddish-brown beast slowly step by step draw near. She was feeding on the subaqueous vegetation in the stream, which was 12in. or 15in. deep. Dipping her mouth under the water she brought up bunches which she leisurely masticated, the water running off in little streams. When first seen the moose might have been fifteen rods away, and she continually advanced, now facing, turning now this side and now the other till about eight rods away, when with great deliberation she pushed her way through the bushes and out on to the bank. Wishing to get one more look the guides were silently paddling the stream when the bushes parted and the head and shoulders of the moose appeared about 70ft. from us, with ears erect and very much the appearance of a petted horse when he sees his master coming. With evident curiosity and no fear she came again into the water, stepping slowly toward our party. And here is the picture fixed in my memory. A stream 20ft. wide and shallow; the banks thick with bushes, back of these the forest. Two canvas canoes, in the stern of each a guide holding her steady with paddle, in the bow of each a very much interested sportsman, holding motionless in air a 6oz. fly-rod; and there, coming slowly, say 60ft. away, a great moose. Deliberately the moose turns, and unharmed nor frightened walks away into the woods. A rifle lay at hand, but there was in our party no disposition to break the laws of the State or kill game of which we could make little use. We had that morning been shooting rifles at marks around our camp, and while we were watching the moose we could distinctly hear the blasting on the new railroad. The animal paid not the slightest attention to the blasting, but did raise her head and listen when the wind made a more than usual rustle in the trees.

The next camp was at Holeb Falls, a journey of a few hours along the river. The fishing in the river here does not amount to much in the summer; but three ponds around the base of Holeb Mountain can be depended on to supply sufficient trout for the camp. The nearest of these ponds covers eight or ten acres, and is mostly overgrown with lily pads. In a bright day the trout take shelter under these, making a great stir of the leaves as they run among the stems at the approach of a canoe. The only way to get them then is to drive a school out of the lilies into one of the clear spaces of water, then fish these carefully, sitting down in the canoe and casting as far as possible from that position. In the second pond there is considerable deep water, and I am confident some good trout, but they would not rise for us. The third pond is a flooded beaver meadow, having little depth of water, with plenty of small trout.

With Henderson I climbed Holeb Mountain, about a three-hours' walk through primeval forests. While the view from the summit is quite extensive to the south and east, the west and north are cut off by other peaks. Any sportsman going to this region should climb some prominent mountain for the better idea he will get of the surrounding country. It is a land of mountains covered with spruce, hemlock, and of deep valleys filled with lakes and streams: far as the eye may reach stretch boundless forests of primeval growth, or the lighter woods that follow the axe of the lumberman. From Holeb only one house can be seen, and that a deserted one on a hay farm. Very numerous are the ponds one may see; from Atteau with its sixty islands to tiny beaver ponds, shining like gems among the mountains, testifying to the industry and wonderful instinct of the beaver. Around the base of Holeb the signs of deer are very numerous. We saw two deer feeding in the ponds and found two horns—a four and a five-prong. Between the mountain and the first pond the deer have worn paths, treading them down to the roots of the trees. It seemed from the looks of these paths as if one need watch them but a short time to see some of the deer that evidently frequently used them. Passing above the signs of deer a section of the mountain seems to have no game; then we came to a belt perhaps 300yds. wide running around the summit and a short distance below it, where the caribou make their summer home. Here decayed logs were torn to pieces, moss bitten away, and well-defined paths run in various directions. At our approach one great buck started from his bed in the moss, not three rods away; he stood several seconds viewing us in amazement, then bounded down the mountain.

After three nights at Holeb we moved camp to Three Streams for one night. The camp here was located between two brooks that flow into Moose River. At this point is to be found some of the best fishing on the river in August. Fishing one night and morning we caught many fine trout; the best eight of these weighed 13lbs., the largest one 3lbs. 2oz. The last, the largest trout of the trip, the Doctor caught, and against a 6oz. split-bamboo rod a 50oz. trout, 19½in. long, can make a very stubborn fight. My companion had never cast the fly till this trip, and as was to be expected, had not succeeded as well as he desired in the earlier days of the outing, and did not seem very much pleased with his own skill. Now, after he landed this big fellow, one could not look at him but his face was wreathed in smiles of happy content. The Doctor lives in a somewhat distant city, and the size of this trout may have grown in his mind as he traveled. If he can make him weigh 5lbs. or 6lbs. at home it's all right. I have not given any names. There was a trout caught at Parlin Pond in 1885 that weighed 3¼lbs.—the largest ever taken there. In 1886 I stopped at the hotel there, and on making inquiry about this trout was told it weighed 5lbs. In 1887 again I inquired and learned the trout weighed 5¼lbs. Some day that will be a very large trout if Parlin Pond Hotel does not change landlords. At the Forks inquiry was made about some trout a party of Hartford gentlemen had brought out from Long Pond in July, 1887; here they were "a fine lot, some of them weighed 4lbs. each." At Parlin Pond they were still "a fine lot and one of them weighed 3¼lbs." At Moose River the largest one weighed 2¼lbs,. and others 2lbs. each. I have often wondered how large such elastic fish must have been at Hartford, especially in trotting horse circles.

From Three Streams to the village is about twelve miles, with one very short carry. In going into this country I find my expenses about $5 a day for trips of 16 or 18 days. The guides furnish tents, blankets, cooking utensils and canoes, charging $2.25 to $2.50 per day, according to the time employed. Black flies and mosquitoes should be provided against with some preparation of tar and oil. Silver-doctor, Montreal, scarlet-ibis, any combination of red and brown are killing for these waters. No. 4 hooks are right size, and two or three dozen flies quite enough for two or three weeks in the woods.

The trip here partially described was perhaps more than usually interesting. It does not fall to the lot of every man who goes to the woods even for many seasons to have so interesting and protracted an interview with a moose, nor can one always find such uniformly good fly-fishing, yet all who love the woods can enjoy the pure, bracing air of the hills, the fragrance of the forests, the delights of canoeing, and cutting loose from all connections with mail and telegraph, and can throw off care, grow strong in body and buoyant in spirit, gaining many pleasant thoughts for future days.

The Doctor wrote, many weeks after his return home: "I did not realize how much pleasure there was in the trip till I had time to think it all over at home." The best things the wilderness can offer are not trout and game, but health and vigor for mind and body. F. T.

PROVIDENCE, Rhode Island.

CŒUR D'ALENE.

I DOUBT very much if there is a prettier or more pleasant place for the sportsman to spend the summer and fall than at Lake Cœur d'Alene, Idaho, and a most beautiful lake it is, twenty-eight miles in length, and from one to two miles wide, nestling in the midst of the Cœur d'Alene mountains, with its innumerable small bays and sandy and rocky beaches, making splendid camping places. There are plenty of deer on the first table-land above the lake; only a half-mile walk, and one is sure to run across an occasional bear, cougar or lynx, in his walks over the hills, while the trout are only about twenty yards from the camp. This, together with cool bracing weather, and little or no rain from April to along in September or October, is all a sportsman could desire. The lake has two large inlets: the Cœur d'Alene and the St. Joseph's Rivers. The "St. Jo" has a branch that flows into it about twenty miles from its mouth, called the St. Mary's, which is as pretty a trout stream as one could wish to see.

Like most mountain rivers the first few miles are still water, but seven miles from the mouth the rapids begin, and with them the most elegant trout fishing! from there up it is a succession of riffles and deep pools. The mountains rise to a good height on the rivers and the game is quite plentiful, especially bear and deer. The outlet of the lake is the Spokane River, which flows from the lower end of the lake, and empties into the Columbia.

Last year Fred and I started on our second trip through the Cœur d'Alene country, and, profiting by the last trip's experience, we struck first for a week's duck and goose shooting and trout fishing to the "St. Jo," and up as far as Ferrill's Ranch, the head of slack water. The river was very high and nearly the whole bottom was overflowed, and the waterfowl were there in great numbers. We killed a deer the first day on the river and shot ducks and geese till we were tired. Although we made it a rule never to kill more deer than we could use for camp, we "slaughtered" ducks and geese and gave them to the various ranches along the river.

The second day we arrived at Ferrill's in our canoes, and, as it was rather late and we were tired, we made camp and stayed the rest of the day, arranging our fly-books and jointing our rods.

We started out early and fished all the next day in the rapids. What magnificent sport we had! Casting the dainty fly into the rapids (flies preferred; the gray-drake and March-browns on No. 8 hooks at that time of year) and watching the spotted beauties make a rush for it as it swept down stream by the rushing current, the trout making frantic efforts to part company with the hook and coming finally alongside of the canoe and into the landing net. At night we laid 206 trout on the bank, the average about half a pound, the largest 2¼lbs. I confess I felt rather ashamed of myself at taking so many, but not having cast for some months I could not resist.

Next morning we started down stream, and, having the current with us, made the lake by night, killing an occasional duck and pheasant on our way. I was up by daylight the next morning, and, going down for some water, I spied a deer about 70 yards from me, standing

on the beach. Hastily getting my rifle, I fired at him, breaking his back. Having cleaned the deer and cooked our breakfast, we started down the lake and spent the rest of the week cruising along the shore toward the town.

I would tire the reader were I to give a detailed description of every trip we took from May to January. However, I shall give a general outline of our expeditions.

The next week was spent in fly-fishing in the lower end of the lake and the Spokane River, having a glorious time with the trout. After that we formed a party to hunt deer on a table-land about 11 miles up the lake. There we spent three weeks killing deer and fly-fishing. From there we went to a small lake lying on the left of the Cœur d'Alene River, where the trout were large, running from two to three pounds, and very gamy and finely flavored. There are a great many lakes on both the Cœur d'Alene and "St. Jo" Rivers in which the fishing is good, but none compare to this particular one. The game also appears more plentiful here than on the others. We killed five deer, a couple of lynx, and a large silver-tip bear, and caught a great many trout. Most of the dear and trout we sent to our friends in Cœur d'Alene by the steamer Cœur d'Alene which makes daily trips from the town to the mission on the river for passengers, freight and ore from the mines; it was then in charge of a most obliging gentleman, Capt. Sanborn.

The water now being quite low, we turned our attention to the "St. Jo" and St. Mary's rivers. We had a number of exciting little incidents as we poled and packed the canoe up the riffles, and when about four miles up the "St. Jo," above the swift water, we found the best trout fishing it has ever been my good luck to find, all large and gamy and very finely flavored. Higher up the river we found the signs of game, or, I should say, animals, plentiful. The bear, cougar and lynx keeping the deer in constant readiness to jump into the river at any moment, but these wild animals were very shy, and we had a good deal of trouble and luck in getting any. We also saw a good many elk signs, but they were nearly all old, and the elk seemed to have taken back into the hills We saw a few mountain goats and had the luck to get two, the other game killed being deer, two bears, a cub and a female, two cougars, three lynx, and plenty of pheasants.

Thinking we had worked pretty hard, I proposed as a rest a duck and goose hunt at "St. Jo" lake and bar. The ducks, geese and swan now going south, stopped there in vast numbers, and for nearly five weeks we had most excellent shooting. None of the game went to waste as we gave all we didn't use to the "Siwashes," who were there in good numbers hunting deer and fishing, drying all they got for winter use.

We had also some good trolling for "bull trout," getting some very large ones, the largest being 8lbs. (The largest bull trout caught in the lake last year was caught on a spoon by Corp. Guy Norton, Co. D, 4th U. S. Infantry.)

This ended our hunt with the exception of a short visit to the head of Blue and Wolf Lodge Creeks, but the snow being very deep we had rather indifferent success, our party killing five deer in seven days.

I wish I could give a full outline of the whole trip. I am sure I could induce some of our sportsmen to forsake the old fished and shot-out regions for these comparatively new fields. Should any one contemplate the trip, I should be pleased to give him hints as to the best shooting and fishing points, etc.

Let me also say that at Spirit Lake, only twelve miles from Rathdrum, Idaho, on the N. P. R. R., one can find elegant fishing, plenty of deer and bear. An old hunter, Pete Rhoterbeck, has cabins there and will show any one the best places.

The following flies are the best in April and May: Gray drake, Abbie, professor, scarlet-ibis, March-brown; on hooks from 10 to 6.

June and July: The gray-professor with yellow body is best, ibis, Parmachene-belle, Seth-Green, orange-miller; hooks 6 to 4.

August, September: Cowdung, grizzly-king, ibis, Seth-Green. NICA.

A POCONO PARADISE.

IF among your readers there be any who are in search of a good place to go to for wholesome air, fine scenery, fair trout fishing and decidedly a surplus of game if they can kill it, we would inform them that we have found just such a place. It is in a region 2,500ft. above the heated walls and slums of Gotham, where ozone abounds in inexhaustible quantities and free to all, where nature is seen in its pristine grandeur, and moreover where the speckled trout gleam in the sparkling brooks, the ruffed grouse drums in the neighboring copse, "the stag at eve," does "drink his fill," Bob White whistles from surrounding thickets, and bunnie scurries away at sight of sly reynard's approach. Even dusky bruin is not far off, and the panther is occasionally an unwelcome visitor to the farmer's pets.

On the 1:15 P. M. train, D., L. & W., from Hoboken not long ago might have been seen the following party, all enthusiastic members of the J. C. H. G. C.: K., the able and genial teller of a Bowery bank and the hero of the slaying of two bull caribou in Maine last fall, he has the head of one of the caribou, a magnificent specimen, mounted in his dining room; Dr. L., the popular clerk of the Circuit Court of this city; the versatile Jerry M., the champion wild goose shot of the club, having bagged thirty-eight last fall down in Maryland; and lastly your humble servant. We were bound for a day's trout fishing. Our objective point we understood was Pocono Mountain or thereabouts, somewhere in the wilds of Pennsylvania. We found both the mountain and the wilds.

Having got pleasantly fixed in the smoking car and cigars alight, we interviewed the conductor. Now there are conductors and conductors. This conductor was a sportsman, therefore a gentleman. He was posted and willing to post us. Long may he conduct, or until he does better and perhaps superintends. Well, we rushed through the State of Jersey and the magnificent scenery piled up all along the Delaware Water Gap and adjacent thereto, but we have no time nor space to go into the raptures; it has been done too well and too often before.

We disembarked at Cresco station, a little one-horse affair with a one-horse station master, we don't know how many miles from Hoboken. The excursion ticket there and back is $4.60. We wanted to take a certain train back that did not stop regularly at Cresco; the station master informed us positively that he could not or was not allowed to flag that train; the superintendent of the road tells us differently, and that station master is lazy or unaccommodating and may get into trouble. We were met at the station by Milton Price with a spanking team, who drove us some three miles to the domicile of the Price brothers, whose post-office address is Canadensis, Monroe county, Pa. Here we found a capacious farm house with the appurtenances owned by the brothers Milton and Westley, and (very successfully) presided over by their niece, Clara Price, not to forget her able assistant, little black-eyed Fanny Crowe. The Prices own a farm of 300 acres, 40 of which are under cultivation, situated on Broadhead Creek, a tributary of the Delaware, and right in the heart of the wilds of Pennsylvania. They are good fishermen, good shots, and good hosts. You are at home at once. Upon jumping out of the buggy we were asked if we would have supper right away; it was then about 6 o'clock. Supper! not much—the roar of the water over the dam and the rapids just below the sawmill and but a short distance from the house had excited the Doctor and Jacobstaff, and the joining of rods, donning of rubber boots and discussion of flies were more important just then than supper. We were soon at the stream, where your correspondent landed the first fish, of about 4oz. It was the first one in eight years. He felt good, it brought back old times. He was soon followed by K. with one of about the same size, then by the Doctor with a littler one, while poor Jerry, whose flies and leaders had become inextricably mixed, was using words akin to club language when pinocle goes wrong. Then we were called to supper. Ah! what a supper, and what an appetite that high mountain air had given us for those biscuits, that butter and cream and coffee (that was coffee) and honey and cider, to say nothing about the crisp, delicious trout freshly caught from those cold waters.

We were up early in the morning after a refreshing sleep on hair mattresses and spring beds. K. and Milt took the buggy for the Buckill, a stream four miles away, the Doctor and I a small brook near by, called the Sprucekill, while Jerry, wanting larger game, proposed to confine himself to the main stream; and Charlie, a younger brother and quite a boy, started for a stream some four miles over the mountain. I need not describe our day's sport nor could I do it justice. What a time we had getting through laurel thickets and black alder brush, over blackened logs and mossy stones as slippery as the eel of historical note, taking a little beauty from that ripple, a larger one from under that mossy stone and a bigger still from just above the foam lying above that driftwood, while the dull roar of muffled thunder on either mountain side told us that there were grouse and more than one in the neighborhood. Suffice is to say we had a right good day. Comparing notes we found that having a guide to the manor born was a good thing, for K. with Milt had beaten us two to one, and even the boy was ahead of us individually, but was not that to be expected? These country boys know where to go, when to go and what to do when they get there, and don't you ever bet that they won't beat you on their own ground.

Well, we enjoyed a good time. K. had to be in New York by 8 A. M. the next day, so he started homeward that evening. The rest of us did some more fishing in the dusk and the dawn, and took the 6:12 train in the morning, arriving in Hoboken at 9:30, well satisfied with our one day's fish.

The Price boys have a well-broken Gordon setter and a black and tan hound, part beagle and part foxhound, that they say it A1 on the Molly Cottontails. We are going up there again when the season opens in November. We hope to be in time before the woodcock get away south. We saw many borings, though we put up no birds. The boys say there are many around there and nobody shoots them. By driving only a few miles north a good deer region is reached, and it is only about twelve miles, we believe, from the celebrated Blooming Grove Park. We are going up after the timberdoodles, grouse and Bob White and the hares, and may be a deer or a bear, who knows? We will tell you about it. JACOBSTAFF.

Natural History.

MUSSEL, BOWFIN, OTTER.

Editor Forest and Steam:

I can add my testimony concerning the edibility of the fresh-water clam. "N. A. T." need not be afraid of their hurting anything but his jaws and perhaps his feelings, when he finds that what looks as good to eat as an oyster or salt-water clam is a rank-flavored delusion and a leathery snare.

When we boys used to go fishing at the lake we often tried them, raw, stewed, fried and in soup, but a little in any way was enough, if not as good as a feast, and we soon gave over begrudging the muskrats all our share of them. Yet tastes differ, and I have seen old Hi Potter get the better of three dozen, raw on the half shell, with the addition of a little salt which he had brought on purpose in a little calico bag all the way from Monkton; and he swore they were better than oysters. But his example and his profanity failed to convince us. Also an ancient worthy of more pleasant memory, one of the old-time hunters, used to aver that if you would "bile 'em into brine and fry 'em into butter they'd be good," but we never tried his recipe.

Did "N. A. T." ever examine his unios for pearls? Some valuable ones have been found in the fresh-water clams of the Winooski.

I remember that not long ago the edible qualities of the bowfin were discussed in your columns. I have had recent experience in this matter which may possibly interest some one now. One night this spring our men went fishing for pouts in the Slang and caught a bowfin of about 2lbs. weight, which they brought home, and after dressing it nicely and removing all traces of its identity, handed it over to the womankind under the attractive name of sweetfish. They marveled somewhat at this heretofore unheard of fish, but fried it according to the best of their skill along with bull pouts, and it was served up with them. It was not ill-flavored, but it was soft and yet it was not soft. It separated easily into fibers, but beyond that no amount of chewing would reduce it, and if swallowed it must be as a bit of soft wood would be, ground into a stringy pulp. Though all who partook of it agreed that it might be better than no fish, if one were fish-hungry, no one asked to be helped to it a second time. It was like a "chip in porridge, neither good nor bad." If I could be informed in time of the next impending battle of the Ichthyophagi with the uneatable, I would try to send them this adversary, worthy of their ivory if not of their stomachs.

Of the otter killed in the township of Monkton, I have heard that it was somehow taken in the outlet of Bristol Pond, near Hog's Back Mountain. It was a fine specimen, and the captor sold the skin in Bristol for $12. A third of this he invested in illicit strong waters, and therewith so loudly celebrated his good fortune, and mistaking his wife for a drum, beat her, that he was mulcted in a fine of $8. His neighbor, S. L., who was never guilty of a pun, says, "He hadn't ought 'er then."

Some may think this an inglorious end of the story of the last otter in the county, but many an otter of the olden time went in much the same way, only in those happy days a man was not fined for ever so much rejoicing over his luck. AWAHSOOSE.

FERRISBURGH, Vt.

TREATMENT OF SNAKE BITE.

BY DR. H. C. YARROW.

[Seventh and concluding paper of the Series, "Snake Bite and its Antidote."]

CAN we now in view of the results of our experiments propose any plan of treatment for snake bite which will afford reasonable ground for a belief that danger may be averted and human lives spared? It is thought the question may be answered in the affirmative, especially as regards those persons bitten by North American species of poisonous reptiles, and the following suggestions are offered with the earnest desire that they may realize fully the hopes of the writer.

What shall a person do who is bitten by a venomous snake? The first advice to give is that he or she should not lose presence of mind, and become so nervous as to be incapable of cool and deliberate thoughts. If the bite is upon one of the lower limbs or upon the arms, a broad bandage of unyielding texture, if possible, should be placed tightly around the affected member, and between the bite and the heart, and be securely fastened. This bandage or ligature can be made by tearing up a shirt and using two or three thicknesses of the material, an inelastic suspender will answer, pieces of a handkerchief may be used, or if in the woods a strip of bark from a sapling can be hastily slit off and applied. A leather strap or thong is better than anything else, but even long grass rolled together so as to form a cord may be used in an emergency. In applying the band or ligature of whatever nature, it should be started about six inches above the bite and the turns made to run downward toward the puncture, and should be wrapped so tightly as to cause the injured limb to become turgid with venous blood. Having fastened it securely, a number of cross cuts should made through the points of the puncture from the snake's fangs, deep enough to pass down into the muscular tissue, taking care to avoid veins which will be seen standing prominently forth, and bleeding from the cuts can he encouraged by rubbing the limb gently up and down below the ligature. A wide-mouthed bottle or similar utensil, from which the air has been driven forth, by burning some whisky or a piece of paper in it, should be applied to the wound and it will act as a cupping glass; or still better, let the bite be sucked by the patient himself, if he can get at it, or have some courageous friend with a healthy mouth perform this act for him. The pulse should be felt, and if it weakens, showing that possibly a portion of venom is reaching the general system notwithstanding the constricting band, whisky should be given in moderate quantities. From time to time the band should be slightly loosened and then replaced so as to admit of partial circulation, but as the heart flags, the stimulant must again be administered. It is no use to make the patient drunk, for alcoholic liquors are not antidotes, in any sense they simply act as a tonic to the failing circulation.

The writer has been informed by a gentleman, long resident in Texas, that the plan proposed has been constantly employed in that State; and that few deaths result there from the bite of venomous snakes. Of course it will be understood that these suggestions are intended to meet sudden emergencies and not to take the place of treatment by intelligent bystanders or physicians. Under all circumstances, the ligating band should be first applied and the incision made, and then if circumstances will admit the following procedure, it is thought, will be the best. Cupping glasses should be applied over the wound, after which a 20 per cent. solution of permanganate of potassa should be injected with a hypodermic syringe directly into the wounded tissue and retained there by means of the finger or compress. The flesh should also be kneaded so as to distribute the solution through the tissues in the immediate vicinity of the bite. In addition the patient should be made to swallow 20 minims fluid extract of jaborandi, or its alkaloid, pilocarpine, may be used hypodermically. If the venom appears to be gaining ground another injection of the permanganate may be given, followed by more of the jaborandi, or pilocarpine, but the latter drug should be suspended when it is found the patient is perspiring freely and when excessive salivation is produced. Carried too far this remedy would weaken instead of strengthening the heart. Whisky or brandy may also be used in limited quantities from time to time. In the absence of any of the means suggested in the way of remedies the primary fact to keep in mind is the importance of the ligature, incision or scarifying the affected part, and the promotion of a free flow of blood. If nothing can be found to use as a cupping glass or no one is courageous enough to use the mouth, the old-fashioned country remedy of splitting open a live chicken and applying it over the wound may be tried, or as has been tried in India with success, the anus of a chicken may be applied over the wound, using a number of different fowls for the purpose. The writer recommends these methods only because there is undoubted evidence of their efficacy. A piece of porous clay might be applied as it would doubtless act in the same manner as did the snake stone in our experiments. It is very important to remember that the ligature or constricting band cannot be allowed to remain very long as gangrene would inevitably result,

it should be loosened from time to time so as to admit of a slight circulation through the affected part, and to permit a small amount of the venom only to enter the system, and the effect of this should be met by the administration of the remedies already indicated. In the case of a rapidly weakening heart, tincture digitalis in 15 drop doses might be given every two hours, or, if at hand, a few drops of nitrate of amyl might be inhaled. Everything failing it might be worth while to attempt artificial respiration, in the hope that if life could be prolonged, the system might throw off the poison, as it has been shown by the Indian Snake Commission that the action of venom actually is delayed by this method. In one case mentioned by Vincent Richards ½ of a grain of cobra venom was injected into a dog. "It took four hours and ten minutes before the animal appeared to be dying, until artificial respiration was resorted to. In four minutes more in the absence of this system this animal's heart would have ceased to beat and somatic death been completed. But by its steady application life was extended to forty-one hours and fifty-two minutes. In a desperate case there should be no hesitation in trying the effect of artificial respiration.

Before leaving the subject of snake bites it seems proper to allude to a matter which has of late received some little attention, viz., the preventive inoculation of serpent venom to prevent danger from bites, and while the writer does not commit himself to the theory he believes it may be worth of serious consideration. As has already been stated in this paper the Ann Arbor experiments showed conclusively that after a time with repeated inoculation of venom the animals experimented upon seemed to be much less susceptible to its effect, and quite recently an individual has been visiting the principal cities claiming an immunity from snake bite, on account of an inoculation performed on him by some South American Indians, and offering to have the matter tested upon a large dog, which had also been inoculated. It has been stated that in Philadelphia these experiments were successful. Tschudi informs us that some of the South American Indians are said to acquire an immunity from snake bite, having been previously inoculated, but the process has to be repeated from time to time. In this connection the following extract is given from "The Veterinarian," Loud., 1887, LX., 565, as it seems to bear the impress of truthfulness. "Three of the oxen were bitten by snakes. One of the bushmen undertook to cure them, and taking a knife made one or two slight incisions round the place where the bite was, which was easily seen by swelling, and rubbed in a powder which he said was made from the dried poison sacs of another snake. In a few hours the poison had entirely subsided and the cattle were as well as their half starved state would allow them to be. I expressed some doubt whether this cure would be efficacious in the case of the more deadly kind of snake, but the bushman assured me that it would, and that he was not afraid of being bitten by any snake in this country so long as he had the poison sac of another snake to use as an antidote.

"The very next day I had an opportunity of putting him to the test. While walking ahead of the wagon I saw a full-grown capell or spunghe slange lying under a bank, and calling the bushman said, 'Catch that snake alive. You are afraid of it, are you?' 'No, boss,' he replied, 'I am not afraid, and will catch it for a roll of tobacco.' Not wishing to be accessory to his death, I refused to bribe him, and went to get the driving whip to kill the snake with. I had scarcely returned when he gave it a kick with his naked foot, and the horrible reptile bit him. Coolly taking out some dried poison sacs he reduced them to powder, pricked his feet near the puncture with his knife, and rubbed the virus powder in just as he had done with the cattle. In the meantime I had put a stop to the snake biting any more by a blow from the whip stock, and the bushman extracted the fangs, drank a drop of poison from the virus sac, and soon fell into a stupor, which lasted some hours. At first the swelling increased rapidly, but after a time it began to subside, and next morning he inoculated himself again. That night the swelling disappeared, and in four days he was as well as ever."

In conclusion it may be mentioned that this record of experimental inquiry is not intended as an exhaustive treatise, for as opportunity occurs other experiments will be tried with such supposed remedies for snake bite as may be offered, and the results will be duly published. In conducting the experiments the writer has been influenced by the motives only of adding to the sum of human knowledge and alleviating human misery, and if he has succeeded in this he will be amply repaid for the labor and dangers incident to the research. His thanks are offered to several persons who have aided him, more especially to his industrious and energetic assistant Mr. E. B. Rheem and to Capt. Bendire, U. S. A. It is proper to add that the greater part of the expenses of the investigation have been borne by the National Museum.

A "WOOLLY CROCODILE."—*Editor Forest and Stream:* I see it reported that "a curious creature was brought to San Francisco by a ship which arrived there the other day. It has some characteristics of the crocodile, but is covered with a coat of short bristles or hair, which gives it a most peculiar appearance. It has been domesticated to a certain extent and will permit the captain or any of the crew to approach it and receive their caresses with evident pleasure, but if a stranger approaches, it distends its big jaws and shows fight. The crew call it a 'woolly crocodile.' It is active and weighs about forty pounds." I think you will agree with me that this is "important if true," in its bearing on the theory of evolution; for if the "woolly crocodile" actually exists, and is possessed of the characteristics here described, it is in truth a "missing link."—C. F. AMERY.

FAMILIARITY OF THE GRAY JAY.—*Editor Forest and Stream:* I was very much interested in Mr. Grinnell's description in the article on the "Autumn Birds of the St. Mary's Lake Region," relative to the habits of the gray jays. Some years ago while deer shooting in northern Michigan I was seated on a runway back in the woods waiting for something to turn up, and had kindled a little fire to warm my stiffening fingers, when I noticed a flock of birds of a kind unknown to me at that time, in the surrounding trees. They were chock-full of curiosity and impudence, and seemed to be chattering at me; and every little while one would hop on some twig a little nearer, and all seemed to take a good deal of interest in what I was doing and what I had a fire for. Finally they approached quite near, and taking some crackers from my pocket I broke them in pieces and tossed them to the birds, and they at once scrambled down to where the dainty morsels were and proceeded to walk off with them. I then put some pieces on top of a stump beside me, and it was not long before they alighted within two or three feet of where I was sitting, seemingly not in the least afraid, and picked up pieces of cracker. They continued doing this until finally they became so bold that they would take the pieces from between my fingers, and one, more courageous than the others, seemed to be quite vexed because I pinched the cracker and would not let it get it at once, and twisted his head and pulled at it three or four times as you have seen chickens do when you hold something tightly between your fingers for them to take. I was very much interested in their actions and anxious to know what kind they were. Later I found that they were the gray jays.—W. B. MERSHON.

THE BIRDS' RETURN.—Charlestown, N. H., May 27.—I note your remarks on "The Bird Hosts" in last number, and can add the result of my observations to confirm the opinion that our native birds are decidedly more numerous this year than for some years past. The spring of 1886 was the first but one for many years that I have spent in in a country village, and I was then struck by the absence of my old familiar friends. Last year, 1887, there were more, and several orioles, of which I only saw one in '86, built their nests in my immediate neighborhood. This year, although a few days later, there are decidedly more of them, and I have seen the scarlet tanager and the indigo bird again, and in my rambles along the trout brooks, or in search of flowers, have been greeted by hosts of brown thrushes, bobolinks and red-winged blackbirds, while one village street is thronged with flocks of the little gold finch or yellow bird, as the boys call them. Now, as the English sparrow has not infested this entire neighborhood very much yet, I am inclined to attribute this marked increase to some extent to the good work of the Audubon Society.—VON W.

SPARROWS AND SONG BIRDS.—Philadelphia, May 14.—Some twenty years ago I had a nice home in the country, where our happiness was increased by the companionship of wrens, orioles and bluebirds. Business compelled me to move into the city. After years of labor I have been enabled to escape the hot streets, sewer gas and other offensive odors and to return to my lovely old home in the country, with its grass, shade and fruit trees. My walk over the grounds was saddened by the positive absence of the little songsters that made its former possession so bright and cheerful, and I am told that their absence dated from the advent of the English sparrow. I write now for advice. I want my wrens, bluebirds and orioles, and care nothing for the sparrow. If I kill the quarrelsome pests do you think I can coax the little warblers to come on the ground where sparrows are forbidden? My .22 Ballard will soon rid me of these English emigrants if such riddance will bring back my little friends.—G. N.

Game Bag and Gun.

IN THE MATTER OF BUFFALO.

LAST May I clad myself lightly in a photograph outfit and an editorial pass and started out to Garden City, Kansas, to visit my old friend C. J. Jones and his herd of tame buffalo. I had helped catch some of these buffalo two years before, or at least had stood around and watched the other fellows catch them, so I felt a sort of two-ply interest in the outfit.

The familiar gray landscape of the upper Arkansas country swam by the Pullman window, and I lay and let it swim till the porter, who should have called me half an hour before, poked his head through the curtains at 8 o'clock and hurriedly called out, "Boss, get up, quick, we're pulling into Garden City now!" That porter missed my quarter, but received my blessing, as I gathered my vestments, my photograph outfit and my editorial pass all in my arms together and stepped lightly and gracefully into the depot building to complete my toilet. I dressed in the simplest and swiftest manner within my power, thanked my admiring audience for their kind attention and went up to Ben Phillip's Buffalo Hotel for a good breakfast.

It began to rain after breakfast and it was therefore impossible to go out to the herd, which was some four miles down the river, with any prospect of successful results at photographing. I found Mr. Jones at his office, up to his eyes in some political scheme or other. I believe he was laying for the honor of being a delegate to the Republican convention at Chicago in June. Mr. Jones divides his time between politics, a big irrigation ditch, the glorious climate of Kansas and buffalo catching. He is a rustler in all these pursuits, but I believe he rather has a leaning to the latter.

The moment he saw me, Mr. Jones insisted I should stay over and start next week with him for the Panhandle, on a hunt which should be positively the last appearance of the North American bison on the stage of history or of sporting journalism. He explained that he already had the teams and running horses down on the range, with half a dozen men, and that word was up that the boys had found the herd, which numbered forty-two head all told. Mr. Jones again affirmed his ability to rope and throw a full grown buffalo (at which I again laughed) and further expressed his determination not to be contented with a few paltry calves, but to bodily round up, wear out, tame down and drive in the whole existing band of buffalo then on the range. There was "go" enough in this idea to fairly set me wild; but at the expense of all my effort, I was forced to confess that I could not possibly get off to join the expedition. I knew very well what I was missing, for I had been out with Mr. Jones before on one of these wild hunts.

The rain abating somewhat, we started down to the herd. At the distance of a mile, we could see the black humps of the buffalo strung out in line among the herd of cattle with which they are kept. A half-wild old herdsman, covered with a tattered blanket, was urging his pony about the herd, and gradually working them up toward the corral, away from the river. Twice before, some of the buffalo had crossed the Arkansas, and led the herder a pretty chase.

As we drew near, it was easy to see that the buffalo were no longer wild buffalo, but quite thoroughly domesticated. It was almost impossible to separate them from the cattle, and they seemed not to care much for the approach of the mounted herder. They would let him ride up close, then dodge around him and cut back into the bunch again. They frequently passed within a dozen yards of us, as we stood by the wire fence. I recognized one two-year old as he passed, carefully avoiding the barbs of the fence. I remembered the hot run at sun-up when we caught him, down on the plains forty miles from water; and I remembered how the herd of big buffalo ran directly over and through a strong wire fence that morning, and scattered it as if it were built of straw.

There were yearlings, two-year-olds and three-year-olds in the lot, thirty-nine in all, I believe. Mr. Jones had purchased one large young cow in Colorado, and I think also one from the Cimarron country; he had also sold three two-year-olds to Pawnee Bill's Wild West show. I saw these three specimens at Wichita. They were the poorest of the lot, one of them being a spindling, big-headed brute. Those left on the Jones ranch appeared to be in very good condition. I recognized the big heifer, Paladora. She was smooth as a seal.

I made several flying shots with the drop shutter at members of the herd as they passed, but feared the light was too dim to get a good negative on an instantaneous exposure, as the clouds had now again entirely overcast the sky; moreover, I wished a view of the herd as a whole, if possible; we accordingly undertook to drive the buffalo into the small corral near the cabin, where we could inclose them and approach closely. As the herder cut them out from the cattle, Mr Reeves (Mr. Jones's brother-in-law; Mr. Jones himself could not come out with us) and I directed them through the little gate. As I stood with the camera near by, and nothing but a little switch in my hand, the buffalo passed within ten feet of me. They certainly looked very large, some of them, and quite capable of making away with one; but beyond a wild look from under their shaggy frontlets, they seemed disposed to keep the peace. In a short time we had them nicely inclosed, and walked up to the fence to look them over. What a strange sight it was! Here, on the native ground of the buffalo, but ground long since swept clean of them by the skin-hunter, we had a band of buffalo rounded up; we had a "stand" on them; they were not a dozen feet from us. And they were genuine buffalo, shag-headed, mournful-eyed and grim. No doubt of it. I tickled one with the switch. It kicked, shook its head, and ran off a few steps, much like a domestic calf. Half a dozen of the herd were large, nearly full grown. From this they ranged down to curly little rascals which would make the sourest cynic laugh in spite of himself.

A number of negatives were taken from different points of view, the buffalo being very patient under the process, and not even taking much fright at the flapping of the camera cloth. The animals were usually from twenty to fifty feet away from the instrument. The herder went into the corral and drove them about, so that often they passed so close one could almost have touched them with his hand through the fence.

A drizzling rain had by this time set in, so that it was very difficult to operate the camera. We adjourned until after dinner, and then came out with a larger instrument, which belonged to Mr. Jones. We had again to drive up the buffalo, and by the time this was done the blackening clouds were just on the point of saturation. I had just gotten a group arranged to my liking and was adjusting the focus of the instrument when the heavens opened and a sheet of rain came driving across the sand hills in a way which might have pleased William Black, but which didn't please us at all under the circumstances. The rains in that country are often very heavy. This was one of the worst. The earth narrowed to a circle of steaming mist as the cloud swept over us. It was impossible to tell anything about the focus. I tried to protect the lens as best I might, and as the buffalo stood there staring dumbly at me, I ran through plate after plate in the blinding rain, and only started in when the wet began to swell the slides, and I realized that perhaps I was ruining another man's instrument.

As I turned to go the rain fairly redoubled, and shut in the little corral in a veritable fog. Out of this frame of mist, gray and twisting, showed the silent, patient, motionless front of the group of buffalo, standing face toward me, wondering, dumb. Their brown backs loomed up high over their lowered heads. Their big, melancholy eyes stared out mornfully, asking that old question which looks out always from a buffalo's eyes, of "What next, Mother Nature?" I came away and left them standing there in the rain, patient, motionless. Soon I was whirling away east again, back to work.

The buffalo have been with the herd of cattle since their captivity, and Mr. Jones has looked forward to this spring with great interest as a time which would determine some of his notions as to cross breeding. At the time of my trip nothing could yet be known, though it was expected cross-bred calves would be dropped both by domestic and buffalo cows. I shall be glad to report upon this phase of the interesting question of buffalo raising as soon as I can hear definitely. Mr. Reeves, who was well posted upon the history of the herd, was of the opinion that Mr. Jones made a mistake in allowing to run with the herd a black Galloway bull, whose known fighting propensities may have driven off the male buffalo, which were younger and not so strong.

When Mr. Jones started down on the hunt he took with him a number of carrier pigeons, which were subsequently used in sending up reports to Garden City, a distance of two or three hundred miles. By the last report, sent from Mount Blanco, Texas, I learn that the party have gotten among the buffalo, and have caught several calves. From the camp on the Canadian, exploring parties were sent out in all directions. I have no definite knowledge, but presume that Lee Howard's old camp is the rendezvous, and that Lee himself is helping Mr. Jones on the hunt. Last year he did so, and in pay for this Mr. Jones gave him the game Kentucky running mare Jennie, who did such noble work on the hunt which I accompanied. The buffalo are reported now to be broken up into small bunches. Mr. Jones had given up the idea of roping and hobbling the full grown buffalo, as after being chased they show themselves ferocious and unmanagable. An adult buffalo is nearly as strong as a steam engine. On

the 22d of May one of the boys, Dick Williams, located a bunch of twenty, mostly old cows, with no calves. Full preparations having been made, this herd was started on the day following, the intention being to follow and tire them out. On the first day the buffalo were followed fully eighty miles. On the second day they showed fatigue, but on winding the pursuers became enraged and restless, pawing and digging a great deal, and going off at great pace. On the third day the hunters got in closer. On the day of the report the herd had been followed seven days, and was described as being under perfect control. Mr. Jones said his intention was to stay with them, following quietly and keeping them moving, until they could be turned up toward the Canadian and driven in among the buffalo now held there, caught by Lee Howard and Mr. Jones.

It is doubtless true that everything will be done on this hunt which can be done to capture the remainder of the buffalo now left on the range. I believe that a number of adults will be taken. Certainly no man better than Mr. Jones could be found to plan and carry through an undertaking of this kind. He reports that he is "well pleased with his success," etc. I have no doubt that when he comes out he will have added materially to his herd, as he surely has to his credit as a bold and successful hunter and plainsman. E. HOUGH.

CHICAGO, Ill., June 11.

A TEXAS DEER HUNT.

IN the fall of 1886, I was visiting a friend of mine who owns a large ranch in Edwards county, Texas.

I had spent three weeks in a very pleasant manner riding after cattle and hunting the half-wild hogs of which my friend, Will Foulke, owned quite a number, when two of the cowboys rode in from a three days' hunt after some horse stock running on the range, and reported having seen plenty of deer in the various "runs" they had crossed.

As we had a deer hunt under consideration at the time, this news determined us, and we made preparations to start the next day. That night we cleaned our rifles, filled our cartridge belts and canteens, packed bacon, coffee and cornmeal in stout canvas bags so that we could conveniently tie them on our saddles, and with the addition of two heavy blankets and a slicker or oil-skin coat apiece, were ready for an early morning start. We were up by daybreak and I was somewhat disappointed at the fine drizzle that had set in during the night, but Will assured me that it was good weather for deer hunting and very much better than a bright sunny morning would have been.

We ate a hurried breakfast of coffee and bacon and then brought our ponies from the corral, saddled them and donning our slickers were soon traveling across the prairie. We rode for several hours over rough hilly ground and then struck a large run or gully between two ridges, and turned our ponies up this, forcing them through the tough shin-oak and brush, thinking we might start a deer from such good cover, but in vain, although we discovered plenty of tracks.

We finally concluded to camp in a small open space where good grass was plentiful. After hobbling our ponies we made a frugal meal of the invariable bread and bacon, and tried to make ourselves as comfortable as the weather would permit.

It was settling into a regular rain by this time, and we decided to ride on a few miles to a "water hole," where we would camp for the night. We had gone about two miles through the shin-oak brush, when I saw my friend, a few feet ahead, suddenly pull his pony up short, and jerking his rifle from its leather case, take quick aim and fire twice in rapid succession. Then I saw a large buck spring crashing through the brush to our left, and then turning sharply to the right, ran quickly across our path about fifteen yards ahead and received another bullet from Will's rifle. He ran on a few feet, then staggered and fell, plunging his horns into the ground and making several attempts to rise to his feet. Springing from our ponies we soon ended his struggles and found that all three shots had struck him, the last penetrating his heart.

We camped there for the night, and after hobbling the ponies we set to work on the buck and soon had him skinned and the choice parts cut in strips convenient for packing, and although it seemed a shame to waste so much valuable meat, we left the rest of the carcass, for we could not carry it, as we had neglected to bring an extra pony along with us to serve as a pack horse.

It rained all that night, and in spite of our slickers we were thoroughly soaked before morning. We were up early, and breakfasting on venison, were soon in the saddle. After riding in a westerly direction for some time and seeing numerous deer tracks we determined to halt, hobble the ponies, and each set off on an individual hunt. We got our bearings as well as we could and set out through the wet grass together until we came to a clump of live oaks, where we separated, Will taking a northerly course and I a westerly one. The rain had ceased by this time and the clouds gave promise of breaking away.

The course I had chosen led over rocks and through large clumps of brush, which made it anything but easy walking, and after half an hour's hard work without seeing anything, I was beginning to think that I would have nothing but my tramp for my pains, when upon reaching the top of a ridge that overlooked a large "run" stretching away to the northward, I saw that which well repaid me for my labor and sent a thrill through me that threatened to develop into a bad attack of "buck fever." There, not over 30yds. away, stood two good-sized fawns, their gracefully-poised heads raised and looking directly at me.

I stood as if petrified, scarcely breathing for fear they would take fright and dash away. They gazed intently at me for fully two minutes (it seemed twenty to me), and then, evidently satisfied that they had nothing to fear from me, first one and then the other lowered its head and went on grazing. This was the opportunity I wished for, and slowly letting myself drop on my knees, I rolled over on my side, and, cautiously cocking my rifle, rose again to a kneeling posture, took good aim at the nearest fawn's shoulders, and fired. Without waiting to see the effect of my shot, I hastily cocked my rifle and fired at the breast of the other fawn.

Both shots took effect, and the pretty little creatures were kicking on the ground and I was preparing to end their struggles, when a well-grown doe sprang out of a bunch of scrub oak near by and running to where the fawns were struggling, touched them with her nose, and then threw up her head with a startled air just as I recovered from my astonishment, but before I could aim at her she turned and sped away, taking great leaps over the rocks and brush in her path.

I fired a parting shot as she disappeared behind a large mass of brush, but evidently without effect, as I saw her ascending the side of the run half a mile away and still running swiftly.

Turning my attention to the fawns, I found them both dead, one shot through the base of the neck and the other through the heart.

I decided to carry one fawn back to camp and then ride out for the other. I found camp without much trouble, and saddling my pony set out and went directly to where I had left the other fawn and found my quarry gone.

At first I thought I must surely have made a mistake in locating the spot, but that notion was soon dispelled, for there were the blood stains of the slain fawns, the ground tore up by their dying struggles and the evidences of my amateur butchery. I was completely nonplussed till a shout of laughter from a clump of brush near by announced the fact that Will was enjoying my very evident consternation and the success of his own joke.

He had seen nothing on his tramp and was returning to camp when he heard my shots, and hurrying in the direction they came from, found the evidences of my good luck and hid the remaining fawn in the brush in order to witness my surprise over its disappearance.

As our water supply was now getting short we decided to strike camp the next morning, and the weather having cleared we had a pleasant journey back to the ranch and our supply of fresh venison was warmly welcomed as a pleasing change to the regular fare of coffee and bacon. W. E. S.

DUCKS ON BEAN'S LAKE.

LEAVENWORTH, Kansas.—It was a cold, drizzly March day, one on which most people would prefer to remain by a warm fire. But myself and companion Charley Gratz knew that such weather on the morrow would surely "be a good day for ducks" as all the knowing one's predicted. Accordingly we set out that afternoon for Bean's Lake, 15 miles up the Missouri River bottom. We were fully equipped to do justice to every unwary fowl that came within 75yds. of our guns. But luck that afternoon was against us, we found that the train did not stop at the lake, and we were compelled to get off at the small station of Iatan about three miles from our destination. It was now 7 o'clock in the evening and raining like fury, but we struck a place to put up for the night.

Next morning we got our luggage together and started across the fields for the lake, little knowing the quality of ground we would have to travel over. Of all things, Missouri bottom soil of a gumbo-sticky nature on a wet day is the worst thing imaginable to stick. Soon both of us were carrying about forty pounds of Missouri soil on each foot, and with a mile of this traveling, friend Gratz "caved." He weighs about 250lbs. when in prime condition, and soon his laborings sounded like the puffs of a wheezy old traction engine. But all these dangers braved, the lake shore was reached, and here we jumped into a boat and rowed over to Bud Kirkpatrick's, who keeps as neat and pleasant a sportsman's stopping place as can anywhere be found. Bud soon fixed us up with a good hot dinner and stories of the immense number of ducks now on the lakes. He said he had seen more, and more had been killed on Bean's Lake this spring than any in the past ten years.

Of course all this had an exhilarating effect and the next morning we were out at our stands before daybreak in readiness for the morning flight. We were on a slough connecting two parts of the lake. One of us took a stand behind a rail fence on the edge of the water and the other fixed up a blind further out in the slough.

The ducks did not seem to be present in such large numbers as we expected, but we managed to bring down about a dozen each by hard shooting and at distances from 50 to 75yds. The shooting was greatly marred by some greenhorn sportsman who blazed away at every flock of birds that came within a distance of 500yds., thus spoiling the sport for others. The game consisted mostly of redheads and teal with a sprinkling of mallards, baldpates and butterballs. I was fortunate enough to bring down a couple of canvasbacks. Many hunters at the lake say that these ducks were more numerous this year than they had ever known them to be.

The weather turned very cold during the day, and the game mostly left the lake for the river, but by shooting over decoys that afternoon we secured about twenty more. This shooting was elegant. The teal would come in to the decoys either single or in pairs, and nothing is more exciting sport than to watch them sail gracefully in, and then rising from behind your brush blind to let both barrels go at the birds.

Gratz is really a fine shot, and he is considered one of the best all-around shots in this part of the country, but he failed to do himself justice this time, getting about twenty ducks while the writer bagged twenty-five.

Seeing that the cold weather had hurt the shooting, the boys at the lake were bidden adieu and we departed for the city, not overloaded with game to be sure, but with the knowledge that even with our poor luck we succeeded in having a good time. We left all our luggage at the lake, intending to accept Bud's hospitality again the next week and get another whirl at the ducks. JR.

WOODCHUCKS CLIMBING TREES.—While out in the woods to-day my dogs treed a half-grown woodchuck. When I first saw him he was about 10ft. from the ground on the trunk of a chestnut tree at least a foot in diameter at the butt, in big woods, quite a number of rods from any cleared land. To see him climb I poked him with a brush until he went up about 15ft. further. He would climb a foot or two and then stop. I had to coax him pretty hard to make him go the last 4 or 5ft. He seemed to do all his climbing with his forefeet, his body he kept flattened close to the tree, his hindfeet seemed to slip and he used them more for a brace than anything else. Seeing he had worked so hard to get up I left him to get down as best he could.—E. T. J. (Bethel, Conn.).

CAMP IN THE CŒUR D'ALENE MOUNTAINS, Idaho, June 8.—*Editor Forest and Stream:* Last night, by the light of a pitch pine fire, I lay in front of my tent and read Orrin Belknap's graphic description of his buffalo hunt, in a back number of FOREST AND STREAM which I had just received. It took a deeper hold on me perhaps than it otherwise would, because three days before I had grasped the bronzed and sinewy hand that wrote it, and had listened with eager interest to several reminiscences, from the author's lips, of adventures afield in the days long agone. He is a genial, generous soul, is Uncle Belknap, and has a heart in him bigger than that of any buffalo he ever saw. He rode fifty miles recently to join me in an exploring expedition in the Pan Handle of this Territory, but an unforeseen calamity befell us that rendered it impossible for him to go; and many and bitter were the regrets we both felt and still feel at the disappointment. By the way, I carried with me on a six-weeks' cruise in that region an Osgood folding canvas boat, and for the information of any such as may think of using such a craft permit me to say that it proved the most useful piece of furniture in the outfit, not even excepting the camp kettle. We explored various lakes and rivers with it, making one cruise of twenty miles. Were out with it in some stiff gales, when the water was white on top, but "we got there just the same." The rag canoe is 12ft. long, weighs only 28lbs., shuts up like an accordeon, and rides on the hurricane deck of a government mule as serenely as a school girl on the front gate. I shall travel in the wilds of Idaho until Dec. 1, and if any reader of FOREST AND STREAM, who is a square-built, broad-gauge fellow and a sportsman, would like to chip with me for a month or two he is welcome to half my tent. A letter in care of Dr. C. S. Penfield, Spokane Falls, Wash. Ter., will reach me.—G. O. SHIELDS.

CALIFORNIA.—Vacaville, May 26.—The game of Vacaville is not very abundant; the only kinds in season now are hare, ground squirrel and English snipe. Wild geese and ducks went out of season in March. Trout law was out the first day of April, and I for one got "April fooled." Dove law will be out the first of June. Doves are not very plentiful. There are only three or four good places for them near here, and there are generally too many hunters in those places. Quail are more abundant than usual and promise good shooting this fall. Deer are too scarce to pay much attention to.—E. G.

INDIANA.—Russiaville.—The prospects for good quail shooting this fall are very favorable. Birds were quite plentiful last season, but few were killled during the fall on account of the scarcity of dogs, and as there was no snow during the winter they fared well, and now they can be seen and heard on all sides. As it has been quite dry so far this spring we may look for large broods of young. The law seems to be well respected in this locality.—A. C. J.

THE JOLLY CLUB.—Creighton, Pa., June 15.—At the annual election of the Jolly Hunting and Fishing Club, June 14, the following were elected: James R. Watt, President; S. S. Hudepohl, Secretary and Treasurer; L. E. Hanky, Humphrey Mount and W. J. Liebert, Camp Sergeants. The club expects to go into camp about the 1st of September on the banks of the Ohio River below Wheeling, W. Va.—S. S. HUDEPOHL, Sec.

SULLIVAN COUNTY, New York.—Parkville, N. Y.—While out for a walk on June 10, to see a snow drift, I saw a large covey of partridges, and a friend of mind saw another covey of 15. The prospects of a good hunting season are anticipated.—40-82.

Sea and River Fishing.

TO A FISHERMAN.

A HOOK,
A book,
A shady nook.
A wish,
A fish,
A sudden swish—
A sigh. But why?
Next day a lie.

CAPE BRETON TROUT WATERS.

THE following description of some of the Cape Breton angling streams is taken from a letter written to Jas. Campbell, Esq., to whom we are indebted for his courtesy in sending it for publication:

The river is about thirty miles in length and empties into Mira Bay, an arm of the Atlantic. Its waters are dark colored and sluggish, and throughout a great part of its length more or less brackish, owing to a certain amount of admixture which occurs when the tidal waters come in from the bay. Of the natural beauties of this noble stream, of the wild, precipitous and majestic though narrow gateway through which it enters the sea, of its calm, cosy caves and nooks, and of its magnificent stretches and lakelike expansions connected by inexpressibly enchanting "narrows," I shall say nothing further than to venture the opinion, based on pretty wide observation, that they are simply unsurpassed. Sport in abundance is here open to the votary of both the gun and rod, but it is of the latter that I shall speak at present.

A great number of streams, large and small, are tributary to the Mira, and they all afford more or less reward to the angler. The Mira may be fished for trout of all kinds at many points (of easy access from Sydney) along its entire course, from the time the ice leaves it early in May till well on in the season. As I have already said, trout in great numbers may be taken in all the tributaries, however small they may be, but as might be expected, it is to the larger branches that the sportsmen must repair would he seek the larger fish. These branches are as follows: Black Brook, Randall's Marsh, Trout Brook and Salmon River.

Black Brook, so called, is in reality a river, having its origin in a chain of lakes from which it makes its way through meadow and wood to the Mira, which it enters a short distance above its mouth. The fishing here is free and the trout are of large size, running from one to five and even six pounds. The best season for this stream is after the heavy July rains. The water is port wine color. Flies, (1) brown hackle, (2) red with brown and mottled turkey wing, (3) same as last, with blue mixed in with the brown. Sometimes I have taken fine fish, when the water is high, with gaudy salmon flies of various kinds. The fishing here ends late in the month of September, when the fish have ascended to a point known as "The Meadows," seven miles from Sydney.

Randall's Marsh is a narrow but deep brook on the south side of Albert Bridge. As I have not fished this stream of late years, nor indeed so far as I am aware has any one else, I can only say that in former years it contained fine large gamy trout.

Trout Brook is a fine stream with many deep pools. Season, from first week of June. Flies: (1) red fly, (2) red dun, (3) red spinner, (4) great red spinner, (5) coch-y-bonddu, (6) the soldier's palmer, (7) partridge hackle. Should the sportsman be fortunate enough to strike a good run of fish here, I don't know any place in the Provinces where a more enjoyable forenoon or afternoon may be had. On the occasion of my last visit but one to this stream, I took from two pools in about two hours one hundred and twenty pounds of magnificent fish; my smallest being one pound, two being well over five pounds and several over four. The water in this stream is lighter in color than Black Brook, and some wariness is necessary on the part of the angler.

Salmon River. My personal acquaintance with this place is limited, but I know that excellent trout frequent its waters, and I am quite sure that were it not for the proximity of other trout streams which afforded me all the sport required, I should be able now to recommend this place. I know of few prettier spots, and I am sure that large fish have been and may be taken there. For the reason first named I am unable to specify flies, but in general I should recommend any of those mentioned as killing in the other streams. I have quite made up my mind to avail myself of the first favorable opportunity that offers to practice the gentle art at Salmon River.

Shortly after the disappearance of the ice from our coasts salmon in great numbers and of the finest quality and size ascend the Mira. They are taken in nets by the inhabitants of the settlement and find a ready sale in Sydney and other places. It has long been axiomatic among our sportsmen that "salmon will not take the fly in tidal or brackish waters," and I believe it; nevertheless my belief has not been too strong to prevent my making the attempt, which I have done most faithfully time and again, but without result. This well known characteristic of the salmon explains the futility of salmon fly-fishing in the Mira. On one occasion while fishing at Albert Bridge early in the season, a gentleman of my acquaintance who was also profoundly engaged in the enjoyment known only to the angler, suddenly "struck" a fish which he landed without much difficulty, but it proved, much to his disgust, to be a "spent" salmon, a fish that, as is well known, will connive at anything—being in point of fact the meanest of the species.

In former years salmon were to be had in numbers in all the principal branches of the Mira, and an attempt is now being made to restock them from the Government fish hatchery at Sydney. If success follows this effort, and there is every reason to believe it will, these streams will soon teem with these prince of fishes. The only branch of the Mira in which salmon are found in quantities is the Salmon River, before mentioned. This stream is fresh, and it has always seemed unaccountable to me that no systematic attempt has ever been made to take salmon out of it with the fly. That it can be accomplished I have not the shadow of a doubt; it possesses all the requisites, such as fresh, pure water, etc., even to the salmon themselves. Why then has it no reputation as a salmon river? I am constrained to believe, simply because it has not been tried. True, a few sportsmen may have made desultory visits (probably at the wrong season), and meeting with no success, jumped at an adverse conclusion; but I think it may safely be said that there are salmon in this river for the first sportsman who seeks them, with due regard to the conditions and contingencies which attend investigations of this kind on a river before unknown.

The sportsman in Cape Breton should be provided with two rods and tackle to correspond. One should be very light and about twelve feet in length, and the other should be stiffish and about fourteen feet long. The latter will be useful in long reaches against the wind, and also in keeping a hooked fish near the surface, when to allow him to run would be to lose him among the snags (roots, branches of trees, etc.) which are so plentiful on the bottoms of many streams. For wading I am opposed to water-proof stockings, long boots and similar paraphernalia. I prefer stout, comfortably-fitting walking lace boots with double-ribbed Cape Breton wool stockings and loose knickerbockers. I always carry a change set and when I have finished my sport I change my clothes. I believe that by this plan the risks of cold and rheumatism are minimized.

I have thus given you a few hastily written and rambling notes on the fishing in and about the Mira. This letter simply contains a few hints; it does not pretend to be even a *vade mecum*; the stranger will therefore need further information, which can always be had, above all he must carefully observe and comply with certain conditions, such as suitability of season, etc., without which his outing, so far as fish are concerned, will result in failure.

WM. MCKENZIE MCLEOD.

THE FIRST SALMON'S SILVER SHEEN.

THE account given by your correspondent "M.," in a late number of your paper, of his experience on the Cascapedia, and the capture of his first salmon touched me in a tender spot and set me to looking over my score book, which contains a vast amount of memoranda which are to me very interesting. Each page and each entry calls up scenes and recollections of purest pleasures, and the brightest of all is the one that records the capture of my first salmon; and I am tempted to write you an account of that trip.

It was in February, 1881, that I received a letter from a good friend asking me to be his companion for ten days on one of the finest salmon rivers on the continent, the freedom of which had been tendered him by the Dominion government. That I accepted goes without saying, and one of the early days of June found us in Montreal, where we stopped over one day to buy the necessary supplies for our fortnight of camp life. We had made a careful estimate of our necessities, and armed with the memorandum sought out Crawford. Now, Crawford is a wily man and accustomed to deal with anglers who come to him with carefully prepared lists of things, which they have made up their minds they want; and before we fairly knew it he had us seated in his private office looking over his list, having summarily put ours to one side. The result was that our bill when presented was about three times as much as we had anticipated, and the goods when packed filled seventeen packages large and small. The Grand Trunk Railroad people, however, are kind to anglers and very little argument was necessary to persuade the baggage agent that it was all personal baggage, under 100lbs. in weight and limited in value to fifty dollars; and 10 o'clock P. M. found us in the sleeper en route for our fishing ground. The afternoon of the second day brought us to our destination so far as the railroad was concerned, although we had sixty miles of canoeing before we could reach our own river. We had estimated that three canoes would carry us and all our impedimenta, but thanks to Crawford and his wonderful catalogue we found that seven were necessary, and with that number we started up the river at noon on June 13. Three days of easy poling brought us to our destination and on the 17th we were ready to open our campaign in earnest.

My friend was an old salmon angler, I a novice; and I wished him to take the best pool, but he insisted that everything should be decided by lot, and the luck of a beginner was mine. I drew the best pool. The morning fishing brought nothing to either of us. In the afternoon I had gone to my pool, and anchoring near its head fished it very carefully for half its length without a rise, when my friend, having fished his water over without result, came down to see how I was getting along. Evening was coming on, and, as I should not have time to fish the whole of my water over, he, at my solicitation, anchored some distance below me and commenced to cast. Hardly had he got fairly at work before he raised and fastened a fish, which was gaffed after twenty minutes of sharp work. This was the first salmon I had ever seen killed, and the lesson, as I learned it, was of the greatest value to me very soon afterward, for hardly was the fish safe before I saw a great "bulge" on the water just where my fly was floating. With the instinct of a trout fisherman I struck at once, and so savagely that had the fish taken the fly I should have assuredly thrown him over my head or broken my tackle. As quick as lightning I cast again, but the warning cry of my canoemen, "take it away from him," prevailed, and I recovered my line and sat down to "rest him" for the regulation five minutes.

At last, with the consent of the tyrant in the stern of my canoe, I stood up and cast again; this time there was no bulge nor other sign, but to my surprise, without warning of any kind, my rod bent nearly double and the line began to run out as the reel played the quickest march I had ever heard. I had seen no fish, and for a moment was at a loss to know what had happened; but no one can be long in doubt under such circumstances, and it quickly dawned upon me that I was fast to my first salmon.

Thirty-five minutes of give and take fighting elapsed before that fish was safe in the canoe, but at last I had him; 37lbs. he weighed on honest scales, and killed without the least help or advice after he was struck. "Ah!" thought I, as I lay back in the canoe and admired him, "you are worth all you cost, if I never get another."

I have killed many salmon since that day, but have never seen just such a fish and never shall, for was he not my first? Two days of fishing over some eighteen miles of river yielded for me twelve fish averaging 23½lbs.; while my friend, who took a smaller number, took larger fish, his take averaging a pound more. SALMO.

RUTLAND, Vt.

BILLY.

BILLY is naturally shy and retiring in his disposition. Solitude offers him time and opportunity amply sufficient to speculate, cogitate and ruminate concerning all the little schemes and dreams of his young life. I might add parenthetically that anything that ends in "ate," or is near to "ate," Billy watches with deep solicitude, yes, and even covets for his inside pocket. When Cash broached the subject of a few days visit to the Adirondacks, Billy's head swelled and throbbed with visions of delight. Leaving Cash and me to kill the trout, he would wander listlessly under the firs and balsams, and over the waves of moss that softly but clearly direct the down-flow of the brook. With his back to care and time, he would sink into the hum and play of nature. See those shadows sporting with each other! Scampering around the scarred base of some woodpecker-ed log, they hesitate before the hot sides of a huge rock glistering in the sun; then fanned on by the nodding branches, they fly across a needly level only to tumble headlong into the brook, which laughs as it tosses their bruised outlines against its pebbly bottom. Breathless now, they rest under that overhanging bank and cool the heads of two or three big trout, sleepy after one of those spring suppers that are so apt to prove a little too hearty and rich.

"But, perhaps, this is not the kind of place we are going to try," says Billy, supposing that we had followed him all along in his visions, "and then, too, I am no fisherman. I never caught a half a dozen in my life."

"Well, it is time you should learn, and I know just where we can catch all we want," boasted (and I thought at the time—lied) Cash.

Billy pondered a moment and we saw that the inevitable was coming. "Say, I did catch a big one once, when visiting my cousin in"—"That's all correct, sweet William; save that till we start our first camp-fire; it will sound more truthful then."

Well, it all ended in our going; and Decoration Day morning found us at Lowe's, at the State Dam, near Malone, N. Y. I must give a short description, by Billy, of Malone before making my first cast. "Malone consists of one house situated on the main street just a few steps from the depot. The house contained, I suppose, the usual number of rooms on each floor, but I am not positive as to this. I only remember one distinctly—the dining room. Almost all dining rooms are made too large; the servant seems to consume hours before reaching the man who has traveled all night. This was not the case with Malone. Everything—and how all-embracing is that word when applied to a breakfast just on the edge of the woods—was within reach." Words failed Billy here sooner than his appetite did there. During our three days' fishing, whenever the trout forgot Billy's end of the boat, and they did sometimes, and Billy was given a moment or two in which to cogitate—no, ruminate is better—how his eye would brighten, his brow uncloud, his lips unfasten with that unmistakable "m'nap" of gustatory delight and "boys that beefsteak, those rolls and eggs." That's as far as he ever would get. He could not spare even the description of all those delicacies. The taste was still too sweet to lose.

Our guides were "three and all different," as the proud father said in describing his triplets. Adam came first, and very properly, too, for his name left no doubt as to the blue blood that flowed in his veins, and his fame as a caster of flies and a reeler of yarns made him eminently desirable for one end of a boat. He paddled Cash with one hand, whipped about flies of his own deceptive make with the other, all the time unwinding a string of variegated reminiscences that even opened the mouths of the trout in astonishment. A sudden pause in the story, a quick and accurate cast, the fly seated firmly in the fish's mouth, and Adam would reel the trout and his tale to an end. Adam had manufactured himself a deer-skin coat, soft and comfortable ordinarily, but once wet it tightened and became as lubricous as an eel. Lester had charge of Billy. He also wore a coat a trifle out of the ordinary run. Made out of a piece of discarded tenting, striped in green and red, and cut with more freedom than cloth, it gave Lester a decidedly brigandish air

which was heightened by a fly-covered felt hat of broad and undulating brim. Lester was an expert and enthusiastic angler, and at once began the task of inculcating Billy into the mysteries of "trunning the fly." Paddling up to where a tiny brook oozed out into the lake he informed William that there always a school of little trout to be found here, "first-rate fellows to practice on." Billy thrashed and yanked as all beginners do, but time and careful instruction brought the desired change finally, and they left the school of shavers in search of larger fish, college fellows at least, and Lester being somewhat of a wag, changed Billy's flies, remarking that professors were no good to catch such trout. Billy cast near a bunch of weeds and, doubtless thinking of rolls or beefsteak, allowed the flies to sink a foot or more underneath the water. Recovering himself with a sigh he raised the point of his rod and—swish! he had hooked a past-graduate at least! Lester grew excited, and issued his commands in a sharp and impressive way. Billy would wind up the line and then the trout would unwind it. When Billy was reeling in the line would hiss through the water, and when the fish was reeling out Billy would do the hissing. Nip and Tuck never saw such a battle before. Finally, on a short line, the trout started directly for the boat. It was then that the guide's true Adirondack blood came to the rescue. "Give him the butt, Billy!" yelled Lester. Ye gods! a Billy urged to use the butt! Lester had evidently never attempted to remove a tomato can from the stamping ground near Central Park. The trout was saved though, finally, and weighed nearly—but Billy will be delighted to tell you the whole story.

George, my man, was not made for a guide. He had altogether missed his calling. Large, loose-jointed and lazy he was more fitted to be guided, and by a strong arm, too, than to guide. He had a luxurious couch fitted up in his end of the boat, upon which he would loll by the hour. Resting upon his paddle over some place designated by him as "likely," he would lazily watch me cast again and again, assuring me that perseverance on my part would catch more trout than push or paddle on his.

We were three days on the lake and river and managed by hook or by crook (here synonyms of the fly and gentle earth worm) to catch about 50 pounds of trout. This number will not look large in print I know, but it did look satisfying and beautiful, as bedded in moss and ice, the trout were boxed for our friends in the city. The hills blue in the distance, the wooded circumference of the lake, the river sentinelled by the unshrouded ghosts of sapless trees rising everywhere from its surface, the air that we could almost taste as it swelled out our lungs, the drowsiness that fell and the vigor that returned with the sun, the sport that was tangible, all these helped to write a book of memories without which we would not, even Billy would not have sufficient foundation upon which to erect the plans and dreams of other days to be passed in forest and on stream. F'LIN.

SPEAKING OF TROUT.

CHARLESTOWN, N. H., May 27.—"Speaking of trout," the season has been late. Two weeks ago, the 13th, was a warm day and a perfect swarm of anglers was out and a good many trout were taken, but when, hearing of the success I tried a couple of Vermont brooks two days later I found nothing but brooks full to the brim of ice cold water.

Two more unsuccessful visits to brooks on this side of the Connecticut River followed on the 18th and 21st, but on Friday the 25th I tried again, going out four miles on the hills and striking the head of a little feeder, which flows into what is down on the maps as Great Brook, and undoubtedly was so before the forests were severely thinned out. The first start was not promising, the marshy cold spring basin in which the brook heads was full enough of water, but no signs of fish. Passing through a little belt of woodland I came to an open pasture on the sidehill, down which the brook plunges in a succession of rapids and cataracts, and here I began to find the trout in the swift water.

Basketing half a dozen, some 6in. long, in this pasture I came to a "bench" or plateau on the sidehill of primeval forest, full of fallen and decaying trees, through which the brook loitered sluggishly in wide, flat stretches, where I could see the fingerlings darting about, but got nothing worth basketing. Through this bit of woodland I came to another sidehill pasture, which yielded me half a dozen more, and I reached the main brook just before sunset.

My first cast brought me in one of ¼lb., which was followed by two more of the same size and three a little smaller, before I reached the long, willow-grown meadow, which stretched down to the farmhouse, where I had directed my young companion, who drove me out, to leave our horse, and meet me, after fishing the meadows each way.

As we had a long, hilly drive to take, and I knew I had all I needed for breakfast, I stopped fishing, and hurried down a side road to the house, where I found my companion, a city boy, had soon got disgusted with fishing, after going up over the ground, or rather water, I had just come down, and only getting one, and was up on the hill with my friend the farmer, looking at his cattle.

My friend H. told me that there had been somebody on the brook every day for a fortnight, and on the Sunday I spoke of he counted eleven fishermen.

A mile of steady climb brought us up out of the brook valley to the top of the river range of hills, just in time to see a 60-mile sweep of the Green Mountains, lighted up with the pink hues reflected from the fading, rosy clouds above them, and half an hour's quick trot, down hill every step, winding round the many curves of a more than usually well kept mountain road, brought us into the village, by the light of the just rising full moon, to find the lamps all lighted in the windows, and the labors of the day at an end. It did not take many minutes to dress that dozen and a half of trout, and stow them in the ice-chest, whence they appeared on table yesterday morning, to furnish a sweet breakfast for half a dozen people, and have "a few left over" for the cook.

VON W.

THE BLUEFISH SEASON has begun in earnest in the Great South Bay and other waters. One party last week caught 69 fish, weighing from 2½ to 5lbs. each, and many of them 3 to 3½lbs.

MAINE WATERS.

THE fishing season in the Maine waters is by no means over. Indeed to the fly-fishermen the season has but just begun. But the season of trolling and bait fishing for trout and landlocked salmon is about over. It may be said that this part of the season began late, for the ice was unusually late in getting out, as has already been chronicled. But this part of the season has also closed early. The departure of the ice was soon followed by south winds and warm weather, and it is safe to conclude that the great trout soon sought the cool and deep waters, where they always spend the hot months. Still the season has thus far been a wonderful one, considering that the trolling part of it has been very short. It has been wonderful in the number of trout, as well as landlocked salmon, caught, even if the size of the trout has not been quite up to the average. The record at the Androscoggin lakes hardly boasts of above eight pounds, up to this writing, but the number of really large fish—up to four and five pounds—has been great. It is probably true that the number of tons of fish taken out by fresh fish dealers has never been greater. The ears of the average fisherman are probably wide open when he hears me speak of fresh fish dealers, but he will pardon my obtuseness in being entirely unable to separate a man who goes to the Maine waters and fishes early and late, in order to get a certain number of pounds of trout to take home—in being entirely unable to separate such a sportsman from the fresh fish business. He certainly is in that business for the time, and he fishes for such people as either cannot or will not go to the waters themselves. The market fisherman does no more. Fishing for the camp table is one thing; fishing to put on ice and take out as trophies, is another thing.

But to the scores. Mr Edgar W. Curtis, of Meriden, Conn., had his usual good luck at the Middle Dam. He took, in not over two days' fishing, five trout, the united weight of which was over 50lbs. Still neither of the trout went above six pounds. This was a catch which well satisfied that gentleman, and he staid but a day or two longer. Loomin Sargent, of Upton, was his guide. Loomin says that he had an easy time, simply watching to see Mr. Curtis fish in the rapid waters below the Dam. Mr. C. D. Chase, of Northumberland, N. H., again had good luck, though last year was his first with the big trout, as he so readably told the FOREST AND STREAM last summer. Frank Dunn, of Andover, was again Mr. Chase's guide, and succeeded in rowing him into success with an eight-pound trout. There are other records of big trout and big catches at the Middle Dam, at which point the fishing has been unusually good this year. Mr. Hempstead, of New London, Conn., is there now for a stay of several weeks. This is about the twenty-ninth annual visit of the same gentleman to those waters, and he is very careful not to break the record. Does he go to Europe or to the South, as he frequently does, his trips or voyages are always timed so as not to interfere with the annual to the Androscoggin lakes. This year his friend, Dr. Scales, of New York, was with the veteran sportsman, and the Doctor got several large trout and a landlocked salmon that weighed about six pounds. His profession called Dr. Scales back early. Both these gentlemen are warm friends of the FOREST AND STREAM. Mr. Labree, of Webster, Mass., with his son and their friend Mr. Young of the same place, have made their annual trip to the head of Richardson Lake, or rather this was Mr. Young's first visit to these waters, but the fourth or fifth annual of Mr. Labree and his son. They had good success, taking in all about 180 trout, though the size of a part of them was not among the four-pounders. It is a curious feature that the trout began to run small at the head of the lake as soon as the south winds began to blow, mentioned above.

Mr. and Mrs. Shaw of the Andrews House, South Paris, Me., with their friends, a gentleman and his wife—I have not his name—took a week's outing on Richardson Lake. They camped in a lumber camp, just above the narrows. The ladies found it rather lonesome in the camp, so they spent nearly all the time on the water trolling. They caught a very large number of trout and burned their faces almost to a blister. But all the same they had a jolly time, and gained health enough to last them a year. A tremendous thunder shower, partly on the lake and scudding for camp, was one of their experiences. They were drenched to the skin, but no colds were taken.

A peculiar record was that of Warren W. Rawson, of Arlington, Mass. Mr. Rawson is a wealthy and a retired farmer. None are better known to the produce trade than he. He visits the Maine lakes annually; in fact, he was born in that State, like many another good man, who later in life has made a business mark and fortune in either Boston or New York. Mr. Rawson points out the old homestead from the car window, with true reverential feeling. He told us a story, in his unique way, about how he paid a visit to the place last year. "A woman lived there—not very rich," said Mr. Rawson. "My family are all gone. But I found out that she was something of a third cousin to me, and I gave her $5, as a remembrance of her relations. The woman was so happy and so surprised that she cried like a child. This completely upset me, and I like to have cried too. How to stop her I didn't know, unless it was to threaten to take the money away. So I told her if she didn't stop crying right off, I'd take the money right away! Didn't mean to, but I couldn't bear to see her cry!" But to Mr. Rawson's trout catch. It has already been published in the papers, but the reporter said, "A man named Rawson, of Arlington—" just as though a gentleman of Mr. Rawson's sterling qualities was not worthy of the title at least of Mr. Rawson. Well, Mr. Rawson was fishing one morning at Bemis Stream. He had on two hooks, one baited with a minnow and the other with a worm. "To give the trout their choice," as Mr. Rawson said. A trout that proved to weigh nearly four pounds took the minnow, and, as Mr. Rawson was playing him to land him, another trout, which proved to weigh eight pounds, seized the worm and was hooked. Then came the tug of war. Mr. Rawson's rod was broken, I believe, but both trout were landed after a fight of a couple of hours. This all happened before many of the other fishermen were stirring. Mr. Rawson was putting in practice his early habit of rising early to carry his big wagons of produce to Boston, before the other farmers got in.

One of the best catches made by a lady this year was that of Mrs. Wardsworth, of Blue Hill avenue, Boston. Mr. Wardsworth makes an annual trip to the Androscoggin lakes, rarely missing a season. This year Mrs. Wardsworth went with him. They were of the Eugene Clapp party, before mentioned in the FOREST AND STREAM. Mr. Wardsworth was completely set in the shade by his wife. She took an eight-pound trout. There are other scores and scores. I have only mentioned a few such as happen to fall to my ear. The season has certainly been a very interesting one, and the fly-fishing has but just begun. The Kineo Club, made up largely of Boston merchants of prominence, is now on its annual trip to Moosehead. Mr. J. Walter Sanborn took a 2¼lb. trout there Friday, a large fish for that lake on the fly. But this club does but little fishing other than with the fly. In a private letter Mr. Sanborn says that "the fly-fishing is expected to be better in a day or two, though they are rising fairly well now." Among the members of the club present this year are J. B. Thomas, Jr., John F. Nickerson, John P. Woodbury, Wm. S. Hills, Chas. E. Lauriat, J. Walter Sanborn, Henry H. Beal, C. S. Darrow, and C. J. H. Woodbury. SPECIAL.

TOMAHAWK LAKES AND LANDLORDS.

Editor Forest and Stream:

I have yearly been in the habit of seeking new places for fishing in the Northwest, and this spring I concluded to visit the Tomahawk Lakes in Wisconsin, and knowing at this season of the year many are seeking information regarding new places, I give it briefly:

These lakes have heretofore only been accessible over trails some twenty-five miles from Eagle River Station, and been fished only by Indians or by parties who camped upon the shores at great inconvenience. The Chicago, Milwaukee & St. Paul Railway Company has just completed an extension on its Wisconsin Valley division to Minocqua, and Messrs. Mann Bros. have built a hotel near the depot, immediately beside the shore of one of the lakes from which all are accessible, giving over one hundred miles of shore fishing. The country is so new that the ordinary maps give no idea of the number or extent of the lakes, which can be easily reached from Minocqua, in most cases through thoroughfares connecting these lakes sufficiently large for boats, and in only a few cases are portages necessary. The lakes are surrounded by high lands, generally quite heavily wooded. Mann Bros. keep as good a hotel as can be expected under the circumstances, are expert fishermen themselves, know the entire system of lakes and will cheerfully give all the information required. They have a supply of boats and guides and practice no extortion.

I have never visited any place I can so readily recommend as Minocqua for extent and variety of fishing, and I have had as much experience in fishing over the Northwest as most gentlemen have. The water in all these lakes is clear as crystal, and the fish are remarkably fine.

I went there May 21, in company of Geo. W. Hale, and we returned yesterday, June 3. During nine days' fishing we caught 46 muscallonge, 102 pike and 393 black bass. I sent home one muscallonge 46½in. long, and the pike averaged the largest I ever saw. We caught a number of small-mouthed bass weighing nearly four pounds each. We caught enough to satisfy us and to cause us to desire a rest. I propose to visit these waters again within ten days, when I think the fishing will be even better than during our stay. J. FRANK LAWRENCE.

CHICAGO, Ill., June 4.

Editor Forest and Stream:

As a sportsman keenly interested in preserving the fish and game of our country, it has occurred to me that a very effective method of doing this is to advertise the fellows who butcher fish and game for market, far and wide. I have done this in a number of cases that have come to my knowledge, and with seeming good results. A fellow who has been netting, spearing or trapping fish, or killing them with dynamite for the paltry sum he gets for them, or who has killed a doe with her young or butchered a poor famished deer by crusting after it in February or March, don't like to have his offenses advertised in the newspapers. If the sportsmen would combine and give the widest publicity to any acts of fish or game butchery that they happen to come across, much good might be accomplished.

Northern Wisconsin has the finest lake country in the world, but the great curse of it so far has been the native pot-hunters who have butchered the deer in the yards in the winter, and netted, trapped and speared the fish in the most wholesale manner. As fast as the new railroad lines have opened up new territory they have been followed by a race of small hotel keepers, who have indiscriminately slaughtered the game and fish during the close season, and then during the hunting and fishing season they have entertained for high prices the sportsmen who visit this section. One would suppose that their own interests would prompt them to do what they could to preserve the fish and game. Instead of doing this they kill the deer and depopulate the lakes and streams of their fish just as fast as they can.

There are several little towns along the line of the Milwaukee, Lake Shore and Western Railroad whose inhabitants have almost lived on the money left with them by sportsmen from abroad, and yet the natives combine to violate the game laws in the most outrageous fashion.

I have in mind now the firm of Mann Brothers, who have established a hotel and sportsmen's headquarters at the new town of Minoqua on the extension of the Mil., Chicago & St. Paul R. R. in Oneida county in this State. This firm holds itself out to entertain sportsmen, and yet during this last winter and spring the firm have had the Indians and certain white fishermen, netting, spearing and trapping fish for them through all the country around Tomahawk Lake. I have myself seen in the market bushels of fish with the spear marks on them, shipped there by this firm. I am certain that the firm has sent to market tons of bass, pike and muscalonge during the last winter and spring, taken illegally. The damage they have done in this way is incalculable. On the 1st of May, after having made what they could in this way, they opened their doors to the sportsmen, and have since been entertaining swarms of them. Many sportsmen who have learned of the practice of the firm have given them a wide berth. I have taken some pains to advertise them among the sportsmen of my acquaintance, and I should like to have the FOREST AND STREAM help me by publishing this article. I think that these vandals can be made to realize that they have committed

suicide in this way, and that it is the only way to bring them to their senses.

Owing to the clearness of the water in many of the lakes around Minoqua, spearing fish is easy, and the butchers have gone upon the spawning beds and the fish have been at their mercy. In Tomahawk Lake muscalonge are scarce owing to this extraordinary clearness of the water. In the Eagle chain of lakes the fish have escaped the spear, because of the water being black and discolored. The fish trap and the seine have been used everywhere with deadly effect. There is a sportsmen's club of large membership here in Wausau, and the members have determined to put a stop to the butchery of fish and game for market, if possible, and in another year the machinery of the law will be put into such condition as to make this work easy. We shall appreciate any help that we can get from the FOREST AND STREAM.

NEAL BROWN.

WAUSAU, Wis.

LANDLOCKED SALMON IN LAKE ST. JOHN.—The Quebec *Chronicle* says: "The opening of the railway to Lake St. John brought a new delicacy within reach of epicures, namely, the landlocked salmon, called by the Montaignais Indians 'Quinaniche,' which is only known to exist in that lake. Within the last few days quite a number of these fish have been received by rail from Lake St. John, being the first salmon of the season. They resemble the salmon in every respect, both in appearance and taste, except that they are not quite so large, running from 4 to 14lbs. in weight. This beautiful fish will without doubt attract multitudes of sportsmen to Lake St. John as the salmon proper has done to the Restigouche."

STRIPED BASS OFF RHODE ISLAND.—South Portsmouth, June 18.—*Editor Forest and Stream:* On Saturday last I took the first striped bass, 7lbs., that has been taken with rod and reel in this locality this season, using a live squid for bait. I have used squid, or an eel skin for a number of years during the first part of the season, and usually got my first bass with one of the two baits. I saw many fine bass, but the water is too clear for them to bite well yet, though the indications point to a good fishing season. I learn that the West Island Club opened for the season on Saturday.—W. M. HUGHES.

FISHING TACKLE AT MELBOURNE.—Messrs. Samuel Allcock & Co., the well known manufacturers of fishing tackle, of Redditch, England, are about to make a large display of their wares at the Melbourne Exposition, which will include all things used in angling, from rods, reels, and lines to shark hooks, down to the smallest hooks called "dust hooks," which are so small that 11,214 of them are required to weigh 1oz.

LARGE CATFISH.—Some large catfish have been taken at Indianapolis, Ind. *The People* says: "At Riverside Park on last Saturday night there were some remarkable sized catfish taken from trot lines. One weighed 15½lbs., two 11lbs., and one 6lbs. Jake, the boatman, took one that weighed 14lbs. It was a good night for cats."

TROUTING IN MAINE.—Newfield, Me.—Trout fishing has been very good in our brooks this spring, and some good baskets are reported.—LO.

MR. LANMAN'S DICTIONARY.

Editor Forest and Stream:

I have a friend who has a habit of saying: "What's the use of having friends unless you use them?" If you agree with this unselfish sentiment, please find a corner in your journal for the inclosed, so that my brother anglers may be getting ready to borrow all the dollars they may need. CHAS. LANMAN.

STORY OF A NOTED BOOK.

Among the bills recently submitted to Congress by the Hon. S. S. Cox is one which will strike the public as a novelty, and be of interest to those who have to do with the laws of copyright. It provides for paying Chas. Lanman the sum of $60,000 as remuneration for the infringement by Congress of his rights under the Copyright law, by utilizing his Dictionary of Congress in the annual publication of the Congressional Directory. The leading facts submitted in support of this claim are as follows:

That the first edition of the Dictionary of Congress consisted of 5,000 copies, and that up to the year 1867 the profits resulting from its sale amounted to $17,000.

That the Government printed three editions of the work, and that for every copy printed they paid the author a royalty of one dollar per copy, thereby recognizing the rights of the author under the law. That the chairman of a former House Committee on Printing recognized Mr. Lanman's rights by declaring in public debate, in 1867, that he had proposed to purchase his interest in the Dictionary for $50,000; and, also, that it was only a few months after that offer was made that the same chairman proposed and carried through the scheme to utilize the plan and much of the material of the Dictionary for the use of the Government.

That the effect of that action by Congress was to make null and void a publication upon which the author was depending for his support.

Some other remarkable facts connected with Mr. Lanman's dictionary are as follows:

It was the only production belonging to a private individual that was ever published as a public document by the general Government. And not less complimentary than the above is the fact that when Congress discontinued the publication of the dictionary, and a new private edition was issued, the Senate by a unanimous vote resolved to purchase outright a supply of the edition for the use of its members.

It may also be mentioned as a curious circumstance that while the National Library contains not less than 21 of Mr. Lanman's productions, the only one that ever gave him any trouble under the copyright law, was the Dictionary of Congress, and that trouble was caused by the direct action of the national law makers.—*Washington Post, June 2.*

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for the distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Cœur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

Fishculture.

AN IMPERIAL FISHCULTURIST GONE.

Editor Forest and Stream:

Among the many notices of the late Emperor Frederick III., of Germany, I have seen no mention of him in the character of a fishculturist. It was my privilege to talk with him frequently on this subject in 1880, when he was the Crown Prince, one of whose titles was "Protector of the Fisheries," while I was in charge of the fishcultural exhibit of the United States at the Berlin Fisheries Exhibition, in that year. His first visit was on the opening day and he then intimated that he would come again and look over our models when more leisure offered. Shortly after he sent word that he would come at 11 A. M., and promptly at the minute he arrived. I was greatly surprised at his knowledge of the details of our work and of several recent American inventions for hatching, and saw at once that he had been reading extensively on the subject and had more than the mere superficial information, which one would expect from a prince.

He came once, and sometimes twice, a week and studied models of our fishways, nets, and hatcheries, and on his third visit was considerate enough to ask that his visits be considered informal, and to request that I would not go to the trouble of dressing to receive him. The frequent visits of many royal persons caused much trouble in the matter of dress, for we always took a drosky to the hotel and arrayed ourselves in swallow-tails and white kids, and then went back trying to look as little like the waiters as possible. Then after the interview came another visit to the hotel for another change, and half a day was gone. Therefore his request not to do this showed a care for the convenience of others which marked his kindly heart. As my chief, Prof. Goode, and his assistant, Mr. True, were absent in Italy for some time, the entertaining of visitors fell to me, and they were not all as agreeable as the Crown Prince.

Once he brought the Grand Duke of Baden and had me relate the wonderful (to him) fact that poor people ate fish freely in America and that fresh codfish sold for from three to six cents per pound, and was sometimes bought for one cent, for in Berlin fish is a luxury only eaten by those comfortably off, and the supply is meagre. I somehow received the impression that the Duke did not believe all of this statement, at any rate he did not enter into the subject with as much interest as his friend showed. I tried to show the Prince our fine angling outfits, but it was evident that he did not care for that, for he went back to the Chase and the McDonald hatching jars and wanted to know about their merits.

Once when I remarked that he took great interest in fishculture he answered that he took interest in all things which were of benefit to the people, especially in those which produce food, and I thought that the coming of this man to the throne would be a great blessing to Germany, and that the arts of peace would receive as much attention as the art of war, but the reaper marked him before the throne was reached and a great and good man, whose power to do good was greater than that of any other, has gone and his loss is felt far outside his realm. FRED MATHER.

HATCHING THE STURGEON.

EXPERIMENTS by Prof. Ryder, of the U. S. Fish Commission, are now going on in the Delaware River to determine the best methods for the artificial propagation of the sturgeon. It is true that a few eggs have been taken in the Hudson River by the employees of the New York Commission, but the experiments were dropped because of a lack of parent fish to work with. The researches of Prof. Ryder has settled one or two points of deep interest to naturalists. He has discovered, among other things, that what have been considered as two species are really identical, one being an older fish than the other. As the fish grows older certain bones of the nose and head stop growing, while the rest of the body continues to increase in size, thus making a marked change in the appearance of the fish, and constituting what has been regarded as a separate species. The results of Prof. Ryder's work will be set forth in a monograph in the next report of the Commission. The propagation of sturgeon is deemed important. If the sturgeon fishery can be revived it will afford profitable employment to the fishermen of the Atlantic rivers at the close of the shad season. The sturgeon come into the rivers just about the time the shad go out and remain a month or six weeks. Now the fishermen at the close of the shad season have to seek other employment. In many places they go inland and work in the harvest field or in gathering fruit. If they could fish for sturgeon their condition would be improved.

Then it is held that the product of such fisheries would materially increase the food supply of the country. It is estimated that the work of carp culture, carried on by the Commission, has added 10,000,000lbs. of food a year to the national supply. The shad work of the Commission, Col. McDonald thinks, has added an equal amount of nutritious food to the annual supply. This addition to the resources of the country, he claims, has not only a direct economic value, but an indirect value in keeping down the cost to the people of meats and other foods. When the prices of meat are advanced beyond the means of the poor, or those in moderate circumstances, they are enabled to substitute cheap fish for meat. This competition, it is held, tends to keep down the prices of meat.

THE U. S. FISH COMMISSION.—Mr. R. E. Earll has resigned the position of assistant in charge of Statistical Inquiry in the Fish Commission, and Commissioner McDonald has appointed Capt. J. W. Collins to be assistant in charge of the Division of Fisheries, which will include the statistical inquiries. Capt. D. E. Collins, brother of J. W. Collins, who for the past eight months has been acting master of the Grampus, has been appointed to official command of that vessel. Mr. Geo. H. H. Moore is now Superintendent of Distribution. Mr. A. B. Alexander, who has been serving in the capacity of Ship's Writer on board the Grampus, has been detached and sent to the Pacific to join the Albatross as Fishery Expert.

SHAD HATCING.—The work of the U. S. Fish Commission with shad has closed for the season and although the official statistics have not been given it is known that about 250,000,000 eggs have been gathered, an amount equal to one-half of the aggregate product for the last ten years, and far beyond the dreams of the fishculturist ten years ago. This, taken with the fact that the cost of the work has not increased, show a great advance in methods. Some eggs were sent from the Chesapeake to Cold Spring Harbor, Long Island, and the fry were planted in the Hudson at Albany.

GATHERING EGGS AT SEA.—The collecting of floating eggs at sea is now being carried on by the Fish Commission schooner Grampus, which has her base of operations at Wood's Holl, but goes out into the Gulf Stream. The schooner is fitted with fine nets, which take up the floating eggs, and also with apparatus to keep them in good condition until she returns to Wood's Holl. It is hoped that this work will throw some light on the spawning habits of some fishes, of which little is now known, as well as upon some purely scientific questions.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone, Superintendent.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St. Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6291.**

THE INDIANA KENNEL CLUB'S DERBY.

Editor Forest and Stream:

The Indiana Kennel Club's second annual Derby for pointers and setters closed June 1 with 68 nomination, of which 38 are setters and 30 pointers. The entries last year were 10, of which 6 were setters and 4 were pointers. The entries were distributed from Maine to Dakota and from South Carolina to Manitoba. The number of entries far exceed the most sanguine expectations of the officers of the club and warrants them in believing that the trials will be the largest in America this year. The entries for the All-Aged Stake close Oct. 1 and the Indiana stake Sept. 1. Entry blanks are now ready for both stakes. Following is the list of entries for the Derby:

ENGLISH SETTERS.

DAISY HUNTER (John A. Hunter), orange and white bitch (Gath's Hope—Daisy F.), April 9.

DASHING CORA (T. W. Stoutenburg), black, white and tan bitch (Zippo—Ruby Buckellew), June 15.

CALIPH (C. G. Winchell), black and white dog (Kota—Topsy), Aug. 9.

TRENTON ROCK (F. Samuels), black and white dog (Change—Gladstone's Madie).

PICKLES (T. H. Ball), black and white bitch (Baby—Madame Drue), May 16.

BELLE S. (R. K. Norton), blue belton bitch (Zippo—Ruby Buckellew), June 15.

FRANK R. (D. L. Pickerel), black and white dog (Deck Roy Leyht's Girl), April 5.

FLEETY NOBLE (W. A. Alderson), black, white and tan bitch (King Noble—Elsie Belton), Feb. 4.

FLORA TEMPLE (A. J. Gleason), black, white and tan bitch (Zippo—Ruby Buckellew), June 15.

DASHING DIXIE (W. G. Peters), blue belton bitch (Dashing Dale—Dashing Model), Feb. 27.

BLUE DICK'S BONNIE (John Bolus), black, white and tan bitch (Blue Dick—Bonnie), Aug. 28.

BLUE DICK'S MOLLIE (John Bolus), black and white bitch (Blue Dick—Mollie Rake), Oct. 22.

RUSH (L. J. Hunter), dog (Jim Taylor—Flip), June.

HIGHBID (J. B. Stoddard), black, white and tan dog (Pegbid—Polly II.), July 3.

POLLYWOG (J. B. Stoddard), blue belton bitch (Pegbid—Polly II.), July 3.

BLANCO KOUTS (J. B. Stoddard), black and white dog (Pegbid—Polly II.), July 3.

SAM KOUTS (J. B. Stoddard), black and white dog (Pegbid—Polly II.), July 3.

PERRY T. (P. T. Madison), black, white and tan dog (Jack W.—Gladys), April 1.

ROYAL PRINCE III. (Thos. Johnson), blue belton dog (Royal Prince II.—Manitoba Belle), Jan. 6.

FRANK SIMPSON (Thos. Johnson), black and white dog (Mark J.—Cambria), April 23.

GAY NOBLE (J. I. Case, Jr.), black, white and tan dog (King Noble—Queen Vashti), Jan. 15.

RESOLUTE (J. I. Case, Jr.), blue belton dog (King Noble—Queen Vashti), Jan. 15.

LOTTIE C. (J. I. Case, Jr.), liver and white bitch (King Noble—Queen Vashti), Jan. 15.

NETA NOBLE (J. I. Case, Jr.), blue belton bitch (King Noble—Nellie Belton), July 19.

FLORENCE GLADSTONE (J. I. Case, Jr.), black, white and tan bitch (Gladstone—Flounce), Jan. 2.

DASH (W. H. Walliagford), black, white and tan dog (Mingo—Zoe W.), Jan. 27.

DON (W. H. Wallingford), black, white and tan dog (Mingo—Zoe W.), Jan. 27.

GATH'S SPARK (S. N. Socwell), lemon and white bitch (Gath's Hope—Lady M.), Jan. 27.

NETTIE B. (A. Bandle), black, white and tan bitch (Blue Dick—Daisy B.), April.

UNNAMED (J. L. Barker), black and white bitch (Count Rapier—Donna J.), June 8.

NELLIE REX (Joe Becker), black and tan bitch (Rex—Gip), April 5.

BLUE DICK'S BEAUTY (H. T. Peck), black, white and tan bitch (Blue Dick—Bonnie), Sept. 28.

FLOSSIE NOBLE (J. H. Peebles), lemon belton bitch (King Noble—Elsie Belton), Sept. 8.

MINNIE (Castleman Kennels), black, white and tan bitch (Royce—Jennie), September.

IRISH SETTERS.

NAT GLENCHO (J. T. Nattrass), dog (Glencho—Maid), Jan. 13.

DONEGAL BOY (C. P. Duerr), dog (Glencho—Maid), Jan. 13.

SYLPH (J. D. Calligan), bitch (Glencho—Ashmont Nora), Jan. 4.

GORDON SETTERS.

NELLIE DUANE (R. W. Wehrle), bitch (Briar—Fannie), March 13.

POINTERS.

BART (J. C. Sherlock), liver and white dog (Bodine—Meteor's Trinket), May 22.

TRINKET S. (A. Smithnight), liver and white dog (Bodine—Meteor's Trinket), May 22.

RICHMOND BOY (A. Smithnight), liver and white dog (Richmond—Hoosier Nell), Aug. 22.

NOBLE BANG (C. Whealen), liver and white dog (Bang Bang—Vanity), Aug. 14.

VAN BANG (C. J. Stoddard), lemon and white dog (Bang Bang—Vanity), Aug. 14.

JOYCE OF HALL'S ISLAND (O. W. Donner), liver and white bitch (Lad of Bow—Bloomo), March 24).

ZULU (J. E. Isgrigg), black dog (McDuff—Topsy W.), Jan. 12.

BERTRALDO (A. W. Whipple), liver and white dog (Cornerstone—Bessie Beaufort), May 29.

HOOSIER HARRY (H. A. Comstock), liver and white dog (Devonshire Sam—Gipsy), Feb. 24.

LAUNCELOT (Chas. Heath), liver and white dog (Graphic—Mealy), May 29.

GRACE (W. C. Mitchell), liver and white bitch (King Don—Queen Faust), March 9.

DUKE P. (W. P. Coleman), liver and white dog (Drake—Phœbe).

LILLY P. (W. P. Coleman), liver and white bitch (Drake—Phœbe).

DRAKE KING DON (L. R. Swift), lemon and white dog (King Don—Croxteth's Rival Queen), June 9.

TRINKET'S CHAMPION (John Bolus), liver and white dog (Croxteth—Trinket), April 21.

DEVONSHIRE ROSE (Devonshire Kennels), liver bitch (Croxteth—Hoosier Nell), Jan. 17.

PATTI OF NASO (J. R. Daniels), liver and white bitch (Nick of Naso—Patti M.), Aug. 8.

ORANGE GIRL (H. Hartley), lemon bitch (Sweep—Flotsam), Feb. 28.

NANTURA (F. F. Harris), lemon and white bitch (Nick of Naso—Portland Lilly), Aug. —.

NUTWOOD (F. F. Harris), lemon and white dog (Nick of Naso—Portland Lilly), August.

DUKE OF MAINE (H. F. Farnham), liver and white dog (Zippo III.—May F.), June 1.

SANCHO (J. A. Greenleaf), liver and white dog (Zippo III. —May F.), June 1.

SONNY (Castleman Kennels), liver and white dog (Rod—Belle), August.

GAL (Castleman Kennels), liver and white bitch (Rod—Juno), February.

TENNIE (Castleman Kennels), liver and white bitch (Rod—Nell), August.

SUE (Castleman Kennels), liver and white bitch (Rod—Nell), August.

PHIL SHERIDAN (Dr. J. E. Links). dog (Joe Pape—Nellie), June 17.

GROVER CLEVELAND (Dr. J. E. Links), dog (Joe Pape—Nellie), June 17.

ZELL (Dr. J. E. Links), bitch (Joe Pape—Nellie), June 17.

UNNAMED (J. B. Carnahan), color, sex and age not given (King Don— ——).

P. T. MADISON, Secretary.

PACIFIC COAST DERBY.

THE entries for the sixth Derby of the Pacific Coast Field Trials Club closed with 21 nominations, 16 English setters and 5 pointers. The trials will begin at Bakersfield, Cal., Jan. 14. Following is the list:

ENGLISH SETTERS.

BUDDIE K. (Chas. Kaeding, San Francisco), black, white and tan dog (Regent—Fannie K.), May 6.

BUFF AND BLUE (H. C. Chipman, Sacramento), blue belton and tan bitch (Harold—Sweetheart), Feb. 10.

DOLLY (F. H. Patzman, San Francisco), lemon and white bitch (Regent—Dot), March 1.

DONNA (P. D. Linville, San Francisco), black, white and tan bitch (Carl R.—Nell), July 21.

ENID (California Kennels, Sacramento), orange and white bitch (Gleam—Doe).

HELEN (California Kennels, Sacramento (blue belton and tan bitch (Harold—Janet), July 18.

HIRONDELLE (California Kennels, Sacramento), blue belton and tan bitch (Harold—Janet), July 18.

HUNT (Charles Kaeding, San Francisco), black, white and tan dog (Regent—Fannie K.), May 6.

LOVE KNOT (California Kennels, Sacramento), black and white bitch (Loadstone—Janet), Feb. 6, 1888.

PRIDE (Albert Peri, Marysville), black, white and tan bitch (Nixie—Pearl Laverack), June 6.

PRINCE ALBA (H. T. Payne, Los Angeles), white and black dog (Grouse II.—Princess Claude), March 19.

SHOT (Charles Kaeding, San Francisco), black, white and tan dog (Regent—Fannie K.), May 6.

SIGNET (H. T. Payne, Los Angeles), white and black dog (Grouse II.—Princess Claude), March 19.

SINGOLD (A. Abbott, Sacramento), blue belton and tan dog (Harold—Sweetheart), Feb. 10, 1888.

TOM PAINE (J. F. Holbrook, Los Angeles), white and black dog (Grouse II.—Princess Claude), March 19.

TRIFLER (James Unger, Los Angeles), white and black dog (Grouse II.—Princess Claude), March 19.

POINTERS.

JAMES DOE (Wm. Schrieber, San Francisco), white and lemon dog (Gladsome—Forest Queen II.), March —.

LADDIE (Wm. Schrieber, San Francisco), white and lemon dog (Tom Pinch—Lassie), April 11.

LOTTIE B. (G. W. Bassford, Suisun), white and liver bitch (Professor—Gracie Bow), July 8.

OLD BLACK JOE (Jas. E. Watson, San Francisco), black dog, age and pedigree not given.

ROBERTA (P. D. Linville, San Francisco), liver and white bitch (Robert le Diable—Young Beulah), March 5.

AMERICAN FIELD TRIAL CLUB.—Cincinnati, O., June 14.—*Editor Forest and Stream:* We are very much pleased with the large number of entries that have been made for the American Field Trial Club's Derby this year, and we believe we may safely count on more than sixty entries. These entries come from many different States, well distributed as to territory, and the trials will without doubt be a grand success. The judges will be men who are not interested in any strain of dogs or under any local influence where the trials are to be held. The club believes that the judges should be gentlemen who are not in any way on too intimate terms with breeders or influenced by sectional prejudices. The results of this year's trials will without doubt be as satisfactory to the club, the entries and to the public as were last year's races. Entries close July 1. For further information, entry blanks, etc., address the undersigned.—C. W. PARIS, Secretary and Treasurer, P. O. Box 718.

NEW JERSEY KENNEL CLUB.—At the annual meet- of the New Jersey Kennel Club held June 7, the following list of officers was elected: President, C. J. Peshall; Vice-President, K. E. Hopf; Secretary, Geo. L. Wilms; Treasurer, J. D. Shotwell; Board of Governors, the above officers with A. P. Vredenburgh, A. C. Wilmerding, Max Wenzel, E. R. Hearn, E. M. Oldham, Dr. Arrowsmith, P. C. Ohl, Louis Livesey, Floyd Vail, J. Von Lengerke and A. Thomas.

THE MORTALITY OF PUPPIES.

THERE appears to have been an unusual degree of complaint among breeders this year regarding the mortality of puppies. Numerous highly promising litters have died soon after birth, and their owners are at a loss to account for their untimely deaths. In England, as we judge from our exchanges, the loss has been much greater than in this country, and taken altogether the season has been a disastrous one in the annals of dog breeding.

By some these losses are attributed to "luck," others ayer that they are caused by some mysterious and occult disease, while still others lay it all to the weather. That luck—good and bad—is an important factor in the rearing of dogs no one can deny. A puppy unlucky enough to be the offspring of diseased and enfeebled parents, or one whose luck brings him under the horse's feet, or dumps him in the cistern, gives his owner opportunity to rail at fortune and to "curse his luck," but how would the case have been had the owner been lucky enough to have possessed ordinary common sense while selecting his breeding stock, or wisdom sufficient to teach him to provide against "unlucky" accidents by keeping his youngsters in a safe place. With the exception perhaps of a rare visitation of distemper, there is no disease that attacks unweaned puppies, and losses at this age, from any ailment, or from the most unfavorable weather conditions, are infinitesimally small among healthy, vigorous puppies that are properly cared for. The blame in the matter lies almost entirely at the door of the breeder, and his flagrant violation of the fundamental laws that govern the reproduction of life in all its forms is very properly punished by his failure to rear the ill-begotten fruits of a union cursed by disease or debility.

Take one example. X was the sire of a well-known sire Z. X was a gunshy dog, a numbskull and a fool. His son Z was a nice-appearing dog, and in the field was passable. He had the mange, and it was chronic. His constitution was broken down. His coat and condition always spoke plainly enough and told that he was no fit creature to father offspring. Yet he was very extensively bred to; he got a large number of pups, and as a matter of course, among so many there were some that lived; but a large proportion died young, and those which survived, though they grew to mature age and were to all appearances healthy, yet gave the intelligent observer an impression that after all they were not right. Now, this dog Z is either still living, or if dead his death occurred not long ago, yet of his numerous progeny few are known to be alive.

It is a depressing fact that gross indifference and carelessness are frequently shown in the choice of breeding stock. Field trial winners and specimens which win the money on the bench are in demand for breeding services, without ever a question as to their condition at the time of breeding, or as to their fitness as mates for each other; and if the puppies which come of carelessness in this regard live, it is by luck, and if they die it is by luck too. We venture to say that there is scarcely a kennel in this country where this mistake of breeding animals in an unfit condition, or unsuited to each other, has not been committed.

It was not always so. Perhaps the temptation was not formerly so great as it is now; but there was a time when breeders exercised in a greater degree common sense and common conscience in this matter, and the unhealthy offspring of unhealthy paternity or maternity were not made merchandise of. We recall an instance in our own experience, where we owned a bitch which was up to the age of one year feeble, and we thought that if she were bred it might be to her own physical advantage. She did have a litter of pups; and it did prove to be to the good of the bitch, but the offspring, every mother's son of them, were in due time destroyed, and the bitch was not bred again.

Not only are diseased and enfeebled animals used for breeding purposes but it is very often the case that the evil is greatly increased by the treatment of the bitch during pregnancy. Chained to her kennel or confined to narrow quarters, with scant opportunity for the exercise that her condition imperatively demands, it is no wonder that the puny offspring lack the vitality to enable them to successfully wage life's battle. Even with robust health a bitch cannot produce vigorous puppies under such conditions, and if they do not die outright they live a monument of weakness to proclaim the worse than folly that made them what they are. Entire exclusion from the breeding kennel of disease and debility, with proper food and care, and plenty of exercise for the bitch in whelp, together with the exercise of a little common sense in the care of the litter, will bring the "good luck" of health and strength sufficient to enable them to successfully resist the attack of disease and to withstand the effects of the most changable climate.

DOG TALK.

THE English Kennel Club, says the *Stock-Keeper*, "has given the champion subject considerable attention of late, which is natural, as it has engrossed the attention of the public for a long time. The club is said to have decided upon the following new conditions respecting the title of champion: Dog shows held under Kennel Club rules will be divided into first and second class according to their position as shown by the number of entries. To gain the title of champion, a dog must get sixteen points, eight in open classes and eight in challenge classes. A first prize in an open class at a first-class show will count two points, and at a second class show one point; challenge classes the same. Specialist Club exhibitions will take rank as first-class shows."

In an article on American dog shows in the *Stock-Keeper* Mr. Wade says: "The practice of benching a lot of dogs together that belong to different classes (upsetting all consecutiveness of numbers) has often been condemned. So has the permitting exhibitors to take their dogs on a promenade through the aisles at irregular hours, incommoding visitors and making it troublesome to find a particular dog. Why these abuses have not been restrained is hard to see. Both are to some degree a relic of the old slip-and-go-easy days from which we are slowly emerging. Undoubtedly the American public 'support' shows, but I am sorry to say that many shows fail to recognize what 'protection' the public are entitled to."

President Renfroe of the new Southern Field Trial Club reports that the club is booming; its support is coming from all over the country, from Maine to Texas. Tidings of a like cheering import come from the American Field Trials Club, and it is more than likely that this country will prove to be big enough to contain both of these clubs without any clashing of interest.

One hundred thousand dogs have been destroyed at the New York pound since it went into operation ten years ago. The dogs are drowned. The Paris dog law resembles that of New York; dogs are not to be allowed in the streets except in the leash. An offending dog will be seized, and unless wearing a collar with his owner's name will be destroyed.

The New Haven *Palladium* reports that two young ladies who were passengers on a train that passed through that city the other day, occupied seats on a trunk in the baggage car, having refused to be separated from a pet dog which the rules of the road prevented them from taking into a passenger car. They were on their way to Springfield.

A Newfoundland dog and a small-sized cur have made the passage over Niagara Falls, coming out with just as much wag to their tails as ever. Now some man who has less sense than a dog will perhaps try to imitate them.

The English specialist clubs are very generally offering prizes to be competed for at the coming Kennel Club show at Barn Elms.

The New Jersey Kennel Club will not hold a dog show at Waverly this year.

ALBANY DOG SHOW.

THE first annual dog show of the Albany Kennel Club was held at Albany last week. There were 290 entries and among them were a number of noted dogs but some of these were absent. The quality in some of the classes was excellent while in others it was hardly up to the average. The attendance was first-class and the club has made a handsome sum. Mr. Chas. H. Mason judged all classes. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, Wacouta Kennels' Wacouta Baldus, 2d, withheld. *Bitches:* No entries. *Puppies:* 1st, Wacouta Kennels' Wacouta Baldus; 2d, G. L. Thomas's Nina.

ST. BERNARDS.—ROUGH-COATED.—*Dogs:* 1st, Mrs. J. M. Nicholson's Mount Sion III.; 2d, Phelps Smith's Barney; 3d, J. Marshall's Tantallon. *Bitches:* 1st, J. Marshall's Lady Flories; 2d, withheld. *Puppies:* 1st, withheld; 2d and 3d, Phelps Smith's Cæsar and Kirmess. High com., Mrs. Albert Reuter's Franc Tireur.—SMOOTH-COATED—*Dogs:* 1st, C. H. Evans's Victor Leo; 2d, Miss Kate S. Pierson's Victor Hugo. *Bitches:* 1st, Mrs. Albert Reuter's Leila; 2d, J. W. Dunlop's Thisbe; 3d, F. P. Hawkins's Princess. *Puppies:* 1st, Dr. J. V. Sheppy's Don.

NEWFOUNDLANDS.—1st, E. H. Morris's New York Lass; 2d, T. McManas's Flush.

COLLIES.—*Dogs:* 1st, 2d and 3d, Chestnut Hill Kennels' Scotilla, Roslyn and Nullamore. Very high com., C. G. Van Der Volgen's Racket. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Lucila and Young Meg. *Puppies:* 1st, Chestnut Hill Kennels' Roslyn; 2d, withheld.

DEERHOUNDS.—1st, C. Rathbone's Norval.

GREYHOUNDS.—1st, withheld; 2d, H. Hunter's Fanny.

ITALIAN GREYHOUNDS.—1st, Mrs. M. A. Torrey's Lilly; 2d, C. D. Torrey's Tiny.

POINTERS.—*Dogs:* 1st, R. Leslie's Spot Dash; 2d, R. P. Bainbridge's Pedro; 3d, withheld. High com., E. H. Morris's Sancho, H. W. Ransom's Sancho and W. McGraw's Don. *Bitches:* 1st, E. H. Morris's Devon Nell; 2d, W. M. Keenan's Muggs; 3d, M. Boleaux's Nell. *Puppies:* 1st, O. T. Warren's Clytie; 2d, W. A. Hamilton's Hannah.

ENGLISH SETTERS.—*Dogs:* 1st, withheld; 2d, C. A. Stadler's Gloster; 3d, J. Greer's Ghost. *Bitches:* 1st, W. A. Gilbert's Judy of Troy; 2d, L. G. Williams's Beth; 3d, F. Nerdlinger's Lilly. Very high com., W. Tallman's Petrel III. *Puppies:* 1st, withheld; 2d, L. G. Williams's Chip.

IRISH SETTERS.—*Dogs:* 1st, E. Hannan's Rory; 2d, E. O. Van Alstyne's Romie; 3d, Mrs. M. E. Hudson's Rex. Very high com., W. M. Keenan's Tom and R. Green's Colonel. *Bitches:* 1st, withheld; equal 2d, Dr. C. E. Jones's Lady Kildare and C. E. Rockenstyre's Queenie; 3d, withheld. Very high com., M. Schrodt's Katie and Warren and Hamilton's Fluff. High com., W. B. Kibbee's Jannette. *Puppies:* 1st, J. J. Guiton's Fanny; 2d, W. McAllister's Juliet.

BLACK AND TAN SETTERS.—*Dogs:* 1st, E. H. Morris's Beaumont; 2d, Dr. F. L. Classen's Kent III.; 3d, R. A. Hamilton's Maida. Very high com., F. C. Ward's Duke. High com., C. Launsbach's Don. *Bitches:* 1st, E. H. Morris's New York Belle; 2d, C. E. Lansing's Topsy; 3d, C. Launsbach's Belle. *Puppies:* 1st, withheld; 2d, A. B. King, Jr.'s Duke.

IRISH WATER SPANIELS.—*Dogs:* 1st, J. F. W. Ross's Handy Andy; 2d, withheld. *Bitches:* 1st, J. F. W. Ross's Biddy Shaugraun.

FIELD SPANIELS.—1st, W. T. Paine's Bridford Ruby; 2d, E. H. Morris's Beau.

COCKER SPANIELS.—*Dogs:* 1st, G. Bell's Jersey; 2d, M. Spellissy's Rus. *Bitches:* 1st, M. Spellissy's Zelia II.; 2d, G. Bell's Queen of Spades. *Puppies:* 1st, G. Bell's Jersey; 2d, E. Wemple's Imp.

FOXHOUNDS.—1st, W. H. Colepaugh's Bess; 2d, C. W. Cornwell's Drive; 3d, E. Wemple's Hector.

BEAGLES.—Absent.

BULLDOGS.—1st, W. T. Tebbutt's Portswood Tiger; 2d, withheld.

BULL-TERRIERS.—*Doge:* 1st, W. P. Shaw's Jack; 2d, withheld. *Bitches:* 1st, C. Donovan's Judy; 2d, H. O'Brien's Nell; 3d, L. Evans's Yome. *Puppies:* 1st, C. Donovan's Amaland; 2d, T. Charles' Valley Boy.

FOX-TERRIERS.—*Dogs:* 1st, C. Rathbone's Beaverwyck Tippler; 2d, T. A. Stuart's Tim; 3d, C. W. Cornwell's Handy Mixture. Com., W. J. Bell's Prince. *Bitches:* 1st, 2d and 3d, C. Rathbone's Daze, Moonshine and Blemton Arrow. Very high com., J. J. Hooley's Nance. *Puppies:* Withheld.

IRISH AND ROUGH-HAIRED TERRIERS.—1st, Chestnut Hill Kennels' Breda Jim; 2d, G. Bell's Braxton Tantrum; 3d and high com., G. G. Cleather's Closh and Dan.

SKYE AND YORRSHIRE TERRIERS.—1st, W. Gentry's Ned; 2d, H. C. Cushman's Rascal; 3d, Miss Mary Martin's Fritz.

TOY TERRIERS.—1st and 2d, W. Green's Nellie and Dandy; 3d, Mrs. Libbie Staley's Nellie. Very high com., Mrs. Anton Gessl's Lilly.

SCOTCH TERRIERS.—Withheld.

PUGS.—*Dogs:* 1st, Mr. Edward Moore's Rowdy, Jr.; 2d, A. Sherman's Fritz. *Bitches:* 1st and 2d, G. Bell's What's That and Rustic Queen; 3d, F. J. Miller's Jessie. High com., A. Sherman's Rats, C. Kraus's Bella and Mrs. R. J. Deely's Topsy. *Puppies:* 1st, G. Bell's Rustic Queen; 2d, T. Fazakerly, Jr.'s, Bess; 3d, Miss Jean Guest Miller's Phonofer.

KING CHARLES SPANIELS.—1st and 2d, W. Phillips's Roscius and Duke.

BLENHEIM SPANIELS.—1st and 2d, W. Phillips's King Pippin and Grand Duchess.

POODLES.—1st, M. W. Reid's Fritz; 2d, Miss Bertie Pruyn's Fromo.

MISCELLANEOUS.—1st, withheld; 2d, H. B. Norris' Topsy.

SPECIAL AWARDS.

Best kennel, Chestnut Hill Kennels; collies, the same; toy spaniel, W. Phillips; largest entry, E. H. Morris; best mastiff, Wacouta Baldus; St. Bernard (2), Leila; English setter, Judy of Troy; second best, Gloster; Llewellin, the same; Irish setter, Rory; puppy, Fanny; bitch with litter, J. J. Smith's Rose; bitch in Albany county, Lady Kildare and Queenie; Gordon setter dog, Beaumont; cocker spaniel, Jerry; pointer bitch with litter, Muggs; bull-terrier, Judy; black and tan (2), Nellie; fox-terrier, Beaverwyck Tippler, Skye, Topsy; pug, What's That; bitch, the same; dog, Rowdy, Jr.; second best, Fritz; owned in Albany, Rowdy, Jr.; King Charles spaniel, Roscius; Blenheim, King Pippin; poodle, Fritz; silver-haired terrier, Ned; smallest, Lilly; largest litter, greyhound Fanny.

MASCOUTAH KENNEL CLUB.—*Editor Forest and Stream:* Inasmuch as many inquiries have been made regarding a proposed bench show in Chicago during the present year, I have been requested by the board of directors to inform you that the Mascoutah Kennel Club will be in no manner connected with such an enterprise. Any bench show given this fall would consequently be under some other auspices. We hope during the spring of next year to give a bench show, advertisement of which will be published in due season.—JOHN L. LINCOLN, JR., Secretary (207 Rush street, Chicago, Ill., June 9).

WASHINGTON DOG SHOW.—*Editor Forest and Stream:* Your report of the Washington dog show states in open pointer bitches, first and vhc. J. C. Schuyler's Bertie May and Blanchie May. Please make correction: Blanchie May (A.K.R. 5033) won first and her litter sister Bertie May (A.K.R. 5062) vhc.—J. C. SCHUYLER.

UTICA DOG SHOW.—Utica, June 18.—*Editor Forest and Stream:* Albany having claimed same dates as we did in last week's issue kindly note that we now claim March 12 to 15, 1889.—Fort Schuyler Kennel Club, (Jas. W. Dunlop, Pres.).

SOUTHERN FIELD TRIAL CLUB DERBY.—(Special Dispatch to FOREST AND STREAM).—Chattanooga, Tenn., June 19.—*Editor Forest and Stream:* Having been delayed in the printing of our running rules, and as it is important that they be distributed before the entries close, it has been decided to receive entries for the Southern Field Trial Derby up to July 10.—T. M. BRUMBY, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Royal Nibs. By A. C. Collins, Hartford, Conn., for liver and white ticked pointer dog, whelped May 19, 1888, by Pard (Bob—Fly) out of Bess (Shot—Bell).

Dom Pedro. By Chas. D. Cugle, Hartford, Conn., for orange tawny, white markings, rough St. Bernard dog, whelped May 28, 1886, by Pontiff (Matterhorn—Madge) out of Satellite (Monk II.—Sheila).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Mystic—Blue Boy. South Paris Beagle Club's (South Paris, Me.) beagle bitch Mystic (champion Lee—Juliette) to their Blue Boy (Regent—Mayfly), June 9.

Boss's Gretchen—Ilford Caution. T. G. Avery's (Buffalo, N. Y.) mastiff bitch Boss's Gretchen (A.K.R. 3547) to E. H. Moore's Ilford Caution (A.K.R. 2980), June 10.

Sal—Bob. G. W. Amory's (Boston, Mass.) pointer bitch Sal (A.K.R. 3653) to his Bob (A.K.R. 3649), June 9.

Toinette—Fritz. E. W. Jester's (St. George's, Del.) pointer bitch Toinette (champion King Bow—Sue) to C. W. Littlejohn's champion Fritz (A.K.R. 1351), May 22.

Queen Alice—George E., Jr. H. Hartley's (Pittsburgh, Pa.) English setter bitch Queen Alice to his George E., Jr. (Count Noble—Daisy Queen), May 24.

Nellie Sting—Brushton. H. Hartley's (Pittsburgh, Pa.) English setter bitch Nellie Sting (champion Sting—Novelty) to his Brushton (Pembroke—Queen Alice), May 6.

Diana—Tom II. N. Billings's (Dodgeville, Conn.) Gordon setter bitch Diana (champion Argus—Beauty) to F. M. Harris's Tom II. (Tom—Flora), May 14.

Muggins—Master Shina. J. A. Sprackliu's (Woodstock, Ont.) cocker spaniel bitch Muggins (champion Brahmin—Gipsy) to A. Laidlaw's Master Shina (Young Obo—champion Shina), June 9.

Gipsy II.—Master Shina. Harry Gordon's (Woodstock, Ont.) cocker spaniel bitch Gipsy II. (Beaver—(Gipsy) to A. Laidlaw's Master Shina (Young Obo—champion Shina), June 15.

Brunette—Bradford Harry. C. York's (Bangor, Me.) Yorkshire terrier bitch Brunette (Bob—Judy B., A.K.R. 3481) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), June 15.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Spangle. G. W. Proctor's (West Gloucester, Mass.) beagle bitch Spangle (Spottie—Nina), May 20, eight (three dogs), by his Tony (Elmore's Ringwood—Schellhass's Trinket).

Polly. T. E. Hibben's (Indianapolis, Ind.) beagle bitch Polly (Rasa—Sara), May 28, four (one dog), by his Rover (Thorn—Lucy Hinton).

Jessie. L. C. Roots's (Stamford, Conn.) collie bitch Jessie, June 1, seven (three dogs), by A. R. Kyle's Royal Monarch (champion Rutland—Ruth).

Claymore Crux. J. L. Lincoln's (Chicago, Ill.) collie bitch Claymore Crux (Rob Roy—Blackberry Girl), May 21, eight (one dog), by H. J. Cobb's Laddie (Robin Adair—Flora).

Belle. David Plummer's (Cape Elizabeth, Me.) foxhound bitch Belle, June 7, nine (three dogs), by A. M. Gerry's Drive (Roderick—Nellie).

Bess. F. C. Walker's (Hartford, Conn.) pointer bitch Bess (Shot—Bell), May 19, eight (four dogs), by A. C. Collins's Pard (imported Bob—Fly).

Daisy. Alex. Wynkoop's (Leesburg, Va.) pointer bitch Daisy (Joker, Jr.—Fussy), June 6, six (two dogs), by his Shakespeare.

Dainty. Dr. H. Montague's (Detroit, Mich.) pug bitch Dainty (Thunder—Tantrums), June 13, five (four dogs), by H. C. Burdick's Port (Santa Claus—Judy).

Flora II. Lorenzo Daniels's (New York) smooth St. Bernard bitch champion Flora II., June 13, eight (four dogs), by K. E. Hopf's champion Hector.

Alpina. Lorenzo Daniels's (New York) smooth St. Bernard bitch Alpina, April 27, nine (seven dogs), by T. B. Lee's champion Victor Joseph.

Swiss Flora. Lorenzo Daniels's (New York) St. Bernard bitch Swiss Flora, June 11, nine (six dogs), by L. C. Wachsmuth's The Baron.

Princess Mix. S. M. Nash's (New York) English setter bitch Princess Mix (Druid—Jolly May), June 6, six (three dogs), by D. T. Kennedy's Prince Bob (Goodsell's Prince—Lorna Doone).

Nellie Dale. Ravenswood Setter Kennels' (Braintree, Mass.) English setter bitch Nellie Dale (John Staples—French's Daisy), April 29, nine (seven dogs), by their Dash Boy (Dash III.—Donna).

Paris Queen. G. W. Proctor's (West Gloucester, Mass.) English setter bitch Paris Queen (champion Paris—Miss Twilight), March 15, ten (seven dogs), by his Count Gladson (Royal Blue—Modjeska).

Meg. C. F. Kenerson's (Hingham Centre, Mass.) Irish setter bitch Meg (Grouse—Kate), June 2, eleven (eight dogs), by his Tim (Shamrock—Dr. Russell's Peg).

Noreen II. J. F. Dwight's (Weymouth, Mass.) Irish setter bitch Noreen II. (Elcho—Noreen), May 8, eleven (six dogs), by Kenerson's Tim (Shamrock—Dr. Russell's Peg).

Bradford Gladys. A. Laidlaw's (Woodstock, Ont.) field spaniel bitch Bradford Gladys (champion Chelmsford—Bridford Negress), June 14, seven (four dogs), by J. Gamlin's Lad o' Devon (Toronto Beau, A.K.R. 189—Toronto Jet, A.K.R. 860).

Lou. F. E. Curtis's (Simcoe, Ont.) cocker spaniel bitch Lou, June 7, five (three dogs), by his Giffer (Zeo—Nina).

Frisk. Jas. White's (Woodstock, Ont.) cocker spaniel bitch Frisk (champion Brahmin—Molly), June 10, seven, by A. Laidlaw's Robin (champion Obo II.—Woodstock Dinah).

Jilt. Lorenzo Daniels's (New York) smooth fox-terrier bitch Jilt (A.K.R. 529), April 14, two dogs, by Mr. Bunker's Trump.

Surrey Nan. Lorenzo Daniels's (New York) smooth fox-terrier bitch Surrey Nan (A.K.R. 1902), May 24, three dogs, by Mr. Howard's Sprig.

Floss. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Floss (Dreadnaught II.—Maggie), June 15, four dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Trumpeter. Lemon and white and lemon ticked beagle dog, whelped Dec. 18, 1886, by champion Bannerman out of Zora, by W. L. Mann, Elizabeth, N. J., to Associated Fanciers, Philadelphia, Pa.

Chic. Black, tan and white beagle bitch, whelped Sept. 10, 1887, by Cameron's Racket out of Mottle, by W. L. Mann, Elizabeth, N. J., to Associated Fanciers, Philadelphia, Pa.

Tom II.—Nera whelps. Black and tan Gordon setters, whelped February, 1888, by Wm. Buchan, Globe Village, Mass., one each to Dr. S. H. Blodgett, Cambridge, Mass.; Geo. McMillan, Detroit, Mich., and B. F. Rodgers, Lawrence, Mass.

Master Shina—Gipsy II. whelp. Black cocker spaniel dog, whelped December, 1887, by Andrew Laidlaw, Woodstock, Ont., to C. S. Mead, same place.

DEATHS.

Lou. Red cocker spaniel bitch, whelped Aug. 17, 1887 (Robin—Devon Beauty), owned by A. Laidlaw, Woodstock, Ont.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

G. A. W., New Orleans.—I have a setter bitch pup, 10 months old, which I have lately turned over to a trainer. He reports that she has a malady in the left leg similar to the St. Vitus dance; says that dog's nose is dry and hot. Gave her a purgative yesterday and this morning she ate very heartily. No traces of worms. Gets plenty of exercise. Do you think it is distemper? Ans. The symptoms you describe are not sufficient to make a diagnosis of distemper. From the age of the dog it looks more like worms. Keep the bowels open and give 5grs. of quinine night and morning for four days. Chorea is common in dogs, but not limited to one limb, as in this case.

J. G. S., Brooklyn.—I have a hound puppy 8mos. old and would like to know what ails him? There seems to be something the matter with his ear, he keeps scratching it all the time and rubs his head on the ground, and is continually shaking his head; it seems to be on one side only. I have looked in his ear but can see nothing; and if I am not mistaken I think he shows signs of distemper coming on. Ans. Canker of the ear. Get the following:

R Bromo chloral	ʒi
Tr. opii	ʒi
Aq. q. s. ad	ʒi

Mix. Sig. After cleansing and drying the ears let a few drops fall into them. Do this morning and evening.

G. E. B., San Francisco.—I have a setter pupy, about 8mos. old, that has within the past two months developed an unaccountable weekness in his legs, accompanied with a severe twitching or jerky motion in one of his shoulders and chest; at a little distance has the appearance of having a sharp attack of hiccoughs. To my knowledge he has had but two fits, both very slight, but immediately following the last the above symptoms developed. His appetite is good, coat in fine condition, in fact with the exceptions noted, he is to all appearances in perfect health. Ans. Your puppy probably has worms, the twitching and occasional fits being due to reflex irritation from the intestines. Purge with full dose of castor oil, tablespoonful, and follow with 30grs. of powdered areca nut made into a large pill or bolus. Note the passages subsequently.

JOHN W. JENNER, Ithaca, N. Y.—My setter commenced with a bad cough, vomiting considerably, and has grown very thin. His hair looks rough, eyes run; he seems to breathe through his mouth, and from appearances has a cold or some kind of a distemper. Has been ailing for about ten days and has grown very poor. When exercised during the afternoon or evening is sure to be worse the following day. Ans. Your dog has the distemper. Give 3 drops tincture of aconite every three hours until the fever abates. Give 5grs. of quinine morning and evening in gelatine capsules concealed in a bit of meat. Quarantine the dog. Give fresh bedding every two days and burn the old. Give teaspoonful of brandy in a little water with the aconite. [This inquiry is dated April 30. It was replied to by mail, the letter being directed to the address given, and in due time has been sent back by the postal authorities as unclaimed.]

A. N., Baltimore.—The whole upper part of my dog's nose seems to be peeling off, and the hair has fallen off on a place about 2in. long by ¾in. wide, right on top of his muzzle, just above the nose. His general health seems good, he eats the same as he always did and is bright and plays around the same as usual. The place where the hair has fallen looks slightly puffed, but when touched it does not seem to hurt him, but he has a sort of sniffling or jerking of his right nostril, as if there was something in it hurting him or stopping it up. There seems to be no discharge of matter from the nose, but a little water-like stuff comes out. His nose to the touch feels cool. Ans. There may be some trouble in the nostrils to account for the external trouble. Careful examination by a veterinary would settle this point. If it is simply a skin disease use the following ointment and give Fowler's solution of arsenic, four drops night and morning in the food.

R. Ung. zinc oxid	ʒiss.
Ung. diachylon	ʒiss.

M. Sig. External, twice daily after cleansing and drying.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE PAINE—BENNETT MATCH.

NO settlement has yet been reached in the curious jumble into which the pistol contest between these two crack shots has revolved itself. Secretary Shepherd, of the N. R. A., has given one audience, but he is acting as Post Adjutant at the Peekskill camp during the present week. Tuesday next, June 26, has been fixed as the date for the hearing of all parties, and it is likely that the Secretary will make a quick and sharp settlement of the whole matter. Already Paine has engaged Abe Hummel as counsel, and there is prospect of a court set-to after the N. R. A. hearing is over. On June 11 Mr. F. E. Bennett, accompanied by his judge, Mr. J. B. Fellows, and Mr. Gould, of the *Rifle*, called at the Boston *Herald* office to demand the stakes as awarded to Mr. Bennett on Saturday, June 9, by Referee Bull. Mr. Fellows, acting as spokesman for the party, endeavored to explain that Mr. Paine did not enter formal protest against Referee Bull's decision. He was informed that in a telegram to the *Herald* Mr. Paine did formally protest, and that, according to the articles of agreement, the secretary of the National Rifle Association must decide the question at issue. Mr. Fellows then offered to give bonds for the $2,000 stake money pending the decisions of the secretary above referred to, and he was informed that his offer would be taken under advisement, and at a later hour was informed that legal advice had been asked in the matter, and the decision was not to pay over the money.

"Do I understand that I will never get the stake, said Mr. Bennett, "even if Mr. Shepherd, the secretary of the National Rifle Association, decides in my favor?"

"That will be decided when Mr. Shepherd gives his decision," was the reply.

"Well, I suppose I will never get the money I won fairly," said Bennett; "that is about all there is to it."

"The *Herald* wants to do justice to both sides," was the reply, "and it would not be right to anticipate a decision by giving away the stakes."

Mr. Bennett and his friends then left the *Herald* office, saying as they were going out that they would hurry as much as possible Mr. Shepherd's decision and be done with the matter. They hoped Mr. Paine would be sportsman enough not to protest the paying of the money if Mr. Shepherd decides that he has lost.

Each side is busy quoting rule and precedent to sustain their respective positions. The conditions of the match were given in the FOREST AND STREAM of April 26, and were very simple. So far as the N. R. A. rules go there is but one reference to revolver sights in the conditions of the revolver match of the last fall meeting. It requires "plain open sights sufficiently strong for service purposes." On the other point of this protest, Bennett's slowness in shooting, it is in evidence that the grand total of his 600 shots was fired within a total of 600 minutes.

Under Article X., Shooting, paragraph 6 says: "In each match of the annual meetings, except where otherwise stated, the squad or team assigned to each target will be required to commence firing at the time named on the score card, and to continue firing at the rate of one shot per minute until the completion of the score." And paragraph 15 says: "In all competitions, unless otherwise provided by their terms, competitors will be allowed one minute to each shot."

These are all and the only references to the question of time in the N. R. A. rules. The Boston *Globe*, of which Rifleman Gould is shooting editor, says of this dispute:

"According to the rules of the National Association the protester must make his protests in writing and in duplicate form within two hours after the occurrence.

"Mr. Paine's judge did not serve a notice until nearly twenty-four hours after, and then not in duplicate, and no written notice was served on Mr. Bennett or his judge up to the present time, hence the protest of Mr. Paine's judge was invalid.

"In regard to sights, those used by Mr. Paine and Mr. Bennett were put on the market over a year ago. Riflemen were anxious to know if they would be permitted at Creedmoor, and wrote to the Secretary of the National Association for information. He responded that they would be allowed in revolver contests, and sights precisely like Mr. Bennett's were used at the last annual meeting at Creedmoor, and it is a rare thing to find a fine revolver shot who does not use such sights. They are permitted by every club in America.

"In regard to time consumed. By the conditions of the match Mr. Bennett could consume as much time as he desired. Men who contest at the various rifle ranges in America, when they are making a big score, frequently find that they are getting 'rattled' and stop shooting for several minutes, sometimes for half an hour, which is permitted.

"The N. R. A. rule applies to team shooting only and in special matches. If one member of the team desires more than a minute to shoot his shot he is allowed it, and some steadier shot makes up the overtime by consuming only half a minute. It is at the rate of a shot a minute, not an actual minute for each shot. If there are five men to each team and 10 shots for each man the team is allowed 50 minutes to do its shooting. There were no provisions for time in the Paine-Bennett match, and Referee Bull was right in disallowing Mr. Paine's protest. If the conditions had been as the team rule of the National Rifle Association reads, at the rate of one shot a minute, as the match called for 600 shots and these shots counted as one continuous score, Mr. Bennett would be permitted to consume 600 minutes or 10 hours. A portion of the time he shot very rapidly, the last 100 shots being fired in 18½ minutes, and he did not occupy the amount of time if he was shooting on time rule.

"It has been shown that Bennett in his practice nearly every day scored over 900 points and on one day aggregating 915, his average being 902 points. C. F. Babcock, the range keeper of the Narragansett Gun Club, of Providence, where Mr. Paine did his practicing before the match, stated to a number of Boston riflemen on Saturday that Paine's best 100-shot score was 901 points. Mr. Paine learned what Bennett had done in practice for the first time when shooting the match at Springfield. Thus with Bennett's beating three successive days settled Paine and he grasped at the last straw and protested."

Mr. Milan W. Bull, the referee, is out with an interview and makes a point on Chevalier Paine when he says: "Rule 7 of Sec. 10, headed 'Shooting,' says: 'Competitors retiring from matches forfeit all claims.' The articles of agreement also stated that 100 shots a day should be fired for six days. This Paine did not do, and moreover, refused to shoot after being ordered to do so by the referee. Bennett shot out the match, and is entitled to the stake on that ground alone. As regards the protest filed by Paine it was not properly made, as the rules say that all protests must be in writing and in duplicate, one copy of which shall be furnished the party protested. The protest must be made within two hours of the occurrence objected to. Paine's protest was filed 24 hours too late, and is therefore illegal. I claim that by the wording of the agreement either of the contestants can fire as slowly as he pleases, provided he does his hundred shots a day."

CANADIAN MILITARY PRACTICE.

MILITIA general orders, issued on the first of the present month provide a system which has long been a great deficiency in the system of home troops. The *Canadian Militia Gazette*, a sharp and capable critic, does not find it altogether satisfactory, and says:

"In future the men of the permanent corps are—having fulfilled certain conditions—to fire from 90 to 120 rounds annually, at distances varying from 50yds. to 600yds., the smaller number of rounds being for the smart men who are able at once to make passable shooting, and the extra thirty to be spent if necessary in training those who do not come up to the set standard.

"First of all there will come position drill and firing with blank cartridges. The attack upon the target will be made at only 50yds. distance, and the soldier having, in a standing position, fired five rounds and made at least eight points, will then be considered qualified to proceed back to 100yds.; should he similarly qualify there he next tries 150, then 200, 400 and 500. If he succeed—with or without the help of the prescribed marginal allowance of ammunition—in making eight points in any series of five shots at each of these ranges, he will pass on to the second stage, and be further instructed; if he fail to make that number of points, his practice ends. That is where one of the defects of the scheme comes in. The man who fails in this simple first stage is the man most in need of further instruction and practice.

"The second stage, for those only who qualify in the first, consists in firing from ten to fifteen rounds at 500yds., and, if twenty points have been scored, a like allowance at 600yds. Those who can't score twenty points in fifteen rounds at 500yds., shoot no more for a season; those who fall short of twenty points at 600 are checked there. Those who stand both tests pass into the third stage, and fire thirty rounds more at 200, 500 and 600yds., ten each range.

"The man who goes right through to the end of this programme will have acquired a fair insight into what hitherto were perhaps erroneously considered the mysteries of rifle shooting. But it is to be feared that with the scheme laid down in the general orders carried out to the letter, there will be comparatively few men who will ever get to the third stage. The system will hardly be satisfactory until provision is made for the further instruction of those who fail in the initial stage. Just as the soldier is drilled and drilled again until he attains machine-like exactness in the manual, he should be made to devote time and attention to rifle shooting until he has attained reasonable proficiency in that much important branch of his military education."

NEW YORK SCHUETZEN.—The New York Schuetzen Corps, the oldest German sharpshooting association in this city, began their annual Schuetzenfest at Schuetzen Park, Union Hill, N. J., on the 13th. The genial Major Busch, the heaviest man in the corps and in this part of the country, for he weighed over 450lbs., has died since the last meet. Still many of the old boys were able to handle their rifles as ably as in old times, and Major Karl Klein and ex-President Landwehr ran up very respectable scores. The present officers are: H. Kleinecke, Captain; Bernhard Kumm, Fred H. Ehlen and Henry Decker, respectively Recording, Corresponding and Financial Secretaries; Fred Cook, Treasurer; Karl Klein, Custodian; Hermann Rapke, Adjutant; Dr. D. Meschendorf and Dr. Louis Wendel, Surgeons to attend to the wounded Schuetzen. While there is a great deal of target shooting the main feature of the festival is the dismemberment of a double-headed wooden eagle that must be shot to pieces. The royal bird was considerably mutilated by the sharpshooters during the day. They began with the crowns. Each head of the eagle had a crown, and a third crown stood between both. This middle crown was brought down by Henry Peters, and then Geo. H. Wiesnberg and August Brunke shot off the right and left crowns. Bernhard Kumm knocked off the globe that the eagle held in one claw, and Chas. Bradley brought down the scepter from the other claw. F. W. Meyer and Wm. Wessel brought down the American and German flags, and Diedrich Lehnert and Wm. Millesdorf knocked off two of the rings. Fred. Schmidt shot off the right head. On the 15th the shooting went on. As guests of the New York Corps there were present large delegations from the New York Central Schuetzen Corps and the Hoboken and Newark Schuetzen Corps. After the shooting, John Gobber, of New York, was proclaimed "Schuetzen König."

NATIONAL RIFLE CLUB.—June 12.—Following are the winning strings in the National Rifle Club, held at Vernon, Vt., June 6 and 7. The length of string is given after all deductions for weight have been made. The riflemen had a good day to shoot on the first day of the meeting. The second day there was a tricky head wind which troubled somewhat. The meeting was well attended and all partirs were as jolly as ever, and separated with good wishes and "Hope you will be here in the fall. The medal given for the shortest aggregate of 50 shots was won by Wm. V. Lowe, with a string of 48⅝in.

First string: Lowe 8^{11}_{16}, Brockway 9^{1}_{16}, Park 10^{10}_{16}.
Second string: Brockway 10^{14}_{16}, Lowe 10^{15}_{16}, Cressy 11^{9}_{16}.
Third string: Lowe 9^{14}_{16}, Cressy 14, Brown 14^{5}_{16}.
Fourth string: Lowe 12^{3}_{16}, Brockway 13^{12}_{16}, Smith 17^{1}_{16}.
Fifth string: Lowe 7^{7}_{16}, Cressy 13, Park 14^{8}_{16}, Stephenson 14^{8}_{16}.—WM. V. LOWE.

THOMASTON, Conn., June 2.—Subjoined are the scores madt at our shoot this P. M., 200yds., off-hand, standard target, brigh light, with wind varying from 3 to 9 o'clock:

E Thomas	8	10	7	5	8	5	9	9	9	7	—77
Fred A Perkins	8	6	7	6	7	6	7	7	9	7	—68
W H Dunbar	8	8	3	6	7	6	8	7	4	8	—87
G P North	5	9	4	6	5	0	10	6	5	8	—57

June 9.—Bright light, with a strong wind at times from 8 o'clock:

E Thomas	8	5	8	6	10	8	8	9	7	8	—77
Fred A Perkins	6	7	6	8	10	6	7	7	7	9	—73
G P North	7	5	7	5	7	6	9	5	5	4	—60

OWENSVILLE, Ind., June 12.—The Owensville Ballard Rifle Team, American field target, 200yds. off-hand, National rules, gold medal:

J Montgomery	7	10	10	7	-7	10	9	7	7	6	—79
W Roberts	10	5	6	9	4	9	6	6	7	9	—71
R Speck	8	5	7	10	3	10	5	3	9	9	—70
McG Dougherty	9	10	8	5	6	7	3	6	4	7	—65

Average 70. J. Montgomery won medal.

BOSTON, June 14.—The firing points at Walnut Hill were comfortably filled to-day by the riflemen, and the scores made were very creditable. Saturday's scores:

Rest match, 200yds.

J Francis	12	11	10	12	12	12	10	12	11	12	—114

Lieut Edgell	3454543—28	F B Edgell	3232340—17—183
F B Thrasher	5334535—28		

NEWARK, N. J., June 14.—The meeting this evening, called by the International Sharpshooters' Union, was attented by delegates from the Our Own, Rutgers, Howards, Monroes and Outing Rifle Association. John Coppersmith was chairman and F. A. Freisenshner secretary. Mr. Coppersmith stated that the object in view was the arrangement for short-range team shooting under the management of the gallery clubs. He stated that clubs could suit themselves as to distance, targets and other conditions. The delegates thereupon decided to arrange for team shooting under the following conditions: Distance, 75ft.; rifle, .22cal.; 3lb. trigger pull; team to consist of five men each, clubs to be privileged to enter as many teams as they choose, but no man to shoot on more than one team; entry, $5 per team; half the teams to be winners and half losers.

NEW BEDFORD, Mass., June 12—The shoot for the handsome gold sharpshooters' medal offered by Lieut. R. H. Morgan of the City Guards to the members of the company came off to-day at the Bay View range. The distance at the shoot this year was 500yds.; in succeeding years it will be at sharpshooters' distances. A very strong cross wind was blowing in puffs at the time of the match.

Sergt Pope	3222535454—35	Pvt Bradley	4000024020—13
Pvt Gibbs	0024534245—29	Sergt Swain	0020500602— 9
Pvt Pope	0000238433—18		

Lieut. Morgan, who was present, made the following score:

Lieut Morgan	0 0 2 0 0 4 2 5 2 5—20

At 200yds. the following practice strings were shot:

Sergt Pope	0535434454—37	Sergt Swain	4253334453—36
Pvt Bradley	4534543444—40	Pvt Pope	5443533454—40
Pvt Gibbs	3443544244—37	Pvt Remington	2322223003—19

TOPEKA, Kan., June 7.—The following scores made by the Topeka Rifle Club June 7:

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE ILLINOIS STATE SHOOT.

CHICAGO, June 11.—Watson's Park, at Grand Crossing, presented a lively appearance this morning, when there was commenced the fourteenth annual tournament of the Illinois State Sportsmen's Association. As the two shoots of the day were for residents of the State only, the outside shooters were few in number, but the latter class are expected to be on hand for the free-for-all tournament which commences to-morrow. The State enthusiasts, however, were numerous, the attendance averaging well with previous years. The several local clubs of Chicago and vicinity were well represented, while the country town delegates were found here and there.

The first shoot of the tournament, and the shoot in which most interest centered, was the contest for the $500 Board of Trade diamond badge, emblematic of the individual State championship, and held by Dr. O. H. Britton, formerly of Champaign, now residing in California. The contest was at 10 live birds, tame pigeons, sprung from six ground traps at 30yds. rise. The birds flew well, the day and weather were perfect, and the sport exceedingly interesting during the progress of the shoot. There were sixty-seven entries and the score resulted as follows: Geo. H. Bangs 9, C. E. Willard 9, H. F. Orvis 6, George Kleinman 10, T. Laflin 10, O. B. Hill 7, R. B. Organ 8, W. G. Payson 9, Andy Dukes 8, T. L. Airey 9, W. Harbaugh 8, W. Cropper 8, W. J. Barker 10, C. E. Straw 9, C. E. Cahoon 9, R. E. Franklin 10, C. E. Riley 9, L. E. Brown 7, C. B. Dicks 5, A. Henry 7, C. S. Wilcox 8, L. S. Carter 7, J. R. Stice 8, Geo. Henry 6, W. B. Haurworth 9, N. K. Sardy 7, Abe Kleinman 8, J. Crossman 8, Charles Kern 5, Tom Stagg 7, Charles Morris 4, W. L. Wells 9, C. Beck 8, W. L. Shepard 9, D. Elston 5, T. T. Hollinger 7, R. J. Lewis 8, H. J. Fahnestock 6, Tom Miller 8, W. P. Mussy 2, G. T. Farmer 7, J. P. Card 5, A. W. Reeves 7, R. A. Tuttle 10, A. F. De Stiger 8, M. J. Eich 7, J. M. Hutchinson 9, B. E. Clark 6, W. W. Foss 6, G. W. Franklin 9, S. S. Dinger 9, C. E. Felton 6, William Kent 7, F. A. Place 8, Henry Sloan 7, S. Sharp 4, G. W. Randall 7, W. McDuff 10, L. Paus 7, S. E. Young 8, Dr. N. Rowe 6, L. M. Hamline 5, A. T. Lloyd 10, E. T. Ellicott 6.

There were 7 ties on 10s, as follows: The shoot was at 5 birds each man. Kleinman killed his 5 birds straight. Laflin missed his first bird and dropped out. Baker killed 5 straight. Franklin missed his first bird, likewise did Turtle. McDuff and Lloyd each killed their 5 birds. On the second shoot-off between Kleinman, Baker, McDuff and Lloyd, Kleinman killed 5 straight birds. Baker missed his first, McDuff his second and Lloyd his third. And much cheering Kleinman was declared the winner of the prize and the champion shot of Illinois for the year to come. As the hour was getting late it was decided to postpone the ties on 9s, 8s and 7s until morning.

In the meantime, on another portion of the grounds, was being shot almost an equally interesting match at 20 single Peoria blackbirds for the L. C. Smith silver cup, valued at $500. The distance was at 18yds. and the traps were 2 in number and of the revolving pattern. The score was as follows: W. G. Payson 15, F. Brown 14, G. H. Bangs 18, L. S. Carter 18, C. W. Sheldon 18, E. J. Brown 12, W. L. Well 18, L. E. Brown 8, F. Mooher 16, E. R. Reeves 13, C. Beck 13, R. A. Turtle 11, G. Henry 17, C. Strawn 16, W. Harbaugh 11, A. F. De Stirger 13, W. W. Foss 14, G. W. Franklin 12, T. T. Hollinger 13, A. W. Reeves 13, G. W. Randall 7, J. A. Sharp 9, J. P. Card 11, C. B. Decks 15, P. C. Bradley 16, J. R. Stice 19, W. E. Phillips 17, C. E. Cahoon 18, L. Paus 16, S. E. Young 12, W. E. Baxter 18, R. E. Franklin 18, Tom Laflin 15, Wm. Kent 14, L. L. Jackson 3, H. A. Foss 19, H. F. Orvis 15, A. Dukes 19, A. J. Lewis 13, M. K. Sardy 12, G. Planter 11, T. Blanchard 10, F. A. Place 16, R. B. Organ 15, H. A. Sloan 11, T. Miller 11, C. E. Felton 14, A. F. Lloyd 16, C. E. Willard 20, W. D. Haurworth 12, E. T. Ellicott 12.

The result was a complete surprise. It was generally thought that there would be no straight score and that those who tied on 19 would have to fight it out. Willard, who shot in the last squad, surprised every one by making a clean record and walking away the winner of the cup. The ties on 19 for second prize, which consisted of $50 cash, 500 loaded cartridges and a bamboo rod, were Stice, Foss and Dukes. On the shoot-off Stice won. The ties for third prize, $30 cash, 400 loaded cartridges and a Winchester repeating rifle, were eight in number. On the shoot-off Baxter won. Phillips and Henry divided fourth prize, $200 cash, 400 loaded cartridges and a bamboo pole.

The 14th annual convention of the Illinois State Sportsmen's Association was held at the Palmer House in the evening. Twenty-seven clubs in 15 cities and towns were represented by 65 delegates. It was directed that $100 be paid to Game Warden W. C. Manierre. A motion to pay $100 to Game Warden J. C. Pipins was referred to the board of directors. Dr. Charles Henry, of the Audubon Gun Club, of Jacksonville, moved to amend Rule 6 of the trap-shooting rules, so that it shall read: "The gun shall not be carried to the shoulder until after the shooter calls pull," instead of, "The gun shall not be carried to the shoulder until the bird takes wing." The amendment was carried to go into effect in thirty days. It does not apply to the present tournament. Chicago was selected as the place for the next tournament over Peoria.

The following officers were re-elected: President, Wilfred N. Low, Cumberland Gun Club, Chicago; Vice-Presidents, H. F. Orvis, Chicago, and Edward J. Brown, Quincy, and Secretary and Treasurer, William L. Shepard, Cumberland Gun Club, Chicago. The law and executive committee will be appointed hereafter by the president.

June 12.—The second day of the seventh annual tournament of the Illinois State Sportsmen's Association was cloudy and warm. The attendance was larger than on the previous day. The morning opened with the shoot-off for second, third and fourth prizes of the diamond medal shoot of the day previous. There were a large number of ties on 9s, but after two shoot-offs at 3 birds each man, there remained Willard, Cahoon, Haurworth and J. M. Hutchinson. They divided the prize—$50 in cash, 500 loaded cartridges, a revolver and a hunting coat. Third prize—$30 cash, 500 loaded cartridges and a bamboo rod—was divided by R. J. Lewis and W. P. Mussey. Fourth prize—$20 cash, 500 loaded cartridges and a pair of rubber boots—was captured by N. K. Sardy and Thos. Stagg. One of the three principal shoots of the tournament, a contest for teams of four men each from any recognized club in the State, at 10 air birds to each contestant, 30yds. rise, 5 ground traps, entrance price of birds only, was then begun. The first prize consisted of a large diamond badge and four small diamond badges, one for each contestant. Crack shots were numerous in the several clubs. The score was as follows:

Cumberland Gun Club, Chicago.

J Gardner	8	W W McFarland	10
G Farmer	8	H W Loveday	8—34

South End Club, Chicago.

J M Hutchinson	8	George Christians	6
C Riley	8	M J Eich	7—29

Lake County Gun Club.

N Lewis	6	F Sarther	10
G Eschneck	8	A Brebach	3—27

Calumet Hunting Club, Calumet.

F Grosskopf	6	F Tasmer	5
W Kruger	5	A Boeber	6—22

Lake George Sportsmen's Association, Chicago.

F A Place	9	R J Lewis	8
J Rumsay	9	R A Turtle	10—36

Blue Island Club, Blue Island.

G Airey	6	G Hosberg	8
L Luchtenmeyer	7	F Willard	7—27

Geneseo Sportsmen's Club, Geneseo.

A Henry	6	W Harbaugh	6
W H Cropper	7	T Laflin	9—39

Audubon Club, Jacksonville.

C Henry	9	G Henry	9
C Strawn	6	J R Still	9—33

Naperville Gun Club, Naperville.

C Sheldon	6	C E Cahoon	8
B Sherman	8	G H Bangs	10—32

The Gun Club, Chicago.

S Dingee	10	W P Mussey	8
H A Foss	8	C E Willard	8—34

Chicago Shooting Club.

Abe Kleinman	9	George Kleinman	10
R B Organ	10	W G Payson	10—39

Crescent City Gun Club.

R F Franklin	7	A Dukes	9
L S Carter	8	L E Brown	8—32

Audubon Gun Club, Chicago.

H F Orvis	10	W W Foss	9
C E Felton	8	John Kleinman	10—37

Le Moille Gun Club, Le Moille.

G Crossman	9	J Crossman	7
F Brown	6	A De Stiger	7—29

Peoria Shooting Club, Peoria.

George Hotchkiss	9	J O'Neill	9
W Haurworth	6	H Fahnestock	4—28

Evanston Gun Club.

G Beck	7	George Peterson	5
T Blanchard	7	J W Franklin	8—27

Mak-Saw-Ba Club, Chicago.

H C Buechner	8	C S Wilcox	8
G W Randall	8	W H Haskell	9—33

Grand Calumet Heights Club.

E C J Cleaver	7	J J Gillespie	5
C S Cleaver	9	A Hurlbut	2—23

Curiously enough there were no ties for the prize. The Chicago Shooting Club, killing 39 out of a possible 40 birds, capture the first prize. For the second prize the Audubon Club of Chicago claimed the honor with a score of 37. Third prize was given the Lake George Sportsmen's Association for a score of 36.

On another part of the ground the open tournament was commenced, shoots Nos. 4 and 6 on the regular programme taking place. Shoot No. 4 was a contest at 12 Peoria blackbirds, sprung from revolving traps at 18yds. rise. The score was as follows: Heicks 11, Benscotten 12, L. E. Brown 8, Gillespie 10, L. S. Carter 9, Borg 2, Metz 10, G. Kleinman 7, McMurchy 10, Fred Erb 11, Penrose 7, Budd 12, Bangs 10, Skinner 11, Towle 10, Place 9, Brown 6, Atwood 10, Young 8, Wadsworth 11, Strawn 6, Ruble 7, Hotchkiss 9, Godfrey 12, Mole 11, Stice 10, Smith 12, O'Neill 8, J. W. Franklin 10, Dukes 12, R. E. Franklin 11, Peterson 6, John Kleinman 9, Wells 10. Natrass 7, Beck 7, Baker 11, Mosier 10. First money, $48, was divided by Benscotten, Budd, Godfrey, Smith and Dukes. Heicks and R. E. Franklin took second money, $28.80, and Stice captured third money, $19.20.

Shoot No. 6 was a sontest at 12 singles and 3 pairs Peoria blackbirds to each contestant. The score: McMurchy 10-5, Budd 11-5, Benscotten 12-5, Heicks 10-5, Carter 10-3, Sprague 9-2, Metz 10-4, Natrass 10-5, R. E. Franklin 12-4, Stice 11-6, Erb 11-6, Dukes 9-5, Elliott 11-4, Gillespie 12-3, Wadsworth 11-2, Cahoon 12-3, Bangs 9-5. First money, $26.35, was taken and divided by Stice, Benscotten and Erb. Second money, $15.80, was taken by Budd and R. E. Franklin, and third money, $10.54, was taken by McMurchy, Heicks, Natrass, Elliott, Gillespie and Cahoon.

June 13.—The shooting continued in the State Sportsmen's Association tournament at Watson's Park, Grand Crossing. W. C. Graham, champion wing-shot of England, put in an appearance and proved to be one of the three winners of second prize in the principal shoot of the day. The shooters and all those interested in the tournament are rejoicing over the continuous fine weather and state if the week ends as well as it has commenced the tournament will be the most successful ever held. It was intended to hold shoots 8 and 6 at Peoria blackbirds, but so much interest was manifested in the live pigeon match that all other events were postponed. The day's contest was a match at 20 live pigeons to each contestant, from 5 ground traps, at 30yds. rise. The entrance fee was $25 and the total pot amounted to over $700. The moneys were 40, 30, 20 and 10 per cent. of the pot after the price of the birds had been deducted. The score stood as follows: C. W. Budd 17, J. R. Stice 17, G. Hughes 15, J. A. Kuble 18, G. Kleinman 19, H. F. Orvis 18, R. Heicks 16, H. McMurchy 19, W. C. Graham 19, Fred Erb 18, W. Gillespie 17, G. H. Bangs 14, R. H. Mertz 17, W. J. Baker 19, C. E. Cahoon 19, L. S. Carter 20, G. Henry 18, W. W. Foss 20, J. Kleinman 20, C. E. Willard 14, F. A. Place 17, R. B. Organ 19, A. Dukes 18, C. S. Wilcox 17, L. E. Brown 18, L. H. Jackson 12, A. T. Lloyd 13, Abe Kleinman 19, O. B. Still 14. John Kleinman, L. S. Carter, and William W. Foss, the three str2.ght score men, decided to divide the money, $232, rather than shoot it off to a finish. Those tied for second money, $174, were Geo. Kleinman, McMurchy, Baker, Graham, Cahoon, Abe Kleinman, and Organ. On the shoot-off at five birds each Geo. Kleinman, Graham and Organ shot the others out and divided the prize. There were tied for third money, $116, Ruble, Orvis, Erb, G. Henry, Dukes, and Brown. On the shoot-off at five birds all dropped out except Ruble and Dukes, and the two divided the money. For fourth money, $88, there were as contestants, Budd, Stice, Gillespie, Mertz, Place and Wilcox. Budd and Stice alone made clean scores and divided the amount.

June 14.—There was a fair-sized attendance of both shooters and spectators when the principal event of the day, shoot No. 7 on the regular programme, was announced. It was a contest for teams of two men each at 10 live pigeons to each contestant, 20yds. rise, entrance $15 per team, birds included; four moneys, 40, 30, 20 and 10 per cent. The shooting was lively and the result was as follows: Geo. Kleinman and John Kleinman 15, Ruble and Stice 16, Gillespie and Wardsworth 16, McMurchy and Budd 17, Cummings and Hotchkiss 16, Roberts and Foster 10, Heicks and Benscotten 19, Carter and Graham 17, Wilcox and Kern 15, Cahoon and Hughes 17, Orvis and W. W. Foss 18, Baker and Strawn 16.

There were no ties for first money, $48, Heicks and Benscotten having made the highest score, took the amount. Orvis and Foss, with the next highest score, took second money, $36. McMurchy, Budd, Carter and Graham divided third money, while Baker and Strawn, with a score of 16, took fourth money, $12.

On the other part of the grounds the regular programme, so far as inanimate targets were concerned, was abandoned. A 12-bird, $2.50 entrance, sweepstake shoot was carried out with the following result: McMurchy 12, Taylor 12, Stice 12, Carter 11, Cahoon 8, Wadsworth 10, Gillespie 7, Hotchkiss 9, Benscotten 9, Heicks 12. Those tied on 12 divided first money, $9.50, while the other ties followed suit without a shoot-off.

In a 7 bird contest, $5 entrance, shoot at live pigeons, Budd, Stice and Orvis secured first money, $26.

June 15.—The tournament came to a close to-day, a day earlier than was anticipated. But few shooters put in an appearance and but one programme shoot was carried out. It was a contest at 10 live birds to each contestant, 30yds. rise. Budd and Baker won first money, Orvis and Stice second, and George Kleinman third. Some small sweepstake shoots followed.

SOUTH SIDE VS. UNION.

NEWARK, June 18.—The great battle has been fought and the record will live in the minds of many as corroborative evidence of the uncertainty of the white man. The Union Gun Club of Springfield, N. J.—the invincibles—the annihilators of the Long Branch and other clubs, met their friends of the South Side Gun Club of Newark, upon the home ground of the former, on Saturday, 16th inst., in a 12 man team shoot at 25 blue rocks per man, and despite their long practice at these targets and familiarity with the grounds, they were compelled to submit (which as gentlemen they know how to do) gracefully to a defeat. From early morning until the shades of night interposed, a constant banging was kept up at the two sets of traps, and thousands of spheres were broken to atoms by the shooters, who kept coming upon every train. The deafening roar and reverberations of some of the modern guns must have carried the mind of the oldest inhabitant back to Revolutionary times. To say the Union boys were confident would be to paraphase. Did not their ancestors defend at the cannon's mouth their honor and title to the sacred hills of Springfield? Do they not cherish the memories of Revolutionary events? Are not the old church from which the singing books were taken for wadding, and the little shady knoll hard by marked with a score of brown head stones in memory of the fallen braves perpetual mementoes, and enough to inspire Young America and write "victory" upon his banner? Was it not suicidal under all the circumstances for any foreign club to the sacred precincts and seek to wrest victory from men skilled in war and under the generalship of a commander such as no other club can boast? But to the battle. Hints were freely thrown out that the Union boys were short of material, and that the Judge had been overworked, and Johnson had to carry ice around with him for the chills, and Haines, Roll and Doc were nervous, etc. Baptain Breintnall of the South Side never flinches, and can smell powder as far as any man, and when the teams were named it looked shaky for the visitors, as their reserves had to be crowded in, while the evident intention of the home club was to wipe out the visitors with their last squad. Many were the sharp and well timed tilts, all of which enlivened the shoot, and barring the thunderings of Whitehead's, Conover's and "South Paw's" guns, the reverberations of which broke more targets that the shot, the event was declared a grand success, and a return match may be expected. A glance at the scores will show how the mighty have fallen, and the duffers pulled through:

South Side.		Union.	
First Squad.			
Hobart	17	Johnson	23
O Von Lengerke	22	Morrison	19
Quad	24	Haines	11
Whitehead	16—79	Sopher	19—72
Second Squad.			
Wheaton	15	Lindsley	18
Heritage	20	A Sickley	14
Still	14	Conover	16
Dukes	16—65	Roll	13—61
Third Squad.			
Breintnall	23	Pudney	19
Beam	20	E Sickley	17
J Von Lengerke	23	Parker	19
Burnett	17—83	Miller	23—78
Totals	227	Totals	211

FORD.

DUNELLEN, N. J., June 13.—To-day was the regular club shoot of the Middlesex Gun Club, but for some unaccountable reason the attendance was very small, the familiar faces of Quinlan, S. G. Smith, Seigler, Dickens and many others failing to show up. After a number of sweepstakes at blue rocks had been shot, some one proposed a live-bird race. Manitz, Charley Smith and Forrest were the only entries, so they agreed to shoot a sweepstake at 15 live birds, $25 entrance. As this is a little larger stake than the boys generally play for, the spectators looked for a shooting match, and they got it, as the score shows. The birds were a good mixed lot, and the shoot, taken altogether, one of the most interesting I ever witnessed. The following is the score:

C Smith	122222111112122—15
Forrest	101011121220111—12
Manitz	221222212112112—15

Forrest took second money, and then came the tug of war. Charley Smith, with his "Dutch gun" (an L. C. Smith), came up smiling as usual, but Gus was with him, also shooting his Smith gun, as the appended score will show. Some one had to miss, and it was Gus's luck to be the man, so the Dutch gun took the money. There is some talk of a match between these gentlemen to come off in the near future, and if they should come together, Charley wants to hold fast to his scalp or Gus will take it. Appended is the score of the shoot-off:

C Smith	12212111122212111212122—25
Manitz	11212121111211212120—24

TEE KAY.

BOSTON, June 13.—There was a fair attendance at the grounds of the East Boston Gun Club to-day, and many good scores were made. The following named shooters were first in the several events: 7 Peorias, Bowker; 7 clays, Adams and Kirkwood; 7 Peorias, Bowker; 7 clays, Bowker and Hargrave; 6 Pcorias, Bowker; 3 pair clays, Gay; 7 straight Peorias, Gay, Bartlett and Kirkwood; 6 straight clays, Bowker and Horn; 7 Peorias, Gay, Bowker and Kirkwood; 7 Macombers, Adams and Bowker; 10 Peorias, Hosmer and Hargraves; 10 clays, Whitcomb; 5 Macombers, Whitcomb and Gay; 5 Peorias, C. E. Savage; 3 pair Peorias, Gay; 3 pair Peorias, G. H. Savage; 7 Peorias, G. H. Savage; 5 straight clays, Connell and Gay; 5 clays, Gay; 7 straight Peorias, Connell. The winners in the prize tournament are: Whitcomb first, Gay and Hosmer second, Connell third, Bowker fourth, Hargrave and Adams fifth, Kirkwood and Horn sixth, G. H. Savage and Bartlett seventh, C. E. Savage, Chapman and Flanders eighth, Salarie ninth, Jamieson and Roberts tenth.

WORCESTER, Mass., June 14.—The series of classification prize shoots were continued this week under the auspices of the Worcester Sportsmen's Club. The place of meet is at the Coal Mine Brook Range. Six strings of clay-pigeons and blue rocks with a possible 30 were first shot, and then the prize with a possible 10. The work in detail follows. Where more than one were entitled to a prize they divided:

	Classification—Class A. C.P.	B.R.	C.P.	B.R.	C.P.	B.R.		
E T Smith	5	4	5	4	4	5—27	9	
Dr Bowers	4	3	5	5	5	4—26	9	
C H Howe	5	4	4	4	4	4—25	9	
G J Rugg	2	4	5	1	4	5—21	9	
M D Gilman	4	4	4	5	4	4—25	8	
E F Swan	4	3	4	2	4	4—21	8	
W L Davis	4	5	5	5	4	5—28	7	
Geo Sampson	4	4	4	5	5	3—25	7	
V D Kenerson	4	3	3	5	5	4—24	7	
C R B Cladlin	4	1	2	4	5	4—20	6	
A B Franklin	4	4	3	3	4	2—20	4	
	Class B.							
L R Hudson	2	2	2	3	3	0—12	8	
A G Larkin	3	4	1	4	4	3—19	6	
G W Russell	2	3	5	2	3	3—18	6	
L S Kilburn	2	3	3	3	4	3—18	5	
C Crompton	3	3	1	1	1	3—12	4	
H Colvin	1	2	4	2	4	2—15	2	

THE JAMAICA PLAINS GUN CLUB held a practice shoot on their grounds at Clarendon Hills, Wednesday afternoon. The day was all that could be wished for and a large number of the boys took advantage of it, and a few ladies. Following are the scores: First event, 6 clay pigeons—Chapin first, Woodruff second, Cobb third. Second event, 6 blue rocks—Cobb first, Chapin and Brown second, Boothby third. Third event, 6 clays—Boothby first, Woodruff second. Fourth event, 6 clays—Brown and Baker first, Chapin and Woodruff second. Fifth event, 6 clays—Brown and Lewis first, Chapin and Green second. Sixth event, 6 blue rocks—Boothby and Baker first, Davidson and Brown second. Seventh event, 6 blackbirds—Brown first, Baker second. Eighth event, 6 clays—Cobb first, Chapin second, Boothby third. Ninth event, 6 blue rocks—Brown and Boothby first, Chapin second, Davidson third. Tenth event, 6 clays—Brown first, Slocum second, Woodruff third. Eleventh event, 6 clays—Slocum first, Brown and Baker second. Twelfth event, 6 blue rocks—Slocum and Brown first, Baker and Davidson second. Thirteenth event, 6 blackbirds—Baker first, Brown second, Davidson third. Fourteenth event, clay pigeons—Miss and out, Baker first. The club will hold an all-day shoot next Monday.

SAN FRANCISCO, June 9.—The Alameda County Sportsman's Club met at Bird's Point, Alameda, this afternoon, to shoot the fourth match of the season. There were 18 contestants, with C. H. Gould shooting twice to make up last month's score, at which he was not present. The birds flew very unevenly, and luck consequently was one of the factors in the shooting. Several good shots were made by Gould, Adams, Houghton and Schroeder. Prizes are to be distributed on the aggregate score for the season, one of which is the silver pitcher won last season from the Eurekas, which is to go to the man making the best score, provided that he attains 66 points out of a possible 72. This will require exceptional shooting from the contestants in the two matches which yet remain to be shot. The following is the score made to-day:

Slade	1112101001100— 7	Boardman	2111111022002—10
Gould	1220112211111—11	Cadman	2202210201110— 8
Adams	2111012112211—11	Schroder	1211012121211—11
Daise	1111110012110— 8	Knowles	1102061100111— 7
Houghton	1202112121211—11	Gould	1111111111001—11
Beck	1221110111021—10	Osbourne	2011221111122—11
Kellogg	1112210210111—10	Browne	2121112100111—10

HASTINGS, Minn., June 12.—The third annual tournament of the Hastings Gun Club opened this morning on their grounds at the southwest end of the city, but owing to the rain and a light attendance the programme was brought to a final close in the evening. There have been too many conflicting shoots in the State to make the affair either pleasant or self-supporting. The following is the score:

Purse No. 1, 10 Peoria blackbirds; entrance $1.50.

Noreen	9	Kennedy	10
Chandler	6	Hanna	8
Greiner	7	Durant	7
Daly	10	Tuttle	6
Balsom	7	Barnum	8
Bonte	9	Hetherington	8
Forbes	7		

First prize divided between Daly and Kennedy, second prize divided between Noreen and Bonte, third prize divided between three ties of 8, fourth prize shot off on four ties of 7.

Purse No. 2, 6 singles, 2 pairs Peoria blackbirds; entrance $2.

Daly	5	Hetherington	8
Kennedy	7	Chandler	7
Noreen	9	Hanna	8
Bonte	6	Dalsom	6
Anderson	9	Barnum	5
Forbes	8	Westerson	7
Durant	9	Tuttle	7
Greiner	4	Dunn	5

First prize divided between Durant and Noreen, second prize divided between four ties of 8, third prize divided between three ties of 7, fourth prize shot off between two ties of 6, Balsom winning.

Purse No. 3—10 single Peoria blackbirds, entrance $2:

Daily	8	Durant	7
Kennedy	7	Hetherington	7
Norcen	9	Hanna	6
Bonte	6	Greiner	10
Forbes	8	Tuttle	7
Chandler	6	Alstrom	7
Anderson	6	Westerson	7

First prize won by Greiner, second by Noreen, third divided between two ties of 8, fourth shot off between six ties of 7, Kennedy winning.

Purse No. 4—9 singles, 3 pairs Peoria blackbirds, entrance $2.50:

Daily	12	Durant	9
Kennedy	12	Hanna	12
Noreen	9	Balsom	10
Bonte	12	Hoffmann	10
Greiner	10	Anderson	11
Forbes	12	Westerson	11
Chandler	12	Tuttle	9

First prize shot off on five ties of 12, Chandler winning; second divided between two ties of 11, third prize shot off between three ties of 10, Balsom winning; fourth prize divided between three ties of 9.

Among the sportsmen from outside of present were F. M. Kennedy, Charles Paul, Henry Blakeley, Leslie Wann and John Pfister, of St. Paul; R. M. Anderson, of Stillwater; T. K. Dunn, of Minneapolis; J. P. Balsom, of Hudson, Wis.; Henry Durant, of Algona, Iowa.

ROME, N. Y., June 12.—A clay-pigeon shooting contest between the Rome and Utica gun clubs occurred this afternoon at Riverdale Park in Rome. The contest was an interesting one and attracted quite an audience of spectators. The Rome Club contain some good marksmen, but they were unable to break as frequently as the Uticans, who won the match by 18 points. Each man shot at 25 birds and the score was as follows:

Utica.		Rome.	
Horton	16	Betson	18
Beckwith	19	Beasley	11
Wheeler	14	Bassett	16
Kilbourn	13	Golly	17
Divine	15	Hauck	12
Elliott	19	Huntington	13
Gates	19	Kingsley	11
Thomas	13	McAdam	12
Rose	12	Worden	9
Dexter	7	Kinney	15
Felton	22	Rayland	19
Sayre	10—179	Lloyd	8—161

ELECTRIC TRAP SPRINGING.—New York, June 12.—*Editor Forest and Stream:* Seeing in the last week's FOREST AND STREAM an account of an electrical device invented by Mr. G. E. Fletcher of Bismark, Dak., for springing pigeon traps, I beg to remark that it is not new. If Mr. Fletcher will look back to April 22, 1883, he will see in the New York *Herald* a full account of a shoot of the Rockaway Hunting Club, where the traps were sprung by electricity; but I find the mechanical the most certain, consequently have abandoned electricity.—J. J. KING.

THE JERSEY CITY HEIGHTS CLUB will have a two days' tournament in July and a five days' tournament in the fall.

WEST NEWARK.—Newark, N. J., June 12.—West Newark Gun Club, John Adelman, of Newark, Vol Wade, of Chatham, N. J., 50 Lockport bats each, 18yds. rise, American rules:

John Adelman	1111111111111111111111111111111111111111111111111—50
Vol Wade	1011110111111111111111111011111011111111111111111—47

CINCINNATI, June 16.—A private shoot at live pigeons was shot to-day on the Zoological Gun Club Grounds between Al Bandle, the all-around shot of this city, and Miss Annie Oakley, of Woodland, Ohio, celebrated as the lady shotgun and rifle shot of the world. The match resulted in a victory for the Cincinnati boy, but on so close a margin and the necessity of the best of shooting to make the match interesting to the odd hundred invited present. From the first to the last bird the interest in the match never lagged, and was of a kind to keep those present enthusiastic. Considering the conditions of the match which called for 20-gauge guns, five pounds two ounces in weight, and a stand of twenty-five yards rise, the work done was of a fine sort. Bandle was handicapped greatly by using the gun he did—a caliber he never before handled—and his shooting is certainly deserving of praise. This in spite of the feeling in favor of Miss Oakley in to-day's match. Her exhibition shooting, with both the rifle and shotgun, was wonderful, and the applause given her something to make her proud. Her conduct, her coolness at the trap and her demeanor in general is of a nature to make her friends. As to the match, it was one for blood, Bandle, so far as extending the lady any courtesy as to victory, not being there, and vice versa. The birds shot were good ones as to flight and strength, and Miss Oakley unfortunately happened to strike the hardest birds, her eighth bird, the one she missed, proving a nasty right quartering into a nasty background. Her shooting since she returned from England is, judging from her all-round work, 50 per cent. better than when she shot here two years ago. Tony Honing officiated as referee and Wick as trap puller.

Al Bandle.....1122121221—10 Miss Oakley.....1112121012— 9

BOSTON, June 13.—Perfect shooting weather marked the opening to-day of the summer series of shotgun matches of the Massachusetts Rifle Association at Walnut Hill. The number of contestants was unusually large, most of the leading gun clubs of New England being represented. Sharp competition was the order of the day. The most interesting event was, however, the shooting for the Climax diamond badge, which was won by Mr. H. G. Wheeler by a score of 36 birds out of 40. Following is a summary of the matches: 1. 5 clays, Smith, Mudie and Sampson. 2. 6 bats, Wardwell, Knowles and Perham. 3. 10 clays, Hall, Smith and Mudie. 4. 7 standard targets, Larpoon and Webster. 5. 10 clays, Knowles. 6. 10 blackbirds, Chase, Stanton and Smith. 7. 20 clays, Grimes. 8. 20 blackbirds, Wheeler. 9. Gold coin watch, 10 clays and 10 blackbirds, Chase first, with 19; Swift, Stanton and Smith second, with 18; Mudie and Knowles third, with 17; Grimes and Hall fourth, with 16; Sampson, Webster, Snow and E. T. Smith fifth, with 15; Nichols, Yerrington, Curtis and Lawson sixth, with 14; Wheeler and Tinker seventh, with 13; Perham eighth, with 12; Wilson ninth, with 11; Burt and Neale tenth, with 8. 10. 5 pairs clays, Stanton. 11. 6 standard targets, Crown, Mudie and Perham. 12. 7 clays, Mudie and Smith. 13. 6 clays, Grimes and Smith. The next shotgun competition will occur June 27, at which time a still larger attendance is expected.

WELLINGTON, Mass., June 16.—The attendance at Wellington to-day was quite large, and the shooters put in considerable time in practicing for the two events of next week. In the merchandise matches, points were scored as follows: Perry 19, Scott 18, Bond, Baxter and Snow 17, Sanborn 16, Hart, Moore, Melcher, Brown and Stanton 15, Shumway, Grimes and Chase 14½ Phelps and Shaefer 13, Webster and Swift 12. The Grimes prize was taken by Conant. The other events were won as follows: Six blue rocks, Scott and Swift; six pigeons, Stanton, six blue rocks, Shumway, Snow and Stanton; six blue rocks, Scott, Ingersoll and Bond; six pigeons, Stanton, Ingersoll and Perry; six blue rocks, Bond, Scott and Moore; six blue rocks, Perry and Shumway; three pair, Bond; ten blue rocks, Scott, Perry and Baxter; ten pigeons, Bond, Snow and Perry; six blue rocks, Sanborn and Shumway; six pigeons, Chase and Stanton; six pigeons, Grimes, Moore and Sanborn; six blue rocks, Stanton; six blue rocks, Sanborn and Snow; six blue rocks, Brown Swift and Ingersoll; three pair pigeons, Baxter and Stanton.

Canoeing.

15. Springfield, Cup, Calla Shasta
20. Mohican, Gibson Badge, Alb'y

OCTOBER.

6. Springfield, Cup, Calla Shasta.

THE CANOE SPEAKS.

ON the great streams the ships may go
About men's business to and fro,
But I, the egg-shell pinnace, sleep
On crystal waters, ankle deep;
I whose diminutive design,
Of sweeter cedar, pithier pine,
Is fashioned on so frail a mould,
A hand may launch; a hand withhold;
I, the unnamed, inviolate,
Green, rustic rivers navigate;
My dipping paddle scarcely shakes
The berry in the bramble brakes,
Still forth on my green way I wend;
Beside the cottage garden end;
And by the needed angler fare,
And take the lovers unaware.
By willow, wood and water wheel
Speedily fleets my touching keel;
By all retired and shady spots
Where prosper dim forget-me-nots.

ROBERT LOUIS STEVENSON.

NEW YORK C. C.—The annual regatta on June 16 was postponed for want of wind, as the Bay was perfectly calm. It will be resailed at some future date. The club house is now located in the old Seawanhaka C. Y. C. basin between Tompkinsville and Stapleton.

PASSAIC RIVER REGATTA PROGRAMME.

THE programme, as issued by the committee of the Passaic River Regatta, is as follows:

Event 1. Paddling, Class I.—Exempt from one man, one canoe rule, ½ mile, with turn.

Event 2. Paddling, Classes II. and III. exclusively.—½ mile with turn. Record event.

Event 3. Paddling, Class IV.—½ mile with turn. Record event.

Event 4. Paddling, Tandem.—Decked sailing canoes, Class IV., ½ mile with turn.

Event 5. Paddling, Upset.—Classes I., II., III. and IV., no special appliances allowed; the cockpit, whatever its length, must not be narrower than 16in. for 4ft. of that length. At signal canoe must be turned completely over, righted, and with the crew inside paddled across the finishing line, 200ft.

Event 6. Paddling and Sailing Combined.—On the triangle, twice around, alternating every half mile; start paddling.

Event 7. Sailing.—On the triangle, three times around. Record event.

Event 8, Sailing, Cruisers.—On the triangle, twice around. Crew must sit inside, sails must be lowered and raised at second and third buoys. Dimensions of cockpit as in event No. 6 will apply, and canoe to enter this race must further have room below sufficiently large for crew to sleep in, without interference from centerboard trunk or other obstruction. Radix or Atwood boards not to constitute an obstruction. Committee reserve to exclude from this race any canoe which in their opinion is not a fair general cruiser.

Event 9, Sailing.—Man overboard, 100yds., to windward. While under way, at signal, half a paddle must be thrown overboard aft, out of reach; the same must be recovered and the race continued to the finishing line.

Event 10. Sailing Consolation.—Prize winners of events 7, 8 and 9 excluded. To windward or leeward and return.

The Regatta Committee consists of T. W. Kitchel, Perth Amboy; George Wm. Cox, Newark; Lincoln B. Palmer, Chairman, Newark.

IANTHE C. C. SPRING REGATTA.

THE Ianthe C. C. held its spring regatta on June 16, notwithstanding the fact that the progeny of Eos and Astraeos failed to put in an appearance even after much coaxing and many protests from the ready ones on the grand stand; a nod from any one of whom would have caused even the most hardened canoeist to cast anchor and remain in camp all summer.

Fearful of having his friends carried out to sea by the tide, or their drifting ashore through lack of wind near some riparian beer garden, Mr. J. L. Douglass, who acted as starter, announced that no sailing events would be called and started the first paddling race for classes III. and IV., which was won by Fredericks, who left Palmer, Farmer and Hobart a mile or so astern. The cheers for Fredricks as he crossed the finishing line were faintly heard in the distance by his opponents who seemingly unconscious that the race had long been finished crossed the line well bunched, in the order named and just in time to enter the next event. Paddling tandem, in which three crews started, Fredericks and Palmer, Hobart and Farmer, Dodge and Hogan. This race was well contested and was won by Fredericks and Palmer, the others finished in the order named.

Event 5 on the programme—paddling, standing on deck, with centerboards housed—was next called. The contestants, Messrs. Palmer, Farmer and Hobart, paddled their canoes up stream some 50yds., and at the command "All hands on deck" (he meant to say "all feet," etc.; the honor of his office had probably turned the starter's head), "areyouready go," the canoes shot down to the finishing line as evenly as though tied together, and with paddle blades whirling through the air like old Dutch windmills. When the finishing line was reached and that ever-ready burst of applause went skyward, each contestant, seemingly thinking he had won the race and unable to control or keep back the blushes that would come after each round of applause, sought oblivion by slumping into the water-wooden armor, and with heads well protected with burnished helmets of Dunlap's best silk, stood in the bows of their respective craft gracefully poising long lances. (The regatta committee requests me to state that at the last moment, the lances not having arrived, they were obliged to substitute brooms in their stead). Armed with these dangerous weapons, the reckless knights spurred on their craft to glory, honor and gore. As they came together in the first bout Farmer's helmet went by the board, and not being warranted, sunk. As they again furiously charged, the onslaught was so terrible that Farmer, unable longer to resist the attack, was swept overboard and went sprawling into the water. Hobart, now maddened by defeat and thirsting for revenge, artfully enticed Percy Hogan to take up his cause, and paddled him out to upset "that fellow out there." Three minutes later Hogan bit the dust and was fished ashore. The ribbon was awarded to Palmer and Fredericks. At the conclusion of the races Mr. J. E. Howell presented the prizes thoughtfully contributed by friends of the club.

ATLANTIC DIVISION.—The programme for the cruise as far as arranged by the committee, is to rendezvous at Newark Bay, near Bayonne, on July 4, sailing next morning through Staten Island Sound and camping on Staten Island above Tottenville. Next day a stop will be made at Perth Amboy for provisions and then a short run across Raritan Bay to Cheesequake Creek, arriving early in the afternoon in time for early camp and any scrub races that may be arranged. Next day the cruise will continue toward the Shrewsbury River, camp being made under the Highlands, and on the following day the fleet will run up the Navesink River. The subsequent arrangements will depend on the weather, but it is proposed to return by way of Staten Island, stopping for a day or two at some suitable place for the races. The Perth Amboy canoeists extend a welcome to all the cruisers and will be glad to take care of any canoes shipped to Perth Amboy to join the meet. Canoeists from the South can go by rail to Perth Amboy and join the camp near Tottenville, some three miles distant, on July 5.

PASSAIC MEET.—The regatta committee of the Passaic River meet presents its compliments to those interested in the success of the meet, and begs to state that, having drawn up a programme of ten events, it now becomes its duty to provide suitable prizes for the same. More than twenty prizes are needed, and the committee having no means at its disposal for the purchase of the same, respectfully requests contributions of flags or other suitable prizes before July 4. Unless contributions are received the victors must return to their homes with naked honor and glory, and without any tangible, visible mementos of their achievements. Contributions may be made to any member of the committee, Geo. W. Cox, 151 Fourth avenue, Newark, N. J.; F. W. Kitchel, Perth Amboy; Lincoln B. Palmer, 77 Lincoln ave., Newark, N. J.

REPORT OF THE COMMITTEE ON RAILWAY TRANSPORTATION.—To Commodore Robert W. Gibson, American Canoe Association: Sir—Your committee on freight rates beg to report as follows: Canoes when loaded in box cars will be rated four times first class. This is the best that we have been able to obtain from the committee on freight classification. Very respectfully, your obedient servants (signed), ROBERT SHAW OLIVER, EDWARD W. BROWN.—Report has been filed by the Commodore to be acted upon by the next meeting of the Executive Committee.—ROBERT W. GIBSON, Com. A. C. A.

WESTERN C. A.—The regatta committee of the W. C. A. extend to the members of the A. C. A. a cordial invitation to participate in the races of their association, to be held at Ballast Island, July 7 to 24, 1888. A list of the races, together with rules governing the same, full information about location of camp, etc., will be mailed to any member of the A. C. A. who would like to attend the meet, upon application to Geo. A. Warder, secretary, Springfield, O. H. D. Crane, Thos. P. Gaddis, G. H. Gardner and W. Kitchin constitute the W. C. A. regatta committee.

A. C. A. PRIZE FLAGS.—In addition to the list of eighteen clubs published last week, the regatta committee would add the following (that have contributed each a flag or the $5 asked for), Ianthe C. C., Pittsburgh C. C. Declined for good reasons, Arlington C. C., Washington C. C.

THE advertisement of Mr. Alex. McComas in another column is of interest to duck shooters, as he offers for sale a farm on the Chesapeake Bay.—*Adv.*

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

NORTON SYSTEM OF NAVAL CONSTRUCTION.

THE sad and fatal occurence of the Agnes capsize last week calls attention anew to the vital importance of safety, above all other considerations in naval design. How the two great dangers of capsize and collision may be avoided is a question that appeals to all who go down to the sea in ships, either for business or pleasure, and in the interest of yachtsmen especially we are called upon to investigate the latest claims for a non-capsizable and non-sinkable vessel. We have spoken several times of late of the Norton system of water ballast and air chambers, the principles of which are illustrated in the accompanying sketch of Captain Norton's working model, now on exhibition at the office of Hoadley & Co., 77 William street, N. Y. While this model does not, as we will show later on, represent the actual condition of a vessel floating freely, it is correct in so far as the mechanical features of Capt. Norton's invention are concerned. The model, which is supposed to represent a part of a half-section of a lifeboat, is of the form shown in our drawing, the depth being 24in., breadth 23in., and the length in a fore and aft direction 10in. As will be seen, it represents a boat with a flat bottom, a straight side and a low, round bilge. Inside a false bottom is fitted, shown by the heavy line, forming one compartment, A, B, C, in three parts. A is the main ballast chamber, joining which is a narrow neck, B, opening into a larger chamber, C, containing airr the normal water level being as shown. The space D is an air tank, separated from the other chamber—in short nothing more nor less than the ordinary watertight compartment used in canoes, lifeboats and many other vessels. From A, a vertical pipe about 1½in. diameter rises to the top of the tank, fitted at the lower end with a check valve E which allows the air to escape from A, but prevents its entrance again from above. At H, near the keel, is an oval opening about 1½×5in. F is a pressure gauge, connected by a pipe with the air chamber C. H is a brass arm screwed to the side of the tank in which the model rests, the latter being pivoted on a bar resting in this bracket and with its other end fastened to the side of the case. The model is made of sheet metal and is quite heavy, the actual weight could not be ascertained, but it must be at least 50lbs. Over the ends of the compartment A, B, C, a plate of glass is fitted, so that the height of the water may be seen. The model is hung as described in a tank nearly 4ft. square, filled with water up to the height shown, leaving depth enough to permit the model to be pressed down until the outer corner *b*, is submerged. The claims of the inventor are best told in his own words, as follows:

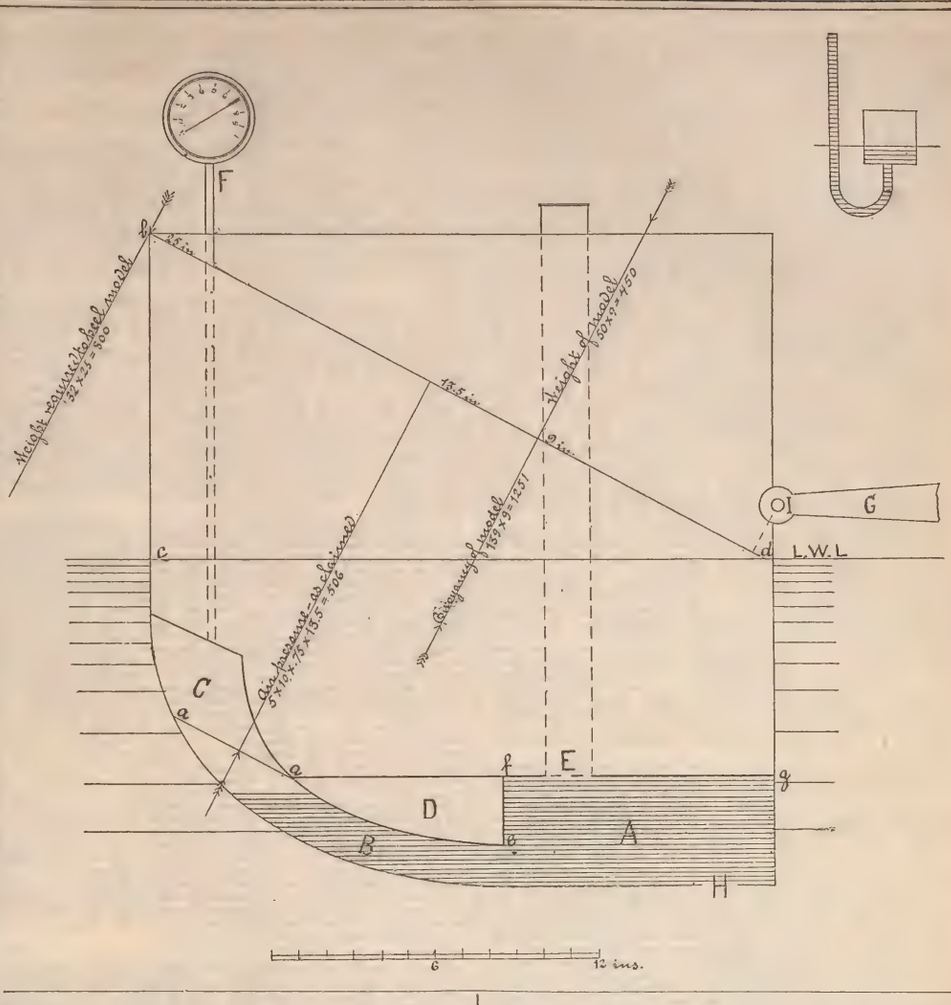
"The air chambers are sufficient in size to keep the boat from sinking when filled with men and with water. The ballast chambers fill with water through the holes, H, as soon as the boat is let into the water; the air in the middle or main part of each ballast chamber is expelled through a small pipe, E. This air pipe at its upper end is supplied with a valve, which allows the air to leave the pipe, but does not allow the air to re-enter from the outside, unless opened by hand. The air contained in the side arms or wings of the ballast chambers cannot escape, it is detained there, acts as an air cushion, and eases the motion of the boat.

"The moment the boat is canted over from an upright position, the water in the ballast chambers, which is distributed along the sides of the boat, acts with a leverage proportionate to the angle of cant to bring her back again.

"When the boat is loaded with men or freight the submersion is increased, and the air in the arms of the ballast chambers is compressed proportionately, and is affected as a spring would be, and adds greatly to the stability and gives the boat great elasticity of movement.

"The effect of the wind upon the boat's sails, when she is suddenly thrown down by it, will be immediately resisted by the compression of the air in the arms of the ballast chambers on the submerged side, and this upward pressure, aided by the weight of water lifted in the chambers on the opposite side, will at once enable the boat to resume her upright position. The advantages of the boat are the following:

"1. The automatically self-acting ballast. The ballast chambers of the boat fill themselves as soon as the boat reaches the water, and the valves open automatically. No attention nor any mechanical action is needed. The advantage is evident. The opening of a valve or any mechanical requirement may, in case of danger, be easily forgotten or overlooked, whereas with the holes in the bottom, which are always open, the boat is ballasted as soon as she reaches the water. When the boat is lifted out of the water, the holes are sufficiently large to allow the water to flow out in a few seconds.



"2. The great stability of the boat. A number of experiments have proved that the stability of the boat is greatly increased by filling the ballast chambers, and with the ballast chambers filled it is impossible to capsize the boat.

"3. Increased sailing capacity of the boat. The greater stability enables the boat to carry a much larger area of sails than any other boat of the same displacement, and to carry this increased area of canvas in a stiff breeze much longer.

"4. Her good qualities as a sea boat in heavy weather. The air cushions in each side of the ballast chambers give a very easy motion to the boat, as has been repeatedly proved by taking her out to sea in rough weather. The boat, when heeling over, compresses the air, and she cants so gradually that no sudden motion or jerks can take place.

"5. Above all, the great safety of the lives of men, intrusted to the boat, against the perils of the sea.

"These boats can be built of any material; the most suitable for all open boats is yellow metal. It does not lose so much by oxydation as steel or iron; it gives a very clean surface, can better stand a blow without breaking, can easily be repaired on board the ship, and always retains a certain value when old. In comparison with wooden boats the metal has the advantage of always remaining tight though exposed to the heat of the funnel of a steamer or to a tropical sun. To give the boat's metal the desired stiffness, without the aid of frames, the metal plates are corrugated."

The practical working of the model is this: When it is placed in the water the compartment fills through the hole H, the air meanwhile escaping through the check valve and pipe E until the water rises to a certain height in the upper chamber C, the confined air in which prevents it from filling the chamber. As the valve in E is closed no air can enter the compartment save by the aperture H. When the model is in this condition the free side is depressed by pushing down with the hand at *b*, and as considerable force is required the stability of the model is supposed to be fully proven. At the same time the hand on the gauge rises from zero to about .75 or .80lb. pressure, which it is claimed by Capt. Norton is exerted over each square inch of area of new surface of the water in contact with the air, now as indicated by the full line *a a*. The next step is to open a three-way cock in the pipe F, thus releasing the air from the chamber C, whereupon it fills with water and the model sinks some distance further. The reason of this, as given to the inquiring yachtsman or prospective investor, is that the wonderful buoyancy of the air pressure shown by the gauge is now removed. To the casual observer these so-called tests are usually conclusive, and he is ready to swear to the evidence of his own eyes; but let us look at the few plain and simple principles which underlie the case, leaving out the extraneous features, which are only confusing.

It is hardly necessary to define the two terms stability and buoyancy, but in passing we would call attention to a practical illustration of the difference between them, as it is necessary to a clear understanding of the model. A flat board floating on the water would possess great stability, but not necessarily great buoyancy, and similarly a raft or catamaran is stable, but not buoyant; it is difficult to capsize, but at the same time has little floating power. On the other hand a barrel is buoyant in the extreme if filled only with air and tightly corked, but it has absolutely no stability, it spins freely around in the water if touched. If a man should step on the gunwale of an ordinary open boat that side would go down, the opposite side would rise out of water and the boat would at once capsize. Now, if he were to lash one side fast to a wharf or pile he could stand with safety on the other, as the boat would be no longer free to capsize, but would only be able to sink bodily beneath his weight, which would be insufficient to sink her below the water. The difference between these two conditions is precisely that between Capt. Norton's model and an actual lifeboat floating freely. When a boat heels one side rises, the other falls, but the displacement remains precisely the same. How is it with the model? When it is pressed down it goes bodily beneath the water, the large wedge *b c d*, being immersed, while no portion is raised out of the water, owing to the fixed point of support at I. The displacement of the part of the model below *c d* is 90lbs., while the displacement of the wedge *b c d*, is 49lbs.; consequently in forcing the model down the displacement instead of remaining the same, is increased 46 per cent. All that is shown then by this so-called test is the buoyancy of a hollow metal case, something very well known before.

Next, as to the pressure of the air in the chamber, C; there is undoubtedly an upward pressure, but how powerful is it? The gauge shows about .75lb., which Capt. Norton claims is exerted over the whole area, *a a*, of the water where it presses against the air. This area is 5×10in., or 50sq. in., consequently the pressure would be 37.5lbs. Now, leaving out the idea of a boat with valve, gauges, etc., this submerged air tank open to the sea is reducible to the simple elements of an airtight vessel with a pipe leading from the bottom, as in the small figure, and filled with water Now the pressure on the air is only that due to a column of water as high as the distance from the upper surface of the air in the tube to the lower surface of the air in the vessel, a fact easily verified by a reference to any elementary work on physics. There can be no greater pressure than this column of water, its size dependent on the area of the tube; and applying this to the model we find that the place of the tube is taken by the smallest of the openings leading to the air chamber. In the case of the model it is the oval hole, H, about 5×1½in., or 7½sq. in.; but if the narrow neck between A and C were still smaller than this, its area would govern the pressure on the air in C. The area of the surface of the water, *a a*, has absolutely nothing to do with the effective upward pressure of this submerged chamber, which pressure, as we have shown, is very far under the amount estimated by Capt. Norton. In one case mentioned the area of surface exposed to pressure in a 26ft. lifeboat is given as 1,600sq. in. on each side, the gauge showing a pressure of .50lb., in other words, a lifting force of 1,235lbs. was exerted on the lee side of the boat by the air alone. The size of the openings is not given or the actual pressure could easily be computed, and would be found as small in comparisen as in the model, where a pressure of nearly 38lbs., according to Capt. Norton's estimate, is found to be only about 5½lbs. As it is an essential point of the system that the holes in the bottom and also the passages, B, shall be small compared with the bulk of water contained in the compartment, the effective pressure in C must always be proportionately small.

We mentioned above a so-called proof of the value of this air chamber, by letting the air out of it. What is really done is to let out the air and let in water, thus opening another part of the vessel to the sea, in which case she of necessity sinks further. The fraud in this case is so palpable that it is astonishing that it deceives any one. The object is to test the value of the open air chamber C under the pressure shown on the gauge. To do this it is essential that the ballast and displacement shall be unchanged, and that the model be first tested with the air chamber in communication with the outside water, through B and H; and then with the chamber cut off from the outside water, as for instance by the interposition of a temporary partition at *a a*; thus making of C merely an airtight compartment, like D. In place of doing this, the compartment is not only emptied of air but filled with water, thus directly diminishing the buoyancy of the vessel.

As a practical test we are told that with C full of air a weight of 32lbs. was required at *b* to sink that point to the water; while with C full of water but 14lbs. was needed. We have been unable to get full and accurate figures as a basis for calculation, but the drawing of the model was made from actual measurements, as far as they could be taken, and is very nearly correct. The various forces acting on the model when it is depressed so as to bring the point *b* to the water are easily calculated. The displacement of the vessel would act upward through the center of buoyancy, as shown, with a moment of 139×9=1251. The weight of the model, about 50lbs., would act downward through nearly the same point, the moment being 50×9=450, and the weight at *b*, 32lbs., gives a moment of 32×25=800. The upward moment then is 1251, while the two downward moments equal 1250, so that the model would be in equilibrium with a weight of 32lbs. on the gunwale at *b*, which point is depressed to the water level. But according to Capt. Norton's claim there is still another powerful force acting to lift the model, the pressure of the air on the surface *a a*, 5×10in., and .75lb. per inch, as by the gauge, or a total of 37.5lbs. This force acts through the center of the plane, its moment being 37.5 ×13.5=505. These figures are sufficiently accurate to show that the model itself gives no indication of the great air pressure claimed, and they show the method of making a careful and practical test if those interested in the scheme wish to do so. All that is needed further is the weight of the model with the size of the opening H, and all the pressures can be readily computed as above.

As we have shown, stability is in no way proved by the model, but it is confused with buoyancy in a way that deceives many; the displacement of the model is altered and juggled with during the "tests," and further, there is no indication in the working of the model of the large air pressure claimed. We know nothing of Capt. Norton's motives, nor of the honesty of his belief in his invention, but judging of the model itself from a purely mechanical standpoint we have no hesitation in pronouncing it a fraud and a snare, in that it does not truthfully represent what it purports to. In conversation with the secretary of the Norton Naval and Shipbuilding Co. we were informed that the fixing of the model to a firm support was merely to represent the load, such as the regular crew and the extra number of persons to be taken from a ship, but whatever the intention, the fact is plain that the fixing of the model destroys all analogy to a lifeboat at sea, and substitutes the question of buoyancy for that of stability.

Had the intention been to fairly test the invention by means of a model it could very easily have been done by constructing two small models of the middle body of a lifeboat, say of 2ft. beam and 1ft. depth, the same proportions as the present half model. One of these boats should have been fitted with the Norton chambers and valves; the other with a simple closed ballast tank to hold exactly the same amount of water that is contained in the Norton model below the line *a a e e*. With the two models of the same weight, and with the same amount of water ballast in each, accurate tests could easily have been made to determine the stability of each, and the benefit to be derived from the air pressure. We were told at Mr. Hoadley's office that the reason for making but a half model was for convenience of transportation, the box and model having been taken through Germany and Denmark and exhibited at a number of places; but the present tank is fully large enough for such an experiment with two models as we have suggested, if the promoters of the scheme are desirous of a test that shall be above suspicion, as the present one most decidedly is not.

Considering the Norton boat, apart from the model and its peculiarities, it should be considered that water ballast is in no way a novelty, being in general use in different types of vessels and having some advantages, while air chambers for safety from sinking are found everywhere and are of the greatest possible value where space permits their use. The water ballast tank and closed air chamber were both well described by one of our correspondents in writing on this subject as "good but not new"; while the special features of the Norton system were at the same time classed as "new but not good." At the first glance it is somewhat puzzling to determine the exact status of the Norton boat, owing to the openings in the bottom. It is evident that the boat gains some stability from water ballast, but why if the ballast can run freely in and out? The fact is that the water is held to a certain extent in the ballast tanks by the pressure of the atmosphere, and so long as it is held there it must be just as effective as the

same weight of water in the same position in a closed ballast tank, such as are used in large steamers and war vessels. If a bottle or other closed vessel be filled with water and inverted the water will not run out unless at the same time air can run in. Now if the mouth of the bottle be inverted in a small saucer of water, the water in the bottle will not run out and its weight will be felt by the hand holding the bottle. In precisely the same way the water once admitted to the compartment of the Norton boat by the air rushing out through the valve E acts as any other water ballast would, and is valuable in so far as it can be retained in the boat.

It has, however, one serious objection; being only partly confined, it is certain to run down into the lee bilge from its normal level to *a a*, while in the windward compartment it also lowers, thus placing more ballast to leeward and less to windward as the vessel heels. This is precisely the case in a water-logged craft, or in craft with ballast tanks partly filled, and both classes of boat are dreaded by sailors. Now, if by any chance the vessel is heeled until the openings near the keel are in the least exposed to the air, as in the capsize of the Mohawk, the Sarah J. Craig, the Grayling, and the last sad instance, the schooner Agnes, the ballast at once leaves the weather side entirely and the vessel is beyond all power of righting. In the Mohawk the lead ballast all fell to leeward, with furniture and other movables, while in the Craig the sand ballast did the same. In the Norton boat let the air in any way gain access to the holes in the bottom and all the weather ballast must infallibly leave the vessel. We were informed by the secretary of the company that this was not the case, that the water could not leave the vessel; but we tried the experiment on Capt. Norton's model and the water ran out as soon as the aperture was above the surface of the main body of water in which the model floats. It is interesting to note here that the model is hung so near to the side of the tank as to prevent an inquiring visitor from raising it until the aperture is out of water, but when we last visited it the water in the tank was at a low level and by a little force the model was raised just high enough to bring the edges of the opening level with the water, when all the water within the model at once ran out.

As long then as the water was held in the boat by the pressure of the atmosphere, the Norton boat would be precisely as stiff as a boat having the same amount of water ballast in closed tanks not entirely filled; but while the latter boat would retain her stability under all conditions, the Norton boat is liable to lose hers at any moment and to be capsized beyond all recovery. Should a sudden squall heel her as Gracie was heeled at Larchmont last year, or as both Gracie and Montauk were heeled on the day when Grayling capsized, the ballast would at once leave the vessel, or if when sailing in a heavy sea a lurch to leeward exposes the bottom in the disturbed water, the vessel must go over. Even under ordinary conditions it is probable that some leakage of air would take place. If the vessel were making a long tack in comparatively smooth water under a steady but moderate angle of heel, some air would be carried under the bottom and find its way in the openings, allowing the ballast to escape, and in a few hours' sailing the trouble might become very serious.

It is claimed by Capt. Norton that the air pressure in the lee bilge, C, is so great that a capsize is impossible under any circumstances, but we have already shown on what a false basis his claims rest. There is, it is true, a small amount of pressure on the submerged air chamber, but it can be definitely calculated, and will be found to be far less effective than a few pigs of lead stowed near the keel. It sounds very well to picture the resistless force of the great Atlantic waves acting on the confined air and compressing it to a great degree; but, in fact, there is no pressure but that due to an insignificant column of water whose base is limited by the opening in the bottom. In practice there is a limit to the size of these openings; they must be very small in proportion to the bulk of water in the compartment, or the latter would rush out at once as the vessel heeled, the weight of the column of water in A. B, being greater than the atmospheric pressure.

There are other points connected with the air pressure which would be interesting to investigate, but they relate to speed and not to safety, and are of secondary importance. It is claimed that the vessel floats partly on the compressed air in the chambers C, and thus is less difficult to move, while at the same time she is mainly supported on the inner bottom, floating on the water in A, B, as well as on the air in C, consequently, as this air and water move with her, there is no friction between the skin of the vessel and the outer water. Such crack-brained idiocy as this has obtained credit with the supporters of the invention, but as it does not affect the main point, the stability and safety, we cannot take the space to deal with as it deserves. We have conversed at length with a number of persons interested in the scheme and all distinctly disavow any scientific knowledge, claiming to be practical men and convinced by the evidence of their senses in the inspection of the model we have described, by the practical tests that have been made by Capt. Norton; and with the most perfect faith in all that he asserts.

The details of tests made are very meagre and unsatisfactory. One instance given is a 28ft. boat which originally displaced 3,025lbs., but after alteration she displaced 4,150lbs., a difference of 1,125lbs., or half a ton. This added weight was all in yellow metal tanks; consequently a full half ton of metal ballast was placed in the bottom of a boat only 28ft. long, and it is small wonder that she was stiffer than before; certainly any ordinary boat would be without either air or water tanks. A number of testimonials from various persons abroad—the Commander and Inspector of Pilots at Cuxhaven, the harbor master at the same place, the director of the shipyards of the Société John Cockerill at Seraing, a captain and a harbor master at Kiel, the manager of the Danish Life Saving Service—together with extracts from foreign newspapers are given in the pamphlet.

All of the testimonials refer to the Norton lifeboat, and it is probable that this craft possesses the good qualities of any lifeboat of full model, large displacement, ample sealed air chambers and water ballast tanks, but all this is not new in any way. The weak point in the boat, as we have pointed out, is the liability to lose all the weather ballast through the exposure of the opening in the bottom, and though in a craft of this type the danger is reduced to a minimum, far less than in a yacht, it still exists and renders the boat inferior to a similar model with the ordinary water ballast compartment. The feature of admitting water through a valve in the bottom instead of pumping it in is a good one, especially in boats that must be carried at davits, but we doubt whether Capt. Norton can prove his claim to this feature to be any better grounded than a claim for the invention of the cellular system of construction would be. It is said that the yacht Gleam would not have sunk when cut in two had she been built on Capt. Norton's system, but neither would she have done so had she been built on the ordinary system of cellular construction as applied to passenger and war vessels, but unfitted to most yachts, owing to the space required. In all the testimonials there is no adequate evidence as to the value of the air chamber C and the pressure on it, all that refers to this point being mere guess work. It is stated that the Norton lifeboat has been thoroughly tested in this country, also that a sailing craft on this system has been tried with great success against other craft on the Potomac, but no particulars are given.

The system, however, has been officially examined by the Navy and Treasury Departments of the United States, as shown in the following extract from the report of United States Naval Board on Norton's lifeboats, dated July 22, 1886. The large lifeboat was 26ft. in length; 7ft. 8in., beam; 3ft. 6in. in depth. The small lifeboat was 12ft. in length; 4ft. beam; 27in. in depth.

"The stability of this boat is very much superior to that of ordinary construction. Ten men were placed on one of the gunwales of the boat, representing a weight of 1,600 pounds, the boat still having a freeboard of three inches. The masts of the boat were stepped, which represented additional leverage tending to heel the boat. This boat in our opinion is very difficult to capsize, though the circumstances of our trial of her stability will not permit us to indorse the statement of the inventor, that the boat is non-capsizable; that point we believe can only be demonstrated by a long and exhaustive series of experiments under all conditions of wind and sea. In our opinion boats of this construction are very suitable for lifeboats." Signed by A. S. Crowninshield, Commander U. S. N., President of Board; J. H. Sands, Commander U. S. N., Member of Board; Philip Hichborn, Naval Constructor U. S. N., Member of Board.

The following extract is from the proceedings of thirty-fifth annual meeting of Board of Supervising Inspectors of Steam Vessels, held at Washington, D. C., January, 1887:

Mr. O'Brien, from the Committee on Life-Saving Appliances, to which was referred the papers and drawings of F. L. Norton's lifeboat, made the following report: "The Committee on Life-Saving Appliances, to which was referred the drawings of lifeboat presented by Mr. Francis L. Norton, beg leave to report that they have given the matter close attention. The boat as presented is a well-proportioned lifeboat, the placings of the ballast chambers and air chambers are good. The ballast chambers should be built of yellow metal. Your committee recommended the approval of this boat. Boats to be built as required by Section 3, Rule III., of Life-Saving Appliances.—MATT. O'BRIEN, CHAS. C. BEMIS, AMERICUS WARDEN, Committee."

The recommendation of the committee was agreed to by the following vote: Yeas: Messrs, Starbuck, Curran, Ashbury, Hays, Dugan, Warden, Daly, Robinson, O'Brien and the Supervising Inspector-General—10. Nays: None. Absent: Mr. Bemis. This recommendation was approved by the Secretary of the Treasury, in accordance with provisions of section 4491 Revised Statutes of the United States February, 11, 1887.

A favorable notice of a similar tenor is also included in the report of the Commissioner of Navigation, the late Jarvis Patten, to the Secretary of the Treasury in 1886.

Not one of the three ventures to handle the subject with thoroughness and decision; they all indorse the features peculiar to lifeboats, but fail to investigate the system of construction as a whole, leaving its promoters free to use the indorsement of the Navy and Treasury Departments of the United States in its appeal to investors. The subject is entirely too important to be left by the authorities in this state; if the invention is all that is claimed, then the sooner the fact is known the better for all seafaring men; if on the contrary, as we believe, it is dangerous in the extreme, it should not be aided by the endorsement of the Government in a course which is certain to result fatally to some one in time.

In this connection we can instance the new boat built under the Norton patents and described in the letter of her owner lately published. We visited last week the yawl Alista at the yard in Hoboken where she is fitting out for her cruise. Like all else connected with the Norton system, there was an absence of definite measurements and figures, but the boat is 30ft. l.w.l., 9ft. beam, 2ft. 6in. draft, including a wood keel of 1ft. and with 22in. least freeboard. She is a boat of comparatively large displacement, with full, round lines, practically a double-ender, and resembling a lifeboat in general model. The sheer is moderate, she has a high cabin house and a cockpit abaft it. There is very little overhang aft, the stern coming in almost to a point. Inside there is just enough room to sit erect on a low locker in spite of the height of the house, the floor being very high. The space beneath the floor is given up to the water ballast, of which the boat has a great weight, certainly enough to make her fairly safe under a very small rig.

The thousand square feet of sail which was promised has dwindled sadly in actual area. The only figures which Mr. Wiener could furnish were the length of main boom, 19ft., mizen boom, 11ft., but the bowsprit we estimated at about 8ft. outboard, the hoist of mainsail 20ft., the mizen 12ft., with a gaff of about 7ft. The mainsail was rigged with a gaff on the passage up from Wilmington, but though it is confidently asserted that full and satisfactory tests were made at sea, the sail has been reduced to a small leg of mutton, 19ft. on boom and 20ft. hoist, or only 200ft. Mizen and jib together will not make 300ft. more, so that the working sail is under 500ft., certainly no great amount for such a boat. The bowsprit is rigged for a jibboom and Mr. Wiener proposes to set a "ringtail" from the head of the high topmast to the end of the main boom. For seagoing the rig is very bad, the canvas being in poor shape and the spars unnecessarily long. As to the alleged tests, Mr. Wiener could give no data, but said that he was thoroughly satisfied with the performance of the boat, and that she bore out all of Capt. Norton's assertions. He admitted that he had no means of comparing her directly with a similar boat with the same amount of water ballast in closed tanks and without the air chambers, saying in a general way that he had sailed all kinds of yachts and knew this one to be much stiffer than any ballasted with iron or lead, and also that he could feel the easy motion due to the compressed air in the chambers. With her small rig the boat will probably be safe enough under ordinary conditions, but let her go down once under such a squall as that which sunk the Agnes last Friday and she will inevitably fail to recover herself. It is true that she cannot sink, but if capsized at sea this would mean that the crew could live for a time, until seaward or washed out, instead of the boat sinking at once under them, but all this is counterbalanced by the immensely greater risk or rather certainty of a capsize. We have received the following letter from Mr. Wiener:

Editor Forest and Stream:

Since my last lines to you the little Alista, under the good pilotage of Capt. Mahoney, has made the passage, by the way of the ocean, from Wilmington to New York harbor. With the wind abeam and three sails set—jib, mainsail and mizen—the captain assured me she made ten miles an hour while it blew fresh, the boat comporting herself admirably at all times. I have about made up my mind that my little yawl is a treasure, reliable in stays, fast, non-capsizable and unsinkable. I must emphasize non-capsizable, for the reason that when off Sandy Hook we were struck by a flaw that called for the slackening of the main sheet, but this was a new and kinky rope and refused to render. The heavy pressure of wind sent her gunwale to water, but there she hung and refused to go any further. The pressure of the sea against the air in her ballast chambers along the waterline, and the downward pressure of the water which was being lifted in the ballast chambers to windward, held her firmly, and the wind seemed to lose its force by the slant of the sails; spilling itself, as it were.

Ordinarily, in sailing small craft, it is the custom for all hands to sit well to windward to make the boat stand up to her work. The Alista does not seem to call for this; on the contrary, whoever went below for rest on our ocean passage would select the leeward side, that being the most comfortable for reclining purposes. Another feature of the principle upon which she is built is that her action in a seaway is less prone to occasion seasickness, as her rolling and pitching seemed to be made very easy and gentle by the air cushions upon which she rides.

As the weather did not admit of painting at Wilmington, a few days are being employed to "pretty up" the ship at Mr. Desmond's boat yard. Next Thursday sail will be hoisted again to dodge around in New York Harbor for a week or two, during which time it will give me pleasure to show you, fellow yachtsmen and yacht builders, the merits of Capt. Norton's excellent invention, particularly as there seem to be so many who do not comprehend it. And yet the matter is admirable for its simplicity. For instance, in considering my boat, that the sea is pressing against 16ft. 6in. in length, 8×10in. in height and width along her waterline, in the air portion of her ballast chambers to leeward; this alone should give her sufficient stability, but there is also the water to windward which she lifts and which consequently helps to pull her down to her bearings. A facile experiment to show that the water is lifted above the level of the sea and that it does not leave the ballast chambers is to place in a bucket of water a tumbler; invert this so that it is full or partially so and you can lift the water in the tumbler above the level of the water in the bucket until you reach the surface thereof. This demonstrates the theory of the Captain's invention, with the exception that if you raise the tumbler a trifle above the surface of the water in the bucket it naturally will pour out and air take its place; whereas the holes along the keel of a boat never becoming exposed the water will never escape from the ballasting chambers.

If the Gleam had been built on Capt. Norton's principle we would never have heard of the lamentable accident, and Mr. Garret might be with the living to-day. He could have felt safe though his boat were cut in two, and if cool-headed could have remonstrated at his leisure from his half of the boat with the pilot of the Appa for running him down.

There is but one way to destroy a Norton boat, as far as I can see, that is to grind her to pieces piecemeal on the rocks. All passenger ships and war vessels should be built on the new system to assure speed, safety and luxurious traveling. Mark my words, dear editor, the time is near at hand that the smallest as well as the largest vessels will be built on the Captain's principles, to assure speed and safety. E. O. WIENER.

HOBOKEN, N. J., June 12.

The sloop Heron, a shoal centerboard boat, 33x13ft. on l.w.l., is now being fitted up on the Norton system, the tanks being similar in form to those in the model, each large enough to fit between a pair of frames. The air chamber in each case is somewhat larger than in the model, and about ten of these tanks are fitted on each side. The lead ballast, some six tons, has been entirely removed, and it is confidently asserted that the yacht will be stiffer without it. The offices of the Norton Naval Construction and Ship Building Co. in Jersey City are ornamented with plans for a schooner yacht, a passenger steamer, gunboat, etc., to be constructed on the Norton system, the designer being Mr. John Haug of Philadelphia. We are told that the company now has orders for thirteen vessels of various sizes, yachts, lifeboats and yachts' boats. We were informed that Mr. Geo. L. Watson, designer of the Thistle, now had an agent in this country to negotiate for the use of the company's patents in vessels designed by him, and at the New York office we learned that Mr. Burgess had sent an agent from Boston to secure similar rights, though who the agent was, or why Mr. Burgess had not called in person on some of his numerous trips to New York and inspected the model, we could not ascertain.

We have not touched upon the structural features of the Norton system, but there is one very important point to consider. Any damage, however slight, to the air pipes or tanks, will allow the ballast to run out. A leak in an ordinary vessel admits water and may be stopped, but a leak in several of the ballast chambers, or any damage to the pipe which connects them, would at once allow the water ballast to run out, leaving the boat unballasted on the weather side.

AN EARLY CROP OF CAPSIZES.

THE national type of shoal draft flatirons have opened the drowning season early and in good style this year by the rolling over at her anchor, with sails stowed, of a schooner yacht 45ft. on waterline, with the loss of one man. On Friday last a very severe thunder storm from the N. W. passed over New York city and the surrounding country, making its appearance at 6 P. M. and breaking with great violence two hours later. A number of yachts were anchored off Tompkinsville, Staten Island, and when the storm struck, one of them, the schooner Agnes, owned by Mr. J. Norton Winslow, capsized and sank at her mooring, off the Corinthian Y. C. house, in about 8 fathoms of water, her lower spars being partly submerged. The Agnes is a shoal centerboard yacht of the ordinary American type, 54ft. l.w.l., 16ft. 9in. beam, 5ft. 9in. depth of hold, and 4ft. 6in. draft. She lay snugly at anchor within 300yds. of shore, with sails furled and all in order for the night, only her crew of four being on board; and when the squall struck her she rolled quickly over and sank. The yacht Vision was anchored near by with her owner on board, and a crew was at once sent off, picking up three of the Agnes's crew, but the fourth, Charles F. Anderson, could not be reached in time. Further up the Bay the open boat Needles, of the Pavonia Y. C., was capsized, her crew of five being taken off the bottom three hours later when nearly exhausted. Several other small craft were capsized or partly swamped, but no more lives were lost. Messrs. Brokaw and Blake, of the Brooklyn C. C., were in the middle of the bay in canoes, on their way to Staten Island, when the storm broke, but they reached the Bay Ridge shore in safety at last.

The storm was a very violent one, but at least three or four fully as bad may be expected every summer in this locality. There was no reason why a properly designed and ballasted yacht should not ride it out in safety, especially when at anchor with sails furled and after two hours' notice of its coming. The capsize of the Agnes was due to nothing but the type; shoal, wide, with high ballast and a limited range of stability, she only did what Mohawk, Grayling, Sophia, Sarah J. Craig, Minerva and hundreds of smaller craft have done, with the exception that her case was the worst of all, the others being under sail when capsized.

There are still scores of yachts in the fleet just as dangerous and treacherous as she; yachts that are used year after year as summer homes, where men take their wives and children, and that are just as likely to be turned in a moment into floating coffins like Mohawk. With so many awful examples before them it is strange that men will go carelessly on, inviting the same risks that have proved fatal to their friends. The dangers of the sea are serious enough at best, but the one that is most to be dreaded is the very one that may be avoided with absolute certainty. Collision and shipwreck can never be forseen and prevented, but a capsize is something that is only possible through faulty design and ballasting.

Such an accident as that to the Gleam can never be absolutely avoided, but an occurrence like the present one is due entirely to ignorence or recklessness in originating and perpetuating such a type of yacht.

In 1886 there was the terrible loss of seven lives on the Sarah J. Craig; last year the Minerva, of much the same proportions as Agnes, capsized in a puff on the Delaware River and drowned two; while at the end of the season the Gracie nearly followed her example, barely missing a capsize but drowning one man; and now the season opens with the Agness and a loss of one.

The yacht was lifted by the derrick Reliance on Saturday night, losing her mainmast, and will be refitted to start afresh on her career. The week previous, at Montreal, a new yacht capsized and so nearly drowned her crew that the race she was to sail in was postponed. The danger of all wide, shoal-bodied, badly ballasted craft has been so thoroughly proven by the examples we have given that it is little short of murder to take the helpless and ignorant on board of them, and in the case of a fatal termination the blame must rest heavily on those who do so. With the case of yacht sailors and seafaring men who know the risks and accept them it is a different matter, but all such craft if used at all should be kept for racing and never for the use of ladies or landsmen guests.

DUCKERS VERSUS CANOES.

Editor Forest and Stream:

I feel that it is due the yachtsmen and canoeists who read your yachting columns that I should make a few comments on Mr. Work's article in your issue of June 7. Mr. Work endeavored to make the point that although the Sadie and Gracie may win races here they cannot thereby establish any claims to a high order of merit, on account of the slowness of the boats against which they race. Priscilla, our last year's champion, was built by Wignall, of Philadelphia, and may fairly be classed as a modern racer. The Frank and Willie Playford won a race on the Delaware last season before she was brought here. The G. W. Bowers is supposed to have a record on the Delaware, but I cannot say what it is. She has shown indications of speed on several occasions here. The Volunteer is a new tuckup, by Wignall, and was launched less than two weeks ago. There is nothing ancient about her. However, it is not necessary to enumerate. A tuckup is a racing machine, pure and simple, and if a ducker can come anywhere near equalling her in speed she is a very desirable craft, and the same may be said of the canoe. I think Mr. Work underestimates the strength of the wind on May 20. When the wind is north to northwest the water is never rough here on our course, and a man standing ashore might make a mistake in estimating its force. That the Sadie and Gracie were badly beaten mainly on account of the strength of the wind I do not deny; but the Philadelphia ducker did not go two rounds while they went one. One of the Philadelphia duckers carrying 18yds. of sail was not ahead of the Sadie or Gracie at any time while they were in the races. After they withdrew the duckers got ahead by continuing on in the race. They withdrew because they could not possibly overtake the leaders, and not from fear of a capsize, or because there was any likelihood of being beaten by boats in the rear. In the afternoon there was a good sailing breeze which lasted during the first round. The canoe Sadie led. The wind fell very light on the second round and the Sadie still led. The question narrows down to this, How much wind is required to enable three men to outsail one man? Another point, the Gracie would not be swamped by a passing steamer on the Delaware; she will, in my opinion, stand as much rough water as will a ducker. We occasionally have rough water here when the wind is easterly, and then the duckers are bailed out with a bucket, while a small sponge suffices for the Gracie.

On the whole, Mr. Work's article is very fair, and the gentlemanly and straightforward manner in which he states his views should command the respect of all. E. A. LEOPOLD.

CORINTHIAN Y. C. SAN FRANCISCO—May 30.—The annual regatta of the Corinthian Y. C. was sailed on May 30 over a course from Meigg's wharf to a stakeboat to northward; thence to Mid-channel Buoy off the Presidio, leaving buoy to port; thence to Blossom Rock Buoy, thence to Sonoma Rock Buoy or Mission Rock Buoy, thence to Blossom Rock Buoy, thence to Mid-channel Buoy, passing between Meigg's wharf and stakeboat going out, and thence back to point of beginning. Second class boats, under 25ft. over all, to finish at starting line without rounding Mid-channel Buoy the second time. After some delay in waiting for wind the start for second class was made at 2:05 with light N.E. wind and strong flood tide. The first class stated at 2:20. After the start the wind shifted to N.W. and freshened, the race being sailed within the limit, five hours. The times were:

	Start.	Finish.	Elapsed.
Spray	2 30 00	7 01 30	4 31 30
Ripple	2 30 00	7 13 00	4 43 00
Pilgrim	2 30 00	withdrew.	
Windward	2 09 00	withdrew.	
Gertie	2 14 00	withdrew.	

MONTGOMERY SAILING Y. C.—Fifth weekly regatta, June 10.—Course, Norristown to Indian Creek and return, distance five miles. Weather fair; wind southwesterly.

	Length.	Start.	Finish.	Corrected.
Gracie, skiff	12.00	1 32 40	3 10 55	1 36 55
Igidious, tuckup	15.00	1 40 00	3 20 55	1 40 55
Playford, tuckup	15.00	1 40 00	3 21 15	1 41 15
J. S. Frith, tuckup	15.00	1 40 00	3 24 10	1 44 00
Flying Eagle, tuckup	15.00	1 40 00	3 24 10	1 44 10
Priscilla, tuckup	15.00	1 46 20	3 24 40	1 44 40
Ino, ducker	15.00	1 30 00	3 26 15	1 46 15
Volunteer, tuckup	15.00	1 40 00	3 26 30	1 46 50
Elsie, ducker	15.00	1 30 00	3 28 50	1 48 50
Querner, tucker	15.00	1 40 00	3 30 35	1 50 35
G. W. Bowers, tuckup	15.00	1 40 00	3 35 55	1 55 55

The Igidious has won three races to date, Gracie has won two, besides leading the fleet around the outer mark in three others which did not finish within the time limit. The canoe Sadie has not been interested in the last four races on account of the sickness of her owner, Mr. Geo. Ritter. Wm. Alcorn judge.

VIATOR.—This name has been given to the Burgess schooner built for Mr. Wyeth by Eddy, of Marblehead. Mr. Eddy has disposed of his shop and will henceforth command the yacht.

QUAKER CITY Y. C., JUNE 18.

THE thirteenth annual regatta of the Quaker City Y. C., which was set down for June 18, will have to be resailed on account of the yachts not making the race in the time limit of seven hours, the leading boats crossing the line 12m. after the time had expired. The day was faultless in all respects except the wind, which was light from W.S.W. For two hours during the race there was almost a dead calm. Fourteen yachts were at the starting point. The start was to be made at 10:30 A. M., but the wind was so light that the regatta committee decided to wait until 11 o'clock, at which hour the starting gun was fired. It was a dead beat to Marcus Hook, the turning point, and even had the wind held right as it was the race would have easily been made, but unfortunately it soon died out entirely, and sprang up too late to enable the yachts to make the race.

The regatta committee decided to resail the race on June 30, the day the fleet start on their cruise to Trenton.

The following is a summary. The elapsed and corrected time was not calculated: Course—Starting between committee boat and flagstaff on shore at Gloucester, to the Horse Shoe buoy, keeping it on starboard; thence around a station boat off Marcus Hook, keeping it on port, returning over the same course to point of starting, keeping to westward of Block House Bar and Chester Island, both going and returning.

Regatta committee and judges, Chas. L. Wilson, Addison F. Bancroft, Wm. J. Thorman.

CORINTHIAN Y. C., June 16.—The seventeenth race of the Corinthian Y. C. of Marblehead was sailed on June 16 over the following courses: First and second classes from judges' line, leaving buoys 5 and 3 on starboard, buoy on Tom Moore's rocks on starboard, stakeboat anchored 200yds. southeast of Tinker's Island on port, Half-Way Rock on port, buoy on Gooseberry Ledge on starboard, buoy on Cut-Throat Ledge on port, buoy on Eagle Bar on port, to judges' line, 10 miles. Third class from judges' boat, leaving Buoy 5 on starboard, Cat Island Rock on port, buoy on Goosberry Ledge on port, buoy on Cut-Throat Ledge on port, buoy on Eagle Bar on port, to finish, six miles. The classes were: First, all those under 30ft.; second, 21ft. and less than 25ft.; third, 16ft. and less than 21ft. The wind was moderate W. by N. at start, but soon went round to S.E., dying down to a calm. The full times were:

Wraith, H. P. Benson	19.02	1 20 36	0 56 48
Adele, W. H. Davis	19.10	1 34 02	1 10 51

THIRD CLASS—CENTERBOARDS.

Dolphin, Royal Robbins	17.02	1 20 20	1 03 31
Pixy, F. W. Chandler	20.09	1 27 05	1 04 41
Josephine, D. H. Follett, Jr.	18.08	1 30 35	1 06 18

Saracen and Rosalind are both new Burgess cutters. Baboon, Mr. Adams's new cutter, sailed an informal race during the afternoon with Zigeuner, designed by Mr. Burgess last year, beating her easily. The judges were Geo. A. Stewart, Ralph G. Brown, A. S. Browne and Chas. Woodbury.

WILLIAMSBURG Y. C. ANNUAL REGATTA, JUNE 13.—The annual regatta of the Williamsburg Y. C. was sailed on June 13 over a course of 20 miles, from the new club house on Bowery Bay around Sands Point Buoy; Class F sailing a 16-mile course around the Gangway Buoy. The wind was fresh S.W., and the tide near the last of the flood.

CLASS A—CABIN SLOOPS, OVER 33FT.

	Start.	Finish.	Elapsed.	Corrected.
Waconda	12 03 18	3 10 00	3 06 42	3 06 42
Tregarten	12 03 38	3 24 28	3 20 50	3 19 22½
Katie	12 04 26	3 33 47	3 29 21	3 27 53½

CLASS B—CABIN SLOOPS, 23 TO 33FT.

Katie Louisa	11 58 43	3 09 54	3 10 51	3 10 51
Sorceress	11 59 21	3 12 28	3 13 07	3 12 37
Progress	11 59 35	3 26 05	3 26 30	3 25 53¾
Mahonk	11 59 55	Not timed.		

CLASS C—OPEN SLOOPS.

Hugh Zobles	11 53 44	2 51 15	2 57 31	2 57 31
Emmie	11 54 27	3 25 30	3 31 03	3 21 55½

CLASS D—CAT RIGGED, 23 TO 27FT.

S. S. Free	11 48 56	3 03 01	3 14 05	3 14 05
E. P. Ackerly	11 47 19	3 26 30	3 39 10	3 32 36
Idler	11 49 11	3 36 07	3 46 56	3 41 26

CLASS E—CAT RIGGED, 19 TO 23FT.

Ida K	11 41 37	3 08 12	3 26 35	3 21 12½
Laura	11 42 57	3 27 44	3 44 47	3 39 24½

Henry Fisher	11 02 05	3 19 06	4 17 01	4 10 41

Mergus takes first prize in Class A, Vixen in Class B, Henry Gray in Class C and Columbia in Class D. Henry Gray wins a special prize, a handsomo gold medal presented by ex-Commodore Robert McWhinney for the fastest correct time. The judges were Com. A. J. Prime, Yonkers Y. C.; Com. Andrus, Manhattan Y. C.; G. E. Gartland, New Jersey Y. C.; Thomas E. Crimmins and Thomas F. Brennan. The regatta committee consisted of A. M. Everett, William H. Rowe, George Parkhill, John H. Kimble and Charles Dietz.

RHODE ISLAND Y. C. ANNUAL REGATTA, JUNE 14.—The Rhode Island Y. C. sailed its annual regatta on June 14 over the following courses: Course No. 3—Start, passing between judges' boat and stakeboat buoy off club house, to and around turning buoy off Gull Point, mouth of Potter's Cove, leaving same on port, and turning to starting point. Distance, 20 miles. Course for Classes 6 and 7—Course No. 4—Start, passing between judges' boat and buoy off club house, to and around turning buoy southwest of Bullock's Point wharf, thence around turning buoy off Gaspee Point, thence around turning buoy between Silver Spring wharf and north end of Starve Goat Island, thence around turning buoy off Bullock's Point wharf, thence around turning buoy off Gaspee Point, back to the starting point, turning buoys to be left on starboard. Distance, 10 miles. A reefing breeze was blowing from the south. The times were:

The regatta committee included Secretary E. H. Wright, C. I. Manchester, Dr. R. H. Carver, F. P. Eddy and E. S. Arnold.

SEAWANHAKA C. Y. C. CRUISE.—The following general order has been issued by the Fleet Captain, Mr. J. F. Tams: "The vessels of the fleet will rendezvous in Oyster Bay Harbor, the former home waters of the club, for the squadron cruise, on Monday, July 2. Captains will report aboard the flagship at half-past eight o'clock P. M. The squadron, while in Oyster Bay, will be the guests of the Oyster Bay Y. C. On the afternoon of Tuesday, July 3, a lawn party will be given in honor of the club on the grounds of Mr. John A. Weekes. The same evening a ball will be given in honor of the club by the Oyster Bay Y. C. While at Oyster Bay, mail matter, telegrams, etc., may be addressed care of Commodore A. P. Montant, Oyster Bay, L. I., and will be delivered to the vessels of the squadron. Stores and packages sent by the Long Island Express to the same care will be delivered at the shore on Commodore Montant's float, at which place market wagons will arrive and fresh milk may be obtained at 7 o'clock each morning, and Commodore Montant will furnish ice. Trains will leave Hunter's Point, Long Island City, for Syosset, where conveyances for Oyster Bay will be in waiting, at 4, 5, and 6:35 o'clock P. M., 15 minutes earlier from East Thirty-fourth street. The entrance to the harbor will be marked on the starboard hand by red flags and on the port hand by blue flags at the 14ft. at low water mark. Captain Pearsall of the Banshee has invited the squadron to make Black Rock Harbor a port of call, and while there to be his guests. The movements for the earlier days of the cruise will be decided upon at the first meeting of the captains, and the vessels of the squadron who have expressed their intention of continuing their cruise to Bar Harbor, Mt. Desert, will take their departure from Vineyard Haven for that point direct, making ports of call on the way back. The secretary has offered first and second prizes to the sailing masters of the yachts declared to be in the best order by judges to be appointed by the Commodore, the details governing the competition for which will be announced at the first meeting of the captains. Rowing and sailing races by the boats belonging to the vessels of the squadron will take place during the cruise. Captains intending to join the squadron are requested to notify the fleet captain at the club house, 7 East Thirty-second street, at as early a date as possible.

LAKE CHAMPLAIN Y. C.—This club held its annual meeting at the new club house in Burlington on June 6, Vice-Com. W. S. Webb presiding. Three members were elected and eleven names proposed. The following officers were elected: Com., W. B. Wetmore; Vice-Com., W. A. Crombie; Meas., A. C. Tuttle; Pres., J. Gregory Smith; First Vice-Pres., W. S. Webb; Second Vice-Pres., Henry Ballard; Treas., Horatio Hickok; Sec., Joseph Auld; Executive Com., U. A. Woodbury, W. H. H. Murray, A. G. Tuttle, F. W. Smith, D. W. Robinson, C. F. Carter, N. F. Nerrill, Elias Lyman, R. G. Severson, Horatio Hickok, Joseph Auld, Alvaro Adsit, T. S. Peck, A. C. Whiting, H. M. Phelps, C. A. Murray, F. E. Smith, E. C. Smith, S. W. Cummings, J. G. Hindes, H. H. Noble, Walter Witherbee, A. G. Whittemore, W. A. Crombie, W. B. Wetmore, H. J. Brookes, H. Le Grand Cannon. On June 11 the formal opening of the new house was celebrated by a ball, a large number being present. The club now has 201 members, 12 steam and 16 sailing yachts.

MONATIQUOT Y. C.—The regatta committee has decided to divide the second class (all boats under 20ft., sailing length), into two divisions, viz.:—No. 1. Catboats only. No. 2. Jib and mainsail boats. Catboats to carry mainsail only. Jib and mainsail boats to carry the sails mentioned and no others, Rule IV, (Classification), and Rule VI. (sails), of the sailing regulations, are hereby amended accordingly. Having made these changes to meet the wishes of a large majority of the yacht owners of this class, the committee have found it necessary to redistribute the prize money apportioned for the season accordingly. The race of June 16 was postponed, owing to the calm weather.

SOUTH BOSTON Y. C.—Opening race June 16. Like all the other races of the day about Boston, that of the South Boston Y. C., the first of the season, was a drifting match, only three boats, all the fourth class, finishing within the limit, the times being:

FOURTH CLASS—YACHTS UNDER 19FT.

		Elapsed.	Corrected.
Hebe, A. S. Ormsby	18.04	5 41 00	1 39 36
Mabel, W. P. Bennett	17.10	5 57 00	1 56 16
Joli, J. F. Cashin	16.08	6 01 50	1 59 15

The judges were G. F. Clark, Hubert Pope, Thomas Christian, R. W. Gifford, J. P. Bullard and W. A. Godfrey.

CAPE ANN Y. C., JUNE 16.—Only three yachts started, owing to the calm weather. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Silver Cloud	20 10	4 00 00	3 22 47

THIRD CLASS.

Doctor	15 09	1 20 20	0 57 27
Ethel	14 02	1 40 25	1 15 50

THE AMERICAN Y. C. OPENING.—The new and elegant club house of the American Y. C. was formally opened on June 16, Com. Starbuck breaking out the flag on the high flagstaff at 4 P. M., the large fleet of steam and sailing yachts in the harbor saluting with their guns and colors. The house is a large and handsomely fitted structure, in Queen Anne style, overlooking the Sound from Milton Point, Rye Beach. Every convenience has been provided, kitchens, dining hall, reception and billiard room, making one of the finest houses in the country. The annual regatta of the club will be sailed on July 14 over the new course in view of the club house.

YACHTBUILDING AT ROSLYN.—Col. Duryea's keel schooner Cavalier is nearing completion, and will be launched soon. Mr. Clapham has just shipped to Buenos Ayres a finely finished 37ft. sharpie with Roslyn yawl rig. He has also completed a 28ft. yacht for New York and is busy with another, a small singlehander, of Nonpareil model but with a 500lb. lead keel. She will be 7ft. 6in. beam, 28in. draft, and will have two berths in cabin, finished inside with hard, wood. Mr. Clapham has lately built several "Roslyn cruisers," 15 to 16ft. long, one with a lead keel for racing and cruising about Halifax, N. S. He also has an order for a 20ft. racing sharpie for the Adirondacks, and a number of orders for his weather grip.

SAVIN HILL Y. C., SECOND RACE, JUNE 16.—Owing to lack of wind only a short course was sailed, the times being:

Alice, R. M. Harding	2 03 00	Anemone, F. J. Stark	2 10 00
Alda, H. G. Patten	2 05 00		

SECOND CLASS—CATS.

Jester, W. H. Besarick	1 51 00	Gypsy, A. Lawrence Kidd	2 10 00
Avis, J. H. Odell	2 06 00		

THIRD CLASS—TENDERS.

Snag, J. Herbert Shaw	0 41 00	Volante, R. K. Rice	0 50 00
Ione, J. Hodsdon	0 42 00		

The Snag is a new boat only 9ft. long. The open race was postponed until Sept. 1.

NEW ROCHELLE Y. C. PENNANT REGATTA.—The pennant regatta of the New Rochelle Y. C. on June 16, was postponed for lack of wind, but a race was sailed in the afternoon between the cats Olive N., C. H. Noxon, 22ft. 8in., and Gracie L., Eugene Lambden, 17ft. 10in., the times being:

	Start.	Finish.	Elapsed.	Corrected
Olive N.	2 13 10	5 01 30	2 48 20	2 48 20
Gracie L.	2 13 56	5 19 00	3 05 04	2 50 34

Olive N. wins by 2m. 14s. The course was 8 miles.

TORONTO Y. C. JUNE 9.—The sealed handicap of the Toronto Y. C. on June 9 resulted as follows:

	Elapsed.	Cor.		Elapsed.	Cor.
Rivet	8 51	8 18	Yolande	6 40	8 85
White Wings	8 38	8 33	Escape	9 50	9 00
Cygnet	8 36	8 36	Cypress	9 39	9 06
Aggie	9 06	8 81	Condor	10 00	9 67

REGATTAS POSTPONED.—Both the Jersey City and Brooklyn Y. C., whose regattas were set for June 16, have postponed them. The former club has just moved its house to a new and much better location at the foot of Communipaw avenue, Jersey City.

ATLANTIC Y. C., LADIES' DAY, JUNE 16.—The ladies' day sail of the Atlantic Y. C. on June 16, did not take place, owing to the threatening weather, but a very pleasant reception was held at the club house.

VICTORIA BRIDGE Y. C.—This new club was to have held its first regatta on June 9 at Montreal, but the Stranger, a new yacht, capsized, nearly drowning her crew, so the race was postponed.

THE SINKING OF THE GLEAM.—The steam yacht Gleam was raised and hauled out at Baltimore last week. No investigation as to the cause of the disaster has been made as yet.

AMERICAN Y. C.—A race was sailed on June 16 at Newburyport, the winners being: White Cloud, Hazard, Budge and Teaser.

WATERWITCH, schr., belonging to the estate of the late Wm. Armour, has been sold to J. P. Thompson, Salem, Mass.

PORTLAND Y. C.—A race was sailed on June 16 for the challenge cup, Genevra winning, with Marie second.

ACTIVE, sloop, has been sold to W. L. Matson, of Hartford, Conn., who will use her for a family boat.

RECREATION, sloop, has been sold by F. B. Shedd to W. G. Titcomb.

QUINCY Y. C.—The race on June 16 was postponed for lack of wind.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. A. J.—We cannot refer you to any one who has live quail for sale at this season.

H. B. SOUTHWEST.—Emery dust will not injure the barrels, nor will the heating.

R. C. B., Madison, Wis.—1. The weight must depend largely upon your build and the purposes for which the arm is desired. 2. The tallow method is a good one. 3. The pistol grip affords a better holding of the arm.

ONE OF THREE.—1. The locality named will afford good sport. 2. The rifle is heavy enough. 3. Write to Game Warden Wm. A. Smith, Grand Rapids.

J. E. L., Chicago, Ill.—1. What is the best book on angling, for a novice? 2. What is the best wood for a rod? 3. Is bethabara a good wood and what is a fair price for a rod made of it? Ans. 1. "The American Angler's Book," by Norris. 2. Ash, with lancewood tip. 3. Yes; $8 to $12, but this depends much upon the workmanship and the ferrules.

M. L. D., Lancaster, Pa.—Please state what article or treatise, if any, you can furnish me giving information upon frog raising, and price of same. Ans. There is nothing published on frog culture. We have repeatedly said that frog culture was a delusion; see answer in our last issue.

C. B. S., New London, Conn.—1. Will you kindly inform me where and for what I can purchase alive genuine diamond-back terrapin? 2. Would they breed in this climate? I have a pond covering about one acre. 3. At what age will they lay eggs, and how old must they be to attain normal size, *i. e.*, about 6 or 7in. long on under shell? 4. Can you refer me to any work on this subject? 5. Has the experiment been made of raising them, and with what success? Ans. 1. Write to E. G. Blackford, Fulton Market, New York; the price varies greatly. 2. Yes. 3. We cannot say. 4. There is no publication on the subject. 5. We believe that it has been tried in Chesapeake Bay, but with what success we cannot say. It is doubtful if the culture of terrapin can be made profitable. If you try it, we would be glad to hear of the result.

J. C., Black Rock, Conn.—Can you tell me how to raise ferrets and how to stop the mother from eating her young? Ans. Milk is good food for the young ferrets and meat should be fed sparingly, as it gives them some disease called "distemper." Once a week is often enough to give meat, and then not in large quantities, until they are four months old. Perhaps a generous diet of meat might cause the mother to stop eating the young, but this does not always work, especially with an old one. If this does not answer try a muzzle and feed her on milk, leaving the muzzle just loose enough to allow her to lap the milk.

FROM THE EDITOR'S SANCTUM.—When certain results of a desirable kind are being effected, it becomes a pleasing duty to invite popular attention to the agency accomplishing these results. This thought was suggested by the invariably good reports constantly reaching us of the curative influences of Humphreys' Homeopathic Veterinary Specifics. These reports are from the most responsible people, and in every instance may be considered reliable. Time and space will permit us to quote but from one of the many "open letters" received annually, that of W. P. Batchelor, Chief Clerk Dept. of State, in Raleigh, N. C., who writes thus: "In November last I had an opportunity to test your veterinary remedies upon the worst case of chronic founder that I ever saw. The experiment was absolutely successful. The animal is all right now and rapidly regaining the flesh lost during her long illness. The cure is so remarkable that if my testimony leads to the further adoption of your veterinary system I shall regard it of greater service to the public than to your company." So they come by the hundreds. We know from personal experience that these remedies are unequalled, and the free expression of horse and stock owners throughout the country does not surprise us. They possess true merit, and merit will win in spite of prejudice or babbling. Humphreys' Veterinary Manual and price list sent free upon application to the company, 109 Fulton street, New York city.—*Exchange.*

(Revised in April, 1888) of the **Connecticut, Magalloway, Androscoggin and Dead River Region.**

This map embraces a large tract of territory from the Connecticut River on the west to the Kennebec River on the east, and from the Canada line north as far south as Whitefield, Jefferson and Gorham in N. H., and Albany, Paris, Hartford and Readfield in Me. These maps are mounted on cloth and bound in tasty cloth covers. Price $1. Jamaica Pub. Co., Jamaica Plain, Mass.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.× 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

The Audubon Magazine
BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

Forest and Stream Publishing Co.,
NEW YORK.

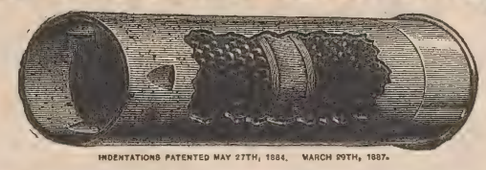
DOG TRAINING:



BY

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

For sale at this office. Price $1.00.

The Old "CRIMP," like the Muzzle-Loader, MUST GO.

The Peters Cartridges

INDENTATIONS PATENTED MAY 27TH, 1884. MARCH 29TH, 1887.

Are loaded by the Peters Patent Cartridge Loading Machine, the most rapid, scientific and accurate cartridge loader in existence. It is run by steam, is entirely automatic, and each machine has a capacity of 4,000 per hour. The wads are of pure and elastic wool felt, perfectly lubricated. They are cut several sizes larger, and compressed into the shell by the powerful machinery, and being so large hold back and develop the gases in guns of all makes. No SPECIAL loads are required for SMITH, LEFEVER or PARKER guns. The machine having a steady and regular movement, the wads are seated level and with proper pressure, while the charge is always uniform. Being fastened by the **PETERS PATENT INDENTATIONS**, the charge when fired passes out unobstructed, giving a WONDERFULLY FINE PATTERN WITH INCREASED PENETRATION. The RECOIL is greatly diminished and the GUN LEFT CLEAN. Sportsmen give their hearty approval. Fred Erb, Jr. made his wonderful score of 490 out of 500 with them. Chas. W. Budd used them the entire first day of the Detroit tournament without a miss, and many others have done their best shooting with PETERS CARTRIDGES.

Try Them for Yourself. For Sale Everywhere.

DAVIES & CO., London, England.

STANDARD TARGETS.

Standard Targets

Can be used without any change in Blue Rock traps, as they are of exactly the same dimensions.

Standard Carriers

Can be attached to the arms of all Blue Rock, Peoria and American Clay Bird traps.

TESTIMONIAL.

MESSRS. VON LENGERKE & DETMOLD, NEW YORK.—*Gents:* We have used your Standard Targets at our last tournament in our Blue Rock Traps, and find they work to perfection. There is no difference noticeable excepting that the general breakage was much less with the Standard than with the Blue Rocks.
(Bridgeport, Conn., May 18, 1888.) HARRY NICHOLS, WM. LONGDEN, } Managers.

Many other clubs can testify to the same superiority. The **STANDARD TARGETS** are made by A. H. Hebbard's Patent Automatic Target Machine, guaranteeing even size, even weight and density, and are *superior in quality to either "Blue Rocks" or "Cleveland Targets."*

Standard Targets are the Cheapest and the Best made.

NEW YORK AGENTS:
VON LENGERKE & DETMOLD,
843 Broad Street, Newark, N. J. 8 Murray Street, New York.

THE STANDARD TARGET CO.,
CLEVELAND, O.

CAUTION!

When Buying Blue Rocks, see that you Get the Genuine.

EACH BOX SHOULD HAVE STAMPED UPON IT

"BLUE ROCK PIGEONS MADE BY THE CLEVELAND TARGET CO."

Inferior imitations which do not fit our traps are being made and sold under the name of "Cleveland Targets." We are also informed that some dealers, when they receive orders for "Blue Rocks," substitute these and bill them as "Blue Rocks." **As the general appearance is the same, it is easy to be deceived.** These imitations sell for several dollars per 1,000 less than Blue Rocks, and are worthless, as they do not fit our traps, for which they are claimed to be made, and the breakage in trapping is very great.
Hereafter the name "Blue Rock Pigeon" will be stamped in the crown of our birds.
The "Blue Rocks" have been adopted by a large majority of clubs and State associations as the best, cheapest and most popular flying target.
The "Blue Rock" trap is made to throw Blue Rocks, and *will not throw any other target as well.*

THE ATLANTIC AMMUNITION CO., Limited, 291 Broadway, New York.
Agents for THE BLUE ROCK PIGEONS AND TRAPS.

$3,000.00 IN CASH PRIZES

Offered by the Chamberlin Cartridge Co. in their Tournament of 1888, and

The Atlantic Ammunition Company's Amateur Championship Sweepstake Tournament, 1888.

New England States, a Diamond Badge, costing - -	**$200.00**	**Virginia, Diamond Watch Charm Trophy, costing**	**$50.00**
New York State, Diamond Watch Charm Trophy, costing	**50.00**	**N. C. and S. C., " " " " " "**	**50.00**
New Jersey State, " " " " "	**50.00**	**Ga. and Fla., " " " " " "**	**50 00**
Penn., Md. & Del., " " " " "	**50.00**		

The above Trophies and Badge are to represent and establish the Amateur Championship of each locality named. We shall do all within our power to guarantee fairness and satisfaction to all.
Must be shot at Blue Rocks. To gauge your skill in shooting you can only do so by using a bird that is **STANDARD IN FACT BUT NOT IN NAME,** it is the **BLUE ROCK.**

ANSWERS TO CORRESPONDENTS.

TROUT CULTURE BY STATES.

IN another column will be found some remarks on the culture of trout by the State of New York, and the views of Commissioner Blackford thereon. The remarks will apply to other States as well, and are therefore of general interest. When New York began to distribute trout the work was confined to public streams, or streams in which the fishing was open to all, but now the fry are sent to waters which are not open to the public, being controlled by clubs or individuals, and there are objections to this disposition of the State funds. In almost every State inhabited by trout there are fishculturists who can supply the fish needed by private persons or clubs, and to them should be left this portion of the work.

At the conference of Fish Commissioners in Detroit, last month, the policy of New York in devoting its energies to trout culture, to the neglect of Lake Ontario, was attacked (see report in our issue of May 24), and the caustic remarks of the president of the Michigan Board were brief but just, and indicated the prevailing sentiment that trout breeding should not be the sole end and aim of fishculture. The advances in the science of breeding fish have rendered it possible to carry on operations on a scale not dreamed of a dozen years ago, and most of the States which have kept up with the advance are now engaged in propagating the food fishes and letting the sportsman share in the increase, instead of making sport the main object.

Mr. Blackford, whose remarks are quoted elsewhere, has struck the key-note, and, if his colleagues agree with him, the field of fishculture in his State will broaden. New York has had more generous appropriations than any other State, and therefore more is expected of her. But many obsolete methods are retained, such as the old-fashioned floating box for shad hatching, on which the State still pays a royalty, when a barge fitted with pumps and modern appliances, manned by several experts, could move from place to place on the Hudson and accomplish ten times as much. Some new blood is needed in order to get greater results, and to bring fishculture in New York out of the rut in which it has run. The distribution of a few million trout, shad and whitefish, supplemented with a bushel of "bullheads" is not enough in these days. Lake Ontario and Long Island Sound are broader fields, the establishment of a corral for salmon on the Hudson where spawn can be taken, now that the river is stocked with them, demands consideration, and there is urgent need of active men to carry out these projects and to put fishculture in New York on a higher and broader plane.

SNAP SHOTS.

IT is a subject of profound regret that the late Joseph Goater left this earth when he did, before he had an opportunity to supplement his researches into the natural history of Boon Gar Arrahbiggee by a study of the wonders of creation in our own land. He might, for example, have given us a more detailed account than appears in the daily papers of the "wingless flying snake" of Darlington county, South Carolina, which was beheld by two girls speechless and spellbound, as it moved silently and majestically through the air. Goater's pencil, too, might have given us some satisfactory conception of the whale which was discovered in Lake Winona, Michigan, now leaping twenty feet into the air, and again burrowing into the bottom with its head ever pointing due north. While in the West Mr. Goater might also have secured the hoopsnake recently captured by George Milton, of Floris, Iowa. This snake rolled down the hill, after the orthodox manner of hoop-snakes, and struck Mr. Milton's plow with its tail; it was captured and now reposes in alcohol.

The New York game law has a clause relating to "galli mules," the framers evidently having in mind gallinules. This is almost equalled by the Michigan provision relating to "muffled" grouse, which in turn is corrected to read "ruffled" grouse by the compiler of the printed laws sent out by the game warden. The text of the Ohio law has it "ruffled" grouse. The Vermont law recognizes the term "woodcock" as a name for the ruffed grouse, but in another clause provision is made for the woodcock properly so called. The New York law forbids transportation of any "wild deed," and it uses the adverb "either" applied to "the counties of this State," which is enough to make old Lindley Murray turn over in his grave. The game laws give evidence of a large degree of shiftlessness, but perhaps they are no worse than other statutes. The courts have held that such errors as "ruffled" for "ruffed" and "deed" for "deer" do not invalidate the law.

Dog shows promise to be all the rage next year, if we may judge from the number of fixtures already announced. The New Jersey Kennel Club is first on the list so far, with dates of Feb. 12 to 15. After this there will be a show each week during hat and the following month, making seven in all. The first or second week in April for the past four years has been the date for Boston, and one or the other will probably be selected by the club for the coming year if they decide to hold a show, but nothing has been heard from them yet. Other shows are being talked up at several places, and there is a strong probability that each week during the months of April and May will have its show, and the season may continue even longer.

The growing interest in buffalo preservation and domestication lends unusual interest to each item under this head. The recent capture of the calves by Mr. C. J. Jones in Texas, which we recorded a few weeks since, is important, and so is the arrival in Washington of the bull and cow presented by Mr. Blackford to the zoölogical collection of the U. S. National Museum. It is reported that the buffalo owned by the Wild West show, which is now performing at Staten Island, have this spring produced five calves, which are doing well. There still remains in America the foundation for a stock of domesticated buffalo, and it is to be hoped that this stock will not be allowed to run out.

The newly amended deer hunting law in the State of New York prescribes the period from Aug. 15 to Nov. 1, for the open season, as formerly, and makes the hounding season from Sept. 1. to Oct. 20, which is an extension of fifteen days.

CHEMISTRY OF POISONING BY SNAKE VENOM.

THE series of papers by Dr. H. C. Yarrow on the treatment of snake bite which we have just brought to a close, have been read with a great deal of interest both by the medical profession and the public generally. Every one is anxious to believe that although from the earliest ages man has sought in vain for an antidote to the noxious and too frequently fatal effects of serpent venom, nature has nevertheless elaborated a remedy somewhere in her secret recesses, and that persistent experiment only is necessary to its discovery. We must confess to a certain measure of disappointment that Dr. Yarrow, who took up the investigation of permanganate of potash, laid it aside without throwing any fresh light on the chemistry of its action in snake poisoning. As far as his experiments went, they appear to discredit the results reached by Lacerda, but his experiments can hardly be accepted as conclusive. Lacerda insisted that if the venom were administered in glycerine instead of in water the action of the permanganate would be negatived. The same conclusions were reached by Dr. Richards from his experiments, and the fact insisted on by Dr. Yarrow, that the permanganate has not the same action on venom in the system that it has in the laboratory, lends at least such a measure of plausibility to the view that glycerine may prove a disturbing agent under some conditions, as to render it desirable to settle the question definitely by further experiment. But for reasons given below we have not much faith in the efficacy of the permanganate after the poison has been absorbed in the system, except as an antiseptic for local employment. But if Dr. Yarrow has failed to throw any light on the chemical reactions of the poison in the system, he appears to have discovered in jaborandi or its active principles a physiological remedy of greater value than any hitherto known to the profession, but whether and to what extent snake poisoning will yield to purely physiological remedies is a point on which an opinion, to be of any value, must be based on a knowledge of the very complicated effects resulting from the reception of venom into the system.

Hitherto the treatment of snake bite has been purely empirical, and for the information of such of our readers as may not understand the term, it may be explained that it is used as meaning "experimental" in contradistinction to "scientific," and implies that the physician not knowing the mode of action of the poison in the system, employs in turn every conceivable remedy, until by experimental tests he finds one which acts beneficially. But Dr. Weir Mitchell's investigation into the chemical composition and character of venom, and into the physiological action of the poison upon the system, has erected a platform from which it is possible to make generalizations which may guide us in the direction of further research for remedial agents, and our generalizations lead us to infer that while physiological remedies are capable of playing an important part in freeing the system from the effects of the venom, their field of usefulness is limited, and that the successful treatment of the more serious cases depends on the possibility of arresting the spread of decomposition set up by the venom.

Dr. Weir Mitchell's ably conducted investigations into the chemical character of snake venoms show that they consist mainly of various proteid substances belonging to two classes, peptones and globulines. All snake venoms appear to contain peptones and globulines, but the proportions are very varied, the cobra venom having a considerable preponderance of peptone, and the rattlesnake an equally marked preponderance of globuline. Injected into a vein, the one is as deadly as the other, but injected into the tissues the globuline expends the greater portion of its energy in creating local disturbance, while the peptones pass into the circulation and distribute their action over the whole system, including the vital organs. Floating in the viscid fluid of which the venom consists, are numerous micrococci, which Dr. Weir Mitchell succeeded in filtering out, and propagating in bouillon. Thus purged of their surrounding venom they were introduced into the circulation of birds and rabbits without creating any disturbance. The venom deprived of them was as active as before, clearly demonstrating that the micrococci play no part in producing the effects incident to snake venom, which are entirely the results of chemical reactions. In its general character snake venom is very nearly akin to the saliva of man and other warm-blooded animals.

Following Dr. Weir Mitchell's experiments on the effects of the venom on the system, it appears that if a

very strong dose is introduced into the tissues or a vein, death will result in less than five minutes. The respiratory organs cease to perform their functions, and the heart's action is arrested; but beyond a little decomposition of the blood and tissues at the point of insertion, the venom leaves no trace of its action.

But in those cases in which the venom is less promptly fatal in its effects, its mode of operation is soon manifested. The globulines, probably on account of the greater rapidity with which they are decomposed, produce the characteristic local effects: the tissues are decomposed, together with the walls of the capillaries which traverse them, blood oozes out and is rapidly decomposed, horrible stenches are generated, and the area of the foul sore extends itself on all sides. Meantime the poison which has entered the circulation, produces similar but more limited effects throughout the system; the capillaries are decomposed from the inside, and the partially decomposed incoagulable blood, oozes out upon the tissues and sets up a process of decomposition of them, and this not only in the tissues under the skin, but the capillaries in the coats of the abdominal viscera and in the pia mater give way also, and admit the extravasation of the decomposed blood into the abdominal cavity and on the brain, and the blood having lost its power of coagulating, the immediate cause of death may be internal bleeding.

Dr. Mitchell contents himself with purely physiological investigations; but it is certain that physiological appearances are but the phenomena of the chemical processes which underlie them. The animal organism is a chemical laboratory, in which all the phenomena of healthy life and growth are but the results of a series of chemical decompositions and reconstruction of the elements into new substances. The food is decomposed in the stomach and by a series of chemical decompositions and reconstructions is converted into chyme, chyle and blood, which latter is further decomposed and its elements reconstructed as tissue of various sorts—muscular tissue, brain tissue, etc., etc. Every chemical decomposition in the healthy body is attended with waste of its substance, and in the healthy system decomposition begins by the combustion of a portion of surplus carbon in oxygen, which is always in necessary supply in health, and the product, carbonic acid, being perfectly innocuous, is carried off without injury. The remaining atoms of the four organic elements have their proportions determined by the amount of carbon and oxygen abstracted, and the character of the product of their recomposition is determined in part by these proportions.

All disease is equally a chemical process, but in snake poisoning decomposition apparently does not begin with the combustion of carbon in oxygen, but by an abstraction of oxygen, and the reconstruction of the remaining atoms into foul smelling hydrocarbons, which decompose all the blood and tissue with which they are in contact. The difference between healthy and diseased chemical reaction is that in the one some carbon and oxygen is given off as an innoxious gas, and in such proportion that the remaining atoms reunite to form tissue, while in disease, the elements abstracted result in the reconstruction of the remaining atoms into deleterious substances, which in their turn promote further unhealthy decomposition.

In snake bite especially the fatality appears to be due to the fact that in the processes of decomposition set up, the carbon does not undergo combustion in oxygen, and get carried off, but forms unstable compounds with the other elements.

The venom itself is decomposed within a few minutes of its absorption by the system, and there is good reason to assume that its mode of decomposition is by the absorption of oxygen, possibly accompanied by the elimination of an atom or atoms of one or more of its own elements. It effects decomposition and must itself be necessarily decomposed in the process. In contact with permanganate of potash it is decomposed into an innocuous substance, and the permanganate is equally decomposed. It gives up some of its oxygen to the venom, and at once falls to pieces, the potash separating from the peroxide of manganese. And if, as appears to be the case, the poison acts in the system by absorbing oxygen from the blood and tissues, it is evident that it undergoes precisely the same change that it undergoes from decomposition by the permanganate. Its direct agency is promptly brought to a close, and it causes no more trouble, excepting that the product probably undergoes putrefaction, as a result of exposure to the series of secondary decompositions which it sets up.

The injury which begins with snake bite soon becomes one of septic poisoning. Each particle of blood or tissue decomposed becomes a poison, which decomposes other blood or tissue immediately in contact with it, and the proportion of poisoned to healthy blood must go on increasing in ever accelerated ratio unless the system can get rid of it at least as fast as it is generated.

A case of snake poisoning then appears to call for three separate modes of treatment simultaneously; firstly, local treatment of the wound by the removal of the liquid and gaseous products of decomposition, for which the snake stone or other compact piece of fresh burnt animal charcoal is a useful remedy, to be followed by injections of permanganate solution or other disinfectant. Secondly, physiological remedies for determining the poison to the skin and urinary organs, and of these the jarborandi appears the best possible remedy, but in its absence resort may be had to other diuretics and diaphoretics accompanied with vapor baths and moderate stimulants, especially of ammonia, which stimulates without producing reaction. Thirdly, and in all severe cases the most important, the arrest of the process of decomposition in the blood. This being achieved there is only the poison already formed to get rid of, and the patient may be saved in cases which would otherwise prove fatal.

For satisfactory experiment in this latter direction we ought to know the precise process of the secondary decompositions, for it does not necessarily follow that the decomposed or decomposing blood and tissues have precisely the same chemical action as the original virus, but there are some facts to lead us to suppose that the process of decomposition begins by the abstraction of oxygen from the healthy blood and tissue. The dark color of the partially decomposed blood indicates loss of oxygen, and the arrest of the disease by artificial respiration indicates the need of oxygen in the blood, and it is for consideration whether oxygen could not be introduced directly into the blood with more pronounced benefit. The venous blood being saturated with a continuous supply of oxygen, there is a strong presumption that it would lay hold of the products of decomposition in their first stage, and supporting the combustion of carbon, alter the course of decomposition and necessarily the products of the remaining atoms, converting them into simple impurities, and perhaps for the most part into innocuous gases readily eliminated by the system.

Oxygen might be introduced into the circulation from a bladder mounted with the mouth piece of a hypodermic syringe, or the peroxide of hydrogen may be introduced by hypodermic injection, and although this reagent failed in Dr. Weir Mitchell's experiment to decompose the venom, that is no evidence against its possible influence on the secondary series of decompositions in the system; but it goes without saying that oxygen to be effective must be introduced in sufficient quantity, and for this reason the permanganate of potash could not be safely employed. The quantity necessary to decompose the original venom would have no appreciable effect on ten, twenty or fifty times its volume of decomposing blood and tissue, and to introduce a sufficient quantity would be to saturate the blood with potash and clog the veins with peroxide of manganese.

But while from the theoretical standpoint there appears reason to anticipate good results from oxygen, it is no less certain that the introduction into the circulation of a sufficient quantity of oxygen, hydrogen or nitrogen, or a compound of any two of them readily decomposable in the system, must necessarily result in their chemical union with the products of decompositions, and consequently in altering the character of the product. These remarks are a fitting introduction to the recommendation of ammonia, a remedy which has more reliable evidence in its favor as an antidote to snake bite than all other remedies collectively, and this evidence is no way shaken by the fact that when it has been administered or introduced into the circulation in poisonous doses, it has killed the patient without arresting the disease.

Ammonia is a strong alkali very destructive of the tissues, and should not be introduced into the circulation more rapidly than it can be decomposed. The only safe way is to introduce it as vapor. A rough and ready method of applying it in snake bite, and one generally available in country places, is to lance the wound caused by the fang and apply a mass of several pounds weight of partially decomposed cowdung smelling perceptibly of ammonia. The skin of the trunk or arm may also be lightly scarified over a square inch of its surface, and the same rough remedy applied there, and maintained in place by a bandage, but for medical treatment a piece of lint or cotton soaked in a diluted liquor ammonia would be preferable, or the powdered carbonate may be applied and covered with a piece of oil skin.

There now suggests itself for consideration a special measure of possible utility. In snake poisoning the whole of the blood is not affected even at death; as long as there is life some of the blood is performing its proper function and its corpuscles are alive and active, but the partially decomposed fluid which contaminates it is no longer blood, but a chemically altered fluid with dead and decomposing corpuscles floating in it, and the proportion which this dead fluid bears to the living blood is the measure of the patient's chance of survival under treatment with physiological remedies, and it is for consideration whether considerable benefit might not result from free blood-letting, accompanied with the transfusion of blood from healthy subjects.

As regards the possible utility of inoculation as a preventive, the question arises, should we use the venom or colonize with the micrococci? We do not know, unfortunately, whether immunity from the small pox is caused by the virus or the microbe. It is very difficult to realize that the virus could have any effect on the system after it has been expelled; but it is easily intelligible that the system being colonized with the microbe, these, on the introduction of the virus, which is their proper food, would seize on it with avidity and assimilate it. But snake venom decomposes so rapidly that even if a colony of the micrococci were assembled at the point of its insertion, they could hardly make away with more than a portion of it before it was decomposed. Still, the fact that the whole family of snakes is proof against the action of venom, while frogs and alligators are subject to it, is a fact due to causes within the field of scientific investigation, and a matter worthy of the most patient and painstaking research.

That man may eventually triumph over his hereditary foe is well within the limits of possibility, but meantime the most hopeful direction of research for the treatment of snake bite is into the means of arresting the spread of the secondary series of chemical decompositions of the blood and tissues. With this problem solved even severe cases of cobra bite might be healed successfully if taken in time, and we hope that when we next recur to the subject of snake bite and its treatment in our columns we shall have to chronicle some satisfactory experiments in this direction.

The Sportsman Tourist.

VACATION.

BY EDWARD CARLTON.

O WORKER, weary with thy work,
Worn with thy daily strife,
Who knoweth that success is vain,
That dreams fade out of life,

Go to thy mother's heart for rest,
Deep as thy childhood's sleep,
Her tired children safe and close
Thy mother yet can keep.

For still 'tis true, as in those days,
Long past, of myth and song,
Calm Nature great all-mother is,
With love and memory long.

Find then, thou canst, on Nature's heart,
This solace for thy pain—
The joy that blossoms with the grass,
The gladness of the grain.

The happy breaking into song
Of brook, and bird, and bee,
And of the wind that lifts the wave
And bends the willing tree.

On silent pools beneath the hills,
Where quiet shadows lie,
On waters swift, of changing hue,
Let fall thy line and fly.

Let thy heart dance with dancing leaves,
And with the pattering rain—
So shalt thou find though day decline
Thy childhood's rest again.

TO THE CHOSSAHOWILZKA RIVER.

THE fishing in the Homosassa River being very poor, four of us decided to go a few miles down the coast to try our hands at the shooting at a certain bird island, or bird roost, as the natives say, and the fishing in the Chossahowilzka River. We had been often told of the fine sport of be expected and consequently went well prepared to do justice to the occasion. To attain the end in view, and with as little discomfort as possible, (so we hoped) the fast and only sailing yacht to be obtained in the place was chartered for the trip. The point of attraction about our craft lay in the peculiar roof of the cabin, and it was certainly unique, showing in a marked degree the ingenuity and deep thought of the shipbuilding Florida cracker. And yet, when we consider that she was built many miles from the water by a marine architect of unknown capacity, the wonder is that she did not display more absurdities. This roof, instead of sliding back as those of our northern boats do, was cut down the center so that it opened upward and outward on each side of the boat, thus hanging close to the water's edge. If we desired air and light while sailing, one side was left closed in order that it should not impede our progress by dragging in the water alongside. The idea, as far as I could learn from outsiders, was not patented.

When starting it was our intention to be back on the following day but any man who takes the Florida "yacht" and crew is doomed to disappointment if he ever expects to do a certain thing in a given time. Our departure was a peculiar one, and in order to gain time, as we supposed, and also to catch a few fish for dinner, two of us rowed down to the gulf, about six miles, but disappointment was there ahead and waiting, so that our catch amounted to but one poor little salt-water trout of scarce 2lbs. We waited long and patiently for our yacht, and, as "everything comes to him who waits," so did she, two hours later. We left the mouth of the river nearly three hours behind time, the consequence was that our arrival at the bird island was at about sunset.

Great sea! what a spot it was! The severe frost of the previous winter had killed every tree and shrub, so that a more dreary-looking place it is hard to imagine. We made the best of what we found, and by crouching in the wet reeds with mud over our ankles, we managed to hide ourselves sufficiently to deceive a flock of cormorants into coming near enough to be shot at. Bang, half a dozen times in quick succession, went the guns and down came the birds, at least that is what they properly should have done, but owing to our not having put on our best aims, only two poor things were killed, and as they were of no earthly use either for their plumage or for food, our poor success was not to be regretted. The magnificent herons which were to have been our chief dependence, had evidently been fired at too frequently not to recognize that we were at their roost with evil intent, and consequently never came near enough to our liking, but kept circling well out of gun

shot, uttering the most discordant cries. This was becoming decidedly slow, and as darkness was fast making we deemed it best policy to leave this spot of mud and snakes and row for our yacht, which we supposed lay near where we had left her. Out of sight, and as we subsequently found, in the most particularly practical manner, she was miles away. To find her was the next question, and now began a search, the impression of which it will take many a day to obliterate from our minds. Fortunately we had one of the crew on the island with us, and as he knew the way we felt considerably relieved for the time being. Divided into two parties, the crew and two passengers in one, friend and self in the other boat, we with some effort got the boats into water deep enough to float us and make a beginning.

Rowing and talking about the miserable place we had just left made us oblivious for the time being of the darkness until suddenly it struck us that the other boat had lost us. Here was a predicament, but after shouting and making a great to do generally, we heard a gun fired, and although in quite a different direction to what we had supposed them to be, we lost no time in getting there. This little experience served as a good lesson, and we ever after kept them well in sight and hearing; for were we not out in the Gulf of Mexico in a small open boat, a 18ft. light river craft, seven miles from land, and the night now so dark it was with difficulty that we could discern the others when but a couple of lengths from us?

As nothing out of the ordinary occurred for some little time we began to feel reckless, rowing our best, when all at once we find ourselves fast on an oyster bar. Fortunately no damage was done, but to get off again was the question. By sounding with an oar we discover that nowhere in the vicinity would the water be over our boot tops; so out we get and carry until there is depth enough to float us again. A spell of perhaps fifteen minutes and those ahead run aground. Then came a shouting and splashing and a "Look out behind or you will run us down; back water! pull on your left, quick!" etc., etc. Patiently bearing all this and a deal more, we end up by getting fast ourselves. After rowing for more than five miles, and getting on and off the oyster bars and coral reefs at least a dozen times, we at last see a small light in the distance, which proved to be our long-sought vessel. Fancy being four or five miles from land and getting out of your boat to carry her over a reef; but then this part of the gulf, known as St. Martin's Reef, is peculiar, and for miles from shore one can go without finding more than five or six feet of water.

Wet, tired and as hungry as such a row is capable of making one, we climb on board, expecting to find a good meal all ready and the captain sounding the gong. Fully inured to disappointment by this time we say but little until we spy our piece of ebony quietly conversing with a lot of lank specimens of Florida crackers instead of being up and about preparing our much-wished-for meal. Convinced of the error, perhaps in tones and words (short and quick ones) not new to him, but nevertheless quite appropriate to the occasion, he managed to get something for the inner man in the course of an hour or so. We follow ashore and demolish it.

Returning on board we undergo another agreeable experience. Not light enough to accomplish anything by, as one lamp leaked, another required a different kind of oil to that with which it was filled, and the third smoked so that it was next to useless. These surprises were becoming monotonous, but with the delusive thought that the morrow would bring forth good things in good shape we smoked a last pipe and turned in for the night. Two on each side of the centerboard, packed spoon fashion, so that when one wanted to move the other must per force do likewise, and with the crew on the roof we do our best to worry through the night. About 2 A. M. I am awakened by a feeling of moisture that seems to pervade everything, but thinking it is the fog that is just then quite dense, try to sleep again. I soon realize what is the matter and that the boat was leaking. Sleep under such conditions was out of the question, so we did the next best thing and remained awake. And oh, how wet and cold water does feel at such times.

With no small amount of satisfaction did we welcome the first light of day, and as soon as the sun was up sufficiently had the bedding, etc., on the roof to dry. Upon investigation, and under threats of dire vengeance, the captain acknowledges having run on a reef in coming up the river. He said nothing to us about it the night previous, because he didn't think she was "hurted." As there is generally a lack of wind in these latitudes during the forenoon at this season of the year, we poled up the river to where our men assured us we would find good camping ground and plenty of fish and—yes, they had seen turkey when there before.

Arrived at the place, we anchor opposite a small mound called a camping island, and after the crew have set the whole place on fire in their endeavors to start our campfire, we succeed in getting our coffee and a few things cooked. Imagine now our utter disgust at finding that those having the matter in charge at the "sportsmen's paradise" had failed to provide either cups, plates, forks or spoons, but fairness forces the admission that they did furnish one knife for six.

The fishing, with the exception of perhaps half a dozen sheepshead of about 3lbs. apiece, was scarcely an improvement on our shooting experience of the eve before, so we were about ready to give up and go back.

As for alligators, they were there galore, and regular mossbackers too, but so shy that it was impossible to get near enough to secure a single specimen. And what a river! Desolate, almost beyond description. Sawgrass on all sides as far as the eye could reach, and, as if to relieve the monotony, it was burning in a dozen different places. Notwithstanding all this we were again prevailed upon to go still further up the river near its source, and we would assuredly not be disappointed. Of course this meant another night on the boat, and having stopped the leak to a certain extent we passed a tolerably good one. Of course no better success attended us at our new quarters, so the next morning we poled the best part of the way to the gulf again, and with glad hearts bid adieu forever to that will-o-the-wisp of a river.

We find a light wind stirring at the mouth, and as it was dead ahead we had as yet a deal of hard poling to to do before we could set our course in the desired direction.

When going through one of the narrow passes between two islands we noticed a school of porpoises in very shoal water, feeding on what appeared to be salt-water trout. So ravenous were they that our close proximity was not noticed, and had it not been for a rifle ball sent among them we probably would have passed quite unnoticed. The channel taken after their being so unceremoniously disturbed was not deep enough to cover their dorsals, and it was a rare sight to see these big fish tear along, perfectly heedless of the fact that they were seriously injuring themselves on the sharp coral bottom. They continued in this way for about a mile, following the tortuous channel with unerring accuracy until deeper water hid them from view.

At last we are in the Homosassa River again, and when within about a mile of the hotel the wind died completely out, so that with the ebb tide, which was running strongly, it was impossible to hold our own against it. The half dozen guns on board were fired simultaneously to notify our friends that we were near, and soon by the aid of a couple of boats were towed to the dock, two days behind time, sadder but wiser men. BIG REEL.

SAM LOVEL'S CAMPS.—XI.

WHILE his friends' attention was divided in watching the progress of their own haul and that of their neighbors, Sam departed in his canoe, paddling up the lower reaches of the stream, where the dipping willow-tips scarcely bent to nor rippled the slow current, and the reflections of trunks and leaves stood motionless on the glassy stream till the boat's wake set them a-quiver, as its slanted bars of golden light climbed rushes, ferny shores and gray tree trunks and then dissolved in green and gold among the sunlit leaves, or a gar-pike, watching with wicked eyes the advancing prow, stirred them with the slow ripple of his sullen retreat. Then a muskrat voyaged from one shore with a freight of weeds trailing from his jaws and undulating with his wake, then sank with it to the underwater doorway of his home and left his wake fading in slow pulsations above him. A green heron, startled from an overhanging branch, went flapping awkwardly along the narrow lane of sky while his distorted double flapped more awkwardly along the lane of water.

There was no sign nor sight of the outer world but the frayed stripe of blue sky overhead, one glimpse of Camel's Hump set in darker blue against it, and seen for an instant through a break in the green and gray wall of trees, Mt. Philo's crown of pines and shorn sunlit slopes.

The solitude was very pleasant to this simple lover of nature who in certain moods was happiest when alone, yet not alone, for he felt a perfect companionship with the woods and their inhabitants close about him. There were other fishers than he but for whose busier plying of their craft he might have forgotten why he had come, so satisfied was he with the lazy voyaging. A heron stood with poised spear in an outlet of the marsh waiting for luck with an angler's patience. An alert mink slid from the bank, cleaving the water with an almost noiseless plunge as if he were a brown arrow shot into it. Not so a kingfisher, who proclaimed from afar his coming, just swerved from his jerky course for the boat, then hung for a moment in quivering poise and dashed down so close that the spray of his noisy plunge fell in splashing drops not twice the canoe's length from her prow, then he flew to a raft of driftwood and perching upon its topmost stick bragged as loudly of his minnow as Antoine might of an eel.

Sam had passed one landing which showed in its forked rests for poles, brands and ashes of fires, heads and scales of fish, much use as a fishing place. Now he came to another where the stream bent from north to west, just above a litttle islet, whose willows, great elms, water maples and one noble buttonwood were bound in a tangled cordage of grape vines. Here were the same signs of frequent fishing. An old boat that had long since made its last fishing and trapping trips lay rotting at the bank, with fish at home under its sunken stern and remnants of muskrats' recent feasts on its mossy thwarts. Landing here he fished from the shore, and having no bait but worms, for a while caught only perch. These bit vigorously enough to raise high expectations, sadly disappointed when the brief spurt of resistance was over and the fish came swinging ashore. But when such trivial warfare ceased for a while and there came at last, after a brief toying with the bait, a downright tug and then a strong up-stream sweep of the line that made it sing and the cedar pole trembled to the shrill song as it bent in his grasp, Sam felt assured that he was contending with a bass without the proof presently given. The water was smitten underneath, shivered into crystal drops as the gallant fish shot thrice its length above the surface, raining crystals from every fin till the circling wavelets of upburst and plunge met. Though Sam's weapons were of clumsy strength, he fought his antagonist fairly as he often had large trout with lighter tackle, not heaving him out over head as boys do sunfish, but tiring him out with the long, uncertain struggle which, if we are to believe the only testimony that we ever hear, is as much enjoyed by the fish as by the scientific angler.

"There," said he, when he had gently lifted the exhausted bass ashore, "you didn't git away, did ye? It mos' seems as if you'd orter, but I guess I'm glad you didn't. By the gret horn spoon! You're harnsome as a pictur' an' you fit like a coon!" If there were other bass here they scorned such humble fare as worms, and after offering in vain the finest in his box, Sam re-embarked and voyaged further up stream. There was a stronger current to make way against, running between higher banks, overhanging in a fringed network of roots of old trees that shaded them, elms with great buttressed trunks, water maples so nearly like them in form that it needed a second glance to assure one that they were not elms; oaks that had showered down mast to feed woodducks in a hundred autumns, clumps of basswood, lusty sons of the dead giant whose moldering stump they stood around, and here and there towering buttonwoods, shining spectre-like among the shadows, more like ghosts of other departed giants of the forest than like living trees.

Stream and banks beautified each other with shadow, with mirrored greenness of leaves, graceful bend of trunks and limbs, with quivering rebound of sunbeams from ripples again and again repeated till they flickered out in the translucence of pools or the gilded green of leaves. Every reach disclosed new beauty and promised more beyond when the glitter of the stream flashed forth from the shadows of a bend.

One who sees it now for the first time, can hardly imagine how beautiful Sungahneetuk was then. One who saw it then and now beholds its abomination of desolation, the shrunken current crawling between banks avariciously shorn of all their trees, of their last green fleece of willows, worthless dead, but priceless to him who loves the beauty that the hand of God has wrought, can but wonder why some awful retribution has not fallen upon the spoilers, nor can he withhold his own feeble curse, wishing that he had the power of God to enforce it.

A railroad in Vermont was almost undreamed of then, and there was no shadow of coming destruction brooding over the peaceful woods and waters, nor did the thought enter Sam's mind to mar his enjoyment of the sylvan scene, that it ever would be changed but by growing older, nor lose anything but by the natural decay that in some way compensates for all it takes.

Now and then, where the bottom faded out of sight in a swirl of dull green under tangled threads of sunshine, he invited the bass to taste his worms, but they would not, though he frequently saw them hanging near his bait on waving fins, then moving away in leisurely disdain.

Presently he descried on the bank above him another angler who was just slipping a fine bass on to the withe that already held a dozen or more. When he had again tethered them in the edge of the stream, he took up his pole and stole cautiously along, carefully scanning the water. Sam landed and followed, watching him in the hope of learning something from one so successful, if he were not so by sheer luck. As Sam drew near the man saluted him with a nod given over his shoulder, showing a face beaming with good humor, for how could a man who had caught a dozen bass wear a sour visage?

"I kinder wanter see haow you du it," Sam said in a low voice. "I never ketched but one 'Swago in my life."

The fisherman looked at him in pitying wonder, then laughed a little and beckoned him nearer. He pointed to a little basin scooped in the sandy bottom and cleared of every large pebble and water-logged weed and stick. A bass hovered always near it and sometimes over it, and now charged furiously upon a perch that had intruded on the sacred precints, pursued it out of sight, and in an instant returned. When a sodden water weed drifted into the precious basin, she seized it before it could lodge there, and, carrying it beyond the down stream rim, dropped it where it was borne away by the current.

"That ere 's a bed," said Sam's new acquaintance. "Naow, see here," and sheathing his hook with an unlooped worm, he dropped it quietly a little above the bed and let it drift down on it. The fish rushed at it, seized it and darted away with it, but before she had time to drop it the angler struck sharply, and almost in the same instant landed her on the grass behind him.

"Thet's the way tu du it," the fisherman said, as he unhooked the fish.

"Wal, it does take the rag off'm the bush for quick work," said Sam; "but I don't ezackly git a holt on 't. Does these ere 'Swagos live in them places all the time?"

"Laws a massy, no! Them's the spawnin' beds, where they lays the' aigs. Don't you see this one's just ready tu lay her'n?" and Sam now noticed that the bass was profusely voiding spawn in her struggles.

"She'd stick tu it like teazles till they was hatched an' a spell arter, an' not 'low nothin' on it. Then they clear aout, an' arter the middle o' July you won't see a 'Swago bass in the crik till 'long airly in the fall. Then the' 'll be some little fellers not bigger ' rock bass."

"Wal," said Sam, with a sigh of disappointment, "I allers thought it was a pleggid mean trick tu ketch traout on the' beds, an' I guess this haint no better."

"But it ketches 'em, an' that's what a feller wants," argued his companion. "Come along an' we'll find another bed, an' you try it once, just for greens."

"Wal, I do' know but I will jest once to see 'f I can," and they went slowly along the bank till another bed and its guardian were discovered.

Sam did exactly as he had seen his instructor do, and soon was fast to a good three-pounder. This, however, was not torn from the water as the other had been—though the guide shouted, "Slat 'er aout! You got 'er hooked good. Slat 'er aout!"—but was vanquished in a fair fight and then drawn gently to the shore. Sam unhooked her tenderly without taking her from the water, then watched her as, lying on her side, she feebly waved her fins, then stood still a moment as if dazed by the recovery of freedom, and then, as she surged away and vanished in a flash, he addressed her:

"Good bye, marm. Nex' time you see a worm in your nest you poke it aout wi' your nose."

"What in thunder d'd ye let 'er go for?" his companion demanded in a vexed tone, when his astonishment found other expression than a blank stare.

"That's the way t' du it," Sam answered quietly, "I jist wanted tu show you haow."

"Wal, I swan! you mus' be a darned fool!"

"That's what I've tol' myself a hundred times," Sam replied rather sadly, but with perfect good nature, "but I can't help it, an' so I haint tu blame for it. Wal, I guess I'll be goin'. I'm 'bleeged tu ye for what you've showed me an' tol' me. Good bye."

Looking back as he turned the first bend he saw the bass-catcher still staring after him in motionless amazement, but could not hear him saying to himself, "Some poor crazy creetur 'at orter be in Brattleburrer! Nex' thing he'll be draowndin' hisself!"

Past landing, island and quiet shores the canoe slid down stream in greater solitude than it had voyaged upward. The kingfisher had ceased his clatter, the full-fed mink fished no more, the heron had flown to his mate in the tall pines, and the muskrat was asleep in his burrow. There was a sluggish stir of life when the turtles slid off the logs with a clump and an unctuous splash, and in the lazy float of myriad insects drifting against the sunlight like a veil of gauze in the unfelt wafts—a suggestion of life somewhere in the boom of a bittern far away in the marshes, in bird songs sung in distant meadows. Smooth, even swells from the lake barred the channel of the last reach with glassy undulations, that slowly heaved up and down the broken reflections of clouds and trees and stirred the rushes with a whispering rustle. Now an azure band of the lake was disclosed, and Garden Island shining against the shadowed steeps of Split Rock Mountain. Then the talk and laughter of the seining party was heard faintly, then louder as he drew nearer, and presently Sam landed and was with them.

The later draughts of the net had not been quite so suc-

cessful as the first, and this giving of less for what they received had had a happy effect on Uncle Theophile and his nephews, and as Solon, Joseph and Antoine were quite satisfied with what they had got for their money, the utmost good humor prevailed. Sam was derided for the small visible result of his expedition, but he had brought back much that his companions could not see, nor would have cared for could they see, wherewith he was too well content to mind their jeers.

Dart and his friends had good luck with the money diggers' seine, which was yet being hauled for them, while they took their ease on a log of driftwood eating their late dinner of fried fish.

"Hello, Lovel! haow du you taller* these days?" Dart accosted Sam, as he sauntered over to their wagon to have a closer look at old Bob. "Come an' ha' some grub with us, won't ye? Lots on't—sech as 't is."

"No, thank ye, I haint no 'casion. I jest wanter see the ol' hoss a minute. Him and his'n 's ol' frien's o' mine. The ol' feller 's slick as an otter," Sam said, patting the shining black side of the venerable beast, who gave him a low whinny of recognition.

"Wal, he haint starvin', an' I guess he haint turrible sorry 'at he lives 'long wi' Dart stiddy your Canuck over there. Say, Lovel, the's a jug of O-be-joyf'l under the buff'lo, pull it aout an' take a snort; I guess it chippers yit. 'Taint none o' Hamner's hoss medicine an' 't won't kill ye in yer tracks; take a holt."

"No, thank ye, I haint dry," Sam said.

"Haint? Wal, it allers makes me dry tu go fishin', kinder sympathizin' wi' the poor critters I've ketched, I s'pose," Dart said as he got upon his feet, brushing the crumbs from his broad breast and wiping his mouth. "But I don't go often. 'F I did, an' eat 's many 's I hev tu-day, the' wouldn't be no fish. If you won't take nothin' solid nor wet, hev a little smoke," and opening a big blue paper of tobacco, he offered it to Sam.

"Ben here a week hevin' fun alive, Briggs an' mongst 'em tells me. Wish 't I'd knowed it afore. Didn't know ye wa'n't t' hum till I seen ye, but I haint seen nob'dy f'm your way in a fortn't," Dart went on when they had lighted their pipes and seated themselves on the wagon tongue. "Got fish-hungry an' thought we'd come daown an' fill up 'fore hoein'. That 'ere's Putnam; mebby you do' know him wi' ol' close on. Do' know why he didn't put on his Sunday-go-tu-meetin's tu come fishin', but he's got his thirty-five-dollar rifle in the waggin, the Lord knows what for, wropped up in tew blankets. Ø, say, haint that 'ere young Gove livin' somewhere 'raound here? Thunder in the winter! 'F you didn't make the all-firedest shot 'at ever I see. Seventy-five rod if 't was a foot!"

"You mean tu Hamner's shootin' match?" said Sam, trying to wear a look of innocence with his tell-tale blushes, "I didn't shoot no turkey, it was Peltier."

"O, beeswax! You go tu grass!" cried the giant, giving Sam a gentle whack on the shoulders that nearly knocked him off the wagon-tongue. "Don't ye s'pose I c'n tell the mark o' the Ol' Ore Bed? Beeswax!" Then he arose and dragged the jug from its seclusion. "Come! Take suthin'; I ben wantin' tu treat ye ever sence, for that shot done me more good 'an a quart."

"Thank ye jest as much as if I drinked a quart, but I don't never drink nothin'."

"Ye don't never? Wal, the least might in the world won't hurt ye. If you live 's long 's I hope ye will, you'll git awf'l dry," said Dart, pulling out the corncob stopple and swinging the jug to his lips over his arm. "An' here's a-hopesin' 'at you will. I don't see," reseating himself after tucking the jug in its nest, "haow on airth you c'n stan' it wi' that Canuck o' your'n. He knows so much he makes a feller feel like a tarnal fool. This ere ol' puke 'at's a-haulin' for us knows more 'n he orter. Ben tellin' me 'tween hauls haow 't he'd a spellin' book—bate he can't spell baker—all planned aout, an' fust he knowed aout come Webster's, julluk what his'n was goin' tu be! Then he said to wait a spell till the steamboat went 'long an' it 'ould scare all the fish in the lake in here an' we'd get the almightydest haul! But your Mister Ant wine come over an' sot aout tu tell this old dickshinary more baout fishin' 'an he'd ever dreamed on, and both of them got madder 'n settin' hens. It was fun for us, only the bilin'-over consait made us feel smaller 'n was comf'table. I du b'lieve 'at these Yankeefied Canucks thinks 'at the Almighty has tu ask some one on 'em every mornin' what He'd orter du that day. An' each one on 'em thinks he'll be the nex' one ast, an' cal'lates tu be a leetle might ahead in tellin'. Blast 'em! I wisht the' was a wall 'twixt the States an' Canady so high 'at nothin' but angels could fly over it! Mighty few o' these creeturs we'd seen then."

"Wal, Antwine aint no angel, do' know 's he ever will be much o' one," Sam admitted, but loyal to his comrade, added in his behalf, "Arter all, I druther hev a dozen sech Canucks as him, or that ol' Duffy, an' tu hev one sech Yankee as them 'at 's haulin' for you, jest as full o' ign'ance an' consait as any Canuck wi'aout no fun nor no humern streak in 'em but what a hawg's got. They be durn'd hawgs, they eat like 'em an' act like 'em an' I'll bate they got brussles on the' backs longer 'n your finger."

"O, I don't dote on 'em," said Dart, "they aint mine. I'm only usin' on 'em. But we've got them an' tew many sech an' can't help it. But it seems 'ough we hed n't orter ketch the slops o' all creation as we du."

So they drifted into talk concerning national affairs, but belonging to the same political party, there was not difference enough in their views to create an interesting warmth.

In town politics, too, they found each other holding the same opinion, that their last year's representative, "hedn't ortu die a ye'rlin' " but should be re-elected this year. Then the seine came in, and less important matters gave way to the excitement of this event.

There was a heavy job of fish-cleaning and packing to be disposed of before the morrow's departure, and time and tide and Uncle Tyler waited for no man, so Sam and his comrades bade farewell to their townsmen and voyaged across the bay to camp.

There on the flat shore, under the willows, jack knives were plied till the sands were silvered with the incessant shower of scales that only ceased falling when the grounded star of Split Rock shed its ray across the darkening lake, mingling its steadfast beam with the fading reflections of the sky's afterglow.

*Tallow.

ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

Natural History.

JAY, PIGEON, CAMERA.

Editor Forest and Stream:

It is now nearly two years since I have been able to get away from business long enough for an outing in the woods, and the longer I am exiled from the woods the more valuable to me becomes your paper, for by its aid I am able in imagination to visit my old haunts and really to get much rest and refreshment in so doing. I am thankful to every lover of the woods, "Yo" and "Nessmuk" and Robinson and all the rest who will take the time and trouble to write out for the rest of us their adventures and experiences. I read them all with the greatest zest, and not a number of the FOREST AND STREAM but starts a dozen questions I would like to ask or a dozen memories I would like to contribute. But there are too many things to do in the world and—I do not write.

To-day, however, I find myself with a little enforced leisure while waiting for a train, and having just laid down your issue of May 31, I venture to say a word about my old friend and companion of many a hunt, the Canada jay, and to ask Mr. Geo. Bird Grinnell if it is not identical with his Rocky Mountain jay. If I were at home I could answer my own question in two minutes, I suppose, but my main purpose is to speak of the Canada jay as I have known him in the deep woods and on the caribou bogs of Maine. There every year for many an autumn his rattling call and saucy whistle have greeted me on my arrival at my camping ground, and I have become familiar with every trick recounted by the writer quoted by Mr. Grinnell, and many more besides. Four of these gray jays have for a half dozen years mounted guard over my book shelves in the "den" where I have gathered many miscellaneous trophies of the hunt. It was a poor reward of their confidence to shoot them, perhaps; but I wanted them for just this purpose, and they have been good companions. I wonder if any one ever—I will not say tamed the Canada jay, for it is so devoid of fear to begin with—but kept it in confinement as its more shy and showy brother the bluejay is often kept, and how it bore captivity. It is, as every hunter knows, generally called in Maine the moose bird, and is said to warn the moose of the hunter's approach.

Its meat-eating and meat-stealing abilities are amazing and beyond belief, and often provoke its destruction at the hands of lumbermen. One method of killing it I have never seen described. It is called the "moose bird flip." A long shingle or cedar "split" is thrust through a crevice between two logs of the lumber camp, and balanced so as to sustain on the portion which projects outside the camp the weight of a bit of pork and the moose bird. Standing inside the camp the slayer, looking out through the cracks or being told by an outsider when the bird has alighted on the meat, strikes a downward blow with a club on the inside portion of the split and the luckless bird is tossed 50ft. into the air with breath and life knocked out of him.

It is natural for this jay to set up a clatter whenever he discovers a human being, and hence I have no doubt that many a time at a critical moment on a moose hunt its racket has spoiled the chances of the hunter. Can any one testify as to this?

The Canada jay has been agreeable company to me during many a lonely hour while waiting behind a blind on a caribou bog. For aught I know he has been responsible for the scarcity of caribou, but, however friendly to the living caribou, I can testify to his fondness for the caribou dead. A half dozen moose birds will in a half day so strip half a caribou carcass that the hunter will need to be very short of meat indeed to try to get anything more from it.

While my pen is at it I want to echo the question, "Where are the wild pigeons?" In my boyhood in New Hampshire I used to see fairly large flocks and be able every year to secure a few, and that was but a few years after the great flights of which every one told, when these birds were netted by the thousand. Now I doubt if a wild pigeon is seen in New England. When a young man I used to see in Illinois and Wisconsin marvellous flights of migrating pigeons going over in long flocks, 75yds. deep, and stretching out of sight both ways over the open prairie country, and squadron succeeding squadron almost every five minutes for two or three days, the roar of their wings sounding like the rush of many waters. In those days I used to hear of great pigeon roosts in Kentucky and Wisconsin. Does any one see such migrating hosts in these days? I very much fear that the settling of the country leaves them no place half secure enough for breeding and that pitiless slaughter has made those marvelous flocks a thing of the past.

As this letter is a scrap-bag, let me throw in a word about "hunting with a camera." The enterprise of the FOREST AND STREAM and the efforts of Mr. E. Hofer to secure photographs of the big game in the Yellowstone Park seem to me worthy of all possible praise and to be imitated at once by every one who is in position to do so. What would not one give to see photographs of the great buffalo herds of the past, blackening the plains for miles, or of the elk or antelope as they were to be found only a few years ago. I wonder if the readers of the FOREST AND STREAM know of a fine piece of "hunting with a camera" performed by F. H. Chapin in the Rocky Mountains and described in a paper read the past winter before the Appalachian Club, of Boston. Part of this paper was printed in the last issue of the club publication "Appalachia," with a reproduction of one of the photographs, viz., that of an enormous silver-tip grizzly bear taken on the rocks near the summit of Long's Peak in Colorado. Two other photographs were taken, one of them a striking and admirable one of three Rocky Mountain sheep, and reproductions of these were shown by a stereopticon to the club. By all means let every sportsman who can possibly do so arm himself with camera as well as Winchester, and count a good photograph of a live animal in its native wildness and grace a greater prize than its dead body, and a far greater proof of the hunter's skill and address.

It makes one wince with regret to think of the scenes he might have made permanent for the delight of others for all time if the detective's camera and instantaneous photography had only been in vogue a few years earlier. What would not I give, for instance, for a photograph of the mating tournament of prairie chickens which I once by careful approach enjoyed, and which, with present appliances, might have been with perfect ease captured by the camera.

Once for twenty minutes I watched a monster moose wading in the edge of a pond, feeding on lily pads, swimming across the mouth of a creek, striding out and shaking the water from his mighty hide, listening, with head and antlers thrown back and one foot lifted, in attitude most dramatic and superb; and all within camera shot! Those noble antlers now hang above the door of my "den," before referred to, but no one can share with me that never-to-be forgotten picture.

All hail, then, to the camera, the new weapon—not of the pot-hunter, but of the sportsman—and may its devotees increase!

One more scrap. Driving to-day in this town I met a man and a barefoot boy carrying fishing pole and a string of nine brook trout, all of them of good size and three of them weighing very nearly, if not quite, one pound each.

The trout were freshly caught, the owners would not tell in what brook, but only "back here a-ways," pointing up the bank of what is known as "Five-mile River." Evidently there are good trout in Connecticut yet for those who know where to find them.

Yet another question, suggested by the account in your last issue of the killing of a moose by lightning. Some years ago my guide showed me in the Maine woods a tall but slender white birch with the mark of a lightning bolt from top to bottom. He showed it to me as a great curiosity, saying that it was the only instance he ever knew of lightning striking white birch. The next year in passing the same place he again called my attention to the tree, saying that it was an old belief among woodsmen that lightning would never strike a birch. Has any reader of FOREST AND STREAM ever heard of such belief?

EBEEMEE.

PUTNAM, Conn., June 2.

WRENS IN A COFFEE-POT.

Editor Forest and Stream:

Some time ago two wrens entered my cabin through some of the numerous cracks, and set to work exploring it. I sat still at my table watching them. Their behavior showed that they were hunting a place to nest. They peeped into every nook and corner, and finally left in a way that seemed to show that they thought they might be able to find better quarters elsewhere. However, in half an hour they returned and began their examinations as before. This time they seemed to reach the conclusion that my cabin would be a desirable place, provided I would move out of it. Having no intention to do this, but wishing to do all I could to please the little birds, I seized an old coffee-pot and hung it on a tree near my door, tying it firmly so that the wind would not shake it. In a little while the wrens discovered it and entered it. It appeared to strike them at once as a charming place, a veritable palace, suitable as a residence of the most exacting aristocrats. From their maneuvers they evidently thought they had struck it very rich, and blessed their stars for so good fortune. I must confess that I too felt quite a degree of pleasure in perceiving how happy I had made my little visitors. And yet it had all been done simply by fastening an old worn-out coffee-pot in a tree.

In a little while they were busy transporting leaves into the coffee-pot, the male laboring as heartily as the female. This shows that he perfectly understood what was going to take place, and what duty demanded of him as a little man. Next day the nest was finished, and it was curious to observe how soft and comfortable they had made it Inside they had lined it thickly with bits of feathers, shreds of wool, and downy substances picked from the wild flowers; so that to the finger it felt like rich velvet. The next day I found a tiny egg in the nest, and another the day following. After this I failed to count the eggs; for when I looked again a few days afterward the little dame was sitting, and I would not disturb her. The eggs were white sprinkled with little brown spots, and they seemed to me very cute.

Now the capers of the little man began to amuse me. Before this, so far as I had known, he had been songless, but now I was frequently called to my door to listen to his singing. He would perch on a branch just above the coffee-pot, and pour out strain after strain of most honeyed sweetness, of such melody as no language could give an idea of. He was singing to his love to cheer her in her long and tedious sitting, and that his strains warmed and thrilled her little heart with drops of the sweetest pleasure, permeating every nerve of it, who can doubt? I do not doubt that while she was drinking these in her little heart was almost bursting with nuptial love, and with the conviction that her little man was just the darlingest love of a fellow in all the world. After thus singing a while he would dart away into the woods.

Only three or four days after the sitting began, I was surprised to see one of them enter the coffee-pot with a worm in his bill. I thought it marvelous that their eggs should hatch so soon. I waited until this wren had flown away, and then went to the nest expecting to see it full of their babies; but instead, there sat the little dame. And this shows that the thoughtful little man was not only making music to cheer her little heart, but was feeding her while she sat, so that she should have no troubles or cares while engaged in that business. I watched him much afterward, and often saw him bearing in his bill some choice bit for her. I dare say whenever he found a particularly choice morsel in the woods he never ate it himself, but immediately hurried off, with his heart full of happiness, to bear it to his lady love. He is indeed a model little husband, and she a most true and affectionate little wife. What happiness must reign in their household!

And now that their little ones have come, I learn yet another way of this gallant and faithful little fellow. Both now engage in feeding their young; for I judge that the little wife out of her loving heart thinks it would be too hard a task for her little man to feed the whole family without help from her. Therefore she sets to work equally with him, and between the two no doubt the little ones are fed. They usually start from the nest together, but it seldom happens that they return together. When the little man returns first and has delivered his offerings to the nestlings, he jumps out on a branch and waits for his mate. If she comes not very soon, he grows impatient and calls for her very distinctly. Her name by which he knows her seems to be Titty-tee; for he calls out in a most musical voice as loud as he can: "*Titty-*

titty-tee, ah, Titty-titty-tee!" and he repeats this time after time till Titty-tee comes. That he intends this as a call for her seems certain, for he sings entirely differing notes when she is present. Indeed, this musical little lover has quite a multitude of songs, and they are all exquisitely turned. His mate does not sing, though I often hear her answer him with a peculiar note when he calls. When Titty-tee comes and has presented her gifts to the little ones, they hop about in the tree together a little while, seeming to be greatly happy, and then dart away into the woods for more food. Can any one study the ways of these sweet little creatures without loving them? I judge not. And if he take not care some drops of their sweetness may perchance fall into his own heart and help to sweeten that too. I have reason to believe that the marriage of these little birds is not for a season, but for life.

This is not the little brown wren I was familiar with when a boy in North Carolina. This one has a longer bill, crooked like that of the curlew, and is much on the order of that of the hummingbird. He has also a longer tail. The brown wren of the East is, I think, brown all over. This one has a lead-colored breast and belly. The other brown wren is a chubby little fellow, and about as round as a bullet and not much bigger. The body of this one is no bigger, but is longer. Their notes are entirely different. I think this wren is probably peculiar to western Texas and Mexico. N. A. T.

YOUNG COUNTY, Texas, May 17.

[It is impossible to tell from the description here given what the wren was. It may be remembered that our correspondent who writes so charmingly of his bird friends, recently told how he had taken in a bullsnake and given it the freedom of his cabin. Next week will be published the sequel of his experiment of entertaining a serpent.]

GROUSE IN CAPTIVITY.

Editor Forest and Stream:

My pair of ruffed grouse have been doing finely all winter and early spring, the male bird, although rather wild, began by his actions to indicate the approach of the mating season as early as the first mild weather in February. Since that time he has frequently been so demonstrative that I have been obliged to shut the two birds in separate coops. Previous to last Friday they had been thus apart for several days, and on that day (May 11) the sliding door between the coops had been removed. The hen had seemed quite timid (although one of the tamest birds I ever had), and would frequently hide when pressed too hard by the male. On the day named I was very busy and did not even look up the birds at noon, as I had always done every day when at home. At six o'clock the male was in the outside coop alone, but the hen was missing. A careful search was made which resulted in finding her wedged under a board in the inside coop, and quite dead. My only theory regarding the accident is that in her efforts to escape from the male she had crowded into the narrow space and become so tightly fastened that she was utterly unable to extricate herself. It does not seem probable that she was killed by the male. He had never shown any of that malignant hatred of her or disposition to punish her that was shown by a Canadian male toward a Massachusetts hen in the same coop with him two years ago. In the latter case the male would undoubtedly have either killed or seriously injured the hen if they had been allowed to remain together any length of time. In the present case I feel sure that if discovered earlier this bird could have been extricated alive, and nothing but the unfortunate circumstance of my unintentional neglect rendered the accident fatal.

Though this was the 11th of May, and as many days later than the same hen began laying last year, she had shown no signs of nesting as yet, and I naturally had begun to feel somewhat impatient. But an examination after death disclosed a fine cluster of eggs, the largest nearly ready for the shell, and in a very few days the most forward would have been deposited. I think I never saw a bird in finer condition. She was not fat, but was very plump and fleshy, and all the organs indicated most vigorous health. This bird was sent me by Mr. Wright, of Pennsylvania, and had been in my possession since the latter part of April, 1887.

You can readily understand that I feel very much like sitting down and crying, and perhaps I should if anything could be accomplished by it. This year, the fourth of my attempts at rearing ruffed grouse in confinement, I believed that I had provided for every possible contingency, and that I should be able to guard successfully against all the rocks against which my previous ventures had been wrecked. But this mishap was one that was entirely unforeseen, and under all the circumstances one that seems particularly unfortunate and exasperating. This leaves me with but a single grouse, the male bird.

At the risk of being tedious, I wish to add that all my additional observation and experience acquired within the past year goes to strengthen the belief that the rearing of ruffed grouse in confinement is not only possible but practicable, and that some one will yet accomplish it who has more good fortune if not more patience than the writer. JAY BEEBE.

TODEDO, O., May 18.

A VISIT TO AUDUBON'S HOME.

Editor Forest and Stream:

In her entertaining narrative of the life of Audubon Mrs. St. John mentions an estate or "plantation" on the Perkioming rs having been occupied by Audubon while he was a resident of this State.

A short time since it was the writer's fortune to visit this historic spot, and it may interest admirers of the great naturalist to know something of his old home as it now appears. It is to-day one of the finest among the many splendid farms in a region justly noted for its fertility and natural beauty.

The valley of the Perkiomen Creek is surpassingly attractive in itself. The left bank of the stream, from its confluence with the Schuylkill as far as the eye will reach, is flanked by a thickly wooded ridge, rising in places abruptly from the water's edge, with many evergreens showing here and there among the more numerous deciduous trees.

Along the opposite side are lovely meadows stretching away far and wide, over which flocks of sheep and cattle roam and feed contentedly and luxuriously, or rest in the generous shade of trees that, from their great size and age, must have graced the landscape in Audubon's time, the whole scene presenting a charming picture of rural peace and plenty.

Local history tells us that here, about the beginning of the present century, Audubon laid the foundation of his great work, here also on April 8, 1808, he married Lucy Bakewell, and here too his eldest son was born.

Preparatory to his removal to Kentucky the naturalist disposed of the farm to Joseph Williams, of Whitemarsh, from whom it passed into the possession of M. R. Ambler, Esq., the present owner.

To one who has learned to appreciate the character of the man and to realize the nature of his life work, a pilgrimage to the home of Audubon is full of pleasure and interest and brings to mind many pleasing thoughts of him and his history. W. D. ZIMMERMAN.

NORRISTOWN, Pa.

PLUMAGE OF THE MALLARD.—Verdon, Dak., June 17.—*Editor Forest and Stream*: I have been interested in the discussion on the change of plumage in the mallard drake, which occurred in your columns some months ago. I have raised young mallards from eggs found in a nest, and watched the young develop their plumage. They were feathered in June and the drakes first began to show green in their heads about the last of September, but were not in full plumage until the middle of November, somewhat later than some wild ones which were in full plumage when shot in October. I mated one of the drakes with a tame duck, but her eggs did not hatch, he sitting by the nest all the time. Another drake remained with the hen which hatched him and sat beside her when she was sitting on her next and then, when the chickens came out, carried them to the water where they were drowned while he was teaching them to swim.—J. L. ROONEY.

SONG OF THE PRAIRIE LARK.—In a recent number of the *American Magazine* appears an interesting article under the above title from the pen of Mr. Ernest E. Thompson. The western meadowlark has hitherto had scant justice done to his powers of song, but Mr. Thompson not only fully describes this liquid melody but has written it out in musical notation so that any one may reproduce it on an instrument. The article is illustrated by two figures from Mr. Thompson's pencil.

"VOICES OF THE NIGHT."

BY ANOTHER LONG-FELLOW.

THE "Voices of the Night" he sang,
In most melodious numbers,
Nor thought of those whose ceaseless clang
Disturb our peaceful slumbers.

We mean not noises, such as wake
The dwellers in the city,
The roar of wheels, the windows' shake,
The wandering minstrel's ditty.

We speak of those which greet our ears
In quiet country village,
Where lowing steers and chanticleers
The naps of morning pillage.

At night, that herald of the spring,
The frog, begins his chorus,
Just as the shades of evening bring
The thoughts of slumber o'er us.

Peep-peep! Peep-peep! don't go to sleep!
The small ones strike the lyre;
Ker-chug! Ker-chung! Let sleep be hung,
The bullfrog joins the choir.

If on the hill too late you've strayed
To watch some sunset view,
The owl, from some old hemlock's shade,
Salutes you, "Who are you?"

Perchance you try a book at night,
When through your window-dashing,
Whiz! buzz! whiz! buzz! full in your light,
You find a June bug splashing!

Then to disturb your quiet naps,
The dire mosquitoes come,
Your ear alone receives the slaps
Which almost break the drum.

No nightingale, with mellow "jug,"
Your evening song shall trill,
The ghost of some dead pedagogue
Keeps shouting, Whip-poor-Will!

Far worse than he, that insect green
Among the branches hid,
Whose strident voice, while all unseen
Persists that Katy-did!

When autumn nights have cooled the earth,
You hope at last to sleep,
When lo! the cricket on the hearth,
Begins his cheep, cheep, cheep!

You spring from bed, a lamp you light,
The babe sets up a roar,
You wish the "voices of the night"
Were all outside your door. VON W.

GRAND EXCURSIONS TO CALIFORNIA.—The Burlington Route is the official route for the teachers bound for the National Educational Meeting at San Francisco. Join the splendid official excursion party from New York, Pennsylvania, Brooklyn, New England, Ohio, Michigan and Indiana, leaving Chicago July 3, 5, 8, 9 and 10. Magnificent trains, free chair cars, Pullman and tourist sleepers, etc. The public entitled to one fare on this occasion. For further information write E. J. Swords, 317 Broadway, New York city; H. D. Badgley, 306 Washington st., Boston, Mass., or address P. S. EUSTIS, G. P. & T. A., C. B. & Q. R. R., Chicago, Illinois.—*Adv.*

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. The Still-Hunter. By T. S. Van Dyke. Price $2.

GAME SEASONS.

SOME of the statutes prescribe a *close season* when game may not be killed; others name an *open season* when game may be killed. In the following abstract the style of each law has been followed.

CALIFORNIA.

Forbidden to kill quail, partridges, grouse, rail, between March 1 and Sept. 10; doves between Jan. 1 and June 1; male antelope, deer or buck, between Dec. 15 and July 1 in the year following; or female antelope or deer at any time.

CONNECTICUT.

Forbidden to kill woodcock, quail, ruffed grouse, partridge, between Jan. 1 and Oct. 1. Forbidden to export game from the State.

GEORGIA.

In Richmond county it is forbidden to kill deer save only between Oct. 1 and Dec. 31; wild turkey, partridge, between April 1 and Oct. 15; summer duck, dove, between April 1 and Aug. 15; woodcock between Jan. 1 and Aug. 15.

MASSACHUSETTS.

Forbidden to kill pinnated grouse, woodcock, between Jan. 1 and Aug. 1; ruffed grouse, partridge, between Jan. 1 and Oct. 1; quail between Jan. 1 and Oct. 15; wood or summer duck, black duck, teal, any duck, between April 15 and Sept. 1; plover, snipe, sandpiper, rail, any shore, marsh or beach bird, between May 1 and July 15; wild pigeon, gull, tern, between May 1 and Oct. 1; gray squirrel, hare, rabbit, March 1 and Sept. 1; deer at any time.

MICHIGAN.

Forbidden to kill deer save only from Nov. 1 to Dec. 1 inclusive in Lower Peninsula, and between Oct. 1 and Nov. 15 in Upper Peninsula; dogs may not be used; deer may not be killed in water; venison may not be exported from State. Forbidden to kill wild turkey except in months of October, November and December; woodcock, partridge, ruffed grouse, wild duck, wild goose, other wild waterfowl, snipe, save only from Sept. 1 to Jan. 1; colin, quail, Virginia partridge, save only during months of November and December; pinnated grouse, prairie chicken, save in months of September and October.

NEW HAMPSHIRE.

Forbidden to kill plover, yellowlegs, sandpiper, duck, rail, between Feb. 1 and Aug. 1; woodcock, ruffed grouse, partridge, quail, between Jan. 1 and Sept. 1; deer, moose, caribou, between Dec. 1 and Sept. 1 following: mink, beaver sable, otter, fisher, between April 1 and Oct. 15; raccoon, coon, gray squirrel, between Jan. 1 and Sept. 1; hare, rabbit, muskrat, between April 1 and Sept. 1.

NEW JERSEY.

In counties of Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren, it is forbidden to kill American pheasant, ruffed grouse, quail, gray squirrel, hare, rabbit, except only between Nov. 1 and Dec. 15; woodcock, except during last 15 days of September and the months of October and November.

In counties of Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Mercer, Monmouth, Ocean and Salem, it is forbidden to kill American pheasant, ruffed grouse, quail, gray squirrel, hare, rabbit, except only between Nov. 15 and Dec. 25; woodcock, except during last 15 days of October and between Nov. 15 and Dec. 25; English snipe, except only between Aug. 31 and Nov. 1; rail bird, marsh hen, except during months of September October and November.

OHIO.

Forbidden to kill quail, except between Nov. 10 and Dec. 15 inclusive; squirrel, except between June 1 and Dec. 15 inclusive; woodcock except between July 15 and Nov. 1 inclusive; ruffed grouse, pheasant, prairie chicken, except between Sept. 1 and Dec. 15 inclusive; wild turkey, except between Oct. 1 and Dec. 15 inclusive; wild duck, except Sept. 1 and Dec. 15 inclusive, but wild ducks may not be killed on Sunday, Monday or Tuesday of any week. Forbidden to kill deer, except between Oct. 15 and Nov. 20.

RHODE ISLAND.

It is forbidden to kill lark, robin, woodduck, gray duck, between Feb. 1 and Sept. 1; grouse, heath hen, between Jan. 1 and Nov. 1; woodcock, from Jan. 1 to Sept. 1, ruffed grouse, partridge, Jan. 1 to Sept. 1; quail, from Jan. 1 to Oct. 1; Bartram's tattler, upland plover, grass plover, from April 1 to Aug. 1; dusky or black duck, woodduck, summer duck, blue or green-winged teal, from March 1 to Sept. 1; wild pigeon, from Jan. 1 to Aug. 10; rabbit, hare, gray squirrel, between Jan. 1 and Sept. 1.

VERMONT.

Forbidden to kill deer prior to Nov. 1, 1890. Forbidden to kill mink, beaver, otter, fisher, between April 1 and Nov. 1.; quail, "woodcock or ruffed grouse," partridge, between Feb. 1 and Sept. 1; woodcock, between Feb. 1 and Sept. 15; wild goose, wild (other than wood) duck, between May 1 and Sept. 1. Forbidden to export ruffed grouse.

WISCONSIN.

Forbidden to kill woodcock save only during July after the 3d day thereof, and during August, Sept. and Oct.; prairie hen, white-breasted grouse, sharp-tailed grouse, prairie chicken, save only during August (after the 14th day), and the month of Sept.; quail or partridge, save only during months of Sept., Oct. and Nov.; ruffed grouse or pheasant, save only during September, October and November; wild duck, wild goose, brant, any aquatic fowl, save only during Sept. after the 15th day, and during Oct., Nov. and Dec.; deer, elk, moose, save only during Nov. Exportation forbidden.

[TO BE CONTINUED.]

A WOUNDED BUCK.

I HAD traveled a long distance to get to the hunting grounds in northern Pennsylvania. At that time there was not such a network of railroads through the timber as there is now, and those who went into that region after the large game which was so abundant, had to go most of the way by wagon, and then afoot to the place where he would fix his camp.

The country was heavily timbered with both soft and hard woods. The land was rolling, and of such a sameness of character, especially when one was shut in by the tall growth of timber, that it was an easy matter to get lost, and not so easy to get oneself found again. Until one learned the direction of the streams, and the lay of land between them, he might calculate on being lost nearly every time he ventured far from camp. I always carried a good compass, and had certain points fixed in my mind, so that if I did get a little off the track, it was only a matter of a little more walking to reach some place which I knew, and thus I could turn up at camp all right. But with the best arrangements that could be made a hunter was often compelled to spend the night by some log, with a fire in front, both to keep him warm, and to keep the bears from disturbing his slumbers. I have traveled for half a day with the compass in my hand to keep myself from being led astray by the sameness of the appearance of the surroundings, and then, especially if it was near night, and I was far from camp, could

scarcely compel myself to follow what it said was the way home.

Did you ever get lost in the woods when you were very anxious to reach camp before dark when you did not know exactly where you did want to go to reach it? If you did not you ought to try it some time, as it is an experience that you will get in no other way. If you have not the steadiest nerve and the coolest brain you will soon lose confidence in the compass, and if you do you are lost indeed. The inevitable tendency of one who is lost is to travel in a larger or smaller circle, and the only way to safety is to trust your compass against reason and appearances. One becomes the most thoroughly bewildered by following the trail of a deer. It is then that his attention is all given to the trail and to keeping a good outlook for the game. In this way hours will pass without his noting the time, or the direction in which he is going, and when he awakens to the fact that it is almost night, whether he has sighted the game or not, the first thought is as to where he is, and how he is to get to camp. At the time of which I speak, in that country, one might travel for fifty miles in any direction, except westward, before he would find a house or a camp to shelter him.

I started out from camp one morning to get meat. My efforts in this direction for some time had resulted in more consumption of that article than in supplying the camp larder with it, and it was about time that a change should come in the hunter's luck. There was a good tracking snow on the ground, and the day was all that could be desired. I hunted until noon without striking a fresh track. I sat down and ate the lunch, took a drink of water, and started again. I had not gone far when I saw a yellow streak going through the bushes. There was no time to make any calculations as to where I wanted to strike that streak. The thing to do was to stop it if possible. So holding on it as well as I could I let the lead after it. It did not stop, but when I got to where it had been, there was blood enough to give some hope that it might yet be stopped. I soon found that it was not badly wounded by the way it traveled; and yet the wound was bad enough to make it tired. I followed carefully for an hour, gaining all the time, and yet not getting a sight of it. I was going up a hill where I had the wind on him, and he had the advantage of the sun on me, when I followed the tracks between a tree and the roots of another which had been blown down. I had seen no change in his gait, nor a pause in his march; but just as I turned around the root of the fallen tree I caught a glimpse of two balls of fire followed by that yellow streak coming at me like a demon. I was taken entirely by surprise, and turned to get out of his way. I had just passed the standing tree when my foot slipped on its roots, and I found myself sprawling on my back. I did not know what would come next, as the buck had rushed around the upturned root after me, and if he should see me on the ground it would be the hunter hunted. I lay still and peered around the tree, and there stood the buck with his hair all turned the wrong way, and his eyes blazing, looking up the tree as if he thought I had climbed it. Carefully lifting my rifle, to which I had clung when I fell, I sent a bullet into his throat, and he sank down in his tracks. When I got on to my feet, the fall and the strain of the imminent danger had so unnerved me that it was some time before I could reach him. When I did he was dead, and I sat down on his body and thought how near that hunter came to ending his days at the root of that tree, and under the hoofs of that buck. To this day I can see that savage beast as I saw him when he rushed at me from behind that fallen tree, and I have always been careful when following a wounded deer to give them no chance to turn the tables on me as he did. HOMERUS.

CLEVELAND, O.

QUAIL ON LONG ISLAND.—The Cedars, Oakdale, June 25.—Several broods of young quail have been hatched out. I never saw so many quail; the prospect for big shooting for a coming season was never brighter.—ALFRED A. FRASER.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

A TRIP TO SUNAPEE.

CHARLESTOWN, N. H., June 4.—Among the many valuable, but often neglected or misunderstood lessons of the New Testament, is the one, "put not new wine in old bottles," and the practical application of it in my own case will be found before this letter is finished.

I received last week a letter from my friend the Doctor, saying that he would be at his cottage at Sunapee until the 31st, and asking me to come up and spend a day or two with him; so on Monday noon, I took the mail train to Claremont Junction, where I changed to a fast freight with passenger car attached, and after two or three hours spent at way stations, reached Newbury, at the foot of the lake, at 4 P. M. in a steady rain. In half an hour a wagon was got ready, and with the aid of my rubber coat and the "father of all umbrellas," belonging to my driver, I reached the Doctor's cottage at 6, to find him and my old colleague, commonly called Bine by his intimates, with the present Fish Commissioner, busy preparing a sufficiency of ham and eggs for supper. The day had been cold and wet, and the fish had refused to bite, and we had to fall back on the staple resources of the poultry yard and the pen for our provender. The welcome was warm, if the evening was cold, and after supper we sat around the kitchen stove, and smoked and discussed the great trout question until bedtime.

Tuesday morning was dark and foggy, but still, and thinking from the density of the fog that it was likely to "burn off" with the sun, we put on our rubber coats, after breakfast, and the Doctor, Bine and myself started up the trolling, the Doctor with a smelt on his hook, Bine and myself with Skinner spoons. No success awaited us, and after reaching a favorite ground we came to anchor, took off the trolling rig, and put on hooks baited with live smelts, and patiently awaited the result. The fog disappeared, and the sun came out hot, and we sat and blistered, and changed ground occasionally nearly all day. The Commissioner, who had been to the hatching house first, came up the lake and joined us, but we were too early in the season, although the last week in May was a very good one last year; and the day's result was one trout, of the new variety, or *S. sunapee*, caught by Bine soon after we anchored, weighing 3¼lbs., and one brook trout of 1lb., caught on one of the lines, which was left out dragging, as we pulled home.

Bine's fish was discussed for breakfast Wednesday morning, and then we parted for the day, the Doctor going down the lake with his trolling rig, the Commissioner and myself to inspect the hatching house and the thousands of young landlocked salmon which had just been turned out into Pike's Brook, and Bine and a young nephew of his, who is going to win fame as an artist and whose admirable portrait of a rainbow trout adorns the wall of the Doctor's dining room, went up the lake to the fishing grounds. After a couple of hours the Commissioner and I joined them to learn that the young artist had drawn first blood, and with the proverbial luck of new beginners had boated a superb *S. fontinalis* of 4¼lbs.

Soon after our arrival on the spot he brought in a *S. sunapee* of 3¼lbs, and that closed the record of that boat for the day, with the exception that the artist also lost one big fish, who tore away, and was supposed by his maneuvers to be a landlocked salmon.

After the Commissioner and I had shifted ground three or four times, or rather resumed our first position, from which we were drifted by a fresh breeze which kept the boat dancing and the points of our rods describing all sorts of ungeometrical figures in the air, our anchor stone not being heavy enough to hold us, the rapid *bu-r-r* of a spare reel in the bottom of the boat, a line attached to which had been thrown over the side, made the Commissioner drop his rod and jump to the rescue, and after a few minutes careful play, by hand, he brought his prize to the surface and I soon had him in the landing net and then in the boat, where it turned out to be a *S. sunapee* of 3¾lbs. After a long period of "pitch and toss," which we relieved by changing our positions as best we could, the reel in the bottom "went off" again, and in a few minutes I had the pleasure of slipping the net under another "new trout" of 3¼lbs.

By this time it was getting well along in the afternoon, and I was discouraged, not having had a bite, for there is no nibble to these fish; when all at once the tip of my rod went under water as if it had been a divining rod of the olden time, and I had but a chance to strike and fix the hook when I found that I had something pretty heavy at the end of my line.

Now comes in the moral of my text. My line had been dipping in the water all day, and with the rod was wet as it could be, the "nozzle" of the tip was rather small, and did not render freely, and the leader, once one of "Orvis-best," had seen service before, and with an extra surge of the fish parted at one of the knots, and away went my expected victim with a double-snelled sprout hook and two feet of leader!

Didn't I "kick myself" mentally? Didn't I think of the good advice I had forgotton, when I put on an old leader which looked good, when I had two new ones in my book? I had cut the old loops which were frayed from both ends, and knotted in new ones, and all seemed fair and sound, but alas, was deceptive! Silently and sadly I made a new loop in the end of what was left, bent on a new hook and made another trial. After another half hour I saw a smelt rise suddenly to the top of the water, close to the boat, and the next instant there was a pull on my line which gave me no time to strike, before the reel began to whir and the line to straighten out for the center of the lake. All was clear this time, but it was not fast, and after pulling out 30 or 40yds. of line, the strain ceased, and the line came back empty.

So ended the day's lesson. We had no more bites and went to camp. In about an hour the Doctor returned empty-handed, but having lost a new leader full of flies, which he was trailing over the stern of the boat to limber it, by the sudden spring of a heavy trout which sprang from under a rock, and snapped it instantly. It was not a successful trip on the whole, and yet was thoroughly enjoyed, and I hope will be repeated with better success a month later. We were too early.

Now for the "new trout." I must confess myself puzzled. They are not like anything I ever saw before, and I cannot conceive the possibility of their having existed in the lake any length of time without having been noticed. The two which I netted were females, clean-shaped, small-headed, beautiful fish, without a spot or marking save a delicate medial line, belly silvery, back an olive brown, not so black as a salmon, but so like one that I said "salmon!" as I netted them, until the Commissioner told me they were the much-discussed trout. There was no *aureolus* about them, that is sure. The fins were a delicate fawn color with white edge, without the black line of the *S. fontinalis*. The male which Bine caught Tuesday had the "hawk's bill" on the under jaw, and the whole head much coarser than that of the female. I hope to be able to say more about them by and by, but now I can only swear to their beauty in the net, and their excellence on the table. VON W.

A TROUT FISHER'S PARADISE.

AFTER wandering all over the country looking for waters where good fishing could be enjoyed, and yet not too far from New York, I have discovered a spot that covers every desire—a spot where trout of large size can be taken with bait or fly, and such trout! On June 14, I took ten trout that weighed 26lbs., within one hour, and brought them home where they received full justice at the palate of a most appreciative family. It is my firm belief that no other waters between the oceans offer such splendid fishing, and the best of it is that they are but thirty hours' ride from the metropolis. Good fishing at the Rangeley Lakes is a thing of the past. I have discovered this from experience. Continual opening and closing of the great dams, suddenly changing dead waters to a swift current, the "jigging" process, the villainous "gang" hook and marauding the spawning beds have done their deadly work, and those who visit the once glorious Rangeley Lakes will be doomed to sure disappointment.

The stubborn facts have come to the surface—as the fish seem to have done—and where for years we have enjoyed the finest trout fishing extant, there is nothing left but a sweet memory of a happy past. Even the once charming scenery of the Rangeley Lakes has gone, for the raising of the waters throughout the entire section has entirely obliterated the lovely golden sandy shores, and now decayed spruce trees and stumpy willows form the only visible shore lines. Occasionally, by following the disappearing ice, a fair catch may be made, but it is the accident of fair fortune, and I repeat, good fishing at the Rangeley Lakes is played out. Since this fact has become undeniable I have been on the *qui vive* for a place where the angler's efforts would be rewarded, and I have found it, and propose to take the readers of FOREST AND STREAM into my confidence and tell them honestly where grand trouting can be had. What is written here may be relied upon, and I am quite sure that any angler who may visit these waters will be well rewarded.

Leaving New York in the morning, the next morning lands the tourist in the unique and historical city of Quebec, wherethe excellent St. Louis Hotel affords every comfort, and the proprietor, Mr. Russell, being an enthusiastic angler and a member of the Quebec Fish Protective Association, will gladly give all desired information. From this city—where a day can be delightfully spent—it is just four hours' ride, via the New Quebec & Lake St. John Railway, to Lake Edward. The cars land the angler upon the shores of the lake, and he has but to step into a boat, of which there are plenty within three rods of the station, to find what is to-day the finest trout fishing anywhere within a reasonable distance of the metropolis. An unassuming hotel is close by, and a good bed and very fair plain board can be had at one dollar per day. Lake Edward is about twenty miles long, with an average width of three-quarters of a mile, and it is full—literally—of fine trout. It is an every-day event to take them weighing from 3 to 5lbs. each, while the average weight is better than 1lb. It is surrounded by the Laurentian Mountains, dotted with numerous islands, many beautiful bays, and its clean sand beaches and lovely scenery make it one of the prettiest lakes I have ever seen. The fish will take the fly a little later, but all I caught were taken with minnows, which can be had in vast numbers close by shore in any of the bays. The minnows keep near shore, knowing their danger, for when pursued they quickly fly to the brush close by. Hence, when one is dropped into the water at the end of a line he is speedily taken by the trout.

Lake Edward has been leased by the Quebec & Lake St. John Railway Company especially for the use of its patrons, and will be carefully guarded against depredations. The causes which have ruined the sport at the Rangeley Lakes will never be permitted here, and good fishing at all times will be the result, for honest hook and line will never be able to deplete or in the least diminish the immense number of trout in this splendid sheet of water. For camping parties it is an absolute paradise, for any of its hundred points afford fine grounds, and supplies of any kind at very reasonble prices can be had at Quebec at one day's notice, while orders can be sent by mail or wire. Ordinary supplies can be bought at the Construction Company's store at the lake. The crowning pleasure of fishing in these waters—and one which every angler will fully appreciate—lies in the very important fact that the fish need not be wasted. There is a fine ice house at the station, built by Mr. Rothwell, the master mechanic of the road, and a most enthusiastic angler and obliging gentleman. He will care for all fish, and when the fisherman is bound for home his trout are packed in moss and ice and are safely brought to table and admiring friends. I left the lake after dinner on Friday and my fish were at home in New York at 10 o'clock on Saturday night, as hard and sweet as could be desired. Lake Edward undoubtedly affords the most satisfactory sport available to New Yorkers, and I am explicit in these lines in order that all good anglers may have as fine sport as was enjoyed by myself.

I will add that a transfer across Montreal is necessary, it being about one mile from the station by which we enter to the station of the Canadian Pacific R. R., from which the trains depart for Quebec. At Quebec the trains for

Lake Edward leave from the arriving station. The fare to Montreal is $10, thence to Quebec, $3.50, and $3 to the lake.

Less than one hundred miles from Lake Edward, due north, lies famed Lake St. John, the "native soil" of the grandest, the most illustrious game fish, without any exception whatever, that plows fresh waters. Brother angler, did you ever catch a wininnish? No? Ah!

JUNE 19. KIT CLARKE.

THE BANGOR POOL.

IT had been one of my lifelong desires to kill one of the "lordly salmon," but not until this spring had the way seemed clear for me to undertake to carry into successful execution my long cherished plan; so it was with the utmost satisfaction that I read the telegram from Bangor saying, "The freshet is over, the river rapidly falling, the water clear and the salmon rising freely; the prospects bright." My fishing traps were all packed, hastily gathering a few articles of clothing into my grip, in one hour's time I boarded the train bound for Bangor Pool, which was to me, and with a proper and generous managment will be to future generations, the Mecca of true anglers, especially to those of New England States. I left my home at 2 o'clock P. M., May 24, and the next morning at 5½ o'clock arrived at Bangor. After breakfast and securing rooms at the Penobscot Exchange, we went up to the pool, which is about twenty minutes' walk from the Exchange.

The tide was flowing; although there were twenty odd rods upon the pool no fish were rising. The fish this year have taken the fly best at about one hour before and one hour immediately after low tide. Two years ago Messrs. Fred Ayer and Tom Allen leased a portion of land lying alongside the river on the Brewer side of Bangor Pool. They erected a substantial club houre. Those who come well recommended they elect members of the club, upon payment of a fee of ten dollars. The privileges and benefits arising from membership give to each member free access to the club house, a place to dry his traps and shelter from the inclemencies of the weather. The club claim that as they have leased the shore down to high water mark they ought to have the exclusive privilege of fishing from the same. The tide rises about nine feet at this season of the year, and as the shore is very easy of access the local fisherman avail themselves of this opportunity and at low water fish wheresoever they will. It seems to me that if the club would charge a nominal sum daily for use of club house room, many anglers from abroad would avail themselves of the opportunity, especially those who can stop but a day or two; one would also feel as though he was among sportsmen who angle not for the one purpose of being "high line" of local reputation, but for the delightful sport and health-giving properties it affords. We received a courteous invitation to join the club, but as our stay would be limited to two days we were forced to decline. As the shores on the Bangor side were perfectly free, not wishing to deprive any one of their rights we hired a boatman to take us across. The waters of Bangor Pool are free to all, the "club" claiming nothing but the shore line of the land they leased.

As it was nearly 10 o'clock A. M. when we landed on the Bangor side we put our rods up in the buildings of the Bangor Water Power Co. and strolled around, viewing with great interest the many sights which were new to us, watching with delight the lumber rafts which shoot the falls every day at high water. The day was delightful, and all business cares were entirely lost in the grandeur of the rush of water and the beautiful coat of green that nature was so bountifully clothing herself with. We returned early to our camp after securing two good river men for the next day.

Bright and early we were upon the grounds, but took no fish, although two were taken by other parties; but in the afternoon at low tide it was my good fortune to kill my first salmon. It weighed 23½lbs, and was in prime condition. The next morning my brother killed one that weighed 19½lbs. We were satisfied, and with grateful hearts we bade adieu to Bangor Pool. Taking the 8 P. M. train for Boston we arrived home the next evening, greatly benefited by our 1,000-mile journey.

In conversation with Mr. Allen I was informed that the season opened some three weeks earlier than last year, and up to May 25 forty-three salmon had been landed against twenty-three same date last year. On the 26th six were taken, on the 27th four, making a total of fifty-three up to date (May 27). The fish were all taken at low water, early in the morning or just at night.

If some arrangement could be made with the weir fishermen down river, salmon fishing at Bangor Pool would be greatly benefited. The local fishermen at Bangor agree that one fish taken to ten rods is a fair average for the season. On May 27 there were on the pool 102 rods by actual count, yet only three fish were taken. Let us hope and trust that a broad and conservative spirit may animate the anglers of Maine—those who angle for health-giving sport and those to whom it is "bread and butter;" then can her lakes and rivers be made to teem with multitudes of fishes, furnishing food for the hungry and health and recreation to the weary. H. W. A.

PITTSFIELD, N. H., May 30.

NETS IN THE ST. LAWRENCE.—The Watertown, N. Y., *Times* prints a communication dated Cape Vincent, N.Y., June 23, which says: "Fourteen warrants have been issued by Justice Boreland, of Cape Vincent, against persons who have been fishing with nets in the St. Lawrence River. Yesterday afternoon Frank Barber and brother, of Three-Mile Bay, and Wm. Knowlton of the same village, were arrested and brought before him. Major Durham appeared for the sportsmen and hotel keepers and ex-District Attorney Emerson came down upon the afternoon train to represent the net fishermen. The trial was adjourned until Monday, July 2. As there are some ten warrants more to be served, it is expected that there will be plenty of business at Justice Boreland's court the next week. Ever since Judge Williams's decision in reference to seizing nets, the net fishermen have been fishing with all kinds of nets in the St. Lawrence, and the above arrests are the result. Those persons who were congratulating themselves that the fish question in the Second Assembly District was settled, and that it would not appear again in politics, have reckoned without their host. Both sides appear to be as determined as ever, and never were so bitter against each other as at present."

THE TROUT HOG.

Editor Forest and Stream:

The effect of playing the trout hog is fully illustrated in the result upon the fishing at Newfound Lake, at Bristol, N. H., where for many years large lake trout had been known to exist, but (so it was supposed) would not take bait, and but few were taken with the spear. Three years ago, however, a man from Franklin discovered that the trout could be taken by trolling, and some fifty were taken that year. Last season one man (Major ——), a diamond merchant from Boston, spent a month or more there, and took fifty trout and salmon, averaging from 7 to 15lbs., by trolling, and several with the spear. I was informed to this effect by a person on the spot and one who ought to know.

Now for the result. This same party had to content himself with one fish this season, while scores left with sunburnt faces and without a fish. Together with several friends I trolled early and late for three days and had only one rise, which resulted in taking a 13lb. trout the first day, but no amount of coaxing with every form of bait, both real and artificial, would secure another.

Last year eight were taken in one day by one person, while this season on no one day did eight persons secure a like number. Last season trout could be seen breaking water almost constantly; this season, during our constant observation about the lake for four days, only two were seen to rise. The lake is only about seven miles long and from one to two miles wide, with fish concentrated about certain points, thus it will be seen how easily from twelve to twenty trout would reduce to the minimum the trout that would take bait. Had each person been willing to stop fishing when he had secured one or two trout, the sport might have been extended indifinitely, but when a man goes into the fish business, boxing and sending fish to Boston for a month, and then comes again in the fall to glean what are left, thereby robbing the people living near the lake of one of its greatest attractions, and one which was of inestimable value to them, he ceases to be a sportsman and becomes a selfish, deluded pot-fisher.

A youth about sixteen years of age informed me that he inadvertently told Major —— of the discovery of a trout and salmon in a pool where they could be easily speared, and he further stated that Major —— caught them. This insatiate fisherman has left the poor farmers whose land adjoins the lake with naught but salt pork for provision, while he contents himself with having cleaned out the lake. The picturesque and lovely scenery which greeted the eye on every hand, together with the soul-inspiring songs of the birds by day and the calls of the "nightingale" which lulled us to sleep at night during our sojourn on a lovely island in the lake, were far more satisfying than fifty trout would have been. BRUIN.

NEW ENGLAND TROUT WATERS.

ACCOUNTS from the fly-fishermen are rather encouraging, but the stories of fishermen hunted by the mosquitoes and flies are not quite as encouraging to the sportsmen about to start on their annual fly-fishing trips. At Moosehead Lake accounts indicate that the fly-fishing is good. Some of the members of the Kineo Club have returned, "well browned up," and highly pleased with the surroundings and the fishing. Some really fine trout have been taken on the fly, and one member of the club took four pounds with bait. The story is that the black flies are not as bad this year as usual, and the theory is that this terrible pest to the frequenters of the woods and streams is growing hopefully fewer every year. Whatever may be the cause of this decrease is not explained; the only hope is that it my be real. Mosquitoes are reported to be very troublesome on the streams, especially along the south shore of this State. One or two parties who have attempted to whip the streams have been ignominiously routed by the terrible force of mosquitoes they encountered. I say ignominiously routed, because the retreat had to be beaten before any trout were taken.

But better success has been the result of fishing some of the noted trout streams of Maine, and they do say that the musquitoes are not as bad as usual in that part of the country. Black Brook, well known to frequenters of the Androscoggin Lakes via Andover, has yielded some remarkable good strings. The great trouble with this brook is that it is over-fished by the natives of the towns below, who fish for numbers and frequently fish, although they are well aware that the fish must spoil before they can be made use of. One little shaver, only about 11 years of age, took the other day ninety trout from a brook in Sumner, Maine, but all to be made good use of.

The supply of large trout in the Maine lakes, as I remarked last week in the FOREST AND STREAM, is holding out wonderfully well. But concerning Mr. Edger W. Curtis' trout there is a slight discrepancy in the statement. The number of trout taken, which weighed over 50lbs., was ten instead of five. Other remarkable catches are also recorded, but the season of these big catches is about over. SPECIAL.

CATFISHING IN ILLINOIS.

CHARLESTON, Coles County, Ill.—This has not been as good spring for angling as usual, but some large fish have been caught. Byrd Monroe caught one channel catfish that weighed 3½lbs., and a few small ones, ¾ to 1lb., in the Embarros River; minnows were used for bait. Douglas Nichols caught one channel catfish that weighed 3½ to 4lbs. in the same river, three miles N.E. of the city; minnows and angle worms being used for bait. Edward Easton and Logan Harris went to the raging Ambraw River for a day's angling, and caught one blue bullhead catfish that weighed 4½lbs., and one that weighed 1½lbs., and some smaller ones, using minnows for bait. Rufus Crim went to the Wilson Rocks, three miles east of here, and caught three blue bullheads and one channel catfish; the two largest weighed 5lbs. each, and next largest 4lbs., channel cat 2lbs. Total catch 16lbs. He used minnows for bait. This catch was on the 23d inst., in the Embarras River, water clear. John Hughes caught three channel catfish that weighed 3lbs. each, and a few small ones in the Embarras River; the bait used being minnows. Two boys about 16 years old, Bob Hart and Jesse Rice, went to the Embarras River, three miles east, and took the belt for the largest fish. It was a yellow catfish that threw the beam up to 6¼lbs. They lit out for home, and it was all they wanted for one day.

Dr. Wm. Mort Chambers purchased of Meecham & Co., St. Louis, lately, the finest fishing rod, reel and line owned by any person in the city. The rod is split-bamboo, the reel is a silver click, the line is the finest braided silk with a wire in the center; total cost about $25.

J. B. DAZEY.

BASSING ON LAKE MAHOPAC.—New York, June 25.—*Editor Forest and Stream:* I dodged the hot spell up at Lake Mahopac. Paid $1.90 for return ticket (good for ten days) at 155th street, took the 4:30 P. M. train on Northern Railroad and got to Mahopac (not Thompson's) by 6 P. M. The lake is about 100yds. away, and the Cole's House, where I put up, as far up the road to the right. Finlay keeps a shanty on the lake and has boats, whitehalls and flatters, for fishing, at $1 a day; special rates for longer periods. You can get a man or boy to row you round for $2 a day and under; but the natives are not expert in angling, their ideal being a porcupine of a boat, with a dozen rods in every direction, with frogs, live bait and worms thereto annexed. Any cub that can row is good enough to take along, and as the lake is round—not long, like Greenwood—you dodge along in a circle, and a day's voyaging in calm water will teach you where you should go. I whipped the shores and the islands with small grizzly-king, brown-hackle and scarlet-ibis, in early morning and in the evening from 5 P. M., raised quite a lot of genuine small-mouth bass in the shallow water, and got any amount of sunfish and yellow perch, which came in two and three at a time. I had barbless hooks and so threw the fish back unharmed, but one evening my comrade wanted the fish kept, and after throwing off all small ones I had over four dozen hand-size sunfish and yellow perch. The bass are genuine small-mouths and very gamy, there must be big ones, which I shall go for after the first of July, when the law is up. There were some yellow perch and small pickerel taken still-fishing on live bait, and I heard, you understand, of two big bass, one on bait and the other taken trolling a rubber frog. There are lots of hotels and boarding houses. I stayed at the Cole's House, $2 a day, $9 a week. Clever people with a nice set of visitors; no big style, but quite some comfort, plenty of milk, light bread, clean linen and good coffee. I am satisfied to go back there for I was comfortable, and on those two bad days it was cool, and there were no flies or mosquitoes.—GRAY JOHN.

TROUTING UP THE BEAVERKILL.—New York, June 19. —*Editor Forest and Stream:* Have just returned from a week's outing up in Delaware county, this State. During the seven days spent there I enjoyed three good days trout fishing on the streams which empty into the East Branch and Beaverkill. The brooks are too low, however, for really good fishing, and the midges, black flies and other torments are simply legion, the combination tending to make the life of a fisherman on those streams anything but a happy one. The day I left for home (Monday) the thermometer up there registered 90° in the shade. My best day's fishing was 150 fair-sized trout caught from a small stream which I can jump over in the widest part. The trout lay in the holes and would only rise to the "enchanting worm." I took four dozen flies as a part of my equipment and only wet two of them, result, "nary a rise."—BLUE ROCK.

BLUEFISH.—This season the bluefishing has been fairly good from Barnegat to Montauk Point. Large numbers have been taken about Fire Island, and last week they struck in near Newport, R. I., and afforded lively fishing in the West Bay. Sheepshead were also plenty at the latter place. Our accounts from the eastern end of Long Island say that the bluefishing is good in Plum Gut and the eastern entrance to the Sound. So far we have no account of their presence further west in Long Island Sound.

A TROUT IN CEDAR RIVER.—Waterloo, Iowa, June 17. —The following may interest some FOREST AND STREAM readers. A genuine speckled trout was caught here in the Cedar River the other day. The first one known to be taken or seen here—10in. in length. Rather strange, as the river is filled with pickerel.—R. W. KINGSBURY.

Fishculture.

WORK OF THE GRAMPUS.

THE schooner Grampus, of the U. S. Fish Commission, sailed from Gloucester, Mass., April 3, for the southern mackerel fishing grounds, calling at Wood's Holl on her way to take on board some necessary outfit for the cruise. As soon as these preparations were completed she started on her voyage of investigation and has been continuously cruising since that time. Her investigations have consisted in taking temperature observations of water and air; setting gillnets for mackerel, herring, bluefish, etc.; trying toll-bait for mackerel and making frequent trials with tow nets, both large and small, for crustacea, floating eggs of pelagic species, young fish, etc. An ingenious device for developing and keeping alive such eggs as might be taken has been made by Colonel McDonald and has been used with excellent success. Several hundreds of thousands of floating eggs were collected in the towing nets and carried to Wood's Holl where they have been hatched and the young fish liberated. Specimens of the eggs, embryos, and young fish in various stages of developement have been preserved and will be studied and described by Professor John A. Ryder. The results of this novel and valuable investigation will give us much additional knowledge of our marine species which will be of great importance.

The Grampus was joined on May 12 by Dr. Tarleton H. Bean, the ichthyologist of the Fish Commission, who has been attached to her since that time, and has made many interesting observations concerning the life habits of the more important food species. In regard to the observations made by the Grampus bearing on the question of the occurrence of mackerel, Dr. Bean makes the following statements: "Few catches of large mackerel have been made this spring by the fishing vessels, in the waters south of Noman's Land, and in every instance only a small number of fish have been taken. One vessel took 800 fish in Vineyard Sound on June 14. Small tinker mackerel, of the size usually called "nails" and "spikes" by the fishermen—from 7 to 10 inches in length—were very abundant from Fire Island to Montauk Point. It requires 1000 of these to make a sea packed barrel, and, of course, they have comparatively little market value. These fish are moving slowly eastward and on the 15th of June were south of Noman's Land. The Grampus took two schools of

mackerel in her purse-seine, but the fish were too young to be sexually mature and were not saved.

"In cruising over the region usually followed by mackerel in their spring migrations it was found that the crustacea upon which the large mackerel feed was very scarce near the land. This food was, however, found in abundance about fifty miles off shore. It is believed that the absence of food near the coast accounts for the non-appearance of mackerel in that region. The large mackerel did not come in shore because their food was not there, and the scarcity of this is accounted for by the uniform low temperature of the water. As a rule, mackerel food has been found only in small areas in localities where it occurred at all. Between the schools of tinker mackerel previously mentioned and the south shore of Long Island was a large body of menhaden, from near the land to ten miles distance, extending from Fire Island to Montauk.

South of Noman's Land, in lat. 40deg. 25min. N., long. 72deg. 28min. W., a large school of porpoises was seen, and the crew of the schooner George A. Leland caught a porpoise in their seine which was being set for mackerel. During the spring the Grampus has taken two specimens of rare porpoises which have been sent to the National Museum." The Grampus has finished her cruise for live mackerel and has been ordered to Gloucester to refit for her summer's work.

THE NEW YORK FISH COMMISSION.

AS we go to press no appointment of a Commissioner to succeed Mr. Roosevelt has been made. The Governor has requested the Board to meet with him before action on the recent law putting the appointment of game protectors in their hands, is taken, and the meeting was called at Albany yesterday. Shad hatching on the Hudson and at Cold Spring Harbor has been successful and as many fry have been placed in the river as in any previous year. The annual report, placed in the hands of the State Printer last October has not yet been issued. This Commission has always been late with its reports.

In the matter of trout culture by the State, Commissioner Blackford is reported to have said to a reporter of the New York *Times:* "I believe that the time has come when the New York Commission should give up the larger portion of its work in the hatching of trout and devote itself to those departments of fisheulture which have for their objects the restocking of the rivers, the great lakes, and the waters of the bays along the shores of Long Island and of Staten Island by the hatching of whitefish and salmon trout, by extending the operations of shad hatching, and by providing for the stocking of the Hudson with salmon which, through the help of the United States Fish Commission, has been proved to be practical. The hatchery at Cold Spring Harbor, Long Island, has just been completed, and is fully equipped with all necessary arrangements for the hatching of lobsters, codfish, smelts, striped bass, salmon, shad, and frost fish. The fishery is under the superintendence of Fred Mather. The true policy, it seems to me, is to leave the hatching of trout to the private fishculturists of the State, who are capable and competent to furnish all of the young trout needed at an expense so small that the sportsmen who desire to stock streams in those particular localities which they favor can do so at a very small sacrifice. The trout is by force of circumstances the gentleman's fish. It can never be made abundant enough in the waters of the State to be a poor man's fish."

This policy, if the Adirondack region and public streams in other parts be excepted, is the true one for the State to follow. The stocking of private streams with trout should be left to private trout breeders, as the owners or club lessees of these streams are able to pay for the fry which is placed there for their own benefit, and from which the public are excluded, and with the exception above stated Mr. Blackford's views are sound.

JAPANESE HONORS TO AMERICANS.—Sapporo, Japan, May 19.—*Editor Forest and Stream:* The following gentlemen have been elected corresponding members of the Fisheries Society of Northern Japan: Col. M. McDonald, Commissioner of Fisheries of the United States; Fred Mather, of the New York and U. S. Commissions; E. G. Blackford, New York Commissioner; C. G. Atkins, F. N. Clark, and R. E. Earll, of the U. S. Fish Commission; W. A. Wilcox, Boston Fish Bureau; Capt. D. T. Church, Tiverton, R. I.; J. Pryor, Secretary Menhaden Oil and Guano Association; E. P. Thompson, Astoria, Oregon, and T. Mowat, Inspector of Fisheries, New Westminster, B. C.—K. ITO, President.

AMERICAN OYSTERS IN THE BALTIC.—The Paris *American Register* says: "American oysters are now also being planted in the Baltic. A first attempt was made in 1876, near Schleimünde, with a batch of 25 tons imported from the United States. They were either carried off by undercurrents or lost in the sand. Last year a second lot of 12 tons was placed in wire baskets, and proved partially successful. Quite recently another importation of six tons arrived, and is now being planted, or rather anchored, in perforated wooden boxes."

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Aug. 30 to Sept. 1.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) H. P. Frothingham, Secretary, 2 Wall street, New York.

Sept. 4 to 7.—Second Annual Dog Show of the Michigan Kennel Club, Detroit, Mich. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 24 to 27.—First Dog Show at London, Ont. C. A. Stone, Superintendent.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 25 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6862.**

NIGHTS WITH THE COONS.

VI.—THE FIRST NIGHT WITH "TENDERFOOT."

IT IS very strange that one having so retentive a memory as Tenderfoot should have entirely forgotton coon hunt No. 1. with Norman, but I will proceed to freshen up his recollection and remind him that I have not forgotton receiving a very kind invitation from him (then a stranger) to drive out to C. and have a coon hunt with him, which I did. The sun was nearly down when I reached C., for it was a long drive, and part of the way over the worst mountain roads it has ever been my misfortune to encounter.

I was given a cordial welcome by Mrs. Tenderfoot, who said Mr. T. had gone for a short hunt after woodcock and would soon come back, which he did, and with a fine bunch of birds, as he is an extra shot and had a fine working dog. It was dark when we left the table. Mr. T. soon brought his carriage to the door, and under the seat we packed lanterns, guns, climbers, etc, and put the three restless dogs, Hayes, Speed and Georgia, in front of us, and in due time reached the ground. We started through a bush pasture for the mountain, and had no sooner reached the foot before all three dogs opened on a fresh trail and ran with race-horse speed up the mountain and over the top. Fainter and fainter grew their cry, until we could no longer hear them. They had gone over the mountain and were out of hearing. We started on in the direction we heard them last, and vainly tried to find a path that a Rocky Mountain goat could climb, but by taking hold of the bushes slowly pulled ourselves toward the top, and wet with perspiration and out of breath made a halt to rest and see if we could hear the dogs. We could not, but before we started again Hayes (the best coon dog I ever saw) came back, and Tenderfoot asked, "What does this mean?" I replied they have ledged the coon, and Hayes has very little faith in ledged coons, and if they are in the rocks far comes back and it saves us many a hard climb up steep ledges. Soon Georgia came back, but Speed did not, and he being a young dog and on strange ground we waited and shivered a half-hour before he came to us.

It was a hard climb we had trying to keep within hearing of the dogs, and we now started to go down (which was easy enough if you wasn't particular the way you went), every shrub seemed to be rooted at both ends and formed a loop that our feet frequently caught in, and the way the lanterns danced and climbers rattled as one or the other tripped or fell would have frightened a grizzly, but after many trips and some falls we again found ourselves on level ground.

Tenderfoot remarked we would find better walking, so we started trying to follow what he claimed to be a cart path, but the night was so dark I could not see it, and the fallen logs, treetops, interlaced vines and crooked laurels, that would have made a manufacturer of rustic seats smile with joy, were not very strong evidence of recent use of Tenderfoot's path.

After another hour of hard walking we heard the dogs give tongue again, and after a sharp run the steady bark of old Hayes told us the game was treed. We hurried on toward the spot and found him barking up a bunch of tall chestnut sprouts, but he soon told us which one the coon had gone up, and Tenderfoot commenced strapping on the climbers, which was soon done; but old Hayes had left. Where had he gone to? We soon heard him bark up about a half mile to the northeast. Yes, there were two coons, and he had treed both. Soon all was silent again, but soon he barked up about a half mile to the northwest. He had started and treed three coons, and was doing his best to keep them all up by barking at one tree a few times and then at another.

Tenderfoot went up like an old telegraph pole climber, but leaves were thick, and he was afraid he might get so close to the coon before seeing him that he might jump; so when old Hayes came around I took him by the collar and kept him until Tenderfoot saw and shot the coon, which proved to be a fine one.

Soon as Tenderfoot got down and off the climbers, we shouldered the coon and started to go to the second one Hayes had treed.

As T. knew every foot of the ground and had been educated for a civil engineer, and had the old reliable North Star to go by, I left all to him; but old Hayes wanted to go in the opposite direction, and showed very little confidence in T.'s organ of locality and his pet star, and it was only by putting a chain on him and dragging him like a cat by the tail that made him follow. But T. said that the dog had got turned around and couldn't tell north from south; so for an hour or more we wandered, until he got so far away from his guiding star and the coons that we saw neither that night, so lost two coons by relying on reason instead of instinct.

T. looked rather sober, but of course I said little, and we soon found ourselves in heavy timber. Daylight had not come yet, and it was doubtful if it ever would pierce the gloom of that dim old forest of primeval growth, whose great trees loomed up like giants in the dark, and I said to myself, "What would Tenderfoot do if Hayes should put a coon up one of the old settlers?"

I soon had a chance to see, for Hayes ranged off. Hark! that was Hayes; he has run right on to his coon and treed him. We were soon at the foot of a tree some four or five feet through at the butt and that ran up some eighty or ninety feet to the first limb, and it looked as though that coon had found a safe retreat; but calmly T. put on the climbers, and, taking the long line in his pocket that the climber always carries so as to lower down and draw up gun or light when wanted, started up.

The tree was so large he could hardly reach a third around it, but the rough bark gave him a hold and slowly he worked up. I anxiously watched him until the first limb was reached, here he took a short rest.

Uncoiling the line he lowered it down, it was too short, it had been amply long to reach from any tree before, so T. descended until line reached ground, and I tied on the light and up he went again until the light seemed as distant as his guiding star.

He stops, breaks off a small branch, saying, "There is a hole in the tree and I feel certain we have lost the game." He inserts the stick and finds that the hole is not deep and coon not in it, and calls out, "Coon is above, I can hear him climbing up." So up he goes until he finds the top of the tree is only a dry trunk that looms up steeple-like some 40ft. above the tall trees that surround it.

Then for the first time he falters. I see him take out pencil and paper and write or figure. What can he be doing? Is he making his will and writing directions regarding his funeral in case the partly rotten trunk should break and dash him to the ground a crushed and lifeless mass? No; he was educated for a civil engineer and is figuring out the probable force of wind that old trunk has resisted and its weight-sustaining strength, and believes it will hold him; so up he goes until I hear the words, "I see him; look out, I shall shoot." A faint report like a pistol and soon a 22lb. coon comes crashing through the limbs, and striking the ground bounds into the air like a rubber foot ball, but he is dead, although the dogs are shaking him, and quick as I can get them off and putting the coon up in a crotch so high the dogs cannot reach him, anxiously watch T.'s descent, which is far more dangerous than ascending, and feel relieved when T. is safely on the ground again.

We take down the coon and look over him together, the heaviest coon I ever got, and such rich dark fur.

Tenderfoot had worked hard to get him, he had climbed the largest, tallest tree I had ever got a coon up, and as he had made no pretensions to being a champion climber, and I presume had never climbed before that night, unless to get sight of the little star that never failed to tell him the way, I told him he had done well.

The wind had now begun to blow quite hard and while we did not get its full force, being down in the valley, we could hear it roar through the trees on top of the mountain, and while listening to it we heard the dogs open and going for the mountain at break neck speed and the wind and roar of a mountain brook tumbling over its rocky bed drowns their cry.

We must find them for old Hayes was never known to leave a tree when he had the game treed. So on we went toward the mountain, wading such brooks as did not come over the tops of our rubber boots and when too deep to wade we found some treacherous log that would either break or shell its bark when we were midway over the stream—the result being the same to us. We at last reached the foot of the mountain which was ledgy and very steep, and tired, loaded with a coon apiece, it was slow and hard work to reach the top, and we feared that we should be unable to hear the dogs owing to the high wind, but we were fortunate and we found we had taken nearly a bee line for the tree, for the dogs were all barking furiously up a lone tall hemlock that stood very close to a high ledge, and it was a mystery to me where it got nourishment from so rocky a soil to attain such a growth, or roothold enough to withstand the gale that was making it sway to and fro like the mast of some storm-tossed ship, but there it stood like some great giant tossing his arms wildly about him as the strong gusts of wind moaned through it branches; it was a wild scene and we paused ere we thought of getting the game; there were great rocks, logs, fallen treetops, the ever-present laurel, a high ledge, the wind shrieking, to which was added the fierce barking of the dogs and one could easily imagine they were wolves so wild was the surroundings.

But to the coon which we must have, so T. again gets ready to climb, and as the limbs came down low and were thick he did not need the climbers, but lantern in hand starts up and when about two-thirds up a strong gust of wind makes the old tree shake from root to top as it bends before the gale and out goes his light and he and the coon were playing "Rock-a-by baby in the treetop, when the wind blows the cradle will rock"; but between the gusts he succeeded in lighting his lantern and climbing almost to the top; says he can see the coon—that he is restless and thinks is getting ready to jump, and as the last word reaches me calls out, "Look out, he has jumped!" but it is certain he did not come clear down, for the dogs were all at the foot of the tree ready to receive him. Soon T. says, "I can see him, he has caught and is hanging on by his forefeet."

The cord is hurriedly lowered and gun tied on and I step back so that the coon would not fall on me, and soon the gun cracks and at the same instant the coon almost brushed me as he came down only slightly wounded. He was at my feet and the three dogs at him and in the fight nearly threw me down, putting out my light, and I was expecting every minute that the dogs would make a mistake and take my legs for the coon, or the coon would take me for the dogs. I pulled myself up on a fallen treetop glad to get out of the fight, and not daring to stir, not knowing how near I was to the edge of the ledge. All this time the dogs and coon were having a free fight, and the coon having got fortified under an old log made it hot for the dogs, but old Hayes never shows the white feather and soon drags the coon out, and I hear the coon give that peculiar cry that it does when the dog gets the death-grip and he knows the end has come.

By this time T. is down and bringing the light, I come down from my perch and we picked up the third coon, T. remarking, "We are far from the team and have got all we can carry" (the three weighed 55lbs.).

Fearing Hayes would strike another trail and give us a long chase we put the chain on him and led him all the way to the team, which was reached by traveling over the same rough country that we had been through before.

We were tired and glad to reach the team again and unload our game, but while we had had a hard hunt it was a successful one.

It seemed as though T. might have found hunting ground where the walking was not so hard (I still think he could), and I confess when I arose the next morning (not very early) tired and lame I felt a slight spirit of revenge underlying the urgent invitation I gave him to come and have a coon hunt with me. I had received a cordial welcome at his pleasant home and had been well entertained. I had found Tenderfoot and his family pleasant acquaintances to make, and still I felt that I had not been well used and wanted Tenderfoot to come to Granby so I could get even with him, and reader, you well know he did, and he has described that hunt far better than I could. He did not notice the wink I gave Meeting House when we started out that night. That wink did not mean roads laid out by civil engineers. The profanity that Tenderfoot heard that night as some one caught his foot against a stub and landed in a bunch of Mohawk briers that were ever ready to receive him was but the echo of his own thoughts. I supposed I had finished him, not having heard from him since the hunt he has so truthfully described, and am glad to know he is still in the land of coons. NORMAN.

GRANBY, Conn., Feb. 16.

VII.—"TENDERFOOT'S" ACCOUNT OF IT.

So you went coon-hunting again? Oh, yes, I have been many a time since, but of all the experiences I ever had I think my first or initiation trip was of all others the most enjoyable to me. You see I was green and had never seen a coon before in my life, much less killed one, and when my friend Norman asked me if I wanted to go "cooning tonight," I told him "of course I do," though I am free to confess that I knew about as much about coon hunting as a dog does about keeping the Sabbath, but having been born with a crazy love for everything that had hunt in it, I was ready to start on any expedition that gave promise of any fun in that direction. I said that I was green as far as cooning matters go, but being of an inquisitive turn of mind I went out to look over Norman's tackle, and take a mental

inventory of his "traps," the use of which I was to learn later. Here came my first surprise. There may be some proper or authentic names for the articles I saw, but if so I have never learned them, and therefore cannot tell you here of all of them, and in fact it would make too long a list for one article. Suffice is to say that as I examined one thing after another, and asked questions, that the conversation ran about like this: "What is this for?" I asked, picking up a rod with a hook at the end. "That? That's for yanking 'em out of the rocks." Well, I will call that the "yanker." "What is this?" "Why that is to punch 'em up, you know." And that is the "puncher;" and so on I found scratchers, corkscrews, fireworks, bobbydinguses and whatnots of every device and description, and if any one knows of a new contrivance that is sure death to coons, if they will only write to Norman he will buy it on sight, providing he has not already got one. But of all this almost endless paraphernalia there was one thing that was the idol of Norman's coon-loving heart, this was an enormous lantern. I at first quizzed him about stealing the headlight of a locomotive, but upon closer investigation I saw that it was some two or three sizes smaller, yet made to imitate one almost exactly. This was Norman's especial pride, and he carried it in that manner to let others know it was too. But that lantern met with all sorts of mishaps all along the line of its experience, and finally brought up after making a flying leap from the top of a 60ft. ledge with broken glass and many a dent and bruise, and when last I saw it was put away under a shed for chickens to roost upon, and according to my judgment it did better service at this than it ever did as a lantern.

And now a word about the owner of all this paraphernalia. This was Norman, and Norman was a coon hunter, and he knew coons from the wee little baby coons clear up to full-grown men and women coons, and knew them well, too; could tell all about their family arrangement and their regular diet, etc. But, like all coon hunters, his stronghold was his ability to somehow have the rest of the boys do the work while he was bragging about the dog. I have investigated coon hunting some since that night and have come to the conclusion that the ideal coon hunter is composed of four component parts. First—A little work; yes, just as little as possible. Second—Lots of creepers, ropes, lanterns and things mostly for the boys to carry. Third—Dogs. Fourth—Brag; yes, lots of brag; he cannot be a good coon hunter without having this last attribute thoroughly developed. He must brag about his dog first, last and always, and intersperse between whiles by bragging about what he did one night last week.

Say! Hold on! Did you get any coons? Oh, I had forgotten all about the coons! Yes; I will tell you. You see Norman told me I must take him where there was large timber and near to water, and as the General's sap works was the largest timber I knew of, and also had a brook running through it, I took him there. It was a blind venture in the dark, and I did not know whether we would find a coon or not, but we went. We were on the ground in good season, and turned loose the dogs—there were two of them. One of them was a good dog and hunted for coons, the other was good for nothing except to hunt for the first dog and get into a fight with him whenever he treed a coon. They had been loose but a few minutes when the old dog opened on a fresh trail and went straight up the mountain. We had been walking in an old cart path along by the brook that ran at the foot of the mountain, but as the dog was going at full cry up the mountain we would follow to save time. A quarter of an hour's hard climbing had put us both out of breath, and we halted to rest a moment, when all at once the dog stopped barking and we heard him no more. He had lost him in a ledge, was Norman's verdict, and in a few minutes was back to us and we were back in the old cart path again

Then followed a long walk in the old cart path of perhaps two miles and no more signs of coons; we came to an open field and waited, when all at once the dog "barked up" close by. We were soon there; the coon was up a tall chestnut tree and I was to climb it. I had never had a pair of climbers on in my life and only knew in a general way the use of them. But Norman buckled them on and I went up the tree, I found no difficulty in reaching the first limbs, although they were 70ft. from the ground, and after drawing up a gun and a lantern I was able to see the coon and shot him out without further delay. The dogs tackled him immediately on his reaching the ground, and shook the little remaining life out of him, and after their usual fight over the coon Norman got them quieted and we, gathering up our game and equipments, started on.

Then followed a long tramp over ledges and through briers in an unsuccessful search for the cart path, and long before we reached the brook we could hear the dog making his melancholy music far off upon the mountain side. He had started another coon and we would have to climb the mountain again; this was glorious. We had just come down and knew every step of the way and the prospect was anything but pleasing. But Norman, who had been listening all this time, remarked with a good degree of satisfaction manifested in his voice, "That dog is coming this way;" and sure enough he was. Thought for once we were in luck, but this only showed how green I was, for presently he turned to the right, crossed the little brook and started up the mountain on the other side. This was Old Eagle's Crag, and was worse by far than the mountain we were on. In a few minutes we heard the dog "bark up" and knew that he had him treed, and by the sound could guess that they were far up its ragged sides if not indeed upon its very top.

Then came an hour of hard climbing that brought us every moment nearer to that steady stream of hoarse barks which kept the mountains ringing with their dull echo and filled our ears with the music of expectancy. And just as we thought that our prize was almost won and that our climbing was almost ended, we came face to face with a perpendicular wall of rock; and there, by the weird flickerings of our lanterns, we could dimly discern, far up and out upon the very highest point of this, the Eagle's Crag itself, a monster pine, standing, as it were, a sentinel for that whole country, and up this pine—the coon.

We turned away to the right; another hard pull, more rocks and brush, another old brush fence, and we were at the foot of the pine. And now how are we to get the coon, who was evidently at the top of the tree? The tree stood upon the very edge of the ledge, which broke off in one perpendicular jump of nearly, if not quite, 100ft. There was an old log fence which ran along the top of the ledge and passed directly beneath the tree. It was broken down in many places, but the old logs remained; and Norman took up his station astride of one of these logs, just back from the edge of the precipice and under the tree at the place where he thought the coon would drop when I should shoot him out, and I went up the tree with lantern and gun to do the shooting.

The wind was blowing as it only knows how to blow on top of such high points. My lantern went out while up the tree, and I had to get down in order to light it again. And again I went up, a little more careful, and I had almost found the coon. Yes, I had seen him, but the branches were so thick that I only saw a bunch of fur, when, in trying to shift his position a little, the limb on which he was standing broke beneath him, and down he went "kerslap" right in front of Norman. I gave a quick glance down through the thick limbs and saw Norman's big lantern going through a series of curves and semi-circles, and finally fly off on a tangent. I heard it strike the rocks where it fell, then all was dark.

The dogs were having a terrible time with the coon and Norman was having a worse time with the dogs. The log on which he sat had slid off toward the edge of the ledge, and as he could see nothing he did not dare to move, and to add still further to his confusion the dogs, which he had seized by their collars and was holding apart one on each side of him, seemed bound on getting together to finish up their usual fight. I hurried down, to see what could be done, and on reaching the ground I found Norman still astride the log and clinging to the dog collars like grim death.

And the coon. Well the coon was not hurt at all, he had jumped under the log that Norman sat upon and somehow in the scrimmage neither dog had been able to hunt him, and when his light went out Norman thinking that the coon was dead and that the dogs would hurt each other fighting, had clung to them all this time with the live coon right between his legs as he straddled the log. It did not take long for the dogs to throttle the old fellow after I got down with my light, and as we drew him out from under the log where he had made so tough a fight, Norman exclaimed, "What a monster," and sure enough he was a monster. Then Norman thought of his lantern and when found it proved to be all right except another bruise had been added to its already well battered sides. After gathering up our load we started for our team.

I had had cooning enough for one night and I informed Norman that I was going home and he had better tie that "bloomed" dog behind. "Oh no!" he said, "he'll come right along, he won't get any more coons. So down the ledge we clambered, on down the mountain till we came to the brook, still on till we found the cart path and following this for some half a mile when Norman said: "Hold on a minute, where's that dog?" We had not noticed him for some time and as we waited and listened, all at once far off on the mountain side came back to our ears the uncertain baying of the dog, yes he was barking up again.

Unloading our game at the foot of a large tree we again climbed the mountain and after a hard scramble of half an hour or more we stood at the foot of the tree, a hemlock of giant dimensions, 7 or 8ft. through at the base and rising like a monarch that it was 75ft. by actual measurement without a limb—the largest tree I ever saw without exception, 150ft. from base to top, and here was where I found the coon. I climbed that tree and know whereof I affirm, for it took me over two hours to investigate the extreme dimensions of it.

I now had had cooning enough for on enight and so had Norman, and my advice was followed, the dog was tied behind. We retraced our steps to the tree where we had left the other coons, found them and our way back to the team as best we could, bundled in and drove home in high spirits, well pleased with our experiences of the night.

The early morning was just showing light in the east, tinging the distant hilltops with that hazy beauty only seen at this hour of the day. The world was awaking into life the first few chirps of the song sparrow beneath our window, and I dropped asleep.

I had forgotten our coon hunting experiences of the night; forgotten Norman; forgotten the dogs; forgotten everything, I was so tired. I was sleeping for all I was worth when some one called in my window, "Say, you! You going to sleep all day." It was Norman and I crawled out. He was weighing the coons when I came down. I looked over his shoulder; 57lbs., yes, that was all. Three coons in one night, aggregate weight 57lbs. And I—well, I could not raise my hands to my head for a week I was so lame. NOTLIKS.

DOG TALK.

INTENDING competitors should not forget that the entries for the Derby of the American Field Trials Club close July 1. The address of the secretary is C. W. Paris, Box 718, Cincinnati, O. A large number of entries have already been received and the club is confident that this stake will prove to be fully equal to that of last year. The entries for the Derby of the Southern Field Trial Club close July 10, and as the trials will be run on grounds but a short distance from those of the former club, dogs can be run in both events without the necessity of a long and tiresome journey from one to the other. Both associations should receive the hearty support of the public, and we have no doubt that at each meeting there will be keen competition for the valuable prizes offered. The secretary of the Southern Field Trial Club is T. M. Brumby, Chattanooga, Tenn.

The New Jersey Kennel Club will hold their dog show next spring at Jersey City the week previous to the New York show. There has been a report current that the club would hold a show in Brooklyn next fall, but there is no probability that this will be done.

We received a call last week from Mr. William Rollinson of Seaforth, England. Mr. Rollinson is well known in mastiff circles, and some good ones have come from his kennel to this country. It is his intention to make his future home in America.

We are informed that the pointer dog Luck of the Goat, winner of the pointer prize in the Acton Reynald Stakes at the recent National field trials in England, is now on his way to this country and that his future home will be at St. Paul, Minn.

Miss Anna H. Whitney has recently imported from the kennel of Mr. J. Blagburn, Hull, England, the St. Bernard dog Beauchamp; he was whelped March, 1885, and is by champion Beauchief and out of Berengaria (Phantom-Brena).

The Fox-Terrier Club has decided to make classes for all terriers at its annual show this year. We have no doubt that this move will meet with the favor of fanciers of the different breeds and that the show will be well supported.

Mr. R. S. Ryan of Baltimore, Md., has recently imported from the kennel of Mr. L. P. C. Astley, Dudley, England, the fox-terrier dog Splint, by Kenton Splinter and out of Patience. Mr. Ryan intends to do a lot of winning with him.

Messrs. Chas. H. Mason and John Davidson have been invited to judge at the dog show to be held at Buffalo, Sept. 11 to 14. We understand that the show will be held under the rules of the National Dog Club.

The poison fiend has been at work at Lockport, N. Y., and several valuable dogs have fallen victims to the acts of this dastardly scoundrel.

Mr. E. H. Moore has gone to England and will doubtless bring home a big dog or two if he can find anything to suit.

AMERICAN FOX-TERRIER CLUB.—New York, June 20.—*Editor Forest and Stream:* The American Fox-Terrier Club will hold their specialty show, including all terriers, at Saratoga Springs, Aug. 30, 31 and Sept. 1. Special prizes of cups to be given. Entry blanks will be ready in ten days. —H. P. FROTHINGHAM, Secretary.

BALTIMORE DOG SHOW.—*Editor Forest and Stream:* The Maryland Kennel Club claim the dates March 19, 20, 21 and 22, 1889, for their first annual dog show. Will give you further particulars later.—W. STEWART DIFFENDERFFER, Secretary.

FIELD TRIAL RULES.

Editor Forest and Stream:

With many others equally interested I have waited long and patiently for some older and wiser head to give us the much needed light upon this important subject. After the "line upon line" already written, there would seem to be little left to be said, and so there is; but unfortunately that little has been left unsaid. In a nutshell, what we want is less discretionary power to judges. While the unscrupulous need restraint, the honest won't object, and would hail with delight the protection given them by a code of rules clearly defining their duties and ridding them of unnecessary responsibility.

I have long favored the limit-heat system, and, in this respect, the rules adopted by the S. F. F. A. places that organization a long step ahead of the others; but even these rules are, in my judgment, defective, in that they do not carry the matter far enough.

It seems to me that all heats in the first series of a stake should be run at least 30 minutes after first game is pointed. If the heat cannot be decided at the end of 30 minutes, then run 15 minute heats until a decision can be reached, always deciding the heat at the end of such interval.

My object in timing from the first find, is to eliminate as far as possible the element of luck, which may make the inferior dog stumble on game near the close of the heat and thus enable him to get in his work and win in a few minutes while the other and better dog is ranging over barren ground. Then make the heats in all succeeding series at least 45 minutes after the first find; followed by 20 minute heats, in case a decision cannot be reached without. This will allow more time for the best dogs in the stake when they come together.

Another perplexing question to deal with is the odd or bye dog. But the following plan, if adopted, will, I think, simplify if it does not entirely overcome the difficulty. Take, for example, a stake of 21 dogs If one dog, say No. 8, should be withdrawn, then No. 9 should take his place, and there would be no bye; on the other hand, if there were no withdrawals, the twenty-first dog should be run a side heat while 19 and 20 are running. Then in the second series he should be placed next ahead of the last dog, which would place 21 where he could not possibly get a bye or side heat except in the contingency of an even number of withdrawals, and one of them must be No. 19. In the third series (supposing 21 to have beaten 17) the order of running would be as follows: 3, 7, 11, 21, 19, 15, always placing the odd dog of the previous series next ahead of the last one of the present series. My reason for running the odd dog's side heat while the last brace is running is, that the judges cannot know until then that there will be no withdrawals, and it places him, as nearly as possible, on equal terms with his competitor, since he always runs against the dog winning the heat run just before his side heat in the previous series, unless one dog above him is withdrawn; in which case he will come against the odd dog of the present series, who ran simultaneously with him in the previous series.

R. I. HAMPTON.

ATHENS, Ga.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the June number of the *American Kennel Register:*

BEAGLES.

6292. Beauty, C. E. Nichols.
6293. Dora, C. E. Nichols.
6294. Little Queen, A. McCollum.
6295. Ross W., H. L. Kreuder.

BULLDOGS.

6296. Doctor, Chas. F. Peasley.

COLLIES.

6297. Alpha Floss, E. P. Cloud.
6298. Fargo, S. Catwallader.
6299. Juno II., Jas. Watson.
6300. Rachel, Miss C. M. Teese.
6301. Zelda, Wm. Stevens.

MASTIFFS.

6302. Clement, L. A. Berger.
6303. Derbyshire Lad, G. Diven.
6304. Ellerslie Wanda, J. L. Hope
6305. Fritz, Geo. C. Hall.
6306. Greenwood Juno, Greenwood Mastiff Kennels.
6307. Mac, Geo. P. Perry.
6308. Madge, G. W. Glazier.
6309. Orion Belle, W. H. Auld.
6310. Peg, Edgar H. Galt.
6311. Rhoda, W. K. Warwick.
6312. Salva, Greenwood Mastiff Kennels.
6313. Tootz, C. C. Richardson.

NEWFOUNDLANDS.

6314. Zero, L. B. Scott.

POINTERS.

6315. Alaric, J. D. Van Buren.
6316. Doctor, W. S. Bidwell.
6317. Guess, W. S. Bidwell.
6318. Psyche, A. W. Perego.
6319. Rex, W. H. Harris.
6320. Scipio Africanus, J. D. Van Buren.
6321. Sport, J. P. Lucas.

PUGS.

6322. Dainty, H. Montague.
6323. East Lake Virgie, Mrs. Al. G. Eberhart.
6324. Gypsey, J. J. Hooley.
6325. Midget, H. Montague.

ST. BERNARDS—ROUGH-COATED.

6326. Alpha, W. H. Auld.
6327. Canada's Merchant Prince, W. H. Auld.
6328. Dom Pedro, C. D. Cugle.
6329. Folko, J. E. Stryker.
6330. Gertrude, A. T. Churchill.
6331. Isis, Wm. Roome.
6332. Jack of Diamonds, C. E. L. Kinnear.
6333. Juliette, D. Driscoll.
6334. Ladie Berane, W. H. Auld.
6335. Lady Gay, A. B. Vanblaricom.
6336. Lady Nettie, F. E. Lamb.
6337. Langford, A. Hoysradt.
6338. Lilly Belle, J. D. Nevius.
6339. Monte Christo, J. J. Conner.
6340. Neva, Chas. Herring.
6341. Nino, Warren F. Daniels.
6342. Prince, A. B. Vanblaricom.
6343. Prince Merchant, Joseph Hellen.
6344. Queen, F. Stott.
6345. Romeo, D. Driscoll
6346. Schyler, W. H. Stott.

SMOOTH-COATED.

6347. Apollona, John Keevan.
6348. Chang, Albert R. Helmer.
6349. Queen Miranda, H. S. Pitkin.

SETTERS—ENGLISH SETTERS.

6350. Royal Albert, Jr., Chas. F. Murphy.

GORDON SETTERS.

6351. Don, P. B. Garland.

IRISH SETTERS.

6352. Dash G., Mr. Gordon.
6353. Duke of Leinster, L. J. Knapp.
6354. Doctor, G. H. Sagendorf.
6355. Reddy, Arthur Bender.

SPANIELS—CUMBER SPANIELS.

6356. Rake, W. C. McMahon.

FIELD AND COCKER SPANIELS.

6357. Anite, E. Shirely.

TERRIERS—BLACK AND TAN TERRIERS.

6358. King, A. W. Smith.

BULL-TERRIERS.

6359. Ginger, Abott Lawrence.
6360. Little Sam, A. H. Simonds.

SCOTCH TERRIERS.

6361. Swift, Wm. E. Hoff.

YORKSHIRE TERRIERS.

6362. Tatter Deux, John L. Lincoln.

THE A. K. C. PRONUNCIAMENTO.—*Editor Forest and Stream:* The vacuity of the A. K. C. is again shown in the late deliverance of its secretary on that dreadful bugaboo "speculative" shows. At what meeting of the Executive Committee was it determined that the use of its rules by gentiles and barbarians was forbidden by the A. K. C.? Who authorized the fulmination of an edict fraught with consequences so dire? When was there ever a show "under the auspices" of the A. K. C.? Does the fundamental principle that a secretary is merely the clerk of the body he officiates for find an exception in the case of the A. K. C.? The duties of a secretary begin and end with recording the acts of his organization and making them public in the required way. Who ever heard of his having either legislative or judicial

functions? This last "construction" impels me to ask in public, what is so extensively whispered in private, if it is not a fact, that the late president, Mr. W. H. Child, was driven into resigning, by finding that his executive functions were constantly usurped by the secretary and others at 44 Broadway, without even advising him of what was done? The very best officer ever connected with the A. K. C., the one who commanded the most entire public respect, and who would and could have brought the club into general respect, is forced to resign by being made a mere figure-head by one secretary and several outsiders! Some of my excellent friends, such as Mr. Peshall or Mr. Collins, will say as they have said, "Why keep on waving the bloody shirt?" Why simply because the A. K. C. never has retrieved a single blunder, or risen to the demands of the situation, unless it was clubbed into it. Entreaty, argument, illustration and prophesy have all been poured on it in vain, and the club has been the only instrument effective in reaching its feelings. The effective course for those "enemies of the A. K. C." that "the ostriches" make such dragons of, is to keep dark and let it continue it's persistent course of blundering. The second Philadelphia meeting was about its most critical point, and had not Messrs. Child, Morgan and Osborne labored for it the whole night long, after the discouragement of Maj. Taylor's "proxy" re-election, it would certainly have died then and there. How have any of these three, who saved it from utter wreck and ruin, been rewarded by the bantling they saved from the waves of scorn and ridicule?—W. WADE. (Hulton, Pa , June 19).

THE MASTIFF BALDUR.—*Editor Forest and Stream:* Permit me to correct a possible error in your last. The mastiff Baldur may have been whelped on May 10, 1887, as his entry at the Kennel Club show at Agricultural Hall so says' but again, two of his presumed litter sisters (champion Beaufort—Gytha II.) are entered at Warwick as whelped May 16, 1887, and six days is altogether too rapid for even an American bitch, much less a slow John Bull one. What the correct date was will be determined by statement from the breeder, Rev. Father Van Doorne, but as argus eyes are on all of us "kickers," I want to forestall possible proceedings *fortes et dures* that may be contemplated against Mr. Craig and me. I bought the dog in England, guided to it by a consideration of his breeding, and the uniform high merit of his full and half brothers and sisters, but Mr. Craig took him off my hands before he landed here, and you can hardly suspect me of perpetrating such a plant on a friend as getting him to exchange an interest in such a tested stud dog as Lord Raglan, and of such illustrious relationship as his, for an interest in a mere youngster, be he ever so promising. Lord Raglan is the sole property of Mr. R. A. Craig, Wacouta Kennel, St. Paul, Minn.—W. WADE (Hulton, Pa., June 8).

LYNN DOG SHOW.—*Editor Forest and Stream:* Please claim date March 26 to 29 for the first annual dog show of the Massachusetts Kennel Club, at Lynn, Mass.—D. A. WILLIAMS, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Carrie Fitz. Liver and white pointer bitch, whelped March 9, 1887 (A.K.R. 6230), owned by T. Fitzpatrick, Rome, Ga.; from poison.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. M., Ithaca.—My 14mos. old pointer puppy has been troubled for the past six months with an apparently incurable ear difficulty. Have tried thoroughly all remedies noticed in FOREST AND STREAM, for similar ailments, without avail. Puppy shakes his head violently, especially after barking. Every two or three weeks there seems to be a gathering, deep into the head, which, upon breaking, discharges a large amount of bloody matter. The inside of the ears become blotched and sore, followed by a gradual drying up and scurfy appearance of the diseased parts. Lately puppy has been afflicted with some skin disorder. Have given Fowler's solution of arsenic in proper doses, also sulphur. He eats well, is strong and healthy, and has plenty of exercise. Ans. For the canker of the ears, use the following:

℞	Bromo chloral..... ʒi
	Tr. opii..... ʒi
	Aq. ..... ʒi

Mix. Sig. Cleanse the ears carefully with water and soap and after drying, let a few drops fall into the ears. Keep the bowels in good order by teaspoonful doses of syrup of buckthorn. Give 2gr. pill of quinine three times daily.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. D. B.—See our game columns.

R., Gardiner, Me.—The operation of spaying is unnatural and cruel, and in a large majority of cases that have come under our observation bad results have followed.

Y. S., Ridgewood, N. J.—Will you please inform me which are the best flies for bass and trout in New Jersey in the months of July and August? Ans.—For black bass use the combinations of red and yellow. For trout use coachman, professor, queen-of-the water and grizzly-king.

CONSTANT READER, New York.—I am a member of a party who wish to spend their vacation in a quiet summer resort where there is good fishing and rowing and possibly sailing. We have thought of going to Lackawaxaxen, Pike county, Pa., on the Erie road. Could you recommend the above named place as one answering our requirements? Ans. Yes, but there is no sailing to be had there in the mountains.

C. P. F., Torresdale.—1. Where can good fly-fishing for black bass be had on the Potomac River, Md., also name and address of party with whom sportsmen can procure accommodations. 2. Is this month better than July and do the fish run above 2lbs.? Ans.—1. Point of Rocks, Md., is a good place, and so is Harper's Ferry. We cannot give addresses there but you will have no trouble in finding accommodations. 2. The fishing will be probably good for some weeks yet. The fish seldom go above two pounds.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEWARK TOURNAMENT.

THE prospects are that the first shooting festival of the International Sharpshooters' Union, to be held at the Newark Shooting Park, July 9-14, will be a great success. It will bring together a great company of expert off-hand shooters, while the prize list is large enough to keep the whole forty targets in use during the entire six days. All the targets are at 200yds., and are divided into association and general prize targets. The association targets are open only to members in good standing of clubs belonging to the Union.

Honor Target.—This target is the regular ring target, divided in 25 rings, ¾in. apart, the black being 12in. in diameter, containing rings 18 to 25. The balance of the target being white, containing rings 1 to 17. Tickets entitling the shooter to three shots, $5. Each shooter can obtain but one ticket. The shooter making the greatest number of rings in the three shots shall take first prize, the shooter making second greatest number of rings the second prize, etc. In case of ties the shooters shall decide the manner of distribution. Ticket for this target must be taken in conjunction with ticket for Stich target.

Stich Target.—This target has a black of 12in. diameter, in the center of which is placed a bullseye of 6in. diameter, the balance of the target is white. None but bullseye shots count. The shooter hitting nearest to center of bullseye shall take first prize, the shooter hitting second nearest shall take second prize, etc. Ticket for 3 shots, $5. Each shooter can obtain but one ticket, which must be taken in conjunction with ticket for honor target.

American Champion Target.—This target has a black of 10in., containing circles 1in. apart, counting from 15 down to 11; the balance of the target is white, containing circles 1in. apart, counting from 10 down to 1. Open only to members using rifles under National Rifle Association rules. Ticket for 10 shots, $5. Each shooter can obtain but one ticket. In case of ties it shall be decided according to National Rifle Association rules.

The General Prize Targets.—Open to all comers; shooters not members of some club belonging to the Union will be obliged to purchase a Festival ticket, which costs $1, if they wish to shoot on any of these targets.

Public Ring Target.—This target is the same as target of Honor, i. e. the regular ¾in. ring target. The highest number of points on one ticket takes the first prize; the next highest number of points second, &c. Tickets for three shots $2. Number of tickets unlimited. In case of ties the prizes shall be equally divided among those tieing. A shooter can obtain but one prize.

Man Target.—This target represents the head and upper of a man's body, the whole figure being black, divided in perpendicular lines ½in. apart; the center line counting 20, the numbers running down on each side to 1. The highest number of points on one ticket takes the first prize, the next highest number of points second etc. Tickets for 5 shots $2. Number of tickets unlimited. Ties to be decided as on ring target. A shooter can obtain but one prize.

Point Target.—The target has a black of 12in. diameter, divided into three parts, the inner circle, which constitutes the bullseye, being of 3in. in diameter, counts three points, the next circle of 6in. diameter counts two points and the balance of black counts one point. Shots out of black do not count. The shooter hitting a bullseye nearest the center shall take first prize etc., same as on stich target. Tickets for 10 shots $1. Number of tickets unlimited. A shooter can obtain but one prize.

Standard American Target.—This target is so well known it needs no description. Open to all comers using rifles under National Rifle Association Rules. Tickets for 5 shots $1. Number of tickets unlimited. The shooter making the most points in any three tickets shall take first prize, the shooter making second most points in any three tickets the second prize, etc. Ties shall be decided according to N. R. A. Rules. A shooter can obtain but one prize.

RULES AND REGULATIONS.

1. Only off-hand shooting is allowed; no shooter is permitted to rest any part of his body against or upon any support.
2. No shooter is allowed to place the butt of the rifle when aiming under the coat, vest or suspender.
3. Any rifle not over .50-caliber allowed.
4. Spectacles and simple glasses in the rear sight (globe sight), or upon the stock of the rifle may be used, but must be produced for inspection by the shooting committee when demanded.
5. Only simple supports or gun holders are permitted.
6. Offenses against these rules, when committed in shooting at the Association targets, will be punished by the loss of the shooting ticket, at the other targets with the loss of the shot and when repeated with a fine of one dollar in each case.
7. Any one shooting for and in the name of another person shall lose all claims to prizes, premiums and entry money and shall be excluded from the shooting house during the festival.
8. On buying tickets every shooter must see that his name and surname, place of residence, name of the rifle club of which he is a member and the number of his festival ticket are correctly entered.
9. Every shooter on entering any stand of the point targets shall deliver to the warner before shooting his ticket, the warner registers with a punch the number of points shot just below the registration of the shot. Every shooter, after having made 10 shots on his ticket, is required to give such ticket to the secretary of the point targets for registering purpose. Any shooter neglecting such registering has to bear his own loss.
10. Every shooter, after having hit the bullseye on the point target must enter in the warner's book his name and the number of his festival ticket.
11. The warner alone has a right to pull the bell. All tickets must be delivered to the warner before shooting.
12. Every shooter must satisfy himself that the result of his shots is correctly entered; errors must be at once corrected by the shooting committee; no claim on the ground of error is allowed when deferred to a later period.
13. The cap must not be put on or the cartridge put into the chamber before the shooter gets himself ready to fire, in so doing he must point the muzzle toward the targets; in the shooting house the rifle must be carried under all circumstances perpendicularly, the muzzle toward the ceiling.
14. All manipulations with the rifle, alterations, aiming for the purpose of regulating the sights must be done on the stand, the muzzle pointing toward the targets.
15. The rifles must be placed one after the other in the rifle stand, and must be taken off in the same order for firing; the shooter must leave the stand without delay as soon as his shot is marked; nobody is allowed to interfere with a shooter when aiming.
16. A shooter, who doubts that his shot was correctly marked, has the right, on depositing one dollar ($1), to demand a committee of two shooters to be appointed by the shooting master, and one of whom must be a member of the shooting committee to inspect the target. If the committee finds the marking correct, the shooter forfeits his dollar for the benefit of the fund for fines.
17. Every shot counts which goes off on the stand after the rifle has been brought to the shoulder.
18. If the rifle misses fire, the shooter can make himself ready a second time; on missing again he must remove the cap or extract the cartridge and leave the stand, the ticket being returned to him; on coming back he must place his rifle last in the row.
19. All differences concerning the shooting are settled by the shooting committee; nobody is allowed to enter the target house, while the shooting is going on, without the permission of the shooting master, and then only in company of two members of the shooting committee.
20. Burning-out of the barrel and exploding of caps must be done on the shooting stand; nobody is allowed to fire a shot except during shooting time.
21. It is prohibited under all circumstances to offer or furnish the markers, warners or secretaries, refreshments while in service, or to enter inter into conversation with them.
22. Any attempt to bribe any marker, warner or other servant, or to forge a shooting ticket, will be punished by both expulsion from the Union, thereby losing all claims to prizes, premiums or entries, and dishonorable expulsion from the Shooting Park.
23. Nobody is allowed to have more than one pound (1lb.) of powder on the loading table, which must be kept in some closed receptacle; larger quantities must be deposited in the magazine.
24. Smoking in the shooting house and shooting outside the range is positively prohibited.
25. The measurement of the bullseye shots is to be done by a proper gauge.
26. Nobody is allowed to shoot on the association targets without a member of the shooting committee being present.

27. At the distribution of prizes, parties claiming a prize must produce the shooting ticket, and surrender the coupon of it as a receipt.

28. In all cases the decision of the shooting committee is final.

29. All competition, for rifles under N. R. A. rules, shall be governed by the rules of that association, unless conflicting with any of the preceding rules.

The prize list for each set of targets is as follows:

Target of Honor.—All prizes given by the different clubs belonging to the union and by individuals shall be placed on this target. The Newark Shooting Society gives $500, which shall be first prize. The full list is not yet ready.

Stich Target.—The amount of $1,000 in 75 prizes will be distributed.

American Champion Target.—Handsome gold medal and $25 cash given by Newark Shooting Society for first prize. $275 cash divided into suitable prizes, also contributions from clubs, firms and individuals given for this purpose.

Public Ring Target.—The amount of $1,500 in 125 prizes will be distributed.

Man Target.—The amount of $1,100 in 100 prizes will be distributed.

Point Target.—The amount of $1,100 in 100 prizes will be distributed.

Daily Premiums.—For first and last bullseye shot every forenoon and afternoon $1 each. For the most bullseyes, $10.

Festival Premiums.—For first and last bullseye of the festival, $5 cash each. For the first 25 points made by one shooter a festival silver medal; for 125 points more a festival gold medal; for every fifty points more $3 cash; the shooter making the most points in his first 300 shots shall be declared king and be awarded the king's gold medal, value $100 and $25 cash. Each shooter can obtain but one silver and one gold festival medal.

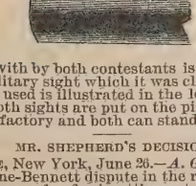
American Standard Target.—The amount of $850 in 50 prizes will be distributed, first prize $100.

Team Shooting.—On Saturday, July 14, to begin at 10 A. M., usual 3in. ring target, open only to teams from clubs belonging to the Union. There will be two classes of teams, those using rifles under the N. R. A. rules, the other using any rifle. Each class to compete only within itself. More than one team may be entered by any club, but no shooter can compete in more than one team in the same class. Teams to consist of five men, 10 shots per man. Entrance fee $15 per team.

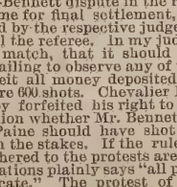
Prizes.—After deducting 15 per cent. the balance will be divided, pro rata, among the winning teams. Half of the entries in each class shall constitute the winners, all entries must be made on or before July 12.

P. S.—On American standard target an allowance of 2 points on 5 shots will be given to shooters using military rifles, sights and ammunition as furnished by the State from which the shooter may come. Special military rifles have no allowance.

The shooting will commence on Monday, July 9, at 1 P. M., and close at 7 P. M.; on Tuesday, Wednesday, Thursday and Friday, July 10, 11, 12 and 13, the shooting will commence at 8 A. M. and close at 7 P. M., with an intermission from 12 to 1 P. M. On Saturday, July 14, the team shooting will commence at 10 A. M. sharp.



The beginning and ending of the shooting will be announced by a cannon shot.



The number of men entered and the prizes given by the various clubs to date are as follows: Miller Rifle Club, Hoboken, 41 men, prize $50; Zettler Rifle Club, N. Y., 39 men, prize $100; N. Y. Schuetzen Corps, 18 men, prize $50; Philadelphia Schuetzen Verein, 19 men, prize $50; German-American Schuetzen Corps, N. Y., 15 men, prize $50; Pittsburgh Rifle Club, 9 men; Norwalk (Ohio) Rifle Club, 3 men, prize $10; Alliej (N. Y.) Rifle Club, 6 men, prize $25; Marion (N. J.) Rifle Club, 7 men, prize $21; Baltimore Rifle Target Company, 5 men, prize $100; New York Rifle Club, 6 men, prize $25; Massachusetts Rifle Association (Boston), 9 men, prize $15; Jersey Schuetzen Corps (Jersey City), 10 men, prize $30; Buffalo Central Schuetzen Verein, 1 man, prize ancient beer pitcher and mug; Independent Germania Schuetzen Society (New York), 4 men, prize $25; Elizabeth (N. J.) Sharpshooters' Association, 5 men, prize $15; Monroe (Wis.) Rifle Club, 3 men, prize value of $20; North Chicago Schuetzen Verein, 2 men, prize $25; New York Schuetzen Corps, 20 men, two prizes, $50 each; Onondaga Rifle Club (Syracuse), 8 men, prize, rifle valued at $100; Barry Rifle Club (New York), 3 men, prize $25; Holyoke (Mass.) Rifle Club, 2 men, prize valued at $20; Hartford (Conn.) Rifle Club, 10 men, prize, clock valued at $20; Rifle, Rod and Gun Club (Springfield, Mass.), 4 men, prize, silver watch valued at $20; Helvetia Rifle Club (New York), 25 men, four prizes of $25 each; Morrisania (N. Y.) Schuetzen Verein, 15 men, prize $50; Bridgeport (Conn.) Schuetzen Verein, 3 men, prize $5; Bullshead Rifle Club (N. Y.), 18 men, prize $35; Vasser (Mich.) Rifle Club, 3 men, prize, water set, valued at $15; Independent Germania Schuetzen Company (N. Y.), 12 men, prize, medal valued at $35; Williamsburgh Schuetzen Gesellschaft, 21 men, prize $50. This places the entries on the honor target at 336, with 15 clubs yet to hear from, among them being half a dozen which will perhaps enter from 40 to 75 men each.

The following rules and regulations will govern the short range team shooting during the July festival, having been adopted at a meeting of delegates of the gallery clubs: All members shooting on teams must have been members of their respective clubs prior to June 1. Names of clubs entered must be submitted to a meeting of delegates before the entry is accepted. Entries to close July 1. It was resolved that each club be requested to furnish a referee; the referees to choose a judge, who shall be a non-member of any club participating in the team shooting. An open-to-all individual shoot on the 75ft. ranges will run the entire week. The entries will be 25 cents for 3 shots; entries unlimited; the highest ticket to take first prize, and so on down to the lowest. One hundred dollars is to be divided into cash prizes as follows: First eight prizes, $15, $12, $10, $8, $6, $5, $4, $3; the rest will be four of $2.50, six of $2, six of $1.50, six of $1. This shooting will be on the Zettler "ring" target, the bullseye counting from 21 to 25 inclusive.

THE PAINE–BENNETT PROTEST.

THE Chevalier Paine accompanied by J. T. B. Collins as counsel and referee Bull with Judge Dexter and A. C. Gould appeared before Secretary Shepherd of the N. R. A. on Tuesday morning and spent an hour in explaining the respective positions of the two pistol shooters, on the protests already given in full in the FOREST AND STREAM. The secretary took all the papers and written statements, listened to all the talk and said he would decide after considering the question carefully and send his decision to the stakeholder.

The sight shot with by both contestants is shown in the upper cut, while the military sight which it was claimed by the protests should have been used is illustrated in the lower one of the two sights shown. Both sights are put on the pistols sent out by the Smith & Wesson factory and both can stand good service.

MR. SHEPHERD'S DECISION.

N. R. A. OFFICE, New York, June 26.—*A. G. McVey, Esq., Boston Herald:* The Paine-Bennett dispute in the recent revolver match having been left to me for final settlement, I have to-day heard the case as presented by the respective judges, Messrs. Dexter and Fellows and Mr. Bull the referee. In my judgment the provisions in the terms of the match, that it should be "play or pay" and that "either party failing to observe any of the conditions herein agreed to shall forfeit all money deposited," required that each contestant should fire 600 shots. Chevalier Paine having refused to do this he thereby forfeited his right to the stakes. It is immaterial in my opinion whether Mr. Bennett used a proper pistol or not. Chevalier Paine should have shot the match through if he intended to claim the stakes. If the rules of the association are to be strictly adhered to the protests are of no value, for No. 5 of the general regulations plainly says "all protests must be made in writing in duplicate." The protest of June 7 was against the sights used by Mr. Bennett as not being what was demanded in the articles of agreement. The terms of the match were that the revolvers should be a Smith & Wesson .44cal., Russian model. There is no mention made of any particular sight. I understand that in revolver competitions the description of this pistol allows it to be used with the wedge sight used upon military revolvers or with a target sight; that it is sold with both, and that the latter is the sight which is used by all contestants in competitions with this pistol. Both the competitors used front sights of this description, there being but little difference between them, and I see no reason why one sight was not as fully within the rules as the other, and why both were not admissible. I do not think that the regulations of the N. R. A. in regard to time allowed competitors to shoot at Creedmoor with rifles apply to a match of this description. There is no limitation in the rules or is any enforced in regard to the time allowed in revolver competitions, nor do I consider that the words "100 shots a day" can be construed to mean 100 shots in 100 minutes. I therefore decide that the protests cannot be sustained, and that Mr. Bennett is the winner of the match. Yours very respectfully, JOHN S. SHEPHERD, Sec. N. R. A.

BOSTON, June 23.—The shooting was not as lively as usual today on account of the heat. Below are the scores made:

Military Match.

B White	4	5	5	4	4	4	5	5	4	4—44

CREEDMOOR.—The second marksman's badge match was shot at Creedmoor on June 23. The heat was intense and the wind very tricky, so that the scores were not as high as on the day of the opening match. The 7th Regiment turned out in large numbers and succeeded in carrying off all the prizes. The following were the best scores:

	200.	500.
McC Butt, Co K, 7th Regt.	22	23—45
G L Hoffman, Co H, 7th Regt.	20	24—44
J W Halstead, Co C, 7th Regt.	21	23—44

S W Merritt, Co B, 7th Regt.	18	24—42

July matches, 4, 14, 21 and 28.—JOHN S. SHEPHERD, Sec.

INTER-PROVINCIAL MATCH.—New Brunswick won at an inter-provincial rifle match at Bedford, N. S., Thursday, June 21, defeating Nova Scotia by 15 points, and Prince Edward Island by 45 points. The total scores were:

	200yds.	500yds.	600yds.	Total.
New Brunswick	235	223	203	661
Nova Scotia	239	206	201	646
Prince Edward Island	227	206	183	616

The New Brunswick marksmen were: Corp. Beatty, 62d Fusiliers; Lieut. Smith, St. John Rifles; Capt. Hartt, Rifles; Lieut. Langstroth, 8th Cavalry; Sergt. Loggie, 73d; Capt. Kinnear, 74th; Sergt. Adams, 62d; Corp. Burns 62d.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE MISSOURI STATE SHOOT.

ST. LOUIS, June 19.—The eleventh annual shoot of the State Sportsman's Association commenced at the Fair Grounds today. The weather was delightful, and as a large number of trap shots were present, the fields were large. In the only live-bird shoot of the day there were over sixty entries. The arrangements were perfect, and reflect great credit on the Excelsior Gun Club members, who have charge of the shoot. J. W. Fisher was the officer of the day.

The first shoot was at 10 single live birds, 21yds. rise; entrance, $5; birds extra; plunge traps. First tie, 3 birds at 26yds.; second tie, 3 birds at 31yds. Divided, 40, 30, 20 and 10 per cent. Open to State members only; $75 added:

Moon	0111011111—8	Coles	1110111011—8
Underwood	0100101110—5	Lenhart	1111001111—8
Daburey	1011001011—6	Selzer	1110111110—8
Elliot	1111111111—10	Owens	1110111111—9
Denser	0011011011—6	Weber	1111011011—8
Scherr	1111011110—8	Werk	1000111111—7
Rinkel	1111111111—10	Mock	1101101011—7
Loerke	0011111111—8	Anderson	1110101010—6
Enrider	1110111101—8	Scott	1111111011—9
Caldwell	1111101111—9	Baehr	1111101111—9
Schaff	0101110011—6	Dukeman	1011110110—7
Addington	1110111111—9	Reaves	0101001101—5
Watson	1111011011—8	Mering	1111111111—10
Cockrell	1101111111—9	Dehart	1011110111—8
Finke	1111111110—9	Reilly	1111111011—9
Dick	1111111111—10	M Anderson	1111111111—10
Haggerty	0101011111—7	Wilson	1111110101—8
Hill	1110111111—9	Orr	1110111110—8

In shooting off the ties Bingham, Elliott and Ringel divided $151.60, the first money; Cockrell, Reilly, Lyman, Tuley and Kelley divided second, $113.70; Pourcelli, Watson and Mason divided $75.80; C. P. Fairman won fourth money, $37.90.

The shoot for teams of two was commenced and partially finished.

The artificial flights were to the right of the live bird traps, and while not as liberally patronized as the live bird shoots, yet received considerable attention. This was under the control of Fred Fodde. The flights used were supplied principally by Mr. H. A. Penrose, and the Keystone was the most used. All the other flights were thrown from the Keystone traps. The first shoot was a special at 18yds. This had twenty-four entries. It resulted as follows: Sieminskie 3, Drayer 4, Purcelle 5, Haggerty 5, Hill 3, Orr 3, Ruges 3, Johnson 3, Hall 2, Riley 2, Haysom 5, Thomas 4, Anderson 6, Kearns 3, Munson 6, Wieber 3, Tulley 5, Moore 4, Kelley 4, Merming 4, Schaaf 2. Anderson and Munson divided.

The first programme shoot was at 12 Keystone flights, 18yds. rise, entrance $2.50; ties, 3 at 21yds. rise; divided, 50, 30 and 20 per cent. The score was: Purcelle 8, Moon 9, Drayer 6, Haggerty 6, Sieminskie 9, Budd 12, Haysen 9, Skinner 9, P. Jones 7, McDonald 9, Pohlman 6, White 9, Johnson 6, Elliot 9, Tuller 4. Budd first, McDonald second, Pourcelli third.

The second programme shoot was at 10 Peoria blackbirds, 18yds. rise, entrance $2; ties, 3 at 21yds.; divided, 50, 30 and 20 per cent. The score was: Wieber 9, Skinner 5, Budd 10, Orr 4, Drayer 6, Haggerty 7, Linburt 4, Sieminskie 8, Schaaf 7, Brown 8, Mack 5, Selzor 5, Jacobs 5, Haysen 9, Ruble 8, Moore 9, Wright 9, Anderson 8, Reiger 6, Jones 8, Elliot 10. Budd and Elliot divided first, Haysen and Wright second, Anderson third. Other small sweepstakes were shot.

The annual meeting of the association was held at the Mercantile Club in the evening, President J. W. Fisher in the chair and J. J. Schaaf acting as secretary. The name of the association was changed to the Missouri State Game and Fish Protective Association. A set of resolutions was adopted relating to the protection of game and fish. The use of plunge traps was condemned, and in future only ground traps will be used. The following officers were elected: D. Underwood, of Kansas City, President; Dr. John Bryan, Jr., of Independence, First Vice-President; John A. McDonough, of St. Louis, Second Vice-President; A. Reiger, of Kansas City, Treasurer; Wm. B. Baehr, of Kansas City, Recording Secretary; Carl Guinot, of Kansas City, Corresponding Secretary. The next convention and shoot will be held at Kansas City.

June 20.—The second day's tournament of the Missouri State Sportsman's Association commenced by finishing the team shoot begun the day before, of which a full and complete score will be found below. Following this came the third shoot of the meeting, in which 69 representatives of the various clubs participated. This shoot occupied the rest of the day on the main range. A continuous sweepstake shooting was kept up all day at the Keystone targets on the artificial flight range, but there were no regular purses or entries, and it was not on the programme as a feature of the tournament. The weather was fine for good marksmanship, although a smart breeze was stirring during the middle part of the day. About 4 o'clock the shooting began to get somewhat wilder than it had been earlier, and as the sun commenced to make things pretty hot about that time, some of the sportsmen claimed that their poor success in killing birds was due to the shot being melted in the air before it reached the mark.

Team shoot, open to any number of teams of two from clubs members of State Association, 5 birds at 26yds. rise, 5 birds at 31yds. rise, plunge traps; entrance $10, including birds; divided 40, 30, 20 and 10 per cent.; $75 added.

First money, $131, divided between Mensing, Weber, Baehr and Caldwell. Second money, $98.25, divided between Watson and Griesedieck on shoot-off. Third money, $65.50, was won by Anderson on shoot-off. Fourth money, $37.75, was divided between Budd, Johnson and Haysen on shoot-off.

June 21.—The third day of the State shoot at the fair grounds was favored with a good attendance. The heavy rain and wind storm checked the shooting for a while, but before the last drops of water had fallen the shooters again resumed pigeon popping. Several tents and awnings that were being used by the sportsmen were blown down, and for a time it looked as though they were going to be blown out of the grounds. The State team medal, one of the most interesting events on the programme, was shot and captured by the Keystone Gun Club of Cameron.

Mr. J. P. Shulte officiated as officer of the day, Mr. J. R. Stice acted as referee in the team shoot and Mr. Kulage performed the same duty in the double bird shoot. The following are the scores of the shooting. Live birds were shot from plunge traps. Artificial flights were shot under National Association rules, with exception of traps, only three being used;

State Association Medal Shoot.—Open only to one team of four from any one club belonging to the State Association, 5 birds at 21yds., 5 at 26yds., 5 at 31yds. each, entrance $20, birds extra; $100 of the purse to go to the last club holding the medal, balance to be divided 40, 20, 20 and 10 per cent.

Lucas 5, Cogswell 6, Kerns 6, Werk 7, Wilson 7, Underwood 4, Dick 6, Hayden 6, Hill 5, Dozier 5, Weber 5, Hagerty 6, Watson 8, Caldwell 7, Cockrell 7, Williams 4, Duser 4, Mock 6, Brown 5, Degarris 7, Tuley 7, Owens 5, Rinkle 6, Mickel 4, Hayson 7, Elliott 7. Riley and Watson divided first, Werk, Guinot, Cockrell and Hayson divided second, W. Anderson and Dick divided third, Williams took fourth.

Shoot No. 3—Six Keystone birds: Drayer 5, Leopold 6, Schaaf 4, Ruble 6, Haggerty 3, Hill 5, Duser 3, Hayson 4, Budd 4, Stice 5, Jones 4, Werk 4, Elliott 2, McMurchy 5, Mensing 6, Scott 4. Mensing, Ruble and Leopold divided first; on shoot-off Stice took second and Budd third.

Shoot No. 4—Six Keystone birds: Budd 6, Pourcelle 3, Drayer 4, Allen 3, Dukeman 4, Skinner 3, Williams 3, Riley 4, Duser 6, McMurchy 5, Ruble 5, Hayson 4, Anderson 5, Schaaf 4, Underwood 2, Wilson 5. Budd and Duser first, Ruble second, and Drayer third.

Shoot No. 5—Six Keystone birds: Riley 5, Wasson 5, Smith 5, McMurchy 6, Bradford 3, Stice 5, Schaaf 4, Wright 5, Kerns 4, Ruble 6, Williams 3, Daniels 4, Bridges 3, Budd 5, Caldwell 3, Skinner 5, Edwards 5, Drayer 3. Ruble and McMurchy first, Stice second, Daniels and Schaaf third. Quite a number of other small sweepstakes were shot at artificial targets to fill out the day's sport.

June 23.—The annual shoot of the State Sportsmen's Association was continued at the fair grounds to-day and was well attended. The shoot at live birds for the St. Louis Gun Club medal absorbed about all the interest and was closely watched. The artificial flights received but little attention and only small sweepstakes were shot, not one of the programme shoots being contested. The sport opened with a shoot at 10 live birds, 26yds. rise, entrance $5, birds extra, divided 40, 30, 20 and 10 per cent. The scores were: Haggarty 6, Underwood 8, Lyman 8, Baehr 8, London 9, Reeves 8, J. Scott 9, Ruble 10, West 7, Watson 10, Caldwell 8, Fairman 9, G. Webber 9, Elliott 6, Orr 8, Bingham 8, Anderson 10, Werk 8, W. Anderson 10, Wilson 10, Stohle 7, De Hart 8, Dukeman 9, Cockrell 9, Denser 8, Clark 8, Dozier 10, Marks 9, Dick 7, Hayson 10, Kirkland 9. First money, $58.50, divided between Anderson and Will son; second, $44.10, divided between London, Fairman, Cockrell and Kirkland; third, $29.40, was divided by Caldwell and Bingham; fourth, $14.70, was divided by West, Griesedieck and Stohle.

The main shoot of the day was for the St. Louis Gun Club medal, value $500; 10 single birds, 26yds. rise; ties, 3 at 31yds.; entrance, $7.50, birds extra. First prize—The grand gold medal. The money in this shoot to go to the last holder of the medal. This medal is to be shot for under the following conditions: The winner is to put it up for competition at each annual tournament of the Missouri State Association at $7.50 entrance, not including birds, to be shot for at ten single birds, 26yds. rise, under St. Louis Gun Club rules, the entrance money to go to the holder of the medal each year. The winner will be required to give satisfactory bond in the sum of $500 to the St. Louis Gun Club for the safe custody aad production of it at the next following annual tournament. This medal can only be shot for by a resident of Missouri and a member of an organized club belonging to the State Association. Besides the medal there were twenty-six prizes donated by local firms, which were divided among the contestants. The scores were:

McDonough	1101000111—6	Elliott	1111110111—9

The money in this shoot was divided among eight men, who tied at Palmyra last year. This year Wm. Anderson won the medal, J. M. Anderson second and Caldwell third. There were twenty-six prizes to be divided.

June 23.—The last day of the annual shoot of the State Sportsmen's Association, at the Fair Ground, was attended by quite a number of marksmen, and there was considerable interest. The following were the scores:

Shoot 1, 12 Keystone birds, 18yds. rise, entrance $2.50. Ties, 3 at 21yds. rise. Divided, 50, 30 and 20 per cent.: Hill 9, Gibbons 4, Hagerty 10, Schaaf 7, Coggswell 5.

Shoot 2, 10 Peoria blackbirds, 18yds. rise, entrance $2. Ties, 3 at 21yds. rise. Divided, 50, 30 and 20 per cent.: Hagerty 7, Schaaf 5, Hill 7, Coggswell 6, Cicardi 4, Jarvis 5, Stanley 7, Westman 4.

Shoot 3, 5 Keystone, 5 blue rocks or 5 Peoria blackbirds and 5 Paragon birds, 15yds. rise, entrance $4. Ties, 3 Paragon birds at 21yds. Divided, 50, 30 and 20 per cent.: Hagerty 4, Hill 9, James 4, Coggswell 9, Stanley 5, Meyer 4.

Shoot No. 4, 5 pair Keystone birds, 15yds. rise, entrance $2. Ties, one pair at 17yds. Divided 50, 30 and 20 per cent. James 7, Hemphill 4, Schaaf 5, Stanley 7, Jarvis 6, Coggswell 6, Griesedieck 3, Hagerty 4, Bradford 8.

Shoot No. 5, 5 blue rocks and 5 Keystone birds, 18yds., entrance $2. Ties, three blue rocks at 18yds. rise. Divided 50, 30 and 20 per cent. Haggerty 7, Coggswell 8, James 6, Cicardi 6, Stanley 4, Griesedieck 9, Bradford 5, Jarvis 6.

Shoot No. 6, 3 pairs Peoria blackbirds and 4 single Keystone birds, entrance $1.50. Ties, miss and out at Keystone target, 18yds. Divided 50, 30 and 20 per cent. Cogswell 7, Hill 8, Stanley 7, Cicardi 7, James 6, Bine 5, James 6, Hagerty 6.

Shoot No. 7, miss and out at Keystone targets, entrance 75 cents, shoot under national rules, 5 targets. Hemphill 5, James 8, Hagerty 5, Hill 4, Rogers 4, Westman 4, Jarvis 7, Stanley 5.

CANADIAN TRAP NOTES.

OTTAWA, June 18.—The St. Huberts are keeping up their practices and will send a strong team to Montreal for the tournament there on Dominion Day. On Saturday they shot off the following sweeps:

First sweep, 10 birds, 18yds. rise, 5 traps—A. Throop 9, J. Deslauriers 8, Dr. Martin 8, G. White 8, E. White 7, W. Sykes 5, R. Dalton 5. On the shoot-off Deslauriers took second prize and Dr. Martin third.

Second sweep, 15 birds, same conditions—J. Deslauriers 15, G. White 12, Dr. Martin 12, A. Throop 12, R. Dalton 11, E. White 11, Dr. Horsey 11. On shoot-off G. White took second prize and Dr. Martin third.

Third sweep, 6 birds, same conditions—Dr. Martin 6, E. White 5, G. White 5, J. Deslauriers 5, A. Throop 4, R. Dalton 4. On shoot-off E. White took second prize. Mr. Deslauriers was in exceptionally good form and made a run of 25 straight birds. During the day he fired at 37 birds and only missed 4.

OTTAWA, June 20.—The St. Huberts Gun Club shot to-day a sweep at 21 birds, 18yds. rise, five traps: Dr. A. Martin 18, G. Trudeau 18, J. Deslauriers 15, A. Throop 18, R. Dalton 17. The club presented Mr. L. Fertier, the retiring secretary, with a very handsome smoker's outfit and address, in recognition of his untiring efforts.

OTTAWA, June 21.—Members of the Ottawa Gun Club shot for the club badge to-day, it falling for the first time to L. C. Labelle. The shooting was poor and the attendance the same. Following were the scores at 15 birds: L. C. Labelle 9, A. Stewart 8, W. Tracey 8, Dr. McPhee 4. Ed White, of the St. Huberts, shot and broke 12.

TORONTO, June 23.—The following are the scores made by members of the Owl Gun Club at their semi-annual shoot for the cup presented by J. P. Moore, Esq., at C. Ayre's shooting grounds, Eastern avenue, to-day:

C H Riggs	1101111111111111111011101—21
J Rice	1011110100111001101011110—16

MONTREAL, June 23.—A fair attendance of spectators and about 50 local shots assembled on the grounds of the Montreal Gun Club this afternoon to witness the third competition for the magnificent silver cup presented to the club by the president. The weather was terribly hot, the light anything but good, and to make matters worse a thunder storm came up during the afternoon which interrupted the match for quite a while. Owing to the above causes the scores made were far below the average. The cup was finally won by W. F. Robertson, whose aggregate for the three competitions proved the highest, although he was closely followed by Mr. Cameron, a new member of the club, who quite astonished the old shots in the second competition by killing 19 out of a possible 21. The following are the results of the final match—20 birds 18yds. rise: Athwater 1, Cawley 4, W. McCaw 9, W. L. Cameron 14, H. Wootton 9, W. F. Robertson 8, Botsford 8, Ramsay 6 B. Jamieson 5.

WORCESTER, Mass., June 22.—The Massachusetts Glass Ball Association held a two days' tournament here this week at the Coal Mine Brook Range of the Worcester Sportsmens Club. It was also the occasion of the annual meeting when the following officers were elected: President, Henry W. Eager of Marlborough; Vice-Presidents, Alba Houghton of Worcester 1st and J. Buffum of Malden 2d; Treasurer, A. Keating of Quincy; Secretary, Charles Hartwell of Gardner; Directors, J. S. Lawyer of Cambridge and W. H. Allen of Brockton.

First day, team contests, possible 50.

Worcester No. 1.

W S Perry	01001—2	01011—3— 5
E T Smith	01110—3	10111—4— 7

SPRINGFIELD, N. J., June 16.—The Union Gun Club of this place and the South Side Club of Newark shot a twelve man team race here this afternoon and the former were defeated by a score of 226 to 211. The day was hot and sultry, but notwithstanding all this quite a large number of residents turned out to see the sport. Brintnall, Hobart, Quad, Heritage, Burnett and Beam of the visiting team came up early, and Miller and Johnson of the the U. G. C. were on hand to receive them. Sweepstake shooting was commenced at once and kept up all day, not even stopping while the team race was going on. Both sets of traps were constantly in use and over 2,600 birds were thrown. Ben, our dandy trapper, had his hands full but was always ready to pull when the call came to do so. The shooting of the South Side in the team race was very fine. Each many shot at 25 blue rocks, 3 screened traps. N. G. A. rules to govern.

South Side Team.		U. G. C. Team.	
Hobart	17	Johnston	23
O Von Lengerke	22	Morrison	19
Quad	24	Haines	11
Whitehead	16	Sopher	19
Wheaton	15	Lindsley	18

Brientnall	23	G Pudney	19
Beam	20	E Sickley	17
J Von Lengerke	23	Park	19
Burnett	17—226	Miller	23—211

The return match will be shot shortly on the South Side's grounds at Newark. Refreshments were furnished to all present free of charge with Johnny McCord in command. 12-BORE.

WELLINGTON, Mass., June 23.—Nearly 100 members of the Wellington Club were at the grounds to-day, the great attraction being the individual match at 100 clay-pigeons for a purse of $100, presented by a member of the club. The purse was offered for the purpose of determining the best clay-pigeon breaker in the club. The conditions were 18yds. rise, birds to be sprung from the fourth notch and no handicaps. In this match there were 29 entries, and among them were the best shots in New England. Wheeler, of Malboro, and Schaefer, of Boston, tied with 94 out of 99 birds, but Wheeler broke his last bird and Schaefer missed his; so the man from Marlboro was given the $50. Some members of the club stated that Schaefer missed his last bird purposely, and that Schaefer and Wheeler had made an agreement to divide the money when they were tied on 99 birds, and that this was done for the purpose also of getting the first money, $12, in the sweepstake. President Strater thought that it was a "put up job," and that it was mean to play such a trick upon the donor, who was anxious to determine the best shot in the club. The president paid the money over to Wheeler, and then said that he would resign at the next meeting. Schaefer and Wheeler both deny that there was any agreemeet between them to "drop" any birds, and Schaefer was positive that he tried to break his last bird. Following are the scores made in the 100-bird match: Swift 84, Wardwell 90, Eager 89, Dickey 86, Wheeler 96, Schaefer 95, Bond 87, Warren 74, Nichols 72, Stone 75, F. Swift 81, Stanton 93, Brown 78, Loring 77, Sanborn 91, Perry 87, Chase 86, Baxter 79, Goodnow 63, Conant 67, Melcher 74, Snow 86, Beaudry 78, Hutchinson 68. In this match Wheeler and Schaefer both beat the best record ever made on these grounds. Following are the winners in the sweepstake matches: Six blue rocks, Short, Tinker, Hall, Nichols and Hatch; six blue rocks, Somes, Hart, Bond, Short and Wheeler; six blue rocks, Short, Hall, Wheeler and F. Swift; six bluerocks, F. Swift, Eager and Wheeler.

CONNECTICUT.—Norwich, Conn., June 22.—Scores made by teams of the four clubs at 25 Ligowskys per man, on New London Club's grounds. The day, the shooters and the visitors were all in their best mood, and it was the unanimous opinion of all present that it was the pleasantest, most agreeable shoot we had attended for a long time. The New London Club is entitled to much credit for its impartiality, superior trapping and generous dinner furnished. Sweepstakes were shot during the balance of the day, and among so many good shots the "filthy lucre" was so distributed that no one was burdened with the large amount he was able to entice into his coffers.

E. W. YERRINGTON.

UTICA, N. Y., June 19.—This afternoon the members of the Oneida County Sportsmen's Club and the Rome Club contested for honors at Riverside Park. The visitors, L. E. Betson, Wm. Besley, O. D. Bassett, A. R. Dawley, A. H. Golly, Geo. Hauck, W. R. Huntington, M. B. Kingsley, G. G. McAdam, T. H. Stryker, E. O. Worden, H. Kinney and R. Roylands, and others, arrived in this city in the afternoon and were escorted to the grounds of the Utica sportsman, where the contest occurred. The following is the score:

Utica.

The game from the start was a close and interesting one.

BROOKLYN, June 13.—The Coney Island Rod and Gun Club held their second regular shoot of the season to-day at Woodlawn Park, L. I. At a preliminary meeting three new members were elected, and one of the three carried off the new badge, the second one winning the second prize, which proved that they were not mean shooters, the third one tieing on the badge, killing his 7 birds straight, but losing on the shoot-off. J. Von Lengerke, 28yds. and C. Plate, 26yds., killed 7 each, the former won on the shoot-off. F. Pfaender 29yds., C. Nostrand 22yds., W. A. Stuart 25yds., J. E. Lake 26yds., J. Simpson 25yds., C. Wheeler 24yds. and C. Carlos 16yds., killed 6 each. On shooting off F. Pfaender, 26yds., killed 4 more and won the second prize. H. McLaughlin, 25yds., and F. Lanzer, 26yds., divided the third money after tieing on 4 birds each. James Shevlin outshot Louis Nungesser and won the fourth money, Dr. Schwartz taking the fifth and last with 3 killed out of 7. Score:

H McLaughlin (25)	0011111—5	C Plate (26)	1111111—7
J Von Lengerke (28)	1111111—7	W Green (21)	0010010—2
H S Donnelly (25)	0100010—2	J S Lake (26)	1110111—9
C Carlos (26)	1111101—6	F Lanzer (26)	1110011—5
F Pfaender (26)	1111101—6	J Simpson (25)	1111110—9
H Blattmacher (25)	1111010—5	C Edwards (25)	1111100—5
C Nostrand (22)	1011111—6	J Shevlin (24)	0110110—4

ST. PAUL, Minn., June 22.—The first annual tournament of the West Side Gun Club, which began on Thursday, was continued to-day, some good scores being made. In addition to the regular programme thus far 14 matches of 10 singles each have been shot, with a fair number of entries. The tournament will close to-day. Following are the scores thus far:

First event, 10 singles: Daly 9, Chantler 6, Burk 8, Lawrence 9, Forbes 9, Bennett 7, Block 5, Menkey 8, Balsom 7, Guion 8, Highhous 6.

Second event, 6 singles and 2 pairs: Block 9, Forbes 5, Bennett 6, Chantler 6, Bur 9, Balsom 8, Holt 7, Daly 7, Highhous 5.

Third event, 10 singles: Chantler 5, Burke 7, Bennett 2, Block 8, Balsom 6, Bante 6, Guion 5.

Fourth event, 15 singles: Block 13, Chantler 10, Forbes 12, Balsom 15, Holt 13, Bante 10, Burk 11, Highhous 9, Guion 6.

Fifth event, 10 singles: Block 7, Balsom 6, Daly 9, Bennett 6, Guion 8, Bud 7, Highhous 5.

Sixth event, 15 singles: Block 11, Daly 8, Balsom 12, Guion 11, Highhous 8, Reid 11.

Seventh event, 6 singles and 2 pairs: Block 9, Balsom 7, Bennett 9, Daly 5, Reid 8, Guion 7, Highhous 6.

Eighth event, 10 singles: Block 8, Bennett 5, Forbes 6, Balsom 6, Daly 5, Holt 5, Highhous 9, Guion 7, Reid 7.

WINONA, Minn., June 22.—O. H. Clarke carried off the medal at the shoot of the sportsman's club, killing 16 out of 20 birds. Alex. Artz killed 14, Gus LeFever 13, A. Pennoyer 12, B. Brooks 11, L. A. Pennoyer and F. H. Lolor 10 each, others all under 10. A sweepstakes followed which M. R. Rose won, O. H. Clarke second.

NEWARK, N. J., June 21.—The fourth monthly shoot of the Southside Gun Club, at the club grounds to-day, was one of the biggest events the club has held. Thirteen sweeps were contested, three being additional to the published programme, Hobart, Brintnall and Miller distinguished themselves by brilliant shooting, and nothing like bad marksmanship was seen on the grounds. In the match at five clay pigeons shooters walking, five men made clean scores out of fifteen entries.

NEW YORK Y. C., JUNE 21.

WHILE there are yachts enough in the fleet to make good racing in all the classes, the entry lists thus far have been very disappointing, and the New York Y. C. regatta on June 21 was no exception to the rule. In the large keel class few entries were expected and three out of a possible four was not bad, but still the presence of the Mohican would have been welcome. As it was Palmer, now converted to a keel, outsailed Ramona, while both beat Dauntless with the greatest ease, adding another to the long list of defeats on which the latter bases her reputation as a racer. The next class had no entries, Fortuna being abroad and Gitana and Montauk staying out. The chief interest of the racing naturally centered in the third class schooners in which was included half a dozen new or renewed boats whose doings have been discounted and discussed since the close of the last season. Of the new additions to the class the largest, Sea Fox, is already familiar to our readers, the smallest, not properly in the class, being on the limit but allowed to sail in it for want of a class competitor, is Marguerite, Mr. Burgess's latest production. Though shorter by 6ft. she is very similar to Sachem, with the same stem and counter but apparently a little higher side, looking somewhat dumpy beside her longer sister. Both are handsome boats compared with the bulk of the fleet, but in neither has Mr. Burgess improved on Puritan, in fact the old boat is thus far the best looking of all his craft, especially including Volunteer. Considering the characteristics of the old fleet as far as beauty goes, it was no difficult matter a few years since to surpass them all; a plumb stem and a clean-cut English counter, with a not very bad sheer, made a boat that was noticeably handsome when seen in the fleet. The improvement has been so great of late, however, that this is not enough, and the designer who will build the handsomest as well as the best boat must try harder than he ever did in the past. Whatever her shortcomings, Thistle showed us something in the way of looks and style, and the other cutters have taught the same lesson, whatever one may think of their pinched-in sides. In all the schooner fleet to-day there is not the equal in appearance to Miranda, built fourteen years since, and when in want of something original and better, designers will be safe in copying her until they find it. The new clipper stem is in itself a tax on the artistic skill of the designer, any one can run the bow out more or less, but very few do it successfully; as a hint to those who are trying we would point out that there is not yet a boat in the fleet with too long a stem, though many are too short. It is no easy matter to balance the overhang at the two ends so as to produce a pleasing effect, and where there is any doubt as to the result the safest course is to stick to the plumb stem. Montauk for instance, never has looked so well since the pilot boat stem was replaced by the mongrel fantasy in gold leaf, and Grayling has at least one good looking end. Marguerite arrived in New York several days before the race and was hauled out at Tebo's, where some five tons of lead were cut off her keel and her foremast shifted.

Next to the third class schooners, the most sport and excitement was looked for in the third class single-stickers, the first class being virtually defunct. With Bedouin, Gracie, Fanny, Stranger, Titania, Shamrock, and the new Katrina, there should have been some hot racing, but the luck seems to be against it this spring. Gracie has gone in for cruising, Titania's owner is abroad, Bedouin for some reason has not entered the spring regattas though always there in the past with fighting flag aloft, while Shamrock, from whom so much was expected this season was kept out at the last moment through the sudden death of Mr. Maxwell's brother. Katrina entered, the race being virtually her trial trip, she having hardly been under canvas before; Stranger came on from Boston to sail her last races in American waters, as she will soon cross the Atlantic, her owner making his home abroad, and Fanny came to the line in good shape for a light weather race. In the next class, the new one added between the old 55 and 70ft. classes, there were three old boats, Hildegarde sailing faster under the new cutter rig that Mr. Burgess has given her than she ever did with one jib; Whileaway, neither faster nor slower than of old, and the much altered and improved Thistle, as usual, slower after the winter's alterations than she was before. In 1884 she was rebuilt and lengthened, in '85 she was made deeper, in '86 she came out with a silver leaf bottom, and last winter she was lengthened and generally improved, the result being as given above. Enough money has been spent on her to build a Shamrock or Katrina, and there is absolutely nothing to show for it. The Clara-Cinderella class was conspicuous only by its absence, both boats being laid up, and in the smallest class only Regina, Adelaide and the little Iseult entered.

The New York Y. C. has at length taken up the suggestion repeatedly made by the FOREST AND STREAM and provided a full set of large numbers, painted on enamel cloth, each piece being provided with permanent grommet holes for lacing to the sail. The result was a vast improvement over the numoering in the Atlantic Y. C., but to make the system perfect it is necessary to carry it a step further and to fix the place in a sail where the number should be and then have grommets inserted when the sail is made, to fit the standard numbers of all the clubs, one common size being adopted by all.

The full list of starters was:

SCHOONERS—CLASS 1, OVER 100FT.

Dauntless, C. H. Colt....116.07
Ramona, C. A. Postley....110.10

CLASS 2—80 TO 90FT.

Sea Fox, A. Cass Canfield..89.06
Troubadour, L. H. Smith...88.04
Miranda, Geo. H. B. Hill...86.02
Sachem, Metcalf & Owens..86.00
Grayling, L. A. Fish.....81.01
Marguerite, W. F. Burden..80.00

SLOOPS AND CUTTERS—CLASS 3, 61 TO 70FT.

Katrina, E. S. & H. D. Auchincloss.....69.09
Fanny, F. B. Fiske.....66.00
Stranger, Geo. H. Warren.65.00

CLASS 4—53 TO 61FT.

Hildegarde, J. C. Bergen...61.07
Thistle, Wm. Ziegler.....60.06
Whileaway, G. F. Randolph57.00

CLASS 6—40FT. AND UNDER.

Regina, Ralph W. Ellis....47.03
Adelaide, Robt. W. Inman.46.91
Iseult, Samuel Mather.....32.10

Marguerite, though in Class 4, was allowed to sail in Class 3, there being no competitor in her class.

In the morning there was no wind, but a clear sky and bright weather for the ladies. The fleet gathered about the start, for the first time at buoy 15, a vast improvement over the old one off Owl's Head, as the passage through the Narrows is cut off, with its flukes and calms. For three hours the yachts drifted about or laid to their kedges, the ebb tide being wasted in vain, but near the beginning of the flood the committee decided to start the race on the strength of a light air that came in from the south, and at 12:48 the preparatory gun was fired from the Electra, followed by a second at 12:53 for the start. Ramona, dropping the tow line of a tug that had held her for some time, came to the line promptly under the pilotage of Capt. Joe Ellsworth, and went over on port tack as the gun fired, being timed just 8s. after it. Following her came Miranda, then Hildegarde, Katrina, Sea Fox and the fleet in a bunch, Dauntless and Troubadour falling foul of each other under the Electra's stern, but with no worse damage than an exchange of somewhat heated sea compliments between the skippers. The start was practically a one gun start, all crowded for the line as fast as they could, and the practicability of such a start was fully shown.

The start was timed:

Ramona	12 58 10	Troubadour	1 01 07
Miranda	12 59 10	Dauntless	1 01 44
Hildegarde	12 59 17	Grayling	1 01 57
Katrina	12 59 20	Marguerite	1 01 59
Sea Fox	12 59 23	Stranger	1 02 58
Fanny	12 59 30	Thistle	1 03 17
Iseult	12 59 35	Sachem	1 04 18
Adelaide	12 59 48	Whileaway	1 05 41
Palmer	1 00 00	Regina	1 05 51

Hildegarde, Fanny, Katrina and Sea Fox soon ran well ahead, the two sloops sailing very fast. As the rest of the fleet came over the line, all carrying clubtopsails and jibtopsails, they scattered widely, most of them holding the port tack for a time along the West Bank. The first on starboard tack was Katrina, close in to the bank, Sea Fox following her around. The schooner was very slow in stays, losing ground every time she tacked during the day. The first half hour served to scatter the fleet so much that the positions of the boats could be clearly noted, the whole fleet forming a straggling line, headed by Hildegarde and Fanny, now near the mouth of the Swash Channel, and tailed off by Dauntless, to leeward somewhere near Coney Island Point. At this time, about 1:30, Hildegarde and Fanny were standing down together on port tack, while Katrina, on starboard tack, was but little astern of them and gaining a little. Stranger, having set her balloon foresail, was well astern of Katrina, while Sea Fox, on port tack, was near the latter. Grayling had fared worse than she usually does at the start, but she made it up by sheer speed as she went through the fleet, passing one after another in quick succession, until only clear water lay between her and Sea Fox. Troubadour was to leeward of Grayling, then Miranda, Palmer, Adelaide and Iseult, strung out in order, while Thistle was some distance to leeward of Troubadour. Ramona was hunting Palmer, while the two white Burgess schooners were among the last, the big Dauntless and the small Regina bringing up the rear.

At 1:29 Katrina went on port tack, nearly in Grayling's wake, and a minute later Fanny went on starboard and apparently handled her back stays clumsily, as her topmast went out of her some distance above the cap. Men were sent aloft and worked for a long time before the wreck was cleared and the stump of the topmast shipped again, the yacht losing her place by degrees but still sticking on and sailed the race to a finish. At 1:40 Sachem was between Troubadour and Marguerite, to leeward of the former, when she tacked, putting Troubadour about and covering her, Marguerite gaining a little while the pair bothered each other. At 1:45 Grayling made a hitch to the eastward to clear Buoy 9, Sea Fox following at once, but so slowly that Grayling was well away before her sails were done shaking, and from there out she never had a show with the slippery white boat. Grayling had set a maintopmaststaysail early in the race and Sea Fox now sent up hers, but gained little by it. At 2:15 Grayling led the fleet, with Hildegarde second, Katrina third and Sea Fox fourth. Stranger was coming along well when the big iron steamer Cepheus, with a party of spectators on board, ran across her bow, blanketing her for a time. The leaders had now reached Buoy 8½, and were timed:

Grayling	2 17 00	Fanny	2 23 22
Hildegarde	2 18 20	Palmer	2 29 10
Katrina	2 19 26	Miranda	2 32 59
Sea Fox	2 21 38	Marguerite	2 33 05
Stranger	2 24 47	Adelaide	2 36 00
Sachem	2 26 50		

No others were timed, and inside the Hook, as usual, the wind was lighter, and Hildegarde lost a little time through a calm. Katrina had been overhauling her for a long time and had passed her before the point of the Hook was reached. Sea Fox had trouble with the lifting gear and could not raise her board, finally taking the ground near the hook, but coming off after straining the board. It was just 2:30 when Grayling passed out of the Hook, Katrina being second boat and Sea Fox third, with Hildegarde in fourth place. Outside the wind was fairly steady but still very light, while the tide was against the yachts. They worked out, making long legs to the eastward with short legs to the south, the sea being like a mill pond. Grayling was well piloted for the Lightship, but Katrina wasted a little and Stranger, now sailing very well, threw away considerably more by overstanding. Each as she turned broke out balloon jibtopsail, Stranger alone having her spinaker boom ready to port, though all set spinakers on the way in, carrying them to Buoy 5. The beat out from the Hook was of little interest, the winners being already decided, and the times tell the whole story:

Grayling	4 12 09	Sachem	4 38 36
Katrina	4 16 51	Hildegarde	4 40 35
Sea Fox	4 32 30	Marguerite	4 48 50
Stranger	4 34 50	Miranda	4 46 15

The elapsed times from Buoy 8½ to the Lightship show that Grayling beat Sea Fox 15m. 43s.; Sachem, 16m. 37s.; Marguerite, 20m. 36s., and Miranda 28m. 7s., while Katrina beat the Stranger 12m. 34s. The return was over the same course, the wind holding about the same and the tide still flooding, the run in being devoid of any special excitement save that due to the maneuvers of Sea Fox. At 5:30, when off the point of the Hook, see jibed her mainsail, luffed up, stowed the sail and came up the Swash under all other canvas, including maintopmast staysail, save main and main topsail, not crossing the finish line, the trouble being in the jaws of her main gaff, which spread apart. The full times were:

FIRST CLASS SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Dauntless	1 01 44	7 25 23	6 23 39	6 23 39
Ramona	12 58 10	7 13 48	6 15 58	6 14 42
Palmer	1 00 00	6 47 51	6 47 51	5 44 39

Whileaway	1 05 41	7 17 43	6 12 02	6 06 21

SIXTH CLASS SLOOPS AND CUTTERS.

Adelaide	12 59 48	7 22 28	6 22 40	6 21 29
Iseult	12 59 36	Not timed.		
Regina	1 05 51	Not timed.		

Grayling's performance shows that so far as light weather is concerned, always her best point, she is improved by the alterations of the past winter, and the blow she has given to Sachem's laurels makes a certainty of more hard fighting before the Boston racer is ready to admit that the edge has in truth been taken from her tomahawk. The race was fair and free from flukes, but the advantage was naturally somewhat with the home boat, though not enough to affect the result materially. When the two meet off Brenton's Reef in August there will be a race worth seeing. As to Marguerite, it is too soon to say what she will ultimately do, but every one must regret that her size puts her out of the fight with Grayling and Sachem, and leaves her without a class competitor in any of the classes, as Iroquois may not race at all this year. Katrina had no worthy antagonist, but she seemed to sail well all day, judging by the whole fleet, and as this was under all the disadvantages incident to a trial trip it is safe to predict that she will be near the head of her class for some time to come, if not the first in it. Nothing but praise was heard everywhere for her looks, and it is safe to say that she is the handsomest yacht afloat in the country to-day. Tastes may differ, some may not admire the clipper stem or the long counter, but all must admit that she is beautiful in the proportions of her parts, a fact clearly shown by her apparent small size afloat. Her marked resemblance to Thistle was generally commented upon, but the sheer is less pronounced and more pleasing to American eyes. The bowsprit has a moderate rise, neither straight out as in some of the imported boats, nor well up in the air as in the old sloop. Judged by her nearest predecessor, Cinderella, she shows a great advance, and if Mr. Smith has taken a leaf from Mr. Watson's book he has used taste and skill in the selection. The race was managed by Messrs. Governeur Kortright and Stephen Peabody, of the regatta committee, and all went off very smoothly.

SEAWANHAKA CORINTHIAN Y. C., JUNE 23.

THE last of the spring regattas, that of the Seawanhaka Corinthian Y. C., was sailed successfully on June 23 in spite of calm weather and a long wait at the start, the greater part of the race being in a good sailing breeze, at least as good as is usually found in June. In arriving up the start in the Narrows last year the club did a good thing in some respects, as it is most difficult to start a fleet in such a tideway without plenty of wind, but a mistake was made at the same time in going up instead of down the Bay, and starting at Buoy 18, off Bay Ridge, rather than Buoy 15, just outside the Narrows. This was plainly evident on Saturday, as there was quite a breeze outside the forts, enough to have carried the fleet down, aided by the strong ebb tide; while in the Upper Bay there was hardly a breath of wind. The fleet was under way in good season, working about in what air was stirring, a large number availing themselves of it and the ebb tide to get as far from the start as possible, with no chance of working back until the tide changed. Katrina was at the line before 11, but ran down to Clifton, where she was becalmed, Banshee, too, was in the same direction, with another of the small class; Sea Fox and Miranda were both drifting out in mid-stream, while many of the others were at a distance.

The race was open to yachts of the New York, Atlantic, Larchmont, Eastern, New Bedford, Knickerbocker, New Haven, Corinthian, New Rochelle and Oyster Bay yacht clubs. The classes and prizes being:

Schooners.—Class I., all over 90ft. l.w.l., $175; Class II., 75ft. to 90ft., $175; Class III., 63ft. to 75ft., $100; Class IV., 63ft. and under, $100.

Sloops, Cutters and Yawls.—Class I., all over 80ft. l.w.l., $175; Class II., 70ft. to 80ft., $150; Class III., 61ft. to 70ft., $150; Class IV., 53ft. to 61ft., $125; Class V., 46ft. to 53ft., $100; Class VI., 40ft. to 46ft., $100; Class VII., 35ft. to 40ft., $75; Class VIII., 35ft. and under, $50.

A prize of $50 was offered by a member of the club, to yachts of Class VII. of sloops, cutters and yawls, with the condition that at least three yachts of that class shall cross the starting line. A prize of $30 was offered by several members of the club to those yachts of Class VIII. of sloops, cutters and yawls, measuring 30ft. l.w.l. and under. Personal prizes were given to members of the winning Corinthian crews.

The courses were:

For all classes of schooners and for classes I., II., III., IV., V., of sloops, cutters and yawls, Buoy 18 to Buoy 10 on S. W. Spit, keeping it on port, thence to and around Buoy 8½, keeping it on port, thence to and around Sandy Hook Lightship, keeping it on starboard, and return over the same course to Buoy 15, keeping to eastward of buoys 9, 11, 13 and 15 on West Bank and outside of Buoy 5 on point of Sandy Hook, going and returning.

For classes VI. and VII. of sloops, cutters and yawls, from same starting line to Buoy 10 on S. W. Spit, keeping it on port, thence to and around Buoy 8½, keeping it on port, thence to and around Scotland Lightship, keeping it on starboard, and return over the same course to Buoy 15, keeping to eastward of buoys 9, 11, 13 and 15 on West Bank, and outside of Buoy 5 on point of Sandy Hook, going and returning.

For class VIII., of sloops, cutters and yawls, from same starting line to Buoy 10 on S. W. Spit, keeping it on port, thence to and around Buoy 8½, keeping it on port, thence to and around Buoy 5, on point of Sandy Hook, keeping it on starboard, and return over the same course to Buoy 15, keeping to eastward of buoys 9, 11, 13 and 15, on West Bank, going and returning.

The finish was between the committee steamer or station boat and Buoy 15.

The entries were:

CLASS 2—SCHOONERS, 80 TO 90FT.

Sea Fox, A. Cass Canfield..89.06 Grayling, L. A. Fish.....83.04
Miranda, G. H. B. Hill....86.02

CLASS 3—SLOOPS, CUTTERS AND YAWLS.

Katrina, E. S. & H. D. Auchincloss.....69.06
Stranger, Geo. H. Warren..65.00

CLASS 4.

Hildegarde, J. C. Bergen...61.07

CLASS 5.

Roamer, P. G. Williams....48.00

CLASS 6.

Regina, R. N. Ellis.....47.10 Daphne, G. C. W. Lowery..46.00

CLASS 7.

Nymph, F. W. Flint.....39.05 Rival, Hope & Copman.....38.04
Wayward, F. Beltz.....39.11 Banshee, P. S. Pearsall.....39.08

CLASS 8.

Volusia, J. M. Williams....31.06 Kangaroo, F. Beames.....27.00
Daisy, Hugh Boyd.....32.09 Iseult, Wetmore & Mather..33.00
Merlin, Wm. Whitlock.....25.00 Hypatia, Jas. Weir, Jr.....29.60
Eurybia, C. W. Pryer.....35.00 Yolande, J. W. Harrison...26.07
Ilderan, Walter Southwick..31.06 Ægir, J. F. Lovejoy.....35.00

Sachem and Marguerite were in the harbor, but neither entered, and though Fanny and Shamrock were on the entry list, neither appeared at the line. Katrina was sailed by her designer, Mr. A. Cary Smith.

The early morning was close and breathless save a little breeze down the Bay, and with every promise of a very hot day in the city. The judges' tug, E. T. Haviland, was on the line in good season, and as the tide was ebbing fast a start might have been made before noon in some of the light puffs that came up from time to time, but the fleet was scattered all over the Bay except at the line. Grayling and a few of the wise ones were lying in to the east end of the line, near Buoy 18, but others were a mile away, with no wind to bring them up against the tide. Katrina finally towed up and the others managed to work in when a little air came in the Narrows about 12:30 and at 12:45 the preparatory whistle was blown, with the starting signal five minutes later for the schooners and a third, five minutes after it, for the single-stickers. Katrina was the first for the line but being well ahead of the whistle she was obliged to work up stream again. Grayling, lying in by Bay Ridge shore, filled away on port tack and cut the line at 12:51:08, while Miranda came over from the direction of Robbin's Reef, with Sea Fox in her wake, both on starboard tack, the former being timed at 12:52:59 and the latter at 12:54:21. Grayling set her maintopmaststaysail on the line and was quickly away in the first place, heading for the Narrows on port tack. Roamer and Rival both made excellent starts, going over after Grayling at 12:55:40 and 12:55:47, then came Stranger at 12:56:22, also over near Buoy 18, with Katrina to leeward of her and timed at 12:56:35. From the west end of the line at the same time came Wayward and Banshee, the former timed at 12:56:43 and the latter at 12:56:07. As Banshee crossed on starboard tack, Katrina came over on port, not seeing the little fellow, she held her course until fairly on top of Banshee, the latter being compelled to luff in order to avoid a collision. With Stranger close to windward, Katrina was unable to luff but she was finally put about and Banshee filled away on starboard tack again, but she had been seriously hindered by the blanketing, to say nothing of the risk of a serious collision. The full times were:

Grayling	12 51 08	Iseult	12 58 13
Miranda	12 52 59	Hildegarde	12 58 29
Sea Fox	12 54 21	Kangaroo	12 58 38
Roamer	12 55 40	Daphne	12 58 57
Rival	12 55 47	Ilderan	12 59 02
Banshee	12 56 07	Merlin	12 59 04
Stranger	12 56 22	Volusia	12 59 26
Katrina	12 55 35	Eurybia	1 00 00
Wayward	12 56 43	Regina	1 00 00
Nymph	12 56 52	Yolande	1 00 00
Daisy	12 57 31	Ægir	1 00 00
Hypatia	12 57 46		

The last four were handicapped.

By the time the leaders were well clear of the Narrows and feeling the freshening breeze from a little east of south, the fleet was scattered and most of the yachts could be placed. Grayling was probably half a mile ahead of Sea Fox, being at 1:20 nearly in mid-channel between the West Bank and Norton's Point, having stood out of Gravesend Bay on a long tack to starboard. She had already taken in maintopmaststaysail. Sea Fox was near the West Bank, while Miranda was still well up in Gravesend Bay in company with Katrina and Stranger, the pair ahead of her. Astern of them were Hildegarde and Daphne, while just clear of the Narrows and south of Fort Hamilton Banshee was leading Nymph, having gained a little on her. Rival and Eurybia were next in order and the laggards at the start were not yet out of the Narrows.

At 1:40 Grayling was on starboard tack with Sea Fox still in her wake toward the West Bank; Katrina was coming up on port tack near Norton's Point, with Stranger hunting her but some distance astern, Hildegarde being the next in order; Miranda and Roamer were astern of Stranger; while a little further in the rear were Banshee and Nymph, the former holding all she had gained at the start and since. Here the pair separated, Banshee hugging the West Bank while Nymph kept out in mid-channel, the result be-

ing that when they came together again at 2 P. M. Nymph was the leader by a good piece of water, which widened during the rest of the race.

The general expectation, from what has thus far been seen of the two in the New York race and in knocking about the Bay, was that Grayling would leave Sea Fox steadily in the light wind, but it became evident when first clear of the Narrows that Grayling was no more than holding the lead she had at the start, and when the pair were fairly at work in the Lower Bay the black boat began to crawl up on her. It was first plain that Grayling could not shake her off, but after a little time Sea Fox was seen to be gaining both in the footing and in holding on, and all on the steamers were agog with expectation of a real bit of racing at last. There was wind enough to send them along at a good pace, some of the smaller craft having all they wanted, and as the two bore down on one tack or the other they were gradually nearing. Finally at 1:52 Sea Fox went on starboard tack and all the glasses in the fleet were leveled at her as she came up, and three minutes later crossed well clear of Grayling's bows, staying at once on the white boat's weather. This to the victor of both the previous races, with two Boston scalps still warm at her girdle from Thursday, was not to be taken quietly, and Grayling was at once about on starboard tack, but only to read the name on the new boat's stern, as she again passed under it. Again Sea Fox tacked to windward of her at 1:58, and just two minutes later Grayling went on port tack with Sea Fox about on top of her. The most interesting point of the duel was in the fact that while Grayling came about like a top and filled away at once with life and action, Sea Fox hung in stays until she had lost way, then lying still for a time after her sails were full before gaining way on her new course. At this work, setting the time for many short tacks, Grayling thought to bother her badly, but still the black boat more than held her own, making up, when once away, both in footing and pointing, all that she lost in stays. Grayling was carrying a big jibtopsail, while Sea Fox had only her "baby" set, neither having maintopmaststaysail, but at 2:05 Grayling set hers. Both now stood along on port tack for a time past Buoy 10, Sea Fox gaining until at 2:14 Grayling went on starboard, the other, well to windward, following at once. The wind by this time was putting both down to planksheer and they bowled along past the perch buoy on the Spit in good shape, Sea Fox doing the better of the two.

Returning now to the others, Katrina was by no means far astern, hanging on close to the schooners, while Stranger was sailing very well. At 2:09 the pair were near Buoy 7. At 2:19 Katrina went on starboard tack for Buoy 8½. The times as far as taken at the mark were:

Sea Fox	2 22 22	Miranda	2 36 45
Grayling	2 23 08	Nymph	2 37 30
Katrina	2 26 10	Banshee	2 38 46
Stranger	2 30 38	Roamer	2 46 50
Hildegarde	2 32 32		

The times show again of 4m. for Sea Fox over Grayling from the start, but it was really more, as when both were timed in line with Buoy 8½ Sea Fox was a long way to windward. As all worked out of the Hook a heavy squall was visible over the city, coming from northwest, and though the leaders missed it by the Lightship the smaller ones in the rear caught it very heavily. Most of them turned in two and a few three reefs, running under staysails and in some cases bobbed jibs. There was no rain but plenty of wind for a time from northwest.

Meanwhile, as the storm threatened, Sea Fox and Grayling worked out by the Hook, still on the wind, with Sea Fox well ahead. The wind was now south and plenty of it, Grayling at 2:45 clewing up foretopsail and lowering jibtopsail, but Sea Fox held to both topsails and the "baby," still well to windward and ahead as they held starboard tack for the Sandy Hook Lightship. Soon after this, however, the wind fell lighter and veered to the westward, freeing the boats on their course. At 2:51 Grayling set her foretopsail again and also her large jibtopsail, running up her maintopmaststaysail, the latter being set very promptly and in good shape; in fact, the handling of her canvas all day deserves special notice. The effect of these changes of wind and canvas was very soon evident, as she began to run rapidly by Sea Fox to leeward, but still well on her course for the Lightship. Sea Fox was now under lower sails, two working topsails and the little jibtopsail, not setting a maintopmaststaysail; but at 3:05 she took in the small jibtopsail and ran up another in stops, breaking it at 3:08. Instead of her large jibtopsail she spread her big linen ballooner, not sheeting it close, but she gained little by it, as Grayling continued to leave her. The squall had now taken full charge of the Lower Bay, but was not felt so far off shore; but soon after the turn both yachts met the new breeze from N.W., which served to take them all the way home. The times as taken at the Lightship were:

Grayling	3 17 20	Katrina	3 22 40
Sea Fox	3 18 45	Stranger	3 30 00

These were not compared with the official time keeper's watch, but they show the exact difference in time between each yacht as she passed, and make Grayling 1.25.00 ahead of Sea Fox. All of this gain had been made in the latter part of the way out from the Hook and after the wind shifted. Grayling made a very clean turn and started for home, while Sea Fox hung as she lufted around the mark and also was delayed in shifting her ballooner over the stay, so that she lost a little more time. Katrina had been sailing well all day, carrying her sail in the hardest of the breezes, and now she was well up with the larger craft. Stranger had lost on the way out, while Hildegarde, far astern, was seen at 3:20 to drop everything, finally resuming her course under staysail only.

At 3:25 Grayling, bound in, passed Miranda, bound for the mark, and at the same time she struck both topsails, as she felt the tail of the squall, and just two minutes later the first puff of it knocked her off and she started in for a long beat home against the new wind. Sea Fox, left to leeward, still held to her topsails, having taken in her balloon jibtopsail at 3:23. At best the topsails were not helping her, and she would have done well to follow Grayling's example, but she stuck to them until 3:37, when both came off her. By this time it was apparent that the worst of the squall was expended over the Upper Bay, and that those outside had nothing to fear from it, and she could well have carried both topsails. The two tacked in, making long stretches, Grayling gaining steadily until she had a very safe lead apparently, but when off the Hook Sea Fox came up on her again quite rapidly.

At the Scotland Lightship the first yacht was Nymph, under jib and single-reefed mainsail, her staysail stowed. Roamer, bound for the other mark, passed down, dropping main and jib and running off under staysail only. Next came Rival, under jib and reefed mainsail, and some distance astern came Banshee with three reefs turned in but jib and staysail set. Wayward was last of the four, with one reef and whole jib. Curiously enough the four were all ahead of the class above, in which the leader was Daphne; by no means a slow boat, but she failed to keep pace with the small ones, sailing the same course. The times, as far as taken, were, Nymph, 3:36:20; Rival, 3:39:55; Banshee, 3:47:45, Wayward, 3:52:15; Daphne, 3:59:30. Daphne was reefed as well as the small ones, and had evidently been through the wars with them. Stranger was coming along astern under working topsail, which she carried all day, Miranda was near her, while Hildegarde was not visible.

Going back to the leaders, it was 3:43 when Grayling went on starboard tack outside the Hook, Sea Fox then a long way astern. At 4:11 Grayling had neared the point of the Hook and went on port tack, and at 4:20 she cast about on starboard tack for the turn at the Spit Buoy. At 4:13 Sea Fox set her maintopsail again, coming up on Grayling until she had cut down half of the latter's lead outside the Hook, but Grayling was now near the top of the hill, she set both working topsails at 4:25, with everything in readiness for a quick run home, then at 4:32:55 she turned Buoy 8½ on the spit, two minutes later she had both maintopmaststaysail and big jibtopsail drawing, and away she went over the last eight miles like a toboggan down its slide. Nymph, with whole lower canvas and jibtopsail, was in company with her at the turn; while Katrina, after sailing for a time under mainsail and jib only, was now inside the Hook with topsail set.

Sea Fox turned Buoy 8½ at 4:38:26 and at 4:42 broke out her balloon jibtopsail again, evidently having no other on board. There was still wind enough to pull her along at a steep pace, the flood tide now helping the whole fleet, and she was steaming away in Grayling's wake when at 4:50 her ballooner blew out and then hung limp and motionless under the lee of her foresail, and it was seen that her bowsprit had gone midway between the gammon and beehole. That this was not the worst by a long ways was evident as the dingey went over the side before she fairly luffed up, two men tumbled in and pulled as fast as possible astern. From the club steamer, too far away to render assistance, a man could be seen in the water, a long way from the yacht, keeping himself afloat while the two in the boat pulled straight and steadily for him. After a short interval that seemed hours to the anxious spectators, the boat reached him and he was helped in over the stern and soon was safe on board the yacht. The promptness and skill with which all was conducted speaks well for the discipline maintained on board the Sea Fox.

Katrina carried only mainsail and jib over a part of the way in, setting topsail before she rounded the Spit at 4:41. She was near the dingey by the time the man had been taken on board. She set her second jibtopsail and ran off for the line, Sea Fox following as best she could without her jib. Shortly after Grayling passed the line the wind fell to a calm and the rear boats were very slow in coming up. Hypatia came down from along the South Beach, for some unexplained reason, and did not finish. Miranda came up in the calm and drifted by outside the line, so was not timed. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—SECOND CLASS.				
Grayling	12 51 09	5 13 29	4 22 20	4 18 24
Sea Fox	12 54 21	5 54 12	4 59 51	4 59 51
Miranda	12 52 59	... ...	... ...	... ...
SLOOPS AND CUTTERS—THIRD CLASS.				
Katrina	12 56 35	5 25 02	4 28 27	4 28 27
Stranger	12 56 22	5 40 09	4 43 47	4 36 59
FOURTH CLASS.				
Hildegarde	12 58 29	6 14 34	5 16 05	5 16 05
FIFTH CLASS.				
Roamer	12 55 40	7 13 21	6 17 41	6 17 41
SIXTH CLASS.				
Daphne	12 58 57	6 33 10	5 34 13	5 34 13
Regina	1 00 03	... ...	... ...	... ...
SEVENTH CLASS.				
Nymph	12 56 52	5 25 37	4 28 45	4 28 45
Rival	12 55 47	5 54 56	4 59 09	4 55 47
Banshee	12 56 07	5 54 16	4 58 09	4 56 58
Wayward	12 56 43	6 10 24	5 19 41	5 13 44
EIGHTH CLASS.				
Eurybia	1 00 00	4 44 55	3 44 55	3 44 55
Kangaroo	12 58 38	5 04 19	4 05 41	3 51 57
Volusia	12 59 26	5 01 21	4 01 55	3 54 13
Ilderan	12 59 02	5 05 50	4 06 48	3 59 06

Ægir	1 00 00	5 23 58	4 23 58	4 23 30
Daisy	12 57 31	... ...	... ...	... ...
Merlin	12 59 04	... ...	... ...	... ...
Hypatia	12 57 46	Did not finish.		
Yolande	1 00 00	... ...	... ...	... ...

Grayling beats Sea Fox 41m. 27s. Katrina beats Stranger 8m. 32s. Hildegarde, Roamer, Daphne walk over. Nymph beats Rival 27m. 2s. and Banshee 28m. 3s. Eurybia beats Kangaroo 7m. 2s. in the eighth class.

The race was managed by Messrs. Louis P. Bayard, Francis O. de Luze, L. F. D'Oremieulx, and M. Morris Howland; while Mr. Julius A. Montant had charge of the club steamer. As far as any racing goes, the interest was almost entirely centered in the schooners and the seventh class sloops, the entries in the other large classes being so few. The battle between Grayling and Sea Fox is by all odds the best bit of racing that has been seen this year, and while Grayling won fairly and deservedly it was through good handling, and especially through good judgment in canvassing, that she did so. The most of Sea Fox's misfortune is to be attributed to her balloon jibtopsail, had she split it when she first broke it out she would have been nearer to Grayling through the rest of the race, and would have saved her nose pole to boot. Evidently she had no large jibtopsail aboard, as one would have done far more good and less harm at all times during the day.

The work of the day, however, certainly proved that Commodore Canfield is to be congratulated on his success as a designer, the boat giving every evidence of speed on end as well as ability to windward, and when the slowness in stays is remedied she will give Grayling plenty of work before the latter can claim the supremacy of New York Bay. Just now the advantage is on the side of the older boat, with a copper bronze bottom as smooth as years of work can make it, and in the hands of good sailors who have handled her for half a dozen successful seasons; while the new boat has still a rusty bottom that will not be in shape before the Goelet Cup race, if then. Nymph sailed a very good race and very easily defeated all of her class, including Banshee. The latter did well at first, but lost by holding the West Bank in going down, while she was under so little canvas after the squall that she made very poor time. The two will meet through the summer, and there may be some more hard fighting before it is settled who shall lead the class.

EXPERIMENTAL CRAFT FOR SEA VOYAGES.

Editor Forest and Stream:

I read in your paper of May 17 my friend Wiener's description of his new yacht on the Norton principle. Before he left here to "go East" we had many discussions on the subject of a proper style of yacht for his projected singlehanded voyage. I have quite an extensive yachting library and we overhauled and read descriptions of all kinds of craft and canvassed their merits and defects. Mr. Wiener evidently wanted something new, something out of the usual line and was apparently hunting up a novelty rather than proved designs. I confess I tried to argue him out of his singlehanded idea for a long voyage and urged upon him the additional safety and comfort to be gained by the presence of a companion, if only a boy. I finally did convince him, but he wrote me afterward that he had come back to his original idea. I still hope, however, that a few weeks' cruise on the coast before he really starts on his long voyage will give him experience which will lead him to take a good stout boy from some of the fishing villages to help him on his adventurous trip.

For some years after I built the little yawl-rigged yacht Enid (which has been described in FOREST AND STREAM and in "Small Yachts") I used her for cruising in San Francisco Bay. She is 30ft. long, 9ft. 6in. beam, and draws 3ft.—about the size of Wiener's new craft. I have been used to sailboats and yachts, big and little, all my life, in a bay which is as windy and rough "as they are made;" but I confess that after a few experiences the "singlehanded" idea got knocked out of me. I have been off for a month's cruise with my wife in the Enid, and found that there were many cases where something had to be done and the helm had to be left to the lady. Of course she knew how to steer and to "obey orders," but there were several instances where I could not have got along at all without her assistance in handling the boat. Had I been absolutely alone I would have been in a scrape. I remember my friend Wiener of a circumstance I well remember. I had been off in a 22ft. catboat, and my companion landed me near my home at Oakland pier and started to beat across to San Francisco, a few miles to windward. It had been blowing very hard and we had two reefs in, and, in fact, had to bail hard and fast to keep the craft afloat while crossing the channel, as, in addition to water over weather bow and lee rail, it had spouted continually into the boat through an open-topped and very low center-case.

The wind had gone down a little and I helped my friend Williams shake out one reef before he started. When half way across, the wind getting lighter, he concluded to shake out the other reef. There was still considerable sea on. While standing on the cabin untying the points a sudden puff heeled the boat over, and, everything being wet and slippery, he shot overboard to leeward, feet first. As he came up he made a wild grab at anything and fortunately caught the bight of the main sheet. This paid the boat off quickly and the sail jibed, slinging him across and bringing up with a jerk. This was repeated several times before he could get near enough to the hull to get hold of the rudder and climb aboard. He told me that during the little "tussel" he had thought what an infernal fool he had been to leave me on the pier and "go it alone." If he had not caught the slack main sheet the boat would have got away from him. Such a thing might happen to any singlehander. Of course any one can say that this would not happen to him, and say what he would do under any circumstances. But, it is the unforeseen that happens. Wiener thought this could not occur with him, but Williams is a good sailor and swimmer, and as cool a man as lives. Wiener has plenty of pluck; in fact, I seem to remember the assertion that his pluck exceeded his judgment in sundry instances during his yachting career in the palmy days of the San Francisco Y. C., especially in some outside cruises southward to Carmel Bay and thereabouts.

But about that Norton principle. Mr. Wiener says he submitted the specifications to the editor of the *Mining and Scientific Press*, "who found an objection in the construction of such a vessel which would prejudice it for my purposes." I happen to be the individual who gets his bread and butter under that title, and his fun under the title of Secretary of the San Francisco Yacht Club. I found a very decided objection, for I did not believe the advantages claimed for the system belonged to it; I did not think the principles involved were the correct ones such as he wants; and I did not believe the system a practical one; nor do I think so now. I confess my knowledge of the plan was wholly derived from the description or specification and drawings of the Patent Office; not the mere abstract in the *Official Gazette*, but the complete specification as published officially. I could see no possible advantages in the idea, and felt sure that a boat built in that manner would be very expensive to build also.

I am still further convinced of this after reading your comments and those of your correspondents in FOREST AND STREAM of May 31. Still Mr. Wiener has had the boat built, paid for her himself, and will prove the theory one way or the other. He has the courage of his convictions and has put up his good American dollars to prove another man's theory. I know he is very tenacious and will find all the good points he can. He won't give up the idea without a thorough trial. I remember when he was cruising steadily for a year or so in the Startled Fawn in these waters, he took to the "fad" of coal oil stoves for yacht use; insisted they were better than the other stoves in every way. This, notwithstanding the remonstrances of his steward. To prove to me the utility of these stoves, after an argument, he invited my wife and me to dine on the yacht, and got up a very swell menu for the occasion. We were invited at a certain hour, and as time passed on our host became nervous and worried and there was evidently something wrong. One hour and a half after the appointed hour the dinner came on. I remember for one thing a particularly pale turkey, without that ripe brown complexion expected of the national bird. Brooks, the steward, apologized for its appearance and said it was the fault of the coal oil stove. But Mr. Wiener thought it was because it had been fed on Malaga grapes—a custom of a friend of ours who raises turkeys up near Carquinez Straits. We all enjoyed our dinner but of course could not well make fun of the stoves under the circumstances. Several accidents happened to them during the different cruises, and at last one of them blew up or capsized or something. At all events the carpets and paint were burned, and the steward was scorched, so that Mr. Wiener had to extinguish him with a rug or blanket. Not until then would he give in that coal oil stoves were not good for yachts. It might have been Brooks, the steward, who convinced him, by refusing to go shipmates with the outfit any longer; and Brooks was too good a yacht's cook to be lost by a trifling stove discussion.

I hope to see my good friend Wiener sailing into the Golden Gate in the Alista some day, having brought the San Francisco Y. C. flag all the way from the other ocean and achieved fame for himself and his craft. But I am not yet ready to believe that the success of her voyage—if successful—will be due to the peculiar style of boat he has selected. Though a centerboard man myself, I am of the opinion that nothing but a good lead keel craft of moderate draft of water, and yawl rigged, is fit for the voyage he is about to undertake. I was in hopes some of the old San Francisco Y. C. men now in your latitude—Ogden, Osler or Moody—would have added to my remonstrances, and prevailed upon our friend not to add an experimental boat to an experimental voyage.

SAN FRANCISCO, Cal. CHARLES G. YALE.

DORCHESTER Y. C., JUNE 18 AND 23.—What promised to be a fine race, with a big entry list and special attractions beside in the presence of Baboon, Xara, Saracen and Rosalind, turned out but a disappointment owing to the calm weather. The race was started at 1 P. M. in a light S.W. breeze and a foul tide. Xara was steered by Capt. Haff, of Volunteer, with Mr. Burgess in the crew, while Baboon was handled by Mr. Adams. After a little time the fleet was becalmed, Baboon drifted ashore on Winthrop Bar and was hauled off. The start in all classes was poor, the boats being closely bunched and with little wind to work clear of each other. Rosalind and Beetle got away and turned the Winthrop Head buoy far ahead of the leaders, which were becalmed, but the time limit expired when they were two miles from home, so the race was postponed until Saturday. There was little wind on Saturday morning, but at 1:15 the race was started. Neither Xara nor Rosalind was at the line, so Baboon did not start, having no competition. The times were:

	Length.	Elapsed.	Corrected.
THIRD CLASS—25 TO 32FT.			
White Fawn, W. C. Cherrington	25.01	2 13 45	1 41 47
Magic, E. C. Neal	31.01	2 10 38	1 44 19
Beetle, A. Hemmenway	27.07	2 14 06	1 44 41
Saracen, W. P. Fowle	30.07	2 12 20	1 45 36
Elf, W. H. Wilkinson	29.02	2 15 35	1 47 38
Hilda, C. P. Curtis	32.03	2 15 00	1 49 37
Moondyne, W. H. Shaw	25.01	2 25 55	1 50 57
Prince Karl, E. Williams	29.01	2 19 35	1 51 35
Breeze, C. E. Paget	26.06	Withdrawn.	
Atalanta, J. R. Thomas	27.10	Withdrawn.	
Mamie, J. F. Ring	26.06	Withdrawn.	
FOURTH CLASS—19 TO 25FT. CENTERBOARDS.			
Helen, Gordon Prince	25.02	2 16 08	1 44 15
Sprite, H. M. & P. S Sears	22.06	2 22 45	1 47 35
Sea Bird, C. L. Joy	22.08	2 28 45	1 53 55
Posy, G. J. Hunt	22.02	2 31 19	1 55 53
Pearl, J. F. Lee	22.08	2 32 13	1 57 25
Black Cloud, Aaron Brown	23.10	2 31 30	1 58 07
Tom Cat, C. H. Lockhart	19.00	Withdrawn.	
Good Luck, J. B. Farrell	22.00	Withdrawn.	
FOURTH CLASS—19 TO 25FT. KEELS.			
Thelga, B. F. Hall	22.01	2 21 30	1 45 58
Echo, Burwell Isham	24.10	2 18 15	1 46 00
Vesper, R. Benner	19.01	2 23 45	1 46 47
Judith, W. B. Pigeon	23.04	2 21 57	1 47 58
Flying Yankee, Sawyer & Reed	19.01	2 23 00	1 53 12
Alice, R. A. Harding	21.01	Withdrawn.	
Erminie, Torrey & Haley	20.11	Withdrawn.	

The prizes were: Third class—first $25, second $20, third $15, fourth $10. Fourth class, centerboards and keels—first $20, second $10. The judges were Messrs. A. J. Clark and Wm. B. McClellan, of the regatta committee; L. M. Clark, H. Daavenport, W. D. Hodgkins, Wm. C. Newell and Vice-Commodore J. C. Soley.

NEW JERSEY Y. C. ANNUAL REGATTA, JUNE 19.—The regatta of the New Jersey Y. C. was this year spoiled entirely by the weather, as the wind, which was fresh from N. N. E. in the morning, died away and left the fleet at the mercy of a strong tide in the Narrows, so that few were able to finish. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS A—SLOOPS AND CUTTERS 45 TO 60FT.				
Isis	11 34 19	2 58 00	3 23 41	3 23 41
Annie	11 35 30	Not timed.		
CLASS C—SLOOPS UNDER 35FT.

Trankle	11 33 48	3 10 05	3 36 17	3 34 37
CLASS G—OPEN YACHTS UNDER 21FT.				
Cruiser	11 37 40	2 26 05	2 48 25	2 48 25
La Mascotte	11 36 41	3 30 05	3 53 24	3 50 44
Liddie	11 30 41	Not timed.		
Ettie Dean	11 32 52	Not timed.		

The judges were Messrs. A. J. Prime, Com. Yonkers Y. C.; W. J. Greacen, Com. Columbia Y. C., and Geo. E. Gartland. The regatta committee included Messrs. John Curtin, W. E. Kinsey and R. Outwater.

OPEN BOATS ON THE HARLEM RIVER.—A race was sailed on June 20 over a mile triangle, 10 rounds, on the Harlem River, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Jean	2 59 35	6 40 18	3 40 43	3 38 55½
Triad	2 59 30	6 40 50	3 41 20	3 41 05
Jessie A	2 59 35	6 46 30	3 46 55	3 45 00
Doctor	3 01 00	6 51 15	3 50 15	3 50 15
Sani	3 00 30	Not timed.		
Little Wanderer	2 59 36	Not timed.		
Joker	3 01 45	Withdrawn.		

Jean wins by 2m. 9⅛s.

A sweepstakes of $25 each was made up between Jean, Triad and Jessie A., and sailed on June 22 over the same course, in a squally S.W. breeze. Jean won, Jessie A. giving up at the fifth round and Triad at the seventh.

CAPE COD Y. C., JUNE 18.—The second race was sailed in a strong N. wind, the times being:

	Corrected.
FIRST CLASS.	
Ariel, Dennis	2 04 17
Nobscussett, Dennis	2 05 54
Madge, Cummings, Orleans	2 06 24
Bertha, Ellis, Barnstable	2 09 07
Genevieve, Bacon, Dennis	2 28 22
Sachem, Roberts, Dennis	2 38 30
SECOND CLASS.	
Magic, Lewis, Dennis	2 09 07
Isis, Dennis	2 37 47

The judges were Messrs. David Sears, Asa Ames and Ambrose E. Pratt.

EAST RIVER Y. C., June 18.—The ninth annual regatta of East River Y. C. was sailed successfully on June 18 over a 20 mile course, from Hunt's Dock around Fort Schuyler Buoy, for the larger boats, and a twelve mile course, around the Stepping Stones, for Class F. The times were:

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Wacondah	1 01 21	4 09 35	3 08 14	3 02 14
Avalon	1 01 33	(Did not finish.)		

CLASS B—CABIN SLOOPS.

Maud M	1 01 25	3 58 20	2 57 35	2 56 15
Alice	1 01 14	4 18 42	3 17 28	3 17 28

CLASS C—CABIN SLOOPS.

Julia	1 02 50	4 41 57	3 39 07	3 39 07

Pirate	12 55 31	4 13 28	3 18 04	3 18 04

CLASS E—CATRIGGED.

Jessie	12 56 58	4 15 48	3 18 50	3 18 50
Ripple	12 59 00	4 50 10	3 51 10	3 51 00
Emma D	12 55 33	4 28 57	3 33 24	3 23 59
Ida K	12 55 55	4 13 28	3 17 33	3 07 30
So So	12 56 15	4 14 53	3 18 38	3 08 33

CLASS F—CATRIGGED.

Aida	12 57 15	3 15 10	2 17 45	2 17 45
Irene	12 57 16	3 23 56	2 26 40	2 26 40
Nettie	12 56 58	3 20 08	2 23 11	2 30 51

Maud M. also wins the champion pennant for the year for the best corrected time over the course. The judges were F. McConnin of the Pavonia Y. C.; Captain R. F. Coffin and A. M. Lamb.

NEW HAVEN Y. C. SPRING REGATTA, June 12.—Course from Adam's Fall buoy to Middlechannel buoy at mouth of Housatonic River and return. Weather, clear and fine. Wind, southward. Tide, flood.

SECOND CLASS—33FT. AND LESS THAN 40FT.

	Start.	Finish.	Elapsed.	Corrected.
Wilful	10 48 00	4 26 50	5 38 50	5 37 28
Marguerite	10 48 00	3 43 02	4 55 02	4 55 02
Flora	10 48 00	3 39 59	4 51 59	4 49 19

THIRD CLASS—28FT. AND LESS THAN 33FT.

Sea Belle	10 42 00	4 23 54	5 41 54	5 41 54
Jewell	10 42 00	4 14 28	5 32 28	5 31 22
Thalia	10 42 00	4 07 10	5 25 10	5 23 53
Endeavor	10 42 00	4 02 42	5 40 42	5 38 58
Ceres	10 42 00	4 04 32	5 22 32	5 18 47
Wanda	10 42 00	3 50 30	5 08 30	5 04 45

FOURTH CLASS—22FT. AND LESS THAN 28FT.

Stranger	10 42 00	3 30 24	4 48 24	4 48 24
Vixen	10 42 00	3 45 20	5 03 20	5 01 15
Vidette	10 42 00	4 18 26	5 36 26	5 29 52

Class 2, Flora first; Marguerite second. Class 3, Wanda first; Ceres second; Thalia third; Jewel, special prize. Class 4, Stranger won. Regatta Committee—E. S. Perry, L. L. Morgan, R. R. Hopkins, Jr., L. A. Elliott, Wm. A. Foskitt, Jr. Judges—E. P. Avery, Morris Bacon.

MONTGOMERY SAILING Y. C.—Sixth weekly regatta, June 10.—Course, Norristown to Indian Creek and return, distance five miles. Weather cloudy and threatening; wind southwesterly.

	Length.	Elapsed.	Corrected.
Playford, tuckup	15.00	1 14 55	1 14 55
Sadie, canoe	15.00	1 24 20	1 19 00
Flying Eagle, tuckup	15.00	1 19 03	1 19 03
G. W. Bowers, tuckup	15.00	1 19 58	1 19 58
Gracie, skiff	12.00	1 30 10	1 20 50
Igidious, tuckup	15.00	1 22 30	1 22 30
Frith, tuckup	15.00	1 24 15	1 24 45
Elsie, ducker	15.00	1 34 25	1 24 25
Warren	14.00	1 35 50	1 25 50
Querner, tucker	15.00	1 27 13	1 27 13
Volunteer, tuckup	15.00	1 28 42	1 28 42
Iola, ducker	15.00	1 40 25	1 30 25
Priscilla, tuckup	15.00	1 37 40	1 44 00

The Priscilla capsized before the start and actually sailed the course in 1h. 11m. 20s., but her time was reckoned from the time at which she should have started. There were indications of a storm and the wind came in heavy gusts, which gave the large boats all they could attend to. The Sadie carried a reef for about one mile of the windward work. After rounding the buoy she let out full sail and passed the Gracie, the G. W. Bowers and the Flying Eagle, the wind holding out strong to the finish. Gracie was reefed for about ¾ of a mile. Wm. Alcorn judge.

WEST LYNN Y. C., JUNE 18.—The light winds spoiled a part of the racing in the first club regatta of the West Lynn Y. C. on June 18, only two classes finishing, as follows:

SECOND CLASS—CENTERBOARDS.

	Length.	Elapsed.	Corrected.
Alice L., P. Lynch	17.01	1 12 57	0 51 22
White Wings, J. F. Tarbox	17.00	Time not taken.	
Maud, R. Hobbs	18.04	1 17 37	0 57 07

THIRD CLASS.

Wild Cat, Charles Alley	16.06	0 38 19	0 25 03
Blue Bell, Fred Stoddard	16.06	0 43 29	0 30 13
Olin, J. Mower	16.08	0 47 14	0 34 02
Isabel, Elmer Davis	16.00	0 45 13	0 31 39
Florence, J. White	16.05	0 44 47	0 31 28
Imp, J. A. Renton	13.01	Time not taken.	

The first and the special class did not finish. The judges were Ozro Rideoute, Wm. J. Walsh and Wm. Burrill. The regatta committee consisted of W. S. Sawyer, G. W. Oliver, F. A. Smith, P. S. Rideout and E. H. Howe.

HULL PENNANT REGATTA, JUNE 23.—The first race of the season was sailed by the Hull Y. C. on June 23, in a good breeze, the courses being: Around H. Y. C. barrel, off Harry's Rocks, near Prince's Head, leaving it on port, around H. Y. C. barrel, off northwest end of Bunkin Island, leaving it on port, around flagboat at starting line, leaving it on port, around H. Y. C. barrel off Harry's Rocks, near Prince's Head, leaving it on port, around H. Y. C. barrel, off northwest end of Bunkin Island, leaving it on port, back to flagboat; distance 6 miles. Only two classes filled, the fourth and sixth. The times were:

FOURTH CLASS—CATBOATS.

	Length.	Elapsed.	Corrected.
Mabel, F. S. Dunne and F. Browne	19.11	4 48 55	4 25 48
Niobe, G. W. Keates	20.02	4 52 30	4 29 36
Myrtle, R. C. Poor	19.02	4 53 33	4 29 45

SIXTH CLASS—CATBOATS.

Rocket, H. M. Faxon	16.02	5 03 22	4 36 25
Mirage, G. E. Jordan	17.05	5 02 39	4 38 06

CAPSIZE OF A STEAM LAUNCH.—On June 22 the steam launch Olivette, 32ft. long, owned by Mr. Holzhauer of Newark, N. J., and enrolled in the Essex Y. C., was bound down the Passaic River for Greenville, on Newark Bay. On board were twelve men and seven girls, a pleasure party made up after working hours. One had a guitar and all were singing or laughing. Near the drawbridge where the Passaic enters Newark Bay a tug with a tow was met, and to avoid her the Olivette kept to the south. The tide was unusually high and the long jetty built by the Government to preserve the channel was under water. The launch was run on this jetty and two men stepped overboard to push her off. As she slid back she lurched and her passengers crowded to the high side, thus capsizing her so that she sank at once. Most of the men looked out for themselves, but one succeeded in rescuing one of the girls. Five of the girls and one young man were drowned, the others standing on the jetty until taken off by boats that came to their aid. The launch was not in charge of the regular engineer and was steered at the time by one of the party who had been acting as deck hand. It is also stated that he and the owner of the launch, who had been steering, were engaged in a dispute when the boat went aground. From all the facts thus far made known it appears that the fault lies in the lack of skill and care on the part of those in charge.

CAPSIZES UNDER SAIL.—On June 24 Edward Egloff and Mrs. Chas. Sanders were drowned off Chicago by the capsizing of a small sailboat. On June 23, in Boston Harbor, during a heavy squall, the sloop Minnie capsized, throwing into the water John Gannon, who was sailing the boat, and his mother-in-law, Mrs. Catherine Trupp. Both were picked up, but the lady was past recovery. A little child was carried down with the boat and drowned.

LAUNCHES.—On June 20 the schooner Cavalier, built for Col. Duryea, by Joshua Bedell, was launched at Roslyn. The cutter Marguerite, built for Mr. C. H. Taylor, Jr., from designs by Mr. J. Borden, was launched at midnight on June 23 at W. K. Pryor's yard, Boston. She is 38ft. over all, 28ft. l.w.l., 10ft 6in. beam and 7ft. draft, with 8 tons of lead on keel. Jean, Mr. Jas. Renwick's new steam yacht, was launched at Mumm's yard on June 20.

AMERICAN Y. C. LADIES' DAY.—On June 23 the American Y. C. opened its handsome new club house at Milton Point to the ladies, with music and luncheon in the afternoon and a ball in the evening. The fleet in the harbor was dressed with flags in honor of the occasion.

MERLE AND IOLANTHE.—Mr. Allen Ames, of Oswego, owner of Merle, has issued a formal challenge to the owner of Iolanthe, the race to be sailed late in August.

SOUTHERN Y. C.—The rendezvous for the annual cruise will be at Cat Island, Mississippi, on July 7. On July 11 the Mississippi City regatta will be sailed, the classes being: 1st, cabin sloops 30ft. and over, in cruising rig; 2d, open sloops under 25ft; 3d, schooners; 4th, catboats.

CAPT. ANDREWS'S DORY VOYAGE.—On June 18 Capt. Wm. A. Andrews sailed from Point of Pines, near Boston, Mass., to cross the Atlantic to Queenstown. His boat, the Dark Secret, was built by Higgins & Gifford, of Gloucester, and is a decked dory 12ft. 9in. long, 5ft. beam and 2ft. deep, with one lateen sail.

CLUB BOOKS RECEIVED.—We have to acknowledge the receipt of club books for the present year, from the Seawanhaka Corinthian Y. C. of New York and the Corinthian Y. C. of Marblehead.

HAMILTON, ONTARIO.—The second of the series of races for 25ft. yachts was sailed on June 16, Flirt winning in the 25ft. class and Adeline in the smaller.

BEVERLY Y. C.—The 127th regatta will be sailed on July 4 off Monument Beach and the 128th regatta will be sailed on July 7 off Marblehead.

VICTORIA Y. C.—The first race of this club was sailed at Montreal on June 16, over a triangular course of 8 miles, Columbia winning.

EASTERN Y. C.—The annual regatta of the E. Y. C. will be sailed to-day off Marblehead, over the same course as last year.

BUFFALO Y. C.—The first race was sailed on June 16, over an 8-mile course. Emma won, with Sylvia second.

KNICKERBOCKER Y. C.—The postponed race will be sailed on July 4, starting at 10:40 A.M.

GLEAM, steam yacht, will be broken up by order of the family of her late owner, T. H. Garrett.

ROYAL CANADIAN Y. C.—The sealed handicap of June 16 failed for lack of wind.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. THE W. C. A. MEET.

THE fourth annual meet will be held from July 7 to 23 at Ballast Island, Lake Erie, O. The programme is as follows:

No limit to ballast or rig. All sailing races on the triangle unless otherwise specified.

No. 1. Tuesday, July 19, 9:30 A.M.—Sailing, twice around Ballast Island, open to all comers. classes A, B and C.

No. 2. Record Event.—Sailing, Class B, 3 miles.

No. 3. Record Event.—Sailing, Class A, 3 miles.

No. 4. Record Event.—Paddling, Class II., ½ mile.

No. 5. Record Event.—Paddling, Class III., ½ mile.

No. 6. Record Event.—All classes, 1½ miles, sail first half mile, paddle second, sail third.

No. 7. Paddling.—Class I., ½ mile.

No. 8. Paddling Upset.—Classes I. and A, 300ft., no special appliances allowed. At signal each canoe must be turned completely over, righted, and with crew inside, paddled across finishing line.

No. 9. Sailing.—Novices, all canoes, 1½ miles, open only to canoeists who never sailed a canoe prior to Sept. 1, 1887.

No. 10. Sailing for the Gardner Challenge Cup.—Classes A and B, 6 miles. Cup now held by N. B. Cook, canoe Carrier Pigeon.

No. 11. Sailing Capsize.—All classes, upset with all sails spread, No special appliances allowed, open cockpit.

W. C. A. SAILING TROPHY.

No. 12. Hurry-Skurry.—Open to all canoes, run 100yds., swim to canoe and paddle 200yds.

No. 13. Sailing Consolation.—All classes, 3 miles, winners of either first or second place in events No. 1, 2, 3, 6 and 9, not excluded.

No. 14. Hand paddling, 100ft.

No. 15. Tournament.

No. 16. Sailing for the W. C. A. Trophy Cup.—Classes A and B, 7½ miles. Cup now held by C. J. Bousfield, canoe Peggy.

No. 17. Tandem Paddling for Ladies.—One-fourth mile. Prizes, two W. C. A. pins.

No. 18 Sailing.—Class C, 3 miles.

Regatta Committee.
- H. D. CRANE, Chairman, Cincinnati.
- T. P. GADDIS, Dayton, O.
- A. W. KITCHIN, Chicago, Ill.
- G. HARRY GARDNER, Cleveland, O.

WATER ROUTES TO BALLAST ISLAND.

From Cleveland, steamer Pearl will leave on week days at 8:30 A. M., city time. Single fare, one way, $1, round trip $1.50. Canoes free if owners are with them. From Sandusky, steamer City of Sandusky will leave daily except Sunday at 10 A. M. and 5:45 P. M. Single trip, 75 cents, round trip $1. Canoes free. On Sundays she will leave Sandusky at 10 A. M. Steamer Alaska will leave Sandusky daily for Put-in-Bay and Detroit at 4:20 P. M. From Detroit, steamer Alaska leaves daily for Put-in-Bay and Sandusky at 8:30 A. M. From Toledo, steamer Chief Justice Waite leaves daily for Put-in-Bay Islands at 8:30 P. M. Single trip 50 cents, round trip $1. Steamers Pearl and City of Sandusky will land canoeists on Ballast Island. Steam tug Ina, Capt. Dodge, will meet boats at Put-in-Bay and transfer canoeists to Ballast Island, two miles, for a nominal sum. The Ina will be in daily use by the Association during the meet. Round trip excursion tickets may be bought at reduced rates to Put-in-Bay from all points.

Two extra prizes are offered, one from Messrs. C. S. Ransom & Co., Cleveland, O., a canoe, 11×28½, to be contested for by the lady members of the Association in a paddling race of ¼ mile distance, the canoes for the contestants to be provided by the regatta committee from the fleet at the meet.

The other prize is from Messrs. R. J. Douglas and M. J. Nixon, of the firm of R. J. Douglas & Co., Waukegan, Ill., a canoe, 10½×26, for a race open to all sailing canoes, each canoe to carry two members of the Association. Race to be sailed with the wind blowing seven miles an hour or more. It is expressly made a condition that the winner of the prize shall donate the same to some lady member of the Association within twenty-four hours after winning.

The course will be once around a triangle, crossing line from flag staff on end of pier at Ballast Island to a buoy located at a convenient distance in a southwesterly direction from flag staff, another point of the triangle being the island off the northeast point of South Bass; the third point of the triangle being a buoy located west of Ballast Island, about as far from Middle Bass Island as the island constituting the second point of the triangle is from South Bass, contestants will have the option of rounding the triangle in either direction, *i. e.*, leaving all marks on the port or starboard and finishing across the starting line. Date of race to be fixed by the regatta committee.

The coming meet has the promise of being the largest and most interesting ever held in the West. The A. C. A. and all unattached canoeists are cordially invited to attend. The carnival will be an especial feature this year, so bring fireworks.

ther information apply to the Secretary-Treasurer.

GEO. A. WARDER, Springfield, O.

The W. C. A. Sailing Trophy and the Gardner challenge cup will be sailed for, the conditions for the first being as follows: 1. The cup shall be known as the W. C. A. Sailing Trophy. 2. It shall be sailed for annually at the meet, on the fourth day of the regatta week, weather permitting, or on the first fair day thereafter. 3. The race is open to all Class A and B canoes, no limit

THE GARDNER CHALLENGE (SAILING) CUP.

set for ballast or rig. 4. Only active members of the W. C. A. in good standing can enter. 5. At least ten canoes must start to make a race. 6. The course to be triangular, distance not less than 7½ miles, and the course must be completed in less than three hours or no race. 7. The cup can be held by the winner, who must give bonds for its safe return, for one year, when it is to be returned to the regatta committee, in good order, to be raced for again. 8. The winner of the Gardner cup will not be allowed to enter for the trophy, nor will the winner of the trophy, be allowed to sail for the Gardner cup at any one meet. Note—Both conditions are recorded, as it is impossible to state beforehand which race will be called first. 9. These rules can be changed or amended, if it is thought advisable, by the regatta committee, at any annual meet, by a vote of two-thirds (⅔) of the members present.

C. J. Bousfield, Bay City, Mich., was the first winner of the trophy.

The Gardner challenge cup is open to classes A and B, no limit to ballast or rig, 6 mile course, to be sailed for at the meet each year.

THE ATLANTIC DIVISION MEET.—*To the Members of the Atlantic Division*—GENTLEMEN: The members of the Atlantic Division, at a meeting held in this city on June 11 for the purpose of considering all questions connected with the division meet, having by a resolution recommended that a cruising meet be held instead of a camping meet, and this recommendation having been submitted to and approved by the executive committee of the division, notice is hereby given that the notice heretofore given that a meet of the Atlantic Division would be held from July 16 to 26 is hereby rescinded, and you are notified that a cruising meet will be held in the waters of New York and Newark bays, beginning on July 4, and continuing for a week or ten days, as may be arranged. The committee having the details of the cruise in charge are W. P. Stephens, Chairman; M. V. Brokaw, and George W. Cox. The cruise will be conducted under the command of Rear-Commodore Pennington.—HENRY STANTON, Vice-Commodore.

PASSAIC RIVER MEET.—The meet of the Passaic River canoeists will be held at the foot of Fifty-seventh street, old Fiftieth street, in the Pamrapo section of Bayonne, on the shore of Newark Bay. The camp will be opened on Saturday, June 20, and continue till about July 5. Camp can be reached by the Central R. R. of N. J., to Pamrapo, also by the Jersey City and Bergen horse cars from Jersey City and Staten Island. Mail matter to be addressed to "The Passaic Canoe Camp," Saltersville P. O., N. J. Two mails will be received and sent from camp each day. Express matter to be sent via U. S. Ex. to Pamrapo, care of committee. Canoeists are requested to register their names at the committee's tent on arrival in camp.—WM. H. MITCHELL, D. D. S., ROBERT H. PEEBLES, FRANK M. BEARDSLEY, Camp Committee.

A. C. A. PRIZES.—The Regatta Committee would give credit to the Harvard C. C., Newburgh C. C. and the Essex C. C. for $5 each. With names before published the list now comprises twenty-three clubs that have lent their substantial aid to the committee. The South Boston C. C. declined for good reasons. The committee wish to thank personally two enthusiastic canoeists who have contributed the whole amount each for a flag in the name of their clubs. We are not permitted to mention the names, much to our regret. To the clubs that have offered to send us flags (not cash) we would request that they send the flags in before July 15, so all prize matters can be closed up early.—REGATTA COMMITTEE, A. C. A.

THE SPRINGFIELD CUP.—The first race for this cup was set for June 16, but was postponed for lack of wind. A race for the Springfield C. C. trophy was sailed, Agawam, Emil Knappe, defeating Curlew, G. M. Barney, Vite, Dr. H. E. Rice, and Girofla, F. A. Nickerson. Dr. Rice in the Narka also won the club paddling trophy. The junior paddling race was won by Sanford Lawton, in the Narka.

NEWBURGH C. AND B. C.—The spring regatta of the Newburgh C. and B. C. will take place on June 30, off the new club house. There will be the sailing races for canoes, boats and sneak boxes, a paddling race for decked canoes, a rowing race and a tandem paddling race.

A. C. A. MEMBERSHIP.—Central Division: Fred A. Dean and W. C. Titus, both of Albany, N. Y. Atlantic Division: Everett Masten, Wm. R. Haviland, Yonkers, N. Y.; John T. Holden, Rutherford, N. J.

PEQUOT C. C. ENCAMPMENT.—The Pequot C. C. will camp on Chimon Island, in Norwalk Harbor, from July 16 to 23. July 18 will be ladies' day and on July 19 the races will be held.

NEW YORK C. C.—The postponed race of the N. Y. C. C. will be sailed on June 30, off the club house, Tompkinsville, Staten Island.

W. C. A. MEMBERSHIP.—R. W. Bailey, Pittsburgh, Pa., and Paul Butler, Lowell, Mass., have applied for membership.

Finest and Most Complete Stock of Fishing Tackle

IN THE UNITED STATES.

Everything required for Fresh and Salt Water Fishing. Weak Fish, Striped Bass, Blue Fish, Salmon, Black Bass and Trout Outfits.

Our Own Split Bamboo Rod "The Spalding,"

With Patent Serrated Waterproof Ferrules, are built with special reference to Uniformity of Spring and Durability, and have no equal. We guarantee them to be absolutely perfect. The reputation they have gained is a guarantee of their merits.

Fig. 1.

Fig. 2.

Fig. 1 shows the male and female ferrules. Fig. 2 shows the same mounted, the serrated ends being wound with silk and varnished, which not only increases the strength of the ferrule but also excludes all moisture and gives it a neat appearance.

THE SERRATED, SHOULDERED WATERPROOF FERRULE is unquestionably the BEST FERRULE FOR SPLIT BAMBOO RODS EVER INVENTED, as it strengthens the joint AT THE FERRULE, which is the weak point in all other makes of split bamboo rods. All other ferrules, whether SPLIT or otherwise, present a stiff, unyielding edge to the bamboo, which tends to cut or crack the enamel when the rod is subjected to a strain, thereby increasing the liability of breaking the joint. This cannot happen if **the Serrated Ferrule is used, as it presents no edge to the Bamboo whatever,** and this, with the "shoulder," which permits of the full size of the joint being used without cutting away, as is necessary with the ordinary ferrule, makes the rod

Stronger at the Ferrules than at any other part.

The merits of the numerous specialties which we control are too well known to require special mention, although we would like to call attention to

The Bray Fly Book.

The Bray Fly Book was first introduced by us during the season of 1886. It is the perfection of a fly book, and has given the best satisfaction of anything of the kind we have ever seen, and no Angler has ever used it who is not enthusiastic in its praise. In this book the flies may be as quickly attached as thrown into an ordinary envelope, and at the same time perfectly secure, while they may be as readily detached; the snell regardless of its length is at all times kept perfectly straight (the advantage of which every Angler will quickly appreciate), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires. The book is made of good material and in the best possible manner.

Morocco cover, 2 pockets, **$1 00** extra.

Also our very latest, which we think is bound to take:

The Universal Fish Rod Holder.

We believe that this article will meet a long felt want. It is meant for trolling or still-fishing in a boat, and is used as cut will indicate. It can be fastened either to the gunwale or seat. It enables a person, if he desires, to go fishing without a guide to row for him, or to have two or three rods without their being all over the bottom of boat to be stepped on and broken.

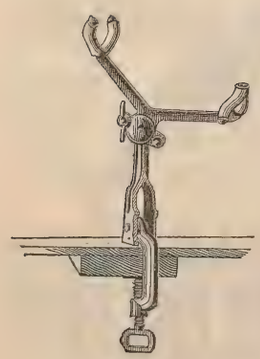

Fig. 1.

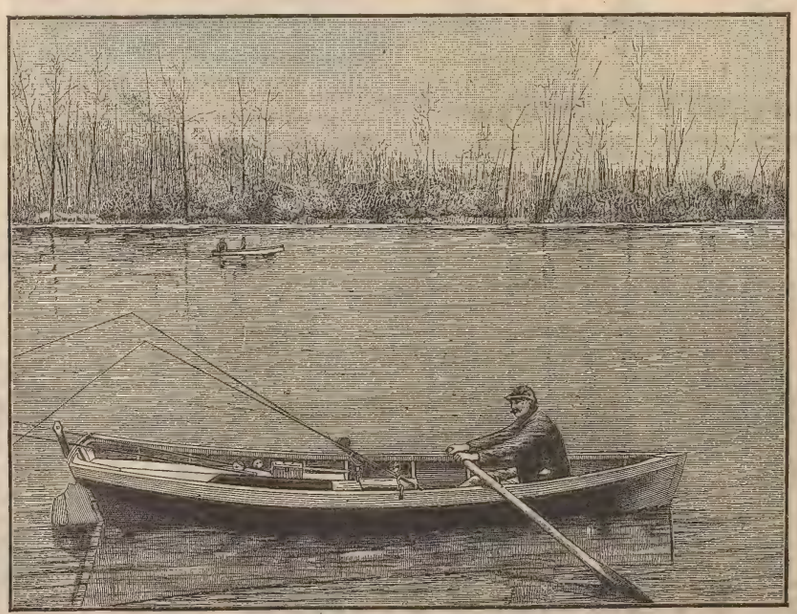

Fig. 2.

Fig. 1 shows Holder as it would be fastened to seat. By means of thumb screw shown it **may be adjusted to any angle or any direction,** as it works on a ball and socket joint. Fig. 2 shows it on side of boat also, with rod in. It will be seen that the rod is perfectly secure, at the same time it **may be taken out or put in in an instant.** In this cut the rod shown has the reel seat ahead of hand, but it will take any rod equally as well, whether reel be ahead or behind, or butt ⅛in. or 2in. in diameter. It is neatly and strongly made and tinned. **Price, put up one in box, $1.50 each.**

DOG TRAINING:

BY

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

For sale at this office. Price $1.00.

The Old "CRIMP," like the Muzzle-Loader, MUST GO.

The Peters Cartridges

INDENTATIONS PATENTED MAY 27TH, 1884, MARCH 29TH, 1887.

Are loaded by the Peters Patent Cartridge Loading Machine, the most rapid, scientific and accurate cartridge loader in existence. It is run by steam, is entirely automatic, and each machine has a capacity of 4,000 per hour. The wads are of pure and elastic wool felt, perfectly lubricated. They are cut several sizes larger, and compressed into the shell by the powerful machinery, and being so large hold back and develop the gases in guns of all makes. No SPECIAL loads are required for SMITH, LEFEVER or PARKER guns. The machine having a steady and regular movement, the wads are seated level and with proper pressure, while the charge is always uniform. Being fastened by the **PETERS PATENT INDENTATIONS**, the charge when fired passes out unobstructed, giving a WONDERFULLY FINE PATTERN WITH INCREASED PENETRATION. The RECOIL is greatly diminished and the GUN LEFT CLEAN. Sportsmen give their hearty approval. Fred Erb, Jr. made his wonderful score of 490 out of 500 with them. Chas. W. Budd used them the entire first day of the Detroit tournament without a miss, and many others have done their best shooting with PETERS CARTRIDGES.

Try Them for Yourself. For Sale Everywhere.

DAVIES & CO., London, England.

STANDARD TARGETS.

Standard Targets

Can be used without any change in Blue Rock traps, as they are of exactly the same dimensions.

Standard Carriers

Can be attached to the arms of all Blue Rock, Peoria and American Clay Bird traps.

TESTIMONIAL.

MESSRS. VON LENGERKE & DETMOLD, NEW YORK.—*Gents:* We have used your Standard Targets at our last tournament in our Blue Rock Traps, and find they work to perfection. There is no difference noticeable excepting that the general breakage was much less with the Standard than with the Blue Rocks.

(Bridgeport, Conn., May 18, 1888.) HARRY NICHOLS, WM. LONGDEN, } Managers.

Many other clubs can testify to the same superiority. The **STANDARD TARGETS** are made by A. H. Hebbard's Patent Automatic Target Machine, guaranteeing even size even weight and density, and are *superior in quality to either "Blue Rocks" or "Cleveland Targets."*

Standard Targets are the Cheapest and the Best made.

C., 1886 (runner up to Gloster); v.h.c., Pittsburgh, 1885. Sire Blink Bonnie, 1st, puppy class, Pittsburgh, 1887, and some elegant fielders. Fee $35.

ROYAL RACKET

Royal Rock (E.K.S.B. 10,163) ex Sail II. Very handsome, stylish, upheaded, blue belton, good fielder. Fee $25. Royal Rock is one of the greatest winners of cups and prizes in England. He has only three sons living.
Address Box 260, Ligonier, Pa.

IRISH RED SETTER

CHAMPION GERALD.

IN THE STUD

TO FIELD BROKEN BITCHES ONLY. Fee, $25. Gerald has been heavily shot over two seasons in the South. PARK CITY KENNELS,
P. O. Box 2,057. Bridgeport, Conn.

IN STUD.

ORION,

By Boatswain ex Nelly, by Young Victor.

First and special, Hartford; second at Boston, 1887.

SERVICE, $50.00.

WM. J. DYER, South Portland, Me.

St. Bernards

BREEDING KENNELS

OF ROUGHCOATS AND SMOOTHCOATS.

104 Premiums in 1887.

Puppies and imported stock on sale. Champions Otho and Hector at stud.
THE HOSPICE KENNELS,
K. E. HOFF, Prop. Arlington, N. J.

THE FAMOUS CHAMPION POINTER FRITZ at stud. Every pup sired by him and exhibited a prize winner. None superior as fielders. Fee $40. C. W. LITTLEJOHN, Leesburg, Va. je21,tf

The Kennel.

Cove Kennel.

For Sale—A number of well broken pointers and setters. Yard and field breaking a specialty. M. STAPLETON, 247 South Water street, New Bedford, Mass. je7,3mo

WM. GRAHAM, NEWTOWNBREDA, BELfast, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen 1sts, nine specials, three 2ds and one 3d. At New York, 1884 seven 1sts, six specials and one 3d.

For Sale at Tell Kennels.

Twelve pointer puppies, whelped May 16 and 21, out of Maud N. and Daisy A. by William Tell, who is second to none on grouse and woodcock. Both dams are good workers. Address
C. A. PARKER,
je28,4t 192 Lincoln st., Worcester, Mass.

FOR SALE.—IRISH SETTER PUPPIES, BY Elcho, Jr., champion Irish setter of America, and out of Maid, a rich colored and grand field bitch, dam of many good ones, including Nat Glencho and Donegal. Address, OWNER OF ELCHO, Claremont, N. H. je28,2t

NOTICE.—AS I AM ABOUT TO GIVE UP breeding pugs, Yorkshire terriers, fox-terriers and Llewellyn setters, I offer for sale a number of first-class bitches to be closed out regardless of cost. Any one wishing any of the breeds offered will do well to address with stamp. C. T. BROWNELL, P. O. Box 335, New Bedford, Mass.

FOR SALE.—LIVER AND WHITE POINTER MAXWELL I., very handsome, splendid retriever and a fine, staunch dog for quail. Is 4 yrs. old and has been hunted three seasons. Price $50. Good reasons for selling. Address P. O. Box 2181, Boston. je7,tf

FOR SALE.

A superb 1 yr. old full pedigreed all red Irish setter dog, winner 2d prize New York, 1888. Also 8 mos. old all red bitch.
RORY O'MORE KENNELS, Albany, N. Y.

FOR SALE.—A FEW BLACK COCKER PUPpies; also some full grown dogs. MOUNTAIN KENNEL, Cabin Hill, N. Y. je14,3t

DO YOU WANT A DOG?
DOG BUYERS' GUIDE,
Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them.
Mailed for 15 Cents.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 5, 1888.

VOL. XXX.—No. 24. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE OLD SPORTSMAN.

SINCE FOREST AND STREAM first saw the light many a man, who welcomed its birth and the new era in sportsman's literature which began with it, has been obliged to confess that he has grown old, while the paper, measured by men's lives, is yet young. Only to himself, perhaps, has he made admission of the fact which stiffening joints, dulling of outward senses and failing of youthful vigor force upon him, but the plain fact is not to be disputed by himself to himself. He finds himself framing excuses against going afield and accepting the validity of such as would have seemed too trivial for his notice ten years ago. It looks likely to rain, and a wetting is a sore affliction to rheumatic joints. A decade ago no such aching brake had been put on his locomotion, and he laughed at the lazy old fellows who made it a plea for staying at home. It is too windy, or too cold, or the snow is too deep. Ten years ago the wind might have cracked its cheeks in vain to stop him; the cold could not have nipped in the bud his purpose of an outing, nor drifts pile so deep that he should be snowbound. But any of these and lesser obstacles may keep him at home now, and he contents himself with promises of better days and preparation therefor, in cleaning of guns, loading of shells, and overhauling of tackle, and in this and in anticipation finds more pleasure than in use and realization.

Yet when he does go out for a day among the covers or along the stream, he feels much of the old ardor. His heart beats the old familiar accompaniment to the sudden thunder of the grouse, the woodcock's whistle, the hound's bugle note, the chatter of the reel; he notes with as much delight as ever, perhaps with more, every beauty of nature, each circumstance or accident of wild life, and at times feels almost young again. But for all these there is something lacking, and with them, something given. He remembers how in times long past an indescribable aroma of the woods tingled in his nostrils from morning until night, and how a continual wild intoxication thrilled his senses throughout the day. Now there come to him only faint elusive wafts of subtle fragrance, only touches of the old exhilaration. Then he was never tired, or never knew that he was, till the day's sport was ended; now he must often confess weariness and frequent inclination to rest. Logs were troublesome hindrances then, now they are grateful seats. Then a good shot brought only pride and exultation and thirst for more; now, with the astonished thankfulness that all quickness and skill have not departed from eye and hand, comes pity for the creature slain and less desire to kill. How childish he would have thought such a feeling, such a little while ago as it seems till he has counted the years; but he is not sorry that his heart is softening or his head grows white. Perhaps he is growing young again!

Well, what if his eyes are dimmer, his hand less ready and his step has lost the elasticity of youth?

He may yet enjoy the woods and waters without leaving his fireside. "Yo" will climb the mountains for him, "Nessmuk" will thread the unmarked paths of the wilderness and paddle his fairy canoe on unknown streams for him, "Kingfisher" and "Wawayanda" fish for him better than he could for himself, and many another sportsman who wields as well the pen as the rod and gun lead him under green leaves and by pleasant waters.

So, more than when he first saw it, the aging sportsman is thankful for FOREST AND STREAM.

Therein he, too, grown garrulous, may tell the story of his own exploits, and though as seen through the haze of years they may be somewhat magnified and multiplied, he may be assured of an indulgent audience, for it is no less an accomplishment of the sportsman to believe a good story than to tell one.

PUBLIC FISH AND PRIVATE WATERS.

IN their report of 1887, the Connecticut Fish Commissioners wrote of the complications growing out of the stocking of streams where the public was forbidden fishing rights. Numbers of waters which had year after year been stocked with trout fry from the State supply, on the supposition that the streams were public, were subsequently found to be posted. One instance was related by the Commissioners where a public-spirited gentleman, who had for years paid the expenses of the transportation for fry to a certain brook, went one time to catch some of the trout, but found the waters posted; and he afterward learned that the proprietor through whose land the brook flowed was in the habit of catching a string of fish every week to sell to a Hartford restaurant. The Commissioners further wrote that the question would in time come up in the courts, "whether a party who has stocked a stream with trout from the State, with the understanding that it is a public trout stream, has the right to prevent any and all persons from fishing therein, thereby reserving to himself the entire proceeds of the State's distribution of young trout in that particular stream."

The question is one which will probably be given early consideration by the courts, for the issue has been raised by the Middlesex County Game and Fish Association, of Middletown. This society, as has been said before in these columns, has undertaken to protect the game and fish by leasing the exclusive right to shoot and fish in the territory it controls, giving at the same time certain broad privileges to the community, so that its leases shall work injury to no one. The association has done much in a public-spirited way to replenish the game covers and trout streams. Among waters stocked by its agents is the Hammonassett River, a natural trout stream. Into this for a number of years the association has placed fry obtained from the State. Now that the fish are grown and there is sport to be had in taking them, the Middlesex Association wakes up one fine morning to discover that the lands along the Hammonassett have been leased, as to their fishing right, to a New Haven club of anglers known as the Hammonassett Club, whose members claim the exclusive privilege of harvesting the crop sown by the Middlesex members. The officers of the Middlesex Association have determined to carry the matter into court and to make a test case of it. Dr. J. W. Alsop, the president of the association, and some of the members went fishing on the Hammonasett, and were driven off by the proprietors of the land on the ground of trespass. This will be made a basis for a suit.

While the Connecticut Commissioners distribute fry only to public waters, it is the practice in some other States, notably in New York, to stock waters which are well understood to be private. Hundreds of thousands of trout fry have been sent from the New York hatcheries at Caledonia and Cold Spring Harbor to streams and ponds owned or leased by individuals and clubs. We have already expressed the opinion that too much attention has been given to this branch of the work at the expense of others. The clubs which lease lands and waters can as well pay for their trout fry as for their quail; and there are private trout culturists who can supply the demand for such purposes; while the several fish commissions have an abundant field for their appropriations and labors in restoring the supply of commercial food fishes. It is in the cheapening of the food supply that fishculture to-day finds a justification for the expenditure of the large sums appropriated to it by the Legislatures.

SNAP SHOTS.

OUR angling columns last week contained a communication which spoke of the Rangeley Lakes as trout waters whose glory had departed. Such a statement could not be expected to pass unnoticed, and we are already in receipt of two letters in reply. These have come too late for the present issue, but they will be given next week. Meanwhile reports from the Maine fly-fishermen continue good; but mosquitoes and black flies are also in the ascendency. Gentlemen just returned from Parmacheene say that they never had better sport with the fly, though the trout caught were rather small. Still other sportsmen have caught larger ones there. A Mr. Leslie with his wife, caught at Littleboy's Falls, ten trout weighing 15lbs. At Bemis Stream, Lake Mooselucmaguntic, the fly-fishing is reported to be excellent. Landlocked salmon continue to be taken in Rangeley Lake later than usual this season. In short the record of this season's catch already gives evidence that the 1888 fishing in the Androscoggin waters is above the average.

We hope that the appeal from the Franklin County (N. Y.) Association for funds to carry on their fight against the netters may be heeded. There is a principle at stake here, and a very important one. As we have explained, there can be no efficient means of breaking up alleged netting, if the nets unlawfully used may not be removed then and there. If a policeman discovers a dynamite bomb on the sidewalk he is expected to remove it, without first seeking to discover who put it there, and to have it condemned by due process of law. The mode of suppressing an illegal net ought not to be a bit more complicated nor less expeditious. The Franklin county case is of more than local importance; the principles concern all communities which number fisheries among their natural resources; and anglers as individuals and clubs have a direct interest in seeing the law against nets enforced and its constitutionality determined.

Francis Henry Temple Bellew, the artist, died last Friday, aged sixty-one. Frank Bellew, as he was better known, wielded a facile and prolific pencil; for more than twenty years his signature has been familiar to tens of thousands of readers. Among the last things he wrote and illustrated—and they were among the best things of the character ever written by anybody—were the Boon Gar Arrahbiggee papers published in the FOREST AND STREAM. The diary of Joseph Goater was distinguished by a playful humor, a rich invention, and a verisimilitude which combined to make the series unique and attracted for it wide attention.

We publish the constitution, by-laws and show rules of the new National Dog Club. These appear to have been framed wisely, and no doubt will commend themselves to the great mass of dog breeders in this country. In fact the club is composed exclusively of breeders, and whatever it may do ought fairly to represent the views and interests of breeders. A meeting will be held at the Metropolitan Hotel, in this city, to-day, to complete the organization of the club.

An individual named Frank Van Ness has been bragging about his exploits in killing deer in June in Pennsylvania. The Yonkers (N. Y.) *Statesman* reports that a deer killed by this hunter weighed 358 lbs. There is nothing like being exact in such matters, and Mr. Van Ness deserves credit for restricting the weight to a figure only between three and four times the average, when it would have been so easy to make it a round 400.

THE GHOST OF THE RIO AZUL.

NOW, there's my friend Dixon. You wouldn't take him to be a superstitious man, or one likely to be imposed upon by his own imagination, would you? In fact quite the opposite. Dixon is a cattleman. He lives in New Mexico. He has spent all his life since boyhood in a country where timid men die young, and has become by long experience habituated to scenes of doubt and danger which would terrify a novice. Dixon is a long sort of man. He dresses in range costume. He is handy with a gun, but not the sort to use it till he has to, I should think. His speech is picturesque at times. He is quiet and practical in disposition. Depend upon it, if Dixon saw a ghost on the Rio Azul it was a genuine ghost, twenty dollars to the ounce, and a yard wide. And this is what Dixon said about it when we last met, a few months ago:

"Have you been out after antelope any lately? Say, I was; and I expect we had a little the toughest time, now, of anybody."

"Didn't you get any?" I asked.

"Oh, we got all the antelope we wanted, but that ain't it. I don't want no more hunts like that. I think about one more would do me up, what with the cold and the scare and all. You know I'd been having a bad cough, anyhow, an' take it altogether we come pretty near leaving yours truly out on the flats that trip.

"It turned in awful cold, you see, and staid that way for nigh on to a week, and then there came a reg'lar blizzard of a storm. We was on the big plains in the eastern part of New Mexico, away out from nowhere, not so very far from the west end of the Neutral Strip, part of the time. We had two teams in the outfit, and was running' wild, all over the country, wherever we thought we'd find the best shootin'. We'd got about all the antelope we wanted, for the cold weather seemed to make 'em kind o' tame. Or probably they knew the big storm was coming and thought they'd just as well be shot as freeze to death.

"First there come a fine rain; then she begun to freeze, and the way she come over those big flats was a reproach to the kindliness of nature. Everything begun to get dark overhead; then the lower edge of the sky all around got a deep blue-black; then the whole sky took a hop, skip and jump and began to close right in on us, an' all you could see was a narrowin' ring of black, an' a little flat, circ'ler world in the middle of it, a gettin' whiter and whiter, an' littler and littler every minute. Then the wind spit on its hands, an' dad wrangle it all to climpity-clamp, say, didn't she come! Then the sleet let up, after a little, an' the air filled up with that awful floury *poudre*. You couldn't see nowhere then. You been caught out on the flats that way? Well, then, you know how it is. It's a kind o' terrible sort of feelin', ain't it?

"Our heavy outfit was two miles away, when she shut down on us. They begun pumpin' their Winchesters, and we turned ours loose reg'lar; so after a while we got together. Then we tied their horses to the hind end of our buckboard, and got out the compasses, an' laid a course for the northwest, intendin' to go if we could, till we struck some stream or arroyo, or if we couldn't, to get as close to the settlements as we could before we made our last camp, so's our families would find out in the spring what had become of us, and not think we'd skipped the country with some Maverick señorita or other. We tied a Winchester in the front end of the buckboard, and another in the front end of the other rig; then the fellow with the compass had to sit in the back end o' the hind rig, an' line up by those two sights ahead. Once in'a while he'd holler out to shoot off that front gun, so's he could see where it was. We bundled up the best we could, with our slickers and buffalos, but Lord! do you suppose the stuff was ever made 'd keep that powder out? It'd blow plum through four inches of plate glass, straight. An' so we pulled on, an' every once in a while I'd fetch a cough that sounded like it come from over the range. I thought of my little wife at home; an' I just said to myself, 'You poor, low down fool you, if you ever get out of this, you never'll go huntin' again long 's you live, now will you?' An' I didn't, neither; not till we went out for blacktail, up in the mountains, quite a while after that.

"We'd been goin' on quite a spell, runnin' entirely blind, except for the two Winchesters and the compass, when all at once we began to hear a low, rumblin', mournful sort of noise, about as strange and sad as ever you did hear. It got nearer, and seemed to be all around us in that blindin' white darkness, a deep, pitiful groanin' sort of a sound. We all knew what that was. It was the emptyin' of the range. The cattle had bunched and was driftin'. Pretty soon we were right in the middle of 'em, and they crowded all around us, a-walkin' with their heads down, an' their eyes a-freezin' shut, an' lookin' all white and ghostly as they walked on down before the wind, a-walking to their death an' knowin' it an' mournin' at it, an' protestin' against bein' left out on the range without no protection against a day like that. I tell you that's a sight there can't no feller forget; it'll stay by him. I can shut my eyes an' see them white things yet, a-driftin', driftin' on down across the range; an' it seems like I can hear that big, mournful, pitiful, helpless moan of them a-walkin', walkin' slow, till the cold got bad enough to put 'em past their sufferin'.

"Well, now, I may remark that was a close squeak for us fellows, an' we got out only by a scratch. We drove on till the horses came to a standstill and turned tail in spite of us. Then we let them go that way for a spell, not knowin' what else to do an' feelin' as if we must be movin'; an' all at once the head team almost went head first into a big draw. We piled out, unhitched the hind team, and then we drove down into that draw a flyin'. How we did it I don't know, but somehow we got to the bottom and found that the wind was broke, and it seemed almost warm. We yanked off the wagon bed from the big wagon, scraped away the snow, pulled out our blankets and soon had a sort of camp fixed. It's astonishin' how much room there is under a wagon box. We could have took in three or four more besides ourselves easy. As for the horses, we took them into the best corner in the cañon we could find, an' they had sense enough to stay there.

"We staid down in the draw over night, an' the next day, after noon, we pulled out up along it, keepin' to the northwest all we could. It was colder than a soda fountain, an' you may know we were glad when we struck the first cedars on a branch of the Rio Azul. Didn't we make a fire? An' didn't I pretty near die that night? An' wasn't I glad when we run on to a little Mexican *placita* the next day! We just drove right up to an empty 'dobe and unhooked, not sayin' nothin' to nobody. There wasn't but about twenty houses in the whole town; but we was too cold to care who lived there or where it was. Fact is, I don't really know to-day where that *placita* is. There's lots of them little Mexican towns scattered over the country that there don't nobody know anything about. The Greasers live and die there, and don't ever come into the white settlement from one end of the year till the other. We s'posed this was that sort of an outfit and didn't worry no more about it, but just helped ourselves, the way we usually do when we're dealin' with Greasers.

"The weather begun to moderate that night, but we concluded to stay at the *placita* till it got warm. So we helped ourselves to wood, built a big fire in the warmest room of the 'dobe, and arranged to stay a year or so if need be. We could see smoke comin' up out of the houses higher up the arroyo, but there didn't nobody show up all day long. The cold weather was too much for the Greasers. I don't s'pose they saw such a storm once in a century.

"There was the usual little church in the *placita*—the Greasers is mighty pious, especially in the hills by themselves that way. Along in the evenin' we saw lights a shinin' in the windows of the church, and pretty soon we heard the little bell begin to jingle to call the folks together. We thought this was mighty funny, for it was n't Sunday, and it wasn't any feast-day that we could locate, and it was the wrong time o' year for any big religious festival that we knew of. Still, we didn't bother our heads much about it, but piled on the wood in the little fireplace, an' pretty soon we got ready to turn in.

"As I was sayin', there was two rooms in the 'dobe. There wasn't anything but bare walls to either one, and the place seemed as if it had been deserted for quite a while. The room we had taken up for ourselves didn't have any outside door to it, and only one window. In the vacant room there was an outside door and window. The window didn't have no sash in it, and was only about a foot and a half square; the door was old, but it wasn't a bad fit, an' shut all right enough. There was a good door between the two rooms, too.

"Now you may think I'm a good ways off'n antelope huntin,' and so I am; but I ain't talking about no antelope huntin' now. I'm a goin' to tell you about the ghost on the Rio Azul, for that was the name of the *placita* we had struck, as we afterward found; it was called so from the little creek it was on. Them Mexicans calls anything a 'rio' [or river] that's got two banks to it. Yes sir, I'm a goin' to tell you about the ghost that come to us that night in that little old 'dobe. I don't s'pose you believe in ghosts. I didn't used to, but my dear Horatio, there's critters on the range that you and me ain't onto.—Shakespeare!

"Well, we turned in and went to sleep. It was the first time we'd been warm for four days, and it felt good. My cough bothered me a little and I didn't sleep as well as the rest. About an hour or so after we had turned in I heard a noise in the other room. It sounded like the rattlin' of a chain; then there was a sort of scraping noise, an' all at once there came an awful groan.

"I was feelin' kind o' nervous and run down, any way, and I declare, when I heard that, I was plum scared! It came so sudden like, and sounded so awful. Still, in a minute or so I got over that, an' I allowed it was a dog had got into the other room. I didn't say nothin', but just slipped out o' my blankets quietly and gathered up a chunk of wood, and slipped up to the door and jerked it open, intendin' to bust that infernal Greaser dog plum wide open for givin' me such a turn. I pulled the door open and into the room. The light from the fire showed up every corner of it. An' I hope I may die if it wasn't empty! There wasn't a thing in it! Not even a mouse—empty from corner to corner!

"Well, that knocked my eye completely out. I didn't know what to think. Fact is, I was too surprised to think at all. At last I concluded that the dog must have jumped out through th' little window; though how he could jump so high and so straight was a wonder. The door was tight shut and latched on the inside. As I didn't dare to think anything else, I had to think the dog had jumped out through the window.

"I went back and lay down again. I was wide awake now, and couldn't go to sleep to save me. The other fellows was all snorin' away hard as they could go.

"In less than five minutes I heard that same scrapin' sound again, and the same clankin' of the chain. I woke up my pardner, Al Maxwell, and poked him till he understood enough to know something was wrong. Then he was wide awake like a flash, with his hand on his six-shooter. He thought the Greasers was raidin' us. I whispered to him to keep still, and told him what had happened to me. We listened. The sounds came again. There was the unmistakable clank of a heavy chain. Maxwell's face turned gray, and it scared me to look at him. Then there come a scrapin' on the partition wall; then a bump, like as if a heavy body had fell against the door. Then a moment later a scream came up—we could hear every word—'*O, sangre de Christo! O, Jesu!*' and the rest was an awful wailing yell.

"Now, I ain't tryin' to tell no sensational ghost story, nor I ain't workin' you for a tenderfoot. But, as I hope for a square deal hereafter, these things did happen just as I'm tellin' you. If I wanted to lie to you I could; but I'm givin' it to you straight, on my honor, an' I'll shoot you or any other man full of holes that says I ain't. I'm serious.

"When that bump come against the door, me an' Maxwell jumped up with our six-shooters, and made a run for the door and kicked it open. There wasn't a thing there! Now, that's the truth, mind. I'm serious. The room was entirely empty. On the floor there was a little sort of place scratched, or dug up a little, in the dirt. You know all those 'dobes have hard dirt floors. The door was fast shut. There wasn't a sign of any sort about, except that little scratched place on the floor. The dog theory was busted. What was it, then, and what were we to do? What would become of us, cooped up in that little hut?

"We went back into the other room. The rest of the fellows were all up, and scared as bad as we was, for they had heard the yell and heard us run out. We sat up in our blankets an'—well, we waited. I don't think I ever did such hard thinkin' in my life. I thought what a poor, miser'ble cuss I had been in my time, anyhow. I thought of the time I drawed three aces and a pair of kings on a tenderfoot that only had two little pairs, and reflected how unnecessary that was of me. I thought of all the heifers I ever branded out on the range. I thought of all sorts of things. Do you know what I believe? I believe ghosts is sent for the identical purpose of makin' fellers like me reflect. Well, I reflected. An' if I do say it, I've lived a dif'erent life since then. I come away from the Rio Azul a better man.

"We all sat up and waited and thought. An' presen'ly there came the same old clank! clank! and the same thump on the door, and the same awful scream. Half delirious as we was, we all run out. We found the room empty, as before. We opened the door and looked out, and there wasn't nothin' to be seen, an' everything was quiet except a coyote a-howlin' out on the flats; and from up to the little church, which was the nearest building to us, there came a wild sort of half heathen chorus that them infernal Greasers was a-singin'. It was awful, I tell you, to have such a mystery as that to take right hold of you. I've laughed at such things before now, and I don't believe I'm such an awful coward myself, but here was all of us done up by the same thing, and what it was there wasn't none of us could tell.

"We went back again and sat down, and nobody spoke for a while. Our whole crowd was whipped, right there. At last Maxwell said:

"'Fellows, it's plain enough that we've got into a reg'lar haunted house. There's been a murder here, and that's why the house is left deserted. The feller must of been killed for his money, an' like as not the money's hid where that scratchin' was made on the floor. The church goin' on up there must have set the ghost a walkin' to-night, or else we did, comin' in here. Maybe we was a little too free just a-unhookin' and movin' right in the way we did. As for me I think we'd ought to get out o' here as soon as possible.'

"We all had to agree to this first and last, but we didn't dare to move till mornin'. Early that mornin' a pretty decent sort of Greaser come down to our camp, an' we had a talk with him, and learned where we was, and told him who we was, and sent him up after some Chili colorow for us. We asked him if anything wrong ever happened around that house, and he looked solemn and said, '*Quien sabe?*' which meant that he didn't know and wouldn't tell if he did know. It was warmin' up a little now, and we pulled out and got into the X Y ranch a little after dark that day, and the next day by a hard drive we made it home to my ranch, and I was comfortably sick for a month with a cough that nearly sized my pile, I tell you.

"My wife knew something was wrong, and after a while I told her the whole story, and told her I was a changed man. I gave my wife a pair of diamond earrings and a seal skin coat, an' she said she hoped I'd see a ghost every month. It didn't seem to worry her, someway, the way it did me.

"But it did worry me, an' it does yet. Of course, I know how you'll look at it. You'll say it could all be explained if we just knew all the facts; but haven't I given you all the facts? And I tell you on the dead square that I have told you the truth. Now that's all I know."

Mr. Dixon then left me after we had made arrangements for a hunt, during the followiug season. I was a good deal puzzled by what he had said, for I knew by his manner that he was in earnest. Of course, I could offer no explanation of the strange events narrated. But that came later on, and from Dixon himself.

I don't like to spoil a good story. I have a notion not to say a word further about the ghost of the Rio Azul, because, as it would then stand, this would be a first-class ghost story—indeed, one very hard to surpass. That one feature of the clanking chain would mark it as of a superior sort. There are all kinds of ghost stories, with all sorts of attractions to them, but the story with the clanking chain will always be held to possess superior elements of fascination. But perhaps, after all, it is one's duty to follow a ghost story to its *dénouement*, and to give all the facts in his possession; therefore I must append the following letter, recently received from Mr. Dixon:

"SEVEN RIVERS, N. M., ——, '87.—*Dear Friend:* Yours of last month at hand, and in reply would say antelope reported plenty and hope you will be on hand at date set. Bring the old rifle and four canteens.

"I feel I must tell you some more about that Rio Azul business, though I hope you will keep it quiet. There's a Mexican on Chiswell's ranch down here who looked natural to me, and at last I placed him. He was the fellow that came into our camp the next morning after we heard the noises. I talked to him about that, and saw something in his eye that made me suspect something. Then I crowded him and made him tell me the whole thing. You see, the Greasers were having a *penitente* there in the church that evening—though how it happened that time of the year I don't know. A *penitente*, you know, is a religious scheme of theirs, and while it is going they whip each other with cactus and quirts, and that sort of things, and jab knives into themselves, and otherwise have a good time. On account of their cruelty these *penitentes* are forbidden by law, as deaths often occur from the punishment. But the Greasers are sort of attached to it, and so they hold them on the quiet. They don't allow any white man to see the whole performance. When we drove up and went into camp, they didn't know what to do. They didn't want us around, and they didn't have sand enough to try to drive us out. So the fellow, Jose Aquila, acting by orders of the priest, run a game on us. He got a long pole and tied a piece of log chain to it, and stood outside and poked the thing through the little window, and scratched around and thumped the door with it and howled, and made a lot of infernal fool all out of us fellows. When he heard us coming he yanked the pole back out of the window and lay down close by the house; and when we came out the door he ran around the house, got into the arroyo and ran off. The reason he came down so early the next morning was he wanted to make some new footprints, so we wouldn't get on to his game. I never knew a Greaser had sand

enough to do a thing like that, let alone sense. It wasn't so bad, was it? I think you will agree that these facts had better not go any further. I showed my gun to Jose and told him he was my friend, and I loved him, but if I ever laid eyes on him again I'd open fire, and if he ever told another soul about that business on the Rio Azul I'd dig up his father's bones and make branding-iron handles of them. That's all I know about the ghost. I don't want to hear anything more about it. I've got a good greyhound pup I think you would like to have. Yours truly, DIXON."

I have often asked Dixon for that greyhound pup, but he said there wasn't money enough to buy him. In view of such a peace offering what could one do? Nothing, certainly, but to keep still about that ghost.

E. HOUGH.

WICHITA, Kan.

MEMORIES OF THE MASTIGOUCHE.

THE cold north wind shook the rain drops from the cedars as we started out of the woods on our tramp of six miles, while our carter was to follow over the steep rocky wood road with our baggage. We had been fishing for a week on the beautiful Mastigouche Lakes. Soon the sun broke through the dark clouds and rolled them up while the wind gathered them together and pushed them across the blue sky out of sight. On the divide beyond St. Gabriel de Brandon lay before us the wide plain where the St. Lawrence, hidden by the distance and its wooded shores, hurried onward to the sea, where the Beloiel Mountain lifted its head high above the level land, the vanguard of a great host; behind us was the beautiful Maskanonge, its surface broken up by the gusts of wind that covered its bright waters with white caps; before us the busy homes of men; behind us the rocky turrrets—the gateway to the great wilderness beyond, shut in by its high mountains from the restless world. As I write these lines I think I see from my tent door the sun breaking over the mountain, taking by surprise the little waifs of mist that have been dancing on the lake; his warm rays lift them up, on bright clouds they float away. The water lies like a beautiful gem in its setting of emeralds, reflecting the blue sky, until the zephyrs with quick hands cut a thousand facets that flash back the sunlight.

A grand time we had; four of us beside our guides. It was funny how our business habits stuck to us! Now there was R———n; he is a large dealer and manufacturer of stoves, ranges, etc.; whenever he killed a large fish, instead of talking like the rest of us, and calling it a big one, he would say it was a great (grate) trout; a large lake was of wide range; if he broke his canoe, he would tell us that his boat was stove. R———y is a civil engineer; so accustomed to using a plummet that he always put one on his line; this was perhaps the reason why he always preferred to fish with bait. Lest I forget it let me say that the sun did the best job of bronzing on him that I ever saw; he promised to let his scalp lock grow, then we were to make him our Indian guide. Your correspondent had not forgotten how when a boy on third base he had been taught to catch on a fly. P. left us early in our outings, I cannot think why unless he was afraid he would be black-balled. Without giving us any warning, one day he very soberly said he thought he had a good reason why a kingfisher hardly ever missed his fish; we asked him to explain; has he not got a first-class reel and a good click to it? Just then a bird came hurrying along, and it sounded as if he was paying out a hundred feet a second; "There, is not that so? Yes, it is a good reason and the real reason too." Soon after he left for his home; we would have forgiven all this if he had staid.

We entered the woods June 1, and found the ice had been out but a few days, the cold water and chilly air made poor fishing at first, but with each day it improved. After a few days on the lake near the hotel we started with our guides and tent up the river to a camping place where a few seasons before we had spent pleasant days. On a little point jutting into the lake, among the white birches we stuck our stakes; across the water—almost from its very shore—rose a steep high mountain, and over its cedar-covered top hung the crescent moon; behind us was a high rocky cliff, seamed and scarred where the frost and storm had torn great blocks. Oh! the sweet quiet of the woods. No sound; save now and then as the gentle wind brought us the roar of the rapids at the outlet. We wrapped our blankets around us and on our balsam beds rested.

With the break of day we started to find an old portage two miles up the river; our guides soon struck it; an hour's carry, and we were in our birch barks on Lac Rilé; here we took over one hundred beautiful trout, among them a two-pounder, a number that weighed over one. As we floated in our canoes we thought from the "lay of the land" that there was a short cut to our camp, so started two of our men to prospect; soon they returned having cut a portage right to our tent's door, not a half mile away. We talked of our experiences as we sat around our camp fire; after a trout supper we lay down to rest, the fragrance of the balsam filled our tent and soothed us to sleep. The next morning we returned to the same lake, but a high wind put an end to our sport and we went back to camp. With the increasing warmth black flies and mosquitoes commenced their raids, and we concluded to beat a hasty retreat. Thus pleasantly spent, these red-letter days were too quickly counted off. We struck our tent, and over portage and running the rapids we came back to the hotel. On the way I fished through Lake No. 2; it was but a short carry to the river below the rapids, so I hurried on ahead to fish a while in the pool where the tired waters would seem to rest. I threw in a brown hackle. It scarcely touched the water when a beautiful fish took it; so quickly was it done that in the rapid deep stream I saw nothing, felt only the tug. A quick strike and he was fast. Into the swift current he rushed and carried out every inch of my one hundred and fifty feet of line; as it spun out I thought with the end of the line would come the end of my sport, but the springy bamboo gave him no chance to tear away. He started across the pool, only to find the withy rod still holding him; a ten minutes' fight and I had him in my landing net—only a pound and a quarter—but what he lacked in ounces he made up in muscle. I leave it to you, my brother sportsman, to fill in the details of this experience. You can recall how under the dark alders, where the swift vexed waters spread out into a broad still pool, flecked over with the white foam; quiet, oh! how still, save the soft murmur in the woods and the chafing of the river against the rough rocks, you laid him on the moss, and spoke from your heart as you said "how beautiful." Down the river we floated; the steady stroke of the paddle moved our birch barks down the lake and broke the smooth surface of the water; the moon stretched a silver ribbon across the ripples as we drew our canoes on the shore.

Sabbath morning was the opening of a perfect day; the blue sky hung over all; the hills were clothed with the soft gray and green of the birches whose leaves were just unfolding, here and there mottled by the darker verdure of the cedars; rocky cliffs looked down into the clear waters of the lake; even the winds were hushed—a day of rest.

A friend had told me of a touching story related to him by his Indian guide the summer before. Pere was on the shore that evening, and as the shadows began to fill the deep gorges in the mountains, I asked him to tell to me the story. It was hard for him to talk in English, but the very effort to make me understand lighted up his swarthy face or softened his keen black eye as he told of the birds that cheered him in his march or remembered his watch by the little dead child, it added a wonderful pathos to the tale. This was the tale he told me:

A Hudson's Bay man married a French girl in the settlement, and brought her to his house in the great woods. Her thoughts often flew over the hills that shut her in to her far off home. Her little child died, and she was sad to think of burying it in the forest, to be left alone, with no one to care for the little grave when they were called to some other post. Pere's heart was touched as he heard of the poor mother's sorrow, and he offered to carry the dead child and bury it among her kindred. The sick mother propped up in her bed, watches him through her tears as, with the little coffin fastened with his tump line on his back, his birch bark on his shoulders and rifle in hand, he starts on his six days' journey through the pathless woods; the tangled woods soon hides him from her sight, but all the way her prayers follow him. Over the rugged mountains he hastens, down the swift river and across the placid lakes he guides his canoe, and, as with Elaine's dumb servitor, the dead is his only burden. Through the aisles of the forest wa-pe-pe, the bell bird, tolled its notes like silver chimes, and the star-flowers turned their soft eyes to look on him as he passed along. When the shadows of night crossed the hills and settled down into the deep valleys he slung the little coffin under the branches of the darkening pines, the gentle wind rocked it and hummed a soft lullaby, the stars kept watch while his sad heart and weary feet rested. Several times in his dreams he saw beautiful creatures steal out of the shadow of the woods and come within the gleam of his camp fire to look on the face of the little child; as he rested on the velvet moss, where the sunshine came shifting through the leaves he seemed to hear them call "Little one, awake." So the lonely days passed; only a single Indian trapper had he met; several bears and caribou crossed his path, but his rifle was not unslung; no noise, hardly the snapping of a twig, broke the silence of his march with the dead. At the settlement he laid his burden down in a new made grave, then hastened back to tell the mother where her little babe was sleeping, and that friends would keep the little one from being lonely. "That is all, Mr. R. Good night!" and Pere was gone.

SPICEWOOD.

THE SQUATOOK LAKES.

HAVING been a regular reader of the FOREST AND STREAM from the first number issued (Aug. 14, 1873) to the present time, I have annually, upon the approach of the open season for trout, scanned its columns for such information as would aid me in determining where I should make my summer fishing trip. By information I do not mean mere description, for the books on angling and the sporting periodicals abound with descriptions of crystal lakes, limpid and rippling waters, deep and placid pools, speckled beauties, etc., etc.; but such information as a practical fisherman desires and seeks before starting or even concluding upon the locality of his outing. While frequently criticising the FOREST AND STREAM for its dearth, of late years, of such information, I have often, at the same time, censured myself for not contributing something of that which I looked for from others; for I have for years spent my summer vacations in the wilderness, fishing some stream or lake for trout. To make some amends for my shortcomings, and with the hope also that I may benefit my fellow fishermen and excite in them feelings of reciprocity, I purpose giving an account of a trip I made to the Squatook (sometimes spelled Squatteck) Lakes in the summer of 1885, and I give it in the shape of a daily itinerary from the diary which I always keep of my annual fishing excursions.

The Squatook Lakes, four in number, are located in the county of Temisconata, Province of Quebec, and are really the source of the Madawaska, a branch of the River St. John, into which it flows at Edmundston, New Brunswick.

Our party, three in number, left Philadelphia on Tuesday, Aug. 18, at 3:55 P. M. via Bound Brook for New York, and the latter place at 10:30 P. M. for Boston via Springfield.

Wednesday, Aug. 19.—Arrived in Boston at 6:25 A. M., drove directly to S. S. State of Maine, breakfasted on board and sailed at 8:30 A. M., reached Portland, Me., about 4 P. M., spent an hour viewing the city and sailed at 5 P. M. Sea smooth and weather clear and delightful.

Thursday, Aug. 20.—At 6 A. M. were off Campobello Island and at 7 A. M. arrived at Eastport, Me. Went ashore and inspected the sardine factories, where small herring, by use of cotton seed oil and French labels, are converted into sardines. Sailed at 8:45 A. M. The Narrows off Eastport were filled with hundreds of little fishing smacks and presented quite a lively and picturesque scene. Temperature at 12 M. in the Bay of Funday, 64°. Reached St. John, N. B., at 12:45 P. M., and left on steamboat David Weston at 5 P. M. for Fredricton, where we arrived at 11:45 P. M. Weather pleasant but cool, thermometer at 6 P. M. on river 64°.

Friday, Aug. 21.—Stopped last night at the Queen's, a comfortable hotel, with fair table. At 7:30 A. M. took train at Gibson, opposite Fredricton, and arrived at Newburg Junction, where we dined, at 11 A. M. Rode most of the way on rear platform of rear car, enjoying the beautiful mountain scenery. The rest of the journey to Edmundston, which was reached at 6 P. M., was exceedingly fatiguing owing to slow train, poor cars and rough road bed. At Edmundston we were met by Mr. T. M. Richards (who keeps store there and with whom we had corresponded about guides, canoes, provisions, etc.,) with teams to transport us and our baggage across the Madawaska River to the village. The bridge having been swept away by the ice the previous winter, we crossed the river by rope ferry on a flat boat and stopped at Adams House, kept by an old Scotchman named Adams. In the evening visited Mr. Richards's store, made up the order for provisions and prepared for an early start on the following morning.

Saturday, Aug. 22.—Had heavy thunder gust last night, and was still raining when we arose this morning, delaying our departure. The guides Mr. Richards had engaged for us were on hand early; they were French Canadians, representing three generations of the same family, Joseph Martin, aged 79 years; Florent Martin, 22 years; Joseph Martin, Jr., 18 years. Packing all our traps and provisions on a large wagon with a pair of stout horses, and mounting on the load ourselves with Mr. Richards and Uncle Joe, as our oldest guide was familiarly called, we started at 9:30 A. M. for Griffin's portage, fifteen miles up the Madawaska, while the other guides, with Mr. Richards's driver, had to pole the three piroges or dug-outs against a rapid current to the same destination. The road we traveled followed the course of the river, was smooth, well drained, comparatively level and in excellent condition, and is known as the Grand Portage, extending from Edmundston to Riviere du Loup on the St. Lawrence River, a distance of seventy-nine miles.

At 1 P. M. we reached Griffin's, and after dining pitched our tents, knowing that the strong head wind prevailing, together with the current, would so delay our other guides that the portage could not be made that evening. At 5 P. M. the river party arrived, wet, tired and hungry. In the meantime we had made all necessary arrangements with Mr. Griffin for the transportation of our canoes and luggage, etc., up the carry early next morning.

Sunday, Aug. 23.—At 6 A. M. started down stream for west end of portage and across the same at 6:30, reaching Mud Lake at 10:30 A. M.. The portage is four and a half miles long, but easy and well marked, and our piroges and luggage were hauled over on three rough sleds made the day previous, with a horse to each. At 12 M., after dining we started down Mud Lake, which is one mile and shallow; thence down Beardsley Brook, which was so low that about half the time we were in the water assisting to push and lift the piroges over shallow and rocky places, and as the day was clear and warm and we fresh we found it hard work. The brook is seven miles long and empties into the Squatook River. This river is quite deep and tortuous, and from the mouth of the brook to Squatook Lake No. 4 the distance is six miles, which we made without trouble and expeditiously, and went into camp at the head of the lake, wet, tired, cold and hungry at 6 P. M.

Monday, Aug. 24.—Our camp was situated in a delightful cove, on dry ground, well wooded, with pebbly beach sloping gradually down to the water. The lake, which is nine miles long and from one to two miles wide and surrounded by mountains, reminds me of Brassua Lake in Maine, but is far more picturesque. Close to our camp was the mouth of the river which we fished both morning and evening, taking an abundance of trout, but no large ones—the largest weighed ¾lbs. A stiff northwest gale drove us into camp early and compelled us to erect a wind break of evergreens to make it comfortable.

Tuesday, Aug. 25.—The gale continued all night and throughout to-day, making it impossible to fish and dangerous on the lake, which was covered with white caps; so we remained in camp and close to the fire, the thermometer registering at 6 A. M. 47° and at 6 P. M. 55°.

Wednesday, Aug. 26.—Started down the lake at 6 A. M., but the wind soon commenced to blow strong from the north, and it was cold and showery all day. The lake was so rough that we had to proceed cautiously, sneaking from point to point, and did not reach the lower end or outlet until about 3 P. M. Here we found an excellent and comfortable camping site, where we pitched our tents, and in the evening tried the fishing at the outlet, but the trout were scarce and the chub large, plentiful and annoying.

Thursday, Aug. 27.—At 7 A. M. started down stream, reaching Squatook Lake No. 3 at 2 P. M.; distance, ten miles. The river is a succession of rapids, which we enjoyed shooting. Caught quite a number of trout on the way down; the largest, 1¼lbs., was taken in a beautiful deep pool. The wind still continued to blow a perfect gale from the north, and we found the lake very rough. It was beastly weather for fishing; the fish would not rise, and it was with the greatest difficulty we could manage our line. This lake is three miles in length, and on its eastern shore is Sugar Loaf Mountain, a tall peak jutting out close to the shore. From its top the view is said to be extensive and beautiful. We camped at the foot of this mountain, close by a brook, at the mouth of which I took in less than an hour half a dozen trout that weighed 1¼lbs. each.

Friday, Aug. 28.—Taking an early start we ran down the thoroughfare one and a half miles into Squatook Lake No. 2, through it, one mile in length, and a short thoroughfare into Squatook Lake No. 1, through it, four miles in length, and down the Tuladi River (its outlet) two miles to Horton's Branch and up this branch two miles to an old log jam, about one-fourth mile in length and known as the Big Jam. Finding we could not get our piroges around this jam without great labor and loss of much time, owing to great washouts made the previous spring, we determined after dinner to return, for little or nothing could be done alone with the fly without canoes. With bait, however, by dropping it between the logs, any number of fine fish could be taken.

Upon reaching the Tuladi River again, we ran down it six miles and went into camp, it being too late to make Tuladi Lake No. 2, which was still three miles distant. Our camp, though on high ground, was damp and amid ferns four feet high; was badly located, uncomfortable, and flies and mosquitoes were abundant and annoying.

Saturday, Aug. 29.—Broke camp at an early hour—glad to leave—paddled down to and across Tuladi Lake No. 2 through the thoroughfare and across Tuladi Lake No. 1 to its outlet and went into camp again at 10:30 A. M. Our camp was located about one mile above the Tuladi Falls and though on high ground was without shade or

wood and as there was no air stirring was very warm. While our guides were making camp we walked over the portage to view the falls, which we found to be rapids only, made by large shelving rocks and without any perpendicular fall whatever. At the foot of the falls we found an Indian with his three children in a birch bark canoe fishing with bait. They had quite a nice string of some five or six dozen trout. In the evening we had fine sport fishing just above the falls. The trout here we found very gamy and their meat of a dark salmon color. Externally they varied much, some were just like the trout of eastern Pennsylvania, while others were of a dark bright red color.

Sunday, Aug. 30.—There was a thick fog this morning which did not clear away until nearly 8 A. M. After breakfast we fished again above the falls and the trout rose beautifully and fought bravely. I killed twenty, the largest 1¼lbs. In the evening we tried the fishing below the falls but we had poor luck. This was a disappointment for the sky was overcast, the wind from the south and all the conditions apparently favorable for fine sport.

Monday, Aug. 31.—Broke camp at 7 A.M. and while the guides let the canoes down the falls with ropes, we walked around and met them below. We then ran down the Tuladi River four miles to where it empties into Lake Temisconata (meaning "winding water") which is a crooked body of water about 30 miles in length and varying from ½ to 1½ miles in width; its shores mountainous and scenery beautiful. The morning was cloudy and misty with the wind blowing strong from the south, and we found the lake so rough that we hesitated for a while about venturing out on it. After a short stop at Mr. Theriault's fishing cottage at the mouth of the river we concluded to go down and cross the lake to the village of Notre Dame du Lac, 4 miles distant, which we reached about noon. This village is situated on the west side and high above the lake and presents an exceedingly picturesque appearance. It has a population of about 200, scattered along the Grand Portage road and was formerly called Detour de Lac. In approaching the village from the opposite side of the lake, the most conspicuous object is the Catholic church, a large frame building with spire. We found the lake exceedingly rough while crossing, and soon after landing it rained so hard that we had to seek shelter in the Lake Side House kept by Pierre Cloutier, Jr., where, the storm not abating, we remained over night. The Lake Side House is beautifully situated on a high precipitous bluff, commanding from the rear a fine view both up and down the lake; in front was a grass plot and flower beds and at the side a kitchen garden surrounded with picket fence. It had no bar and none of either the internal or external appearances of a public house. It was light, cheerful and comfortable and as clean as clean could be. Madame Cloutier evidently being as good a housekeeper as we found her to be a kind and attentive hostess. The people all spoke French, a few English, and Madame Cloutier spoke both quite fluently.

Tuesday, Sept. 1.—In my many fishing trips it has never been my good fortune to meet with so delightful a stopping place as the Lake Side House, and we left it this morning with some reluctance. Before starting we purchased a saddle of lamb for $1, and five dozen eggs for 50cts. At 12 M. camped on the Madawaska River opposite the mouth of Pool River, two miles below Lake Temisconata and twenty miles from Edmundston. In the evening fished a large and splendid pool just below camp, but were soon driven in by a very heavy thunder storm. Largest trout taken weighed 1¼lbs. Lived sumptuously to-day on roast lamb, fried frogs, scrambled eggs, etc.

Wednesday, Sept. 2.—It was raining and a strong cold wind was blowing from the north when we broke camp this morning. By noon it cleared but continued cold. Fished some on the way down and reached Edmundston at 4 P. M. After settling our bills and packing our trunks we visited the ruins of the Old Block House, at the junction of the two rivers, and enjoyed from its top the magnificent views which the valleys of the St. John and the Madawaska presented at sunset.

Thursday, Sept. 3.—There was a heavy white frost this morning. Breakfasted at 2:30 A. M., and started at 3:40 A. M. for St. John via Woodstock and McAdam Junction. After a long and tedious ride reached St. John at 8 P. M. Stopped at the Dufferin Hotel, an old but clean house, with fair table and good service.

Friday, Sept. 4.—Sailed on S. S. State of Maine at 8:15 A. M., reached Eastport at 11:30 A. M. and left at 1 P. M. Owing to low tide we had to run around Campobello Island, and as the sea was rough a great many were seasick, but three ladies appearing at the supper table.

Saturday, Sept. 5.—Arrived at Portland at 4 A. M. Sailed an hour later and landed at Boston at 1 P. M., after a most enjoyable sea trip. Took sleeper at 6:30 P. M. for Philadelphia.

Sunday, Sept. 6.—Arrived at Broad street station, Philadelphia, at 7:15 A. M., all in excellent health and spirits but tired and dirty.

The expenses of the trip were as follows:

Tickets, Philadelphia to Edmundston and return	$96 90
Meals and berths on steamer both ways	22 25
Provisions, etc	53 64
Griffin's bill for portaging canoes	10 00
Pay of guides	54 00
Other expenses, including hotel bills, baggage transfers, etc.	65 05
Total	$301 84
Making each one's share of the expenses	$100 61

The fishing was nothing to brag of. I have had much better and also much worse. This, however, may be accounted for by the time we were there, being between seasons. We caught plenty of trout, more than we could use (the surplus were salted down by our guides for their own use); but there were comparatively few that weighed over a pound. Our greatest disappointment, however, was our failure to take a tuladi trout. This, perhaps, was owing to the water in the lakes being so warm. We found it frequently several degress warmer than the air. As an outing, however, it was the most enjoyable and comfortable (not to say lazy) one that I have ever taken; and I have no doubt that in the proper season any number of trout, and of good size, might be taken in the waters of the Squatook Lakes. I hope before long to repeat the trip and verify this declaration. LA TRUCHA.

APRIL 9, 1888.

Natural History.

MUSK-OX, BIGHORN AND MOUNTAIN GOAT.

BY R. W. SHUFELDT, C.M.Z.S., ETC.

AS will be seen by the "List" in my paper on the peccary, there still remain for our notice of the American *Bovidæ*, the subjects of the present article; the buffalo having been briefly treated in my last contribution.

Ovibos moschatus, the Musk-ox.—So far as our present knowledge extends, there is but one species of this interesting animal in the genus which has been created for its reception.

From good authority we learn the present range of the musk-ox to be restricted "to the most northern parts of North America, where it ranges over the rocky barren grounds between the 60th parallel and the shores of the Arctic Sea. Its southern range is gradually contracting, and it appears that it is no longer met with west of the Mackenzie River, though formerly abundant as far as Eschscholtz Bay. Northward and eastward it extends through the Parry Islands and Grinnell Land to North Greenland, reaching on the west coast as far south as Melville Bay; and it was also met with in abundance by the German polar expedition of 1869-1870 at Sabine Island on the east coast."

Fossil remains of this animal which have been discovered, show that at one time it was also a Siberian form, and it occurred through some of the central and southern parts of Europe, Central Germany, France, and even England.

As will be observed by its technical name, science has considered it to have kinship both with the sheep and the ox kind, as indicated by its structure, while on the whole its relation to the sheep is perhaps the closer of the two. Musk-oxen exhale a strong odor, which is present at all seasons and in both sexes. It renders the flesh of the animal unsavory eating, and it is said that even the meat of the very young ones is tainted with it. I find one authority asserting, however, that animals of this species are occasionally killed where their meat is very delightful, and as good as any mutton that was ever cooked.

We are still quite ignorant of the structure of this animal, and even the organs which are responsible for this musky odor are as yet undescribed; so that any contributions to the anatomy of *Ovibos* will be gratefully welcomed by science. A very complete study has been made of its osteology, which of course is something, but let us trust that this is not to be another one of the animals on the long list of those we have allowed to become extinct under our very eyes, and to pass away, leaving a blank page in our works upon the morphology of animals.

As will be seen by a glance at the accompanying figure, the musk-ox possesses a strong pair of recurved horns, which are broad at the base and spread out upon the forehead of the animal. Here they meet in the middle line in the old males, but in the females and young an interspace occurs at this point. These horns are at first directed downward behind the eyes, then gracefully curve upward and forward, being black in color at their tips, but of a dirty white shade for the rest of their continuity. As in a buffalo, these animals have small pointed ears, which lie partly concealed by the masses of hair about the head; their hearing, scent and vision are all of the first order. They lack the naked "muffle" of the ox, the nasal area between the upper lip and nostrils being supplied with a close coat of short hair as in the sheep. The legs of the musk-ox are also covered with short hair, but for the rest its coat consists of a heavy fur, long and straight, being of a dark brown color. Over the withers this hair is more or less curly and matted, lending the appearance of "a hump," which in reality does not exist. So long is this hair at the sides that it conceals the kees, and behind, the diminutive tail of the animal is completely out of sight. Beneath this coat, in winter, we find an underlying woolly fur next the skin, but in summer this is shed, to have a new growth of it in the autumn.

Differing from oxen, the *Ovibos* has no pendulous flap of skin down the median line, from chin to chest, although the hair in this situation is long and might lead one to suspect the presence of such a feature. Again, its hoofs are quite distinct from those of cattle, they being unsymmetrical, the nail to the outer toe being rounded, while the inner one is pointed; further, the hair of the limbs is continued on under the soles of the feet. Capt. Parry found that the majority of the specimens showed an area of hair on the middle of the back of a soiled white color, which he called "the saddle."

In size, the musk-ox is not greater than one-third of a common ox, and barely weighs over 400lbs. Notwithstanding its short legs, this animal can get up a very good rate of speed when it once becomes thoroughly alarmed, and will dash up a rocky mountain side with surprising agility; and in such dangerous places it seems to be quite as much at home as the bighorn.

The animals usually congregate in small herds of some twenty or thirty in number, although Hearne says he has seen as many as a hundred together, but accompanied on such occasions by not more than three or four old males. During the rut the old rams have furious battles with each other, and it is said these sometimes end fatally.

Females carry their single lambs about nine months, when they are born during the latter part of May or the first part of the next month. At all times these animals are partial to the unwooded, rocky regions of their range, where they feed upon the scanty grass during the summer months, but are reduced to the lichens throughout the winter. Should the Esquimaux or other hunters find them in such a situation, and be cautions to keep out of their sight, at the first report of the rifle the entire bunch will huddle together, when several may be shot before they get scent, or see the source of the danger, when an old ram, much after the fashion of his domesticated kin, will take the lead, and the whole herd dash off for the nearest hillside. Old males, however, will often stand and show a good fight if they be but wounded, and charge the hunter with no small degree of courage. According to Richardson the agile Esquimaux will take advantage of this trait and stab his game to death during the several brave charges the dying animal may make upon him.

Ovibos moschatus still stands sorely in need of extensive studies from us, both upon its habits, general economy, and more especially upon its anatomy.

Ovis montana, the Bighorn; Mountain Sheep.—Those who have never enjoyed the opportunity of seeing either a museum or living specimen of the bighorn sheep of this country can gain a very good idea of the general appearance of an old ram from the excellent figure I offer with this article. As will be seen, the horns of the male animal are its most striking feature; they are simply enormous in some specimens, measuring as much as 3ft. along their posterior curvature from base to tip The apices are so far forward in some instances that they prevent the owner of the prodigious pair from cropping anything like short grass on the level ground. These extravagant cornute appendages do not attain to any such notable size either in the female or young, the former appearing almost like some animal of another species alongside of her lordly partner.

Having no resemblance whatever to the wool of a domestic sheep, the coat of the bighorn has always reminded me somewhat of the pelage in *Antilocapra*; the hair being slightly crimped and rather coarse in quality. At the roots and next the skin we discover a soft fur to be present, as was also pointed out in the antelope. To some extent completing the resemblance, we also find the rump in the bighorn to be pure white, while its general coat is of a light clay-dun color, shading into dingy white beneath.

Bighorns can be found in all suitable localities along the entire crest of the Rockies as far as the Mexican border. Northward from British America to the Alaskan division of the range, they are replaced by Dall's mountain sheep, a good variety, named and described by my friend Mr. E. W. Nelson. Ewes of this species have their lambs during the months of June and July, and generally drop from one to two, much as in the domestic sheep. Several times I have had the opportunity of seeing these little fellows alive in the mountains, and prettier little chaps were never born alive; they are very light in color.

To me, the flesh of a bighorn killed when he is fat in proper season, is far more enjoyable as a meat than that of any farm-fed animal of the tame variety I have ever tasted. It has all the good points of mutton, with just the proper amount of the game relish with it. These animals become very wild in localities where they are much hunted, but in their less frequented haunts they appear at first to have but little fear of man, and a stage driver (a truthful one), once told me that when one of the new western routes was opened up through the mountains in Wyoming, and he drove the stage, he several times passed close to a small flock of these sheep as they stood and stared at his stage from the rugged side of the cut where he passed through. On one occasion one of them was killed by a passenger with a revolver from the stage window. I believed the story fully, as I knew the man, and knew the locality, and further, was aware that many bighorns were there and they were rarely hunted.

On one occasion, several years ago, I hunted all day long for these bighorns, in the very heart of their range, the Bighorn Mountains above the head of Goose Creek. Tracks and signs were plenty, and several times I caught glimpses of small herds far, far above my head, jumping from rock to rock on the very side of the almost perpendicular precipice that reared above me.

Toward early afternoon, being tired with my severe tramping and climbing, I stretched myself out in a prone position under a great pine on the very top of one of the mountains, which was more or less timbered to its summit. The ground about was dark and crumbly, but showed no traces or other sign of game, and was wholly devoid of grass or plants. In this place I fell asleep, and must have been asleep about half an hour when I was suddenly awakened by a loud and dull rumbling noise, which sounded like a bank of clay and gravel caving in. Instantly I was on my feet with rifle in hand, but all was quite still again. In looking about me I soon found that a flock of some twenty-five or thirty sheep, yes, bighorns, had come up my path, and from the disposition of their tracks, they had formed a circle about me and talked the matter over, till perhaps something inclined me to move or turn over, when the entire party made a break obliquely down the side of the precipice which was near at hand. My feelings can be better appreciated than here described, I fairly danced I was so mad. But recovering myself in a few moments, I took up the trail, but very soon discovered the inaccessible place they had run for, and no sooner had I made the discovery, than I saw the flock, far below me, peacefully skipping from rock to boulder, and across fissures and rents, with the most unconscious ease.

All those hunters who have ever pursued the bighorn will bear me out as to my testimony to the extraordinary jumps this animal will sometimes make when he is once thoroughly alarmed. I was at one time so situated that I had an admirable view of such a scene, being some four or five hundred yards from two old rams and seven others of all sizes and sexes, springing from rock to rock on an unusually rugged cliff wall, and briskly stimulated by the rifle fire of a party of Sioux Indians running along on foot below them. It seemed to me that the sheep barely touched the several landing places as they sprang from one to another, and I would hardly dare to say how far the rocks were apart.

A good friend of mine, an English captain in an Indian regiment, described it well on one occasion. He was in this country on leave, and on a hunting tour in Wyoming, and having never seen a bighorn was very anxious to add a huge pair of their horns to his trophies. A mutual acquaintance took him into the Elkhorn Range, where they were plenty, and, acting as his guide, offered him the best opportunity to fulfil his desires in that direction. At the time I speak of they had arrived at a very choice part of the range, the guide carefully picking his way along the top of a lofty, rugged and rocky mountainside—the rocks were both great and small and all sorts of distances apart, while the general incline, it was said, was something over forty-five degrees—the captain stalked along the base, keeping in sight of his guide, who was far above him. Just the place for bighorn, and sure enough they soon met with their game. Two old rams loomed up between them, very near the guide, but out of range of the captain; the guide promptly dropped the smaller of the two, hoping to start the magnificent survivor down toward his friend. He rightly calculated, and the animal went just in that very direction on the mighty jump; but much to the guide's chagrin and surprise, the captain never raised his rifle for a shot,

AMERICAN BOVIDÆ.

Upper Figure—An old ram Bighorn (*Ovis montana*). Copied by the author from Packard after Brehm.
Middle Figure—An adult male Mountain Goat (*Mazama montana*). Drawn by the author after F. Specht.
Lower Figure—An old Musk-Ox, male (*Ovibos moschatus*). Copied by the author from Packard after Brehm.

and the sheep on seeing him, frantically broke off at right angles. The hunters were soon afterward together where the first one had fallen, and the guide promptly upbraided his follower for not having seconded his attempts, after putting him in the way of slaying as handsome a bighorn as ever graced the Rockies. "And why waste a cartridge," naïvely remarked the captain, "on such a crazy brute that I was sure would break his bloody neck, you know, long before he reached me." The guide had nothing to say to this apology.

There are in other parts of the world species of noble form, which are quite near kin to our bighorn, as, for instance, the argali (*M. argali*) of the mountains of northern Siberia and Kamtschatka, and the handsome ruffed mouflon of the Atlas Mountains of northern Africa. An argali, full grown, will weigh upward of 300lbs., and has much the same appearance as our bighorn, being fully as large an animal.

Mazama montana, the Mountain Goat.—In *Mazama* we have another genus with but one species to represent it, and this the mountain goat, an animal of which we as yet know but little, and which is still a rarity in most of our museum collections. So far as I at present know its structure, I take it to be nearly a pure caprine form, showing little or no other relation to allied species, no more, at least, than does any other true goat, it having kinship, of course, with such types as the ibexes on one hand and the sheep on another. In size it is about as large as an ordinary common goat, but a far handsomer animal, it having a fine pair of slender, ringed and jetty black horns which curve backward. The female also possesses a pair of these, but in her they are not so large nor conspicuous. *Mazama* has a coat of a fleecy kind of hair, appearing somewhat woolly on the fore parts, and of a different quality on the back and flanks; the entire pelage being of a snowy white color.

Probably next to our buffalo, these goats are now the rarest of the ungulate forms in the American fauna, a fact which inspires many a collector and hunter to pursue them in their dangerous haunts, for one must have both courage and determination to follow them over the steep, rocky fastnesses where they are found. The chase of chamois pales by comparison with the risks one must take in the regions I refer to, for where do we find such chasms, such crags, precipices and heights as are afforded by the Rockies in southern British Columbia? And it is here that alone the mountain goat can be hunted with any surety at all of securing them. The limits of its range seem to be between 40° and 65° north latitude, the animals resorting in small flocks to the loftiest and most inaccessible peaks of those parts.

"The Rocky Mountain goats," writes one traveler, "are like the enchanted beasts in German story, which lure men to destruction and then mock at their misery. The sportsman sees three or four of them half-way up a rocky mountain; he follows the track as it turns right up; the cliff rises abruptly from a narrow ledge of slanting shingle to tremendous precipices. In many places the shale is brittle, the footing is slippery, the rifle leaves only one hand free, while the ear catches the rush of dislodged stones in the abyss below. At last some poor creature is killed. With what result? He falls over some twenty or forty feet of rock, breaking his horns and tearing his skin; useless for a museum, as well as being quite uneatable." Very recently I see that Professor Bell, F.Z.S., has exhibited and passed remarks upon specimens of the tegumentary glands from the head of the Rocky Mountain goat before the Zoölogical Society of London, and I trust that those who may have the opportunity of collecting the skeletons or spirit specimens and skins of this comparatively rare species, will never allow it to slip without doing so. Almost any museum will welcome such specimens, and the anatomy of this type still requires especial attention.

This will complete what I have to say in reference to the natural history of our existing United States ungulates; the tapirs as representing the suborder *Perissodactyla* (see peccary paper) do not occur in our fauna, and will not be taken into consideration here. In closing I would lay special stress on certain points. An exhaustive account of the habits of the peccary as they exist within our own territorial limits is much to be desired, and a review of some parts of its morphology will not come amiss. With the deer much yet remains to be done—the caribous require far more careful study, and the methods of investigation so admirably introduced by Caton will bear very extensive and further research in more directions than one. Nor are we by any means fully informed even upon the structure of such common animals as these, especially a *comparative* study of their "soft parts." From an economical point of view such a species as the prong-horn will amply repay the efforts that might be easily made to bring it under domestication; and a great deal still remains requiring our investigation of its habits and anatomy. So far as I know we have no good figures of its brain and other parts. When we come to the buffalo, I for one simply consider it criminal, as well as disgraceful, if this country make not a strong effort to secure to posterity living examples of this important type, a matter that can now be managed without very undue trouble and expense. A park established in some part of the State of Kansas would make an admirable locality to breed and rear some of these animals, and if captured in Texas, they could easily be transported thither by rail.

I repeat, too, what I said in reference to further studies of the remaining genera, as *Ovibos*, *Ovis*, and *Mazama*; they all stand in need of such careful investigation.

In my next paper I trust to introduce the very extensive, though interesting order *Rodentia*, the rodents, containing many forms from widely separated geographical areas of our country.

THEY CAME THROUGH ADVERSITY.—Fredericton, N. B., June 26.—A short time since Mr. J. Edwards, proprietor of the Queen Hotel in this city, was offered by a little boy for the sum of twenty-five cents, a squirrel which he had knocked off a tree with a stone. The offer was accepted, and the poor, panting, half dead little creature was placed in a squirrel cage which happened to be at hand. Mr. Edwards is now the owner of five squirrels, the old squirrel having given birth to seven little ones, two of which died. The others, which are not longer than one's thumb nail, are in good condition and thriving well, and are most carefully nursed by the mother, who treats them in the most affectionate manner.—EDWARD JACK.

THAT BULLSNAKE.

Editor Forest and Stream:

Lately I wrote you how, on waking early one morning, I found a bullsnake some 4ft. long in bed with me; how I refused to kill him, but offered him my home to dwell with me and my bed to sleep in, if he liked. No snake was ever treated with more hospitality than this one, and if ever man deserved well of a snake it would seem that I am he. The invitation to dwell with me was accepted, and he set himself at once to work to clear my shelter of rats and mice, which he did with perfect success and in much quicker time than any cat could have done it. He did not, however, to my knowledge venture again into my bed, though he may have done so often when I was asleep and knew it not. His method was to work all night and sleep all day; sometimes sleeping in a pile of newspapers in a corner of my room, but generally under the house in a small bowl-shaped depression nearly full of dust. He had come to regard me with so little fear that he would hardly stick out his tongue when I went to look at him or show him to my visitors, nor would he show the least spite when I tickled him with a twig. This led me to believe that I could train this fellow to be as domestic as a house cat, and perhaps as playful. I regretted that I can neither fiddle nor flute, as I desired to treat him to some music, having heard that snakes are very found of it. His residence with me was desired not only to rid my shelter of rats and mice, but also because I fancied he would guard the premises against rattlesnakes, who sometimes creep in houses at night in search of prey. We know in Texas that the bullsnake and the little yellow prairie snake will attack the rattler on sight, and generally kill him by breaking his spinal column.

Now for the upshot of thus patronizing and harboring a snake; of taking a snake into one's bosom. I wrote FOREST AND STREAM of a pair of lovely wrens that had nested in an old coffee-pot which I had hung up for them on a tree near my door. In due time five baby wrens came to them, as cute and cunning little things as were ever seen. To watch their development and how tenderly their parents nurtured them, gave me great interest. Ere their eyes were open, when I would go to the nest and whistle a soft note it was funny to see how they would thrust up their little heads and stretch open their mouths to the widest extent possible, expecting something to be droped into them. When they had grown older and obtained some sense, it made me laugh to see them shrink away and hide in the nest when I approached it, now and then peeping out to see if I had gone. I really loved the little creatures.

Well, a few evenings ago, while sitting with some friends in front of my door, I heard my little birds flutter and squeak in the coffee-pot, as if in pain and terror. One flew out and fell on the ground at my feet. Hastening to the nest I saw something white in it, nearly covering the opening, which in the darkness I supposed to be an owl, but thrusting my hand in, I was thrilled with horror to find it was a snake. A lantern was quickly brought, and by the light of it I tried to drag the rascal out with a stick, but he refused to come. I then tilted the coffee-pot up and beat upon it violently. Under this treatment he slowly came out, and when about a foot of him was hanging down, being filled with grief and indignation, I struck him a violent blow with the stick, sending him several yards away into the grass, supposing him to be killed. Then examining the coffee-pot I found he had devoured all my little birds except the one which flew to my feet for protection. It made my heart sick.

And it was my bullsnake who had done this evil deed; he whom I had entreated with such kindness. This I know, because since that evening he has not been about my premises at all; though previously he could be seen any time of the day asleep either in my room or under the house. Next morning I looked for his dead body, believing one blow had killed him, but it had not. He recovered and slunk away into other quarters, carrying with him a mean conscience. Why does he not return to the place where he was treated so kindly and hospitably? I truly believe that it is because he knows that he has acted the villain, and cannot again abide the face of his benefactor. That he is full of sense his actions clearly show.

"Now the serpent was more subtle than any beast of the field which the Lord God had made."

At dawn next morning I heard the piteous lamentations of the two wrens weeping for their babes, because they were not. I arose and went to the door. They were sitting at the mouth of the coffee-pot, crying and fluttering their wings in a strange manner, as if beside themselves with grief. I then took the little one whom I had tenderly brought into my house and put him before them on the ground. They saw him immediately, and flew to him almost before he was out of my hand. Their demonstrations of joy over him were touching, but what affected me most was the behavior of the little mother. Because I had brought her one of her babes she seemed to think I had them all, and for half a day she was constantly coming into my house, hopping and chirping around as if looking for them. The little one that was left to them is now quite grown, but they do not leave him. They sing and flit around my shelter all day, often coming in.

And I have changed my views regarding the bullsnake. I wish no more to flute or to fiddle with him or any of his sort, or to call him pet names. They kill rattlesnakes and utterly root out rats and mice, and for these good points they should be commended. But also they are terrible destroyers of little innocents in their nests, and of all eggs they can find. They climb trees like a squirrel, and glide from branch to branch with ease and rapidity. The poor birds and squirrels can find no place where their little ones will be safe from them. Undoubtedly they eat hundreds of thousands of quail's eggs every year, and it is owing to them that these birds are not abundant in western Texas and that the grasshopper flourishes. If eggs escape, they pursue the little chicks with fleet and silent tread, playing havoc as they go. I veritably believe that they destroy 75 per cent. of the young birds of Texas every year, either in the eggs or as fledglings in the nest. Hence it is no wonder that we have such a host of insects injurious to the farm and garden. When the bullsnake does so much harm, we can get along without the good that he does. My judgment is that he should be killed.

Indeed, are there any snakes whom it is not better to kill than to save? Are they not all workers of more evil than of good? Is not the whole race of them a nuisance and a scourge? Verily, I believe it. I was inclined to except the little prairie snake of Texas, which kills rattlesnakes and does not climb trees, but he may be, and doubtless is, a terror to such birds as nest on the ground and in low brush. The following passage from the Good Book is hard to get round:

"And the Lord God said unto the serpent, 'Because thou hast done this, thou art cursed above all cattle, and above every beast of the field; upon thy belly shalt thou go, and dust shalt thou eat all the days of thy life. And I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head and thou shalt bruise his heel." N. A. T.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. The Still-Hunter. By T. S. Van Dyke. Price $2.

GAME SEASONS.

SOME of the statutes prescribe a *close season* when game may not be killed; others name an *open season* when game may be killed. In the following abstract the style of each law has been followed.

MAINE.

Forbidden to kill moose, deer, caribou between the first days of January and October; woodduck, dusky duck, black duck, other sea ducks, between the first days of May and September; ruffed grouse, partridge, woodcock, between first days of December and September following; quail, pinnated grouse, between first days of January and September; plover, between first days of May and August.

NEW YORK.

It is forbidden to kill deer save only from Aug. 15 to Nov. 1; use of dogs forbidden except from Sept. 1 to Oct. 20 (in Suffolk and Queens counties except during first ten days of October exclusive of Sundays); use of dogs forbidden at all times in St. Lawrence and Franklin counties. Forbidden to kill wild duck, goose, brant between May 1 and Sept. 1 (in Long Island waters between May 1 and Oct. 1; in Chautauqua Lake between Feb. 1 and Sept. 1.); quail between Jan. 1 and Nov. 1 (in Niagara county before 1889; in Columbia and Westchester counties except in month of Nov.); hare, rabbit between Feb. 1 and Nov. 1; woodcock between Jan. 1 and Aug. 1 (in Oneida, Delaware, Rockland, Dutchess counties, between Jan. 1 and Sept. 1; in Columbia county except in months of Sept., Oct. and Nov.); ruffed grouse, partridge, spruce grouse, Canada partridge, between Jan. 1 and Sept. 1 (in Queens and Suffolk counties between Jan. 1 and Nov. 1; in Niagara county before 1889, in Columbia county except in months of September, October and November; in Westchester county except in November; black or gray squirrel between Feb. 1 and Aug. 1; (in Dutches county between Jan. 1 and Sept. 1); ruffed grouse, partridge, between Jan. 1 and Sept. 1; robin, lark, starling at any time.

DEER HUNTING AT MURRELL'S POINT.

ABOUT the latter part of November I went down to the hospitable mansion of Mr. Jack Crichton, who lives opposite Mr. John Murrell, Jr., on Red River in Red River parish. It was Friday night when I arrived at Mr. Murrell's. There we were joined by him, and his brother-in-law, Mr. John Warren. The eldest son of Mr. Crichton was also one of our number for a deer chase on Bayon Pierre, our pack of hounds consisting of four hounds belonging to Murrell, and two to Crichton. They were splendid runners, fleet and untiring. We made several drives, starting a number of deer, all of which crossed to the big lakes in that section of the country, without any one getting a shot, except Murrell, who drove and while in thick brush got a flying shot at an immense buck, rather too far to kill. He missed the deer, which soon ran across Pierre Lake, and the hounds there lost the scent.

On Monday we went duck hunting. Only one duck was killed, and that a black duck, which I shot under embarrassing circumstances. I was wading in deep water, covered with high saw grass, when I heard a whirr in the tops of the thick cypress trees to my left. Quickly throwing up my gun, I made a snap shot at a single duck, and had the pleasure to see him go down with a thud into the brush on dry land. The shot was so quick and so difficult to make that I was really delighted.

A number of squirrels were killed on our return home by Murrell and Warren and Crichton's son. The next day we took another deer drive, going to the same places. As we were riding along the path by the side of Grassy Lake we found a horn of immense size, that had been dropped that morning by a buck, which we knew was dropped then, as it was not there as we passed along on the Saturday before; and the hounds struck the trail of the deer going into the lake. Murrell blew off the hounds, since the deer had gone out of the drive we intended to make. This threw us into a drive beyond it. As Murrell placed the standers we found the scrape of a buck that was so fresh that it was evident the buck had made it that morning. Here he placed Warren and myself a few hundred yards above him, while he took a stand about the same distance bevond mine.

The drive was made by a little negro, some 12 years old, who knows all the drives, and always accompanies Mr. Murrell. A freedman also assisted in the drive. This man is a remarkable instance of what an industrious negro can do. He is a tenant on the place, made and gathered six and a half bales of cotton this season, besides carrying the mail two days of every week at a salary of $20 per month from the Government. Besides, he built this season two cotton houses and fenced in his land. This done by himself, without any help. This freedman often hunts with Mr. Murrell, and will not hunt with other negroes on the place.

I had barely time to hitch my pony and take my stand before I heard one gun at Warren's stand. Soon I heard the hounds in full cry, going out of the drive below any stands. The drivers began blowing their horns for getting back the dogs, and an hour passed before a hound returned. This was a fine bitch, the mother of all the rest of the hounds. I heard Warren blow his horn for the drivers to come to him, and soon I heard the bitch in full cry at his stand, and going into Pierre Lake. In about half an hour I heard three shots in that direction. Mounting my pony, I rode to the place as near as I guessed I heard the shooting, and there I found the horse tied by Murrell. In a few minutes he came walking back, and told me that John Warren had broken the hindleg of

a big buck, which the bitch followed and bayed in the lake, and John and the freedman had waded in and shot him. A quarter of an hour elapsed before I saw John and the freedman coming back with an immense buck swung to a pole, with each end on their shoulders. They were very tired, as it was deep wading through the sticky mud and water. In the meantime we had kindled a fire, and I was patiently smoking, awaiting their return.

"Come, tell us all about it," I said to John. "Well, Colonel, soon after I took my stand I saw the buck creeping out where the scrape was. He seemed very uneasy, as he smelt where we went along, and he stopped by the side of a big cottonwood tree, with his head and shoulders behind it. I knew it was my only chance for a shot, so I fired at his hams. He was about eighty yards from me. At the crack of the gun he ran off, with the tree between us, and when he crossed to go into the lake I saw he had a broken leg. I waited until Andrew came with Music; we put her on the track, and he and I followed on foot as fast as we could, as it was impossible to ride through the mud and water. We heard Music baying for some time, and when we got near the deep part of the lake we saw her coming back. Whooping her back she swam into the water, and we saw her go up to the buck that was lying down. He rose and they had a terrific fight. Andrew and I waded up to our waists, and the first chance we could get to shoot without killing the bitch we both fired. He did not fall but started to run. This gave me a good opportunity to shoot, and I broke his neck with my second barrel." We took out the entrails of the deer and hung him to a tree, and kindled a fire to keep away the buzzards that were hovering over us in large numbers, so soon attracted by the scent of blood. A favorite part of a deer to me is the melt and heart. These I hung on a bush near by. But when we returned at night the buzzards had eaten them, though they had not touched the buck, being kept away by the fire and smoke.

In the meantime all the hounds had returned and gotten a good bait of the entrails. Andrew reported seeing five deer before the hounds as they ran back.

This portion of the country is most favorably situated for deer driving. A long narrow ridge, not over 200yds. wide, was for five miles in the form of a half moon. On one side it is bounded by a deep bayou, impassable except at three points, where the deer cross often, and run into an immense long cypress brake, where the dogs either lose them or they run across to Bayou River, and there they are safe. This ridge is covered with thick brush, vines and palmettoes, and immense trees of all varieties. On the other side is an open overflow ground, about 100yds. wide, and then begins the deep grassy lake, with a flat of very thick growth of tight-eye bushes between the overflow and open water of the lake. The stands are placed next to the ridge, and as it is so long it is divided into several drives. At the head of the lake is a wide brushy tract of land, which is bounded by small lakes, and beyond them a narrow bayou called Watson, and which can be crossed nowhere by horses or cattle, but deer can cross it.

Our next drive was in this part of the country. Along the overflow was a small slough filled with water, at each end of the slough is a stand. John Warren took the lower and myself the upper, while John Murrell went to Watson's Bayou. It was not a quarter of an hour before I heard the hounds in full cry coming as I thought, to my stand. Then two heavy guns broke the stillness, down where John stood, and the hounds came booming by me, too far in the brush for me to see them. They ran to where Murrell's horn was tied, and suddenly turned as if coming to me. Then, when in almost shooting distance, veered and crossed Watson's Bayou, and then ceased crying.

I was standing with my back to a large ash tree, looking in the direction the dogs had gone, when I suddenly heard something going rip, rip, rip, behind me. Turning partly around, I saw a yearling deer almost flying. Whirling entirely around the big tree, and bringing my hammerless gun to my shoulder, I made the quickest shot I ever made at a deer in my life; I knew I had the gun on it as I fired, but I did not see it an instant after the shot; the ground was open, as regards trees and brush, but covered with palmettoes, about three feet high. I could discover no sign of blood nor any tracks, and I began to think I had not seen a deer, it was a mystery I could not unravel.

John Warren came running up and reported he had shot both barrels at a big doe and had badly wounded her. She had a yearling with her when he shot and they were both going straight to my stand, but his shooting had turned them. He was so confident the dogs would catch the doe that he left his stand and came running in the direction the dogs took when the doe turned back, and he had met the little yearling and turned it to me. It was too far for him to shoot. I told him what I did and we both searched for blood, but could find none. I told him that I heard the dogs stop after crossing Watson's Bayou. He said he would go on there and endeavor to meet up with John Warren, and that I had better remain there until Andrew came out of the drive and could bring me a dog to put on the track of my deer. As I have not missed killing every deer I had shot at for the last eighteen times I concluded to remain until a dog could be got to find my deer, since I felt confident of having killed it. The driver came out to me and I directed him to get a hound if possible and return with it to me. Remaining there a full hour I heard a hound howling not far from me. I hollowed and Music came up. Putting her on the track where I first saw the deer, she would not open, but when she got to the place where I shot she gave full cry and bounded forward in the opposite direction from what I thought the deer had taken. Opening at every leap, she stopped in the palmettoes about eighty yards from me. On going up I found my beautiful little deer stretched on its side dead and stiff, fallen dead without a struggle. To say I was glad was putting it mildly. Having no horn, I could do nothing but hollow in the most lusty manner, to get some one to come to my assistance. After a long time John Murrell rode up, and tying the deer to his horse's tail, he dragged it to where Warren and the driver were waiting for the dogs, in the endeavor to find the wounded doe. John told me it ran up to his horse where it was tied, but he was too far to shoot, and then it turned back in the direction of my stand. It was badly crippled and he heard the dogs catch it, but he could not locate the direction. He thought he could put Music again on the trail and follow it to where it was caught. This was attempted, but it became too dark to follow her, and he was forced to return back home. It was nearly 9 o'clock at night when we got back to our buck, and full 11 o'clock when we arrived at his house, tired and hungry. Did I not do justice to the fine supper that was awaiting us? Only a hunter can appreciate it who has gone through such a day's hunt without a mouthful to eat from daylight to nearly midnight.

GEORGE D. ALEXANDER.

WITH THE RUFFED GROUSE.

OVER Long Mountain was famous ground for birds, and with the lovely weather it was a shame to stay round the house. M. hitched up Buckskin, and off we went for a tramp. Ah! those lovely Connecticut hills. From the top of one I could see away over to the Catskills, and long I looked. The country around here is as well watered as Virginia; and the innumerable streams that run down into the Housatonic furnish trouting in summer, and at the time I speak of they gave fair shooting a little later on. Over the hills and far away, we pulled up by the Aspetuc, put up the horse, and got out guns and dogs, all ready for the fray. I don't imagine prettier woodcock ground could be found than what we entered. Ah! how many there be who can sympathize with me when I vainly try to describe the disappointment felt at getting on to such ground and finding no game. Dogs working beautifully, ground apparently all bored up, you tread as lightly as on a Brussels carpet, finger scarcely touching trigger, no word spoken, expectant, eager, disappointed. So we traversed the ground and never started a bird.

"You go round this next swale on one side, Captain, I'll take the other." Dash stops in an instant. A cluck, a step, and out jump two woodcock right in front of me. Never touched either one of 'em. However, I marked them down. Down the valley we go. Look out old man. Up goes one my way, and he don't travel far this time. M. picks up the other one. Careful, there may be more. A little further and Dash almost says as he cocks his eye toward me, "Don't miss." Out comes a famous fellow; snap goes the hammer; no cap on. I soon remedy that, and follow him up. There he goes; but this time so does the gun. What more joyful sight than to see your bird tumble head over heeels, clean killed, not massacred. I pick him up and smooth down his russet feathers and let Dash nose him, and on we go.

So we swung down through the alders; and I made some unaccountable misses, and an occasional good shot, until we got out into the open, then we sat down and took account of stock. M. is a little ahead; I tell M. not to shoot so much at his dog, and he tells me, "When you hie on yours don't wave your hand all around creation; point to him where you want him to go;" and I believe he is right. Whirr; out flies a plump partridge right under our noses. Oh! Dash, Dash, how could you, and our guns are on the grass by our sides; and we not ready. Oh dear what a mess! We jump up and follow him up the hillside; half way up along the mountain runs a wood road; M. goes down that while I with Dash at heel circle round, and keep a bright look out; the dog makes game; and suddenly, with a whirr, out goes the royal bird. I cover him, and pull in an instant, and a puff of feathers shows me he's hit, a snap shot. I follow him up; and at the same moment, off go both barrels of M.'s popgun; and I hear him shouting, and going on like a crazy man. Perhaps it was a rattlesnake; there are some few there still left; more likely a copperhead; still more likely he fired and missed. Nothing of the kind. I overhaul him; and, by Jove, there are three fine partridges! "How's that for high?" says my gleeful companion, and he explains to me, "Two birds dashed out and down the road; I made a double shot; never saw the third fellow at all. Duke went out and brought in one bird, then went back and brought in No. 2, then started off and came in with No. 3. Beats the Jews. What did you shoot, Captain?" I was so much taken up with M.'s lucky streak that I almost forgot about my bird; so I go back and tell my dog to find dead bird. "Careful, sir; close find; ha, ha; good dog;" and Dash brings him up to me. Later on, with a dog of mine, still more famous than old Duke, from whom I named him, hunting with my old friend Charley I saw three partridges killed with two shots, but these two occasions are the only ones I have witnessed in many years shooting. Not long afterward, while I was recounting M.'s exploit to one of these "that-reminds-me" fellows, he said, "I was up to Mud Pond not long ago; and darn me if I didn't kill five different kinds of game with one shot; sure's your born. I saw a shykepoke and crawled up to him, and let sliver, and knocked him over, and a teeter snipe, and a robin, and a ——." I didn't wait to hear the rest. That man to this day thinks I don't believe a word he says, and he's right.

We tramped on, after stowing away our game and made up our minds we had shot away our luck, for though we heard a bird or two get up, we couldn't get sight of one. Back we go to Hill's mills and stow our birds away, and drive off.

Up on top of that mountain, my guide says, there is a large swamp or table land, and wood roads all around; a mighty likely place for partridges; we'll go up and try it. We stop at a farmhouse and tie; "Come in, boys, and have some cider." We start for the new grounds, and had not been in very long before we heard some one shooting down on the swamp. We push on, and Duke roads a bird, puts him up, and M. fetches him. I break the wing of another, and Dash comes up to an old stone wall, and comes to a point and whimpers, and I feel in a hole in the wall, and get hold of the bird and pull him out, bite his neck and stow him away. There's another gun; I see a partridge come whizzing by and, I thought, dropping down by M., who is some fifty yards away. Presently comes an elderly man down the wood road on a bog trot, with an old double-nosed liver pointer waddling along ahead of him, and hails me with "Say, mister, see anything of a partridge round here?" "Yes," "Where is he?" "In my game bag, I just killed one." "Mine must have come right down here, there's his course." "Well, I'll help you look for him;" and we look around, and walk down toward my companion. The old fellow puts the same question to him. "No, I hain't seen no birds; Won't yer old dog find him?" "I don't know." "Well, if he won't, better shoot him. I wouldn't give shucks for a dog that won't retrieve." This summary method don't meet the old man's approval, and he hunts around in vain, muttering "He must have dropped right about here." M. says "Come along, Captain, we've got something else to do, besides hunting for the man's birds." There was no disputing this, so off we go, and the old fellow, with the liver-colored dog, matching his shooting jacket, disappears round a turn in the road. "Here, Captain, put that in your pocket," and M. pulls a noble bird out of his coat pocket. "Left my game bag down in the wagon." "I was dreadfully afraid the bird would tumble out." "Why that's regular highway robbery," I reply. "Serves him right, just look here; see what he's shooting these birds with! Bad as a trap!" M. shows me the top of the bird's head, as smooth as a billiard ball; we pick out single B shot. That settles it. I pop the bird in along with the rest. There goes a hawk darting by in pursuit of a bird, and we walk down, keeping both dogs close in. This time old Duke gets in his work, and out rings my friend's horse pistol, and he scores another bird. Look out for the man with one gun. We get down to where the snuff-colored, single B man must have struck in, and I am carrying all the birds, and have as many as I can tote. We agree we have done well, and enough is as good as a feast; so we call in our dogs and start for the house. We have a good bunch of game, some eight partridges and half a dozen woodcock. Our worthy host draws us another pitcher of cider, and off we rattle for home.

As I sit here in my den years after and try to dot down some of these old time hunts, I can close my eyes and conjure up swamp and birds, and dogs and gun. For a moment, as it were, I fancy I see them all; and then they fade away into the past, and are "the dream of things that were."

CAPTAIN CLAYTON.

A BEWITCHED GUN.

WHILE the relative merits of the old muzzleloaders and the new breechloaders are being discussed it may not be out of place to relate a practical joke that is reported as having been perpetrated upon an old-fashioned advocate of the old style guns. The upholder of the old style is an inveterate joker. He spares not the young nor the modest, the aged nor the pious. The joker himself, however, is neither young, modest nor pious, but he is very superstitious. He has been long in the West and has some of the ideas of the Indian about the supernatural and invisible world. He was a stage driver on the wild plains when they were peopled with phantom shapes as the seas are for the superstitious sailor.

Old Sam, as he is called, is a firm believer in witches and ghosts. He camped with P. T. and Harry one night in the midst of an old forest when the firelight flickered in fanciful shapes and shadows danced and chased about. To add to the visions of Sam's unbridled imagination Harry related a thrilling experience with a nocturnal visitor that never identified itself as a thing of flesh and blood. Sam was restless all night. He muttered when half asleep something about shrouds without heads, heads without bodies, and ghosts and witches. It was noticed that he had loaded his gun that night and placed it within reach.

Morning came and Sam seemed happy that he was still in the world of flesh, and with his old relish for whisky and good things to eat. Nor had he lost his propensity for cruel jokes. He slipped a young and hairless mouse which he had secured by some means into each cup of coffee Harry and P. T. had set aside to cool. The scalded vermin settled to the bottom and were not discovered till the good beverage was drained to the dregs. To the victims of the joke these creatures presented a disgusting appearance, and they were affected even worse than Sam had been by the ghost stories amid the wild scenes on the stilly night. The joker laughed heartily.

It was now Sam's duty to attend the horses. He was half an hour away. Harry and P. T. engaged themselves on Sam's old muzzleloader which he had so carefully loaded over night. It was their turn to perpetrate a joke. They put in a charge of powder and then a wadding, punk or tinder gathered from one of the ancient forest trees of fir. Another charge of powder and another wadding of tinder. They repeated the operation till the gun was nearly full of powder and tinder in alternate layers. When Sam returned the gun was just where he had left it as regards position. They were ready to start on a tramp. Harry in handing Sam the gun dropped the stump of a cigar in the muzzle.

They were hurrying toward the lake where the ducks were quacking. Bang! went Sam's gun. Sam turned white, as one will at the accidental discharge of a fire arm. He took it from his shoulder and looked at the cap. Bang it went again. He held it at arm's length and almost screamed something about both barrels. Then he said, "I guess the old thing's safe now." Bang she went again. "The devil!" said Sam, while his pale face was a panorama of horrors. He held the smoking gun high above his head and called on all the saints for help. Bang went the gun again. It was too much for Sam. "I dreamed the witches had my gun last night," he said, and threw it from him on the ground. Another report rang out from the brush pile in a few seconds. Sam started for camp on a run. The gun gave its voluntary reports a few times more and Sam still believes it is shooting away on that brush pile. He is afraid of guns now and gets away as fast as possible when he sees one.

BOISE CITY, Idaho. ROXEY NEWTON.

A NEW GUN FACTORY.—It is now definitely settled that the much-talked-of gun factory is to be located in Northampton, Mayor Hill's energy and capital having brought about this desirable result. A corporation has been organized with a capital of $50,000, and Geo. E. Forbes, of North Brookfield, is the president, and W. H. Whitney, inventor of the gun to be manufactured, the treasurer. It is to be known as the Whitney Safety Arms Company. There are at present but four stockholders in the concern, Mayor Hill being the only Northampton man. The location of the factory is not yet decided, but W. H. Whitney, the treasurer, was in town yesterday looking up a house, and as soon as possible arrangements will be matured for making the guns on a small scale.—*Springfield Republican.*

WHERE ARE THE WILD PIGEONS?—Two years ago they were near Muscogee, Indian Territory. The only nesting place known at the time was in that vicinity.—CHARLES HALLOCK.

GAME IN THE WATER.

OUR Fredericton (N. B.) correspondent, Mr. Edward Jack, writes: "About the 16th of June a moose crossed the Tobique River 54 miles from its junction with the St. John at Riley Brook settlement. One of the settlers named Gaunce, seeing the animal coming down the river bank, met him as he was coming up out of the water and shot him. The animal was not a large one."

The New York *Herald* of June 24 published a dispatch from Lake George, New York, dated June 23, which said: "A curious incident, which came near being attended by serious results, occurred on the lake a few days ago. While out in a rowboat Mr. Thomas C. Adams, a guest of the Mohican, and a companion named Franks noticed a fine buck deer swimming in the water. Mr. Adams, who happened to have a gun in the boat, fired on the animal, wounding it. The moment the shot had been fired the buck, which probably found itself unable to reach shore, turned and made straight for the boat, which it upset, throwing the two men into the water. Fortunately another boat was close at hand and they were promptly rescued. The deer, after a few convulsive struggles, turned over on its side, dead. It was towed to the shore and found to be a remarkably fine animal." If this is true Mr. Thomas C. Adams ought to be chased around by the constable until he is caught and punished for his misdemeanor by fine or by imprisonment in jail or by both, as the law directs.

According to the Bangor *Commercial* of June 22, James W. Ham, who lives on the shore of Moosehead Lake, Me., and his hired man pursued a doe swimming in the lake; one caught it by the tail while the other made fast the painter, and the deer was taken alive and incarcerated in a pen along with a buck which had been caught in the winter.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

MAINE'S TROUT SUPPLY.

WHEN reading the reports of Maine lake fishing one cannot help wondering where so many trout come from, or rather how the supply is kept good. Meeting Fish Commissioner Henry O. Stanley the other day, this question of the wonderful supply in the best Maine waters came up. Mr. Stanley agreed with me that the number of pounds of trout and landlocked salmon taken from Maine waters this year is greater than ever, especially of the latter. Mr. Stanley is of the opinion that if the trout and salmon can be properly protected while on their spawning beds in autumn, and freed from fishing through the ice it would be next to impossible to generally clear out any well stocked waters of these valuable game and food fish. One condition he is very earnest about and that is that some of the small streams running into the larger lakes and rivers shall be closed from all fishing; for the good reason that these streams are the nurseries of the trout. There they come into existence, and feed upon insects, etc., till they reach sufficient size to take care of themselves in the waters of the lake below, when they descend and commence to feed upon the minnows found in such abundance in all the best trout waters of Maine. Soon the monster trout and salmon are developed, which we hear so much about. These giant trout return regularly to the waters of the stream to breed, and it is here that they should absolutely be protected. It is a lamentable fact that the poaching element is not yet all extinct, and that in many sections of that State annual resort is had to these streams for a supply of trout, taken from off the spawning beds. But this class of fishing is less practiced than formerly, for the good reason that the law frowns upon it, and hence the wonderful increase in the supply of trout mentioned above. It is a fact that a good deal of wealth lies in these trout nurseries, and the next Legislature of Maine should see to it that they are yet more thoroughly protected.

Mr. Stanley's idea of a rapid growth on trout in these remarkably well fed waters of Maine is very pleasing talk for the lovers of the line and rod to listen to, and he has within a few years come naturally across incontestable evidence of the truth of his position. It comes in the case of a small pond not far from the celebrated Weld Pond, stocked with landlocked salmon only eight or ten years ago. It is not possible that salmon could ever have got into that pond by any other way than those put in by the Commission, and nobody ever heard of such a thing as a salmon there till after they were put there by the Commission. Now the wonder is that salmon have been taken there this spring weighing five and six pounds. Mr. Stanley is of the opinion that a growth of four or five pounds is reached in five or six years, either on the brook trout or the landlocked salmon, provided the feed is abundant. This food is minnows, and minnows there must be in abundance, either of the smelt or the dace or chub varieties. The old idea that it takes a great many years to grow a large trout or salmon is exploded. Mr. Stanley is hopeful of good legislation in his State this winter. The Republican candidate for governor is very friendly to the cause of fish and game protection, and it is hoped and believed that a Legislature will be chosen that will grant what Maine needs so much; viz., sufficient appropriations, and some slight changes in the fish and game protective laws. The Commission is a good deal encouraged at this from the fact of a wholesome growth of public sentiment in the right direction.

The vacationist is about to take the field, and we are soon to see his effusions concerning "speckled beauties," and "good hotel accommodations" in the daily and weekly papers. Indeed he has already begun his writings. He describes everything with sufficient minuteness to satisfy even a criminal trial. One of them, in a two-column article in a Sunday paper the other day, even told his readers—if he had any—just how he proceeded to put rod and line together; how he ran the line along through every ring on the rod; how he soaked his old wooden rod in the water, to make it pliable and to keep it from coming apart at the joints. Alas for the nicely varnished split bamboo! He told us all this with the confidence of an instructor in the art of angling. Even the method of impaling the worm on the hook was given to exactness, and then he tells how he made a cast on the waters of the stream, "up in New Hampshire," the gates of the mill having been closed the day before, for the especial benefit of this wise fisherman. Wouldn't some of the sportsmen who read the FOREST AND STREAM have given more to have had those gates opened just before? All the same to the man who thinks he knows it all. But when he professes to get up very early on the morning of June 10; to take a lantern and look over the contents of the wagon that is to convey him to his favorite pool; and for the driver to look over the last straps of the harness with the lantern, he makes it appear that it was yet dark. But the start is quickly made, and the watch is consulted and it is just quarter past five. What does this writer ask of the credulity of the man who has really been a-fishing this spring and crawled out of his blankets at 3:30, many a morning early in June, because it was already daylight? Perhaps the mornings are late and dark up in New Hampshire. SPECIAL.

JOCK'S LAKE.

LITTLE FALLS, N. Y., June 10.—I have just returned from a few days' outing in a part of the Adirondacks never before visited by me; and in spite of a very large proportion of bad weather, including two rainy days, several thunder storms with hail of the proverbial hen's egg dimensions, two nights of freezing weather, much high wind, making a sea which prevented fishing, with intervals of perfect calm, with bright sunshine, during which the surface of the lake was like a vast mirror, and the water so clear and transparent that no respectable trout could be induced to come within flyshot of the boat, I had a very good time, enjoying myself very much, and appreciated to the utmost the many resources which, through the enterprise of Mr. A. D. Barber, Jr., proprietor of the Forest Lodge at Jock's Lake, are furnished to enable fishermen and hunters to enjoy to the utmost the pleasures of camping-out life, at the least possible outlay of trouble, work and cash. A week in the woods, if one had to build camps and pack luggage and the necessary heavy load of provisions, cooking gear and bedding, requires fair fishing at the least to be enjoyed. I and those with me were saved all of this trouble and enjoyed more, from their variety, the few hours which with any prospect of success, could be credited to fishing.

Jock's Lake is the largest of a group of seven or eight, which lie within a radius of five or six miles from the Forest Lodge as a center, and all are in the southeast part of Herkimer county; these are, beginning with the westernmost and proceeding nearly east, North, South, Jock's, Jones, Deer, Otter and Goose, with Little Salmon and Trout lakes about two miles south of the line. From the western side of North to the eastern side of Goose the distance is 21 miles, made in six carries of 2, 1½, 3, ½, 1½ and 1 mile each, the remainder by water. There are well-chopped trails between each pair of lakes. All the lakes are well stocked with speckled trout, and several of them with salmon trout. All of them are well provided by Mr. Barber with comfortable camps, outfitted with rubber and woollen blankets, cooking utensils, etc., and on every lake there are good boats, some of the comfortable flat-bottomed description, from which the most inexperienced angler can fish with safety, shift around and stand up in, as he will; others are neat little 60-pound Rushtons, a pleasure to row in, not a hard task to carry.

Within a day's distance are the Bisby, Woodhull, West Canada and Wilmurt lakes, and two days' tramp will reach the Fulton Chain or Piseco group; three the Raquette, Blue Mountain and Moose Lake system.

On Jock's Lake there has developed a very comfortable well-kept hotel, the Forest Lodge. Mr. Barber, a true lover of the woods, selected, some six years ago, a charming point on this lake, and built himself a bark shanty, and his wife, equally if not more than he in love with woods life, joined him, and the next year they occupied a rough log cabin, using the shanty for an outhouse; the next a small frame building and turned the cabin into an annex; the next a dozen or more rooms were added and the little frame house became the dining-room of the Lodge, and this year a great building of hewn logs, with quarters for perhaps fifty or sixty, it is hoped will be ready July 1 to receive guests. So great was the need of a public house in this vicinity that before entering into the business the Barbers were, except for the important element of receiving compensation, to all intents innkeepers, as in one year they gave shelter and entertainment to over eight hundred people.

There are three routes into the lakes, two of which are via the West Canada Creek, into which the outlets of Jock's and lakes to the eastward empty, the other via the Black River into North Lake, which, as well as South, is a feeder to the Black River Canal, their outlets governed by dams with gates. Coming from any point on the New York Central R. R. the way is by railroad from Herkimer to Poland, thence sixteen miles by wagon to Griffin Evans's, on West Canada Creek, thence thirteen miles of hard buckboarding or tramping, as one may prefer. I believe the general vote of those who go in that way is divided; those who ride wish they had walked, and *vice versa*. This tramp or ride lands you on the north shore of the lake, and there will be found a boat with which you can cross, two miles, to Barber's.

Starting from Utica at 7:40 A. M. by the Black River Railroad you reach Prospect at 8:30. You can leave there at once, if previous arrangements have been made with the livery man, who takes parties in, Mr. Congdon, or you can go by stage, according to the route you may select. If by stage you start immediately and reach Griff Evans's about 2 P. M.; thence in, the route is that already described. The stage fare is $1.50 to Evans's; I believe he charges $8 for a buckboard and team, whether one or four are in the party.

The route which I selected was via North Lake. From Prospect to the Gate House is twenty-four miles, of which two-thirds are on a good trotting road, the remainder wood road, rough in places. The time taken is five to six hours, the cost to one person with buggy, $4. for a team $7 to $8. The Gate House is at the head of North Lake, and from there the distance into Barber's is ten miles, viz.: 2m. trail to South Lake, 2m. row to foot, 1¼m. over to Jock's, 4½m. to foot at Barber's. If you can row and pack your own traps the gate keeper will furnish you with the keys to get Barber's boats, you may be able to pick up a man to go with you, or you can send over to Barber's for a guide, or you can go over light and send back for your luggage, or you can wait for a guide bringing up an outward bound party, for as long as detained you can get board and lodging at the Gate House, terms $2 per day. A guide sent especially for you costs $2; if you take a return tripper, but $1. By thus connecting, the cost of getting in and out is reduced to a minimum. I had seats each way in wagons and boats, which had been used by other parties at total cost of $4.50 from and to Prospect.

A brief abstract from my diary will finish the itinerary:

June 1.—Left Prospect 9 A. M., hired team, reached State House at 3 P. M. Key of boat on South Lake not to be found; staid all night.

June 2.—Up early, caught a half-pounder under the flume on bait, having tried flies without success. Worked half a mile of W. Canada Creek; caught half a dozen small trout. 11 A. M., guide Giles Beecraft reported with party from Barber's, for whom my team was sent in. Started for Barber's 1 P. M. Strong wind, making rough sea; fortunately, for it was very cold, wind dead aft; and under backs, packs and our blades ran the two miles of South Lake in eighteen minutes, and four and a half of Jock's in thirty-two; the little 60lb. Rushton ran like a deer. Arrived chilled through, a hot stove and good supper, and early to a good bed in a cosy bedroom, brought me up. Thermometer on arrival 40°. Both trails easy and in good order.

June 3.—About 10 A. M. with two others started for Otter Lake; reached Jones's by good trail in 1h. 10m.; from Jones's to Deer in 12m., and from Deer to Otter two miles, in 48m., all good trails. Before we had finished dinner rain began, fished in it a couple of hours, taking about twenty, averaging ¼lb., on fly.

June 4.—Cold morning and foggy on lake, trout rising splendidly to the fly, took eleven in one hour, when the breakfast summon came, largest ½lb. The other rods with bait during evening and morning did rather better than I. After breakfast, impatient to try Jones's Lake, which had great repute for large fish, returned to it; rest of my party went out. I found a party of three from Herkimer and with them fished Jones's Lake several times thoroughly during the day. Result three trout, one of ½lb., two of about 3oz. each. Weather grew very cold with strong north wind; the guides went to Deer Lake, and returned in three or four hours with about 10lbs. of nice trout.

June 5.—Although ice made in our bucket outside of camp, we had not known that it was so cold, for we had found a remarkably comfortable camp, with lots of blankets. All of us went to Deer Lake and had a good days' fishing, although the wind was so strong and gusty that our boats unprovided with stern anchors circled constantly and scared the fish.

The flies of all descriptions were faithfully tried, but not a single rise did we get to them. We took about 80 trout, averaging a good ¼lb., and returned early to Jones's Lake, the wind having gone down and apparently the chance of fishing it better. Our evening's fishing on it was blank.

June 6.—Another cold night, with ice (the temperature at Barber's we afterward learned was 26°), but we passed it very comfortably. As it bade fair to be a good day, two of the party remained to fish the lake. I with a guide and companion started across the mountain for some rift fishing in the West Canada Creek, the distance is said to be two miles; it seemed much longer, for there is no trail, and our route led straight away up a very steep hill and down into a quagmire filled with windfalls. We were one hour and forty minutes reaching the creek, on which we spent the day, moving about four miles on the still water, and fishing a mile of rifts with indifferent success. I took six or eight with fly on the rifts, none in the still water, then I went over the same ground with bait and took twice as many and larger.

The three miles trail back to Barber's is easy, and we made it in seventy minutes; found a very high wind on the lake and no boats out. About sunset it moderated a bit and I pulled to a rocky point; after trying artificial bait unsuccessfully put on a big dew worm, and it was hardly in the water before I had hold of a trout, which gave me business for quarter of an hour; he scaled a little over two pounds.

Passing the shanty of a camping party from Herkimer I was shown by one of them a much larger trout than mine, taken the day before. It was a good three-pounder, and it with about sixty pounds of smaller ones was snugly stowed with moss and filled a butter tub. Congratulating the old fellow on his extraordinarily good luck for five days' fishing, he in a significant way said, "Yes, and this is not the half of them."

June 7.—A calm, bright, warm day; lay around, resting up, reading up and getting posted up. Amused myself playing with the hounds, of which a fine pack of fourteen, friendly fellows, are chained to their commodious kennels in rear of house, each and all eager for a little petting. Among them are several with records and several of mixed breed. One which is largely bloodhound is among the best tempered until a deer is killed, then handle with care is the motto. Another, judging by appearance, has far more shephred than hound blood, yet through his superior intelligence is considered one of the best.

The pet bear also furnished his share of amusement; but best of all were the fishing cats; the pair are large, handsome and spotted. I don't know their sex, but they always go in couples. One watches closely at the edge of a pool till a dace or shiner comes within reach, when with a quick grab it catches it, and permits its mate to eat first.

During the day several parties fished unsuccessfully, and toward sunset I made a good try, but failed to get a strike.

June 8.—Learning that a party of ten were expected to arrive at State House, by noon six of us started for home—to take advantage of return teams—and reached Prospect by 7 P. M., without incident.

A summary of my trip: In ten days I traveled about 80 miles by rail, 40 miles on foot, 30 miles in boats, camped out four nights, fished 18 hours and caught 12lbs. of trout, the largest of 2lbs. Of my 18 hours spent in fishing, over half was wasted. I caught one trout in Jock's, two in Jones's Lake, about a dozen in West Canada Creek; the two little lakes Otter and Deer furnishing the majority. Bad weather was the principal cause of failure, that could not be helped, but there was one very strongly operating cause which could and should be.

There were many hours of fairly suitable weather that were spent in idleness, for it did not pay to waste them on either Jock's Lake or Jones's—both magnificent sheets of trout water, which should have given us all we wanted to do. But the party with the butter tubs was the only one that could get trout out of them; and that party, it is currently thought, had only the one butter tub full that I saw, but several more; and for many years the same party has enjoyed the same success, sending out from one tub to a dozen of solid meat trout. Members of this party go out from the camp at early daylight, return in a couple of hours with many pounds. They disclaim the use of set-lines, baited traps and gill nets, but before netting and fishing through ice became illegal, during the times when Jock's Lake had no inhabitants on its shores, this party made no secret as to its methods. Now they claim that the nets which they are known to have are to catch minnows for bait, their buoys for lake trout.

There is no doubt in the mind of any one who lives in this locality, but little, if any, in that of visitors', that Jock's Lake and Jones's are being systematically netted and "skinned" of their trout. Unless some steps are taken to prevent, the time is soon coming when they will cease to be trout lakes.

The game constable I have never met, but common report says that he is too old and infirm to prove a source of danger to those disposed to violate the law.

Mr. Barber has made an attempt to restock the lake, putting in some 8,000 fry, but he had little hopes of success, inasmuch as a large proportion of the fry furnished him were, he says, so very young that many had not as yet gotten rid of the sac.

There are numbers of moneyed men who are building private camps on these lakes; unles they, by concerted effort, stop illegal and destructive fishing and thoroughly restock these waters, the tide of fisherman travel to Jock's Lake will cease.

The many comforts and conveniences there furnished to us—and I do not remember of a place in the Adirondacks where in every respect there exists so perfect a combination as at the Forest Lodge—will have but little power to draw when we can get no good fishing without further journey into the wilderness.

If there were reasonable chance that an hour or two in the morning or evening spent on the lake would give a man even one such trout as my one evening secured to me, many would, contented with the comforts for the rest of the day, go often and stay long. Otherwise they will be apt to seek further. PISECO.

P. S.—I did not see, hear or feel a mosquito nor punkie; saw but few flies, and was troubled very little by them.

A WEEK WITH THE TROUT.

JOHN had written us that the 20th was the date. That is he had entered into a contract with certain of the larger Cranberry Lake trout to run up the inlet, gamy and hungry at that time, and we were to be there ready for them.

Our party was not strong numerically, but in brain and tongue power it was, being composed entirely from the bar. The Prophet, ex-City Attorney, small but wiry, the Asst. District Attorney, thin and sarcastic, and a homely, partially bald, plain lawyer, not prepossessing in appearance, but bad for fish.

Leaving home on Saturday, at noon of Sunday we were at Fine, St. Lawrence county, where John Ward, one of the oldest and most reliable guides in that section, waited with horses to carry us to Star Lake and Walker's, the last house on the road in. A cold, drizzling rain threatened the return of a winter already nearly nine months long as we started, but we pushed on, and after a hearty meal at the Star Lake House and the transfer of our baggage at Walker's to a heavy lumber wagon, we were soon footing it through the aisles of the forest primeval the five miles that yet remained of our journey to the inlet.

The trees, although yet only in the bud, were already listening to the soft voice of coming spring; the afternoon, whether caught in the wet meshes of the network of rain or shot through by the golden arrows of slanting sunlight that semi-occasionally forced their flight through the clouds overhead, was the promise of fairer days to come, and released from legal bent our minds were buoyant as those of boys, our legs springy as a hound's, and our voices vied with the early robin and jay.

The walk was just enough for an appetizer, and at six o'clock we emerged on the inlet at Sternberg's hospitable cabin more than ready for the fried trout, hot bread and maple syrup that awaited us. Perhaps the occasional imprint of a small slim shoe seen in the soft spots of the wood's trail we had traversed had to do with it, but before the pipes of the older fishermen had fairly begun to glow after supper the A. D. A. (Asst.-Dist. Atty.) had found young ladies, the daughters of the house, and made their acquaintance over the melodeon. I cannot blame the young people. He was not handsome, but had a good voice, and the girls were both exceedingly pleasant.

We found two other fishermen on the ground, but with clouded faces. The trout had not begun to run; it was too early, and they were bound for Gull Pond the next morning. There at least creels could be filled, while here on the inlet fishing was a waste of time.

We listened to their reports with sobered minds, but—we had been trouting before, and determined to know for ourselves the outcome of the inlet. There were two miles of glorious rapids and big fish there if only they might be caught.

Clean beds and quiet consciences gave us such rest as only comes to those who are so blessed, and when we broke the ice to wash in the morning—for ice formed half an inch thick that night—it was in the glad sunlight of a glorious day, and our friends of the night before half regretted their move to the pond. However, they were soon off, and we, after such a breakfast as might reasonably do for three meals, shouldered our baskets and rods and started down stream.

"Simply to live in this air is a delight," said the Prophet as he trugged sturdily onward, "the glory of life is good health and ——."

"A full pocket-book," suggested the A. D. A. striding behind. "The two give me a glimpse of Paradise."

The plain lawyer only sighed.

Three-fourths of a mile from the house we reached the head of the rapids, and rods were jointed, lines stretched and the fishing soon began.

It may be that years of varied experience had taught us how and where to take the finny prey with more certainty than our friends who had deserted the stream the day before; at least certain it is that when at noon we met to rest and discuss the substantial lunch John had in his basket our creels were reasonably well filled, and that when the sun touched the western treetops and we "lit out" for home we had ninety-eight handsome fish to show for the day's sport. None of them were very large, however, not exceeding half a pound in weight, and we decided to try new ground, or water, for a day or two, and return to the inlet later in the week. Consequently, on Tuesday morning we embarked in two boats with blankets and provisions for a camp, and having added another guide to our party started up stream on the trip to Buck Pond.

At about eleven o'clock, after a delightful paddle—delightful to us, paddle to the guides—of some eight miles we landed at Griffin's crossing, so-called, cooked and ate our dinner, and hiding one boat our guide took the other "woods fashion" on his head, we divided the remainder of the duffle between us and started over a three-mile trail to the pond.

There is one oddity about timber distances that has always impressed me. Evidently the measurements are made either by the eye when the brain is asleep and cannot assist, or the chain is stretched by the birds high above all hills and valleys, underbrush, slashings and windfalls and with no account of the extra steps required to surround a dead tree that has fallen across the trail, or to force one's passage through an abattis that the winter storms have made. The three-mile tramp to Buck Pond was declared by the plain lawyer to be fully four and one half miles, by the Prophet put at five, by the A. D. A. at seven, by the guide without the boat at "the toughest trail he had ever crossed," and by the guide with the boat on his head—at simply three miles! But judging from our own experience, had we toted that boat it would have been equal to the journey from Albany to New York by land.

John said we scared some deer from a beech ridge we crossed. If our crashing and stumbling, tumbling and groaning did not scare all the bears into the neighboring counties it was because they couldn't be scared. At half-past three we found Buck Pond, and, after a needed breathing space, leaving John to build an open shanty or "lean-to" for camp, two of us took the boat and two others a raft and sought at once to try the fishing.

The A. D. A. and the homely lawyer took the raft, and after pulling it with much waste of muscle and some extremely illegal expressions to a spot—simply a spot—near the center of the pond, began to fish. For twenty minutes no success, then with a start the A. D. A. took out a quarter-pounder and his companion followed suit, and in forty minutes the pair had captured forty fish almost of a size. Then as suddenly as it began the sport ceased. Flies were tried with sparing success, and both men were about to seek the shore when it became apparent that the raft, unsettled as it had been from the moment of embarcation, had at length decided that its day was past and had begun in a slow, water-logged, but exceedingly sure fashion to go to pieces!

For a moment the horror of the situation held both voyagers speechless, then the deep bellow of the elder lawyer and the fine tenor of his friend rang wildly over the quiet surface of the pond.

"Boat ahoy! we're sinking!"

No response.

"Boat ahoy! Come quick, our raft is going to pieces!"

From the distant boat a single cry, the Prophet's voice, "Take a log apiece and swim ashore!"

"By Jove! If I can get out my pistol I'll shoot at him!" said the plain man.

"Don't! the recoil will sink us sure," begged the other. "Call again," and call they did. At last, just as the supreme moment had arrived and the raft was but a mass of floatwood practically held together by the strained legs of the lawyers, the boat leisurely approached, and the Prophet inquired:

"Had any luck?"

"Get us ashore out of this," growled the A. D. A., "or we capsize your boat! Don't you see we're sinking!"

"'Taint deep," murmured the Prophet, still he rescued his brethren, and having fished to his own heart's content we all returned to camp.

John had a substantial "lean-to" erected large enough to shelter half a dozen, with sufficient green birch cut to last all night, and soon the cheery sizzle of the trout in the pan and coffee in the pot sounded in our ears.

Supper means a great deal to men who had performed the physical labor we had since dinner, and, although some eighty pounds of trout had been taken from the pond, the guides announced when we were through the meal and had lit the meditative pipe that we had eaten nearly a basket full of fish and would have to keep steadily to our rods if we intended to eat as much at every succeeding meal.

Later the moon, round and yellow, rose and looked at us through the treetops, and a hoot owl away on a distant hillside began to berate us for disturbing his solitude. One after the other we replied to the feathered remonstrant, but he would deign no call except in response to the clear, high tones of the A. D. A., and we concluded that the bird of night must recognize some hidden camaraderie expressed in the voice of our friend since he as promptly sent his answering cry.

"Both fond o' bein' out nights," suggested John, and the conversation ceased.

At ten we turned in, having piled the fire high with green logs which crackled and sissed, then burned red and white with intense heat. At two the homely lawyer arose and replenished the heap, disturbed more by some bad dream of uncollected fees than by lack of warmth, his comrades said, and at five A. M. the reveille was sounded.

An early breakfast with the golden rays of the morning sun gilding the trout pan and coffee pot, and the Prophet, one guide and the restless lawyer took another trail, a mile by word of mouth, two by leg, for Cage's Lake in the hope to capture some of the large trout said to harbor there.

The morning was an effort on the part of spring to overtake summer, warm and sunny. The trail wandered up and down all the steepest hillsides and through the roughest timber, and after an hour of positive work the three fishermen stood sweltering on the shore of the lake.

An old raft was discovered and taken possession of by the Prophet, while the lawyer and guide built a new one. That is the lawyer civil-engineered the guide, and the guide built. The fishing proved to be excellent, plenty of water and great expectations, but owing to a cloudless sky the catching was poor. At high noon three trout weighing a little over a pound each were the result, and the party left their rafts, tramped steaming over the trail, which had not shrunk or been straightened since morning, and at two P. M. sat once more at the camp table at the pond.

The A. D. A. having varied his morning's sport with hunting had treed a hedgehog, which, after vainly trying to burn out he had anathematized and allowed to escape. Dinner over the party shouldered boat, baskets and packs and made the long carry back to the river. Seven halts were ordered, and at each one the homely man drank from some "thunderbrook," dry except during the rainy season, and was refreshed. The rills of the mountain beat the rills of the still every time as nature's restorers.

Arriving at the river the plain lawyer and a guide took the light boat and rifle, and ran ahead hoping to see something worthy a shot on the down trip. And they did.

Halfway back to Sternberg's the voyagers discovered a fox snugly coiled upon the bank evidently watching for his evening meal.

"Shoot him!" cried the lawyer, then filled with sudden valor, "I'll shoot him myself!" he continued, and as the boat drew toward the game, still silently watching its approach with his bright black eyes, the worthy attorney pulled his .32-cal. Smith & Wesson, and at the distance of about fifteen feet fired point blank at reynard.

The result was a cloud of dust, a tossing red brush, a gone fox and an astonished hunter! He afterward explained that "the confounded boat hit the bank and spoiled his aim!" but his friends smiled. His skill with the pistol was known of aforetime.

A run of two hours through the silent evening tinged with the glorious colors of a dying day down the winding river now rustling between banks fringed with reeds and willows, now sweeping noiselessly through grand avenues of forest with distant vistas of hemlock and pine doubled in the silver and steel of the water at their feet, and just as the full moon climbed the eastern sky and poured her soft light upon the world the boats touched shore again at the Sternberg cabin.

The best ones of the party prayed that night for rain, but it came not, and on Thursday morning we sallied forth and spent a delightful day along the rapids. Delightful is that freedom which the office man finds in out-of-door life and nature's changeful beauties, the rustling woods, the brawling, foamy stream, the sunlit, cloud-flecked sky; but our success was even less than on Monday. The fish were indeed running up stream, but only the minnows, suckers, shiners, and dace were in any numbers. Each dark pool that contributed one or more trout to our creels supplied as many dozen worthless fish to nibble the bait or tear the fly, and when night came a beggarly show was the result, excepting one beautiful *Salmo fontinalis* which weighed past 1¼lbs.

On Friday therefore we determined to strike through the woods by trail to the Oswagatchie, seven miles, and try that water, reasonably thinking our luck could be no worse. At early day we bade our host Sternberg farewell, leaving our heavier dunnage to be sent out by horses to Fine, and with rods and creels started on the long walk to the river. The air was warm and grew warmer, but each hour the woods had added to our endurance, and without great weariness we reached the stream at about eleven o'clock, and after lunch began fishing.

Soon we found that here too the lack of rain made the sport poor, but we worked on as fishermen should, with "hope springing eternal" as we waded from pool to pool until we came to the falls, a series of plunges which the waters make over three benches of rock, each perhaps twenty-five feet in height, and broken so as to render the view exceedingly picturesque. It required some two hours to work our way carefully by this portion of the river, occasionally taking a dark trout from some pool, and at six P. M. we at last reached the bridge, tired and hungry, with light creels but lighter hearts, regretting one fact only, that our outing was over.

A ride of five miles brought us to Fine and early on Saturday morning we drove twelve miles further to the railroad. On our way we enjoyed the unusual sight of a deer feeding in the grassy levels in the open field, which trotted quietly away as we approached. At eight A. M. we took our train and at five P. M. were once again in the busy marts of trade, refreshed, renewed and ready for the daily struggle for bread; yet with a green and woodsy memory of that week put aside for enjoyment over the evening pipe when winter winds do blow.

F. E. H.

ST. LAWRENCE BASS FISHING.

Editor Forest and Stream:

As might easily be imagined, the opinion handed down by Judge Williams in regard to the seizure of nets in Jefferson county, the full text of which was printed in your paper of June 14, caused much concern among those interested in preserving the excellent bass fishing that has made the St. Lawrence River such a popular resort for sportsmen. It was expected that the net fishermen would take the decision as a license to go ahead with their business, which was stopped some eight or ten years ago. The fears of sportsmen in this regard have not been realized. The fish protectors have been as vigilant as ever and only a few nets have been found on the St. Lawrence fishing grounds. Warrants for the arrest of all those having nets set have been issued by Justice Boreland, of this place, and the offenders have been given to understand that the statute imposing penalties for fishing with nets has not been declared unconstitutional by Judge Williams, who refers only to that portion relating to the summary seizure and destruction of property. Some of the parties arrested have been discharged, it having been found that they were fishing with sturgeon nets, which, on account of the large mesh, would not take bass or other game fish. Others have taken their nets out of the river and have given bail for future appearance in court. There are now no nets in the river on the American side between this place and Alexandria Bay known to the protectors or any one else.

Fishing is good. What is something remarkable for this stream, the water this year is from two to three

feet below its usual level, and many shoals visited by fishermen last season will now be found well out of water. As a sample of the fishing we are now having I am permitted to quote the catches of two or three of my fellow sportsmen. Mr. J. T. O'Donahue, of New York, arrived here about a week ago, and has not brought in less than thirty fine bass any day since he came. His first day's catch numbered thirty-two, and the largest weighed 4½lbs. J. W. Mackey, also of New York, went out yesterday afternoon and returned with fifteen small-mouthed bass that averaged 2½lbs. each. J. H. Gay, of Springfield, and Col. Geo. W. Bradley, of Brooklyn, have been equally fortunate. For my part I have found the fishing excellent, and see no reason why it should not continue so until the end of the season. C. J. B.

CAPE VINCENT, N. Y., June 28.

BLUEFISH AND WEAKFISH IN LONG ISLAND SOUND.—These fish, which have not appeared in Long Island Sound, west of Port Jefferson, for many years, are now being caught in Huntington, Cold Spring and Oyster Bay Harbors. Every year the young bluefish as big as a man's hand come into these harbors, and also go as far west as Great Neck, but do not return when larger. They are then called "snapping mackerel," and are so abundant in their season that almost any kind of rig will take some, but they do not put in their appearance until the last of summer and early fall. The bluefish and weakfish now in the harbors named are small, one to one and a quarter pounds, but their advent is noteworthy because it is rare. Forty years ago these fish used to frequent the Sound, and fishing for them was good, but for some reason they abandoned it, and the Sound has become the poorest fishing water on the Atlantic coast. We can think of but one reason for this state of things. It must be temperature or a lack of food, the two great causes that would prevent fish from entering such a body of water when they are plenty in its vicinity, and it cannot be the former. It is a matter of rejoicing to the people on the north shore of Long Island that these fish have come in this season.

FISHING IN NEW YORK HARBOR.—The salt-water fishing about New York is now near its height, and in about two weeks more promises to be as good as usual. The weakfish are coming into the Lower Bay in schools, and in Gravesend and Prince's bays many fishermen are taking them with lobster and other baits. At the Kills a few have been taken with live bait and also with shrimps, but only the school fish have been captured, and these are the smaller ones, running from one two two pounds. Blackfish and sea bass are also frequent in the Lower Bay, and, on the whole, the fishing is very fair; almost every fisherman has some success, although no large catches are reported yet.

TABUSINTAC FISHING CLUB.—St. John, N. B.—Thos. R. Jones, merchant; John R. Armstrong, barrister; Samuel Hayward, merchant: John W. Gilmor, manager *Daily Telegraph;* Chas. A. Macdonald, barrister: Thomas McAvity, merchant; Geo. K. McLeod, lumber merchant; all of St. John, in the city and county of St. John; Thos. H. McMillan, barrister; David McLellan, lumber merchant; Jas. C. Robinson, manufacturer, all of Portand, and Thos. G. Loggie, draughtsman, of Fredericton, have been incorporated as the Tabusintac Fishing Club, with a total capital of $3,000, divided into 15 shares of $200 each.

Camp-Fire Flickerings.

"That reminds me."

236.

FROGMOOR, North Carolina.—Our oldest inhabitant can certainly take the cake, for the clear, well-rigged, varnished and gilded, article his equal is not to be found this side of grass roots.

A youth from New Jersey visted this world recently and I trotted out the O. I. for his edification. The shock was too much for him and he has gone home. Without a little show of competition the O. I. will not stretch himself to the full extent of his genius, so I just started him off with a modest little remark about a man that shot five deer in one morning. He settled back in my rocking chair, took his handkerchief out of his hat and wiped his head, and proceeded to give chapter and verse about a man that shot seven—four bucks and three does, or else three bucks and four does—all stone dead at the first shot, in May or June, 1835, or else it was in October, 1834, and it was a flintlock; the first barrel missed fire. His name was either Jonson or Endicott, and his daughter married a man that lived in Rhode Island, a place near the middle of Connecticut, very near all the colleges. She was so young then that she must be alive now and easy to be found and can tell you exactly them same circumstances to-day.

At this point he put on his hat and I was afraid he would stop, so I said something about twenty-eight ducks at a shot, but he was ready with seventy-two and their tails dragging on the ground, the pole bent so much between the two friends' hands who staggered under the two ends.

The Jerseyman thought he had better start for home now, but I said he had better wait and try the fish. My fish story I don't remember, it was such a wee one, and with a grin of pity for my lack of genius the O. I. launched boldly out: "It was in the first part of the summer of 1826. Shrimps was plenty and me and Major Alten, we says let's go fishing. So we called four of our best boat hands and went down to the sheepshead drop. On the young flood, catfish begun to bite and we kept slinging them overboard and pretty soon there was three or four pretty large sharks playing about the boat. The Major was in the stern and he called my attention to the fact that two of the sharks were much larger than the rest. "Now," sais he, "I'm going to wait till they are both on this side of the boat, and then I will give them a fish to scrabble for." Sure enough he did. One shark turned belly up under the water, and the other made a jump out of the water and came down mouth open. Then they commenced to kick about and made such a fuss that we pulled up our anchor and moved a little further off. We couldn't see what was the matter, but they seemed to be hitched together somehow. They kept it up about two hours, and at last when they drifted ashore we rowed up to them and found that each one had the other's lower jaw part in his own mouth, and both dead as Julius Cæsar. "What became of the catfish?" said the Jerseyman with a wink at me to show that this was a sticker. Not a bit of it though. "They both got the catfish. It was fast between their two jaws and had one stinger fast in each one's tongue." "Beautiful night, ain't it," suggested the now thoroughly abashed Jerseyman, as he sidled toward the front gate. "Nothing much to speak of," rejoined the O. I. "You ought to have seen some of the moonlight nights we used to have here before the war." HARD A-LEE.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for the distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Cœur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

Fishculture.

THE OHIO COMMISSION.

WE have the twelfth annual report of the Ohio Fish Commission for 1887. The jurisdiction of the Board covers both fish and game, and the wardens of the different counties send in concise reports which show that both are more plentiful in all parts of the State than last year, and this the Commissioners attribute to the efficient work of the wardens, who work without compensation, and it is recommended that some law be passed by which these men may secure from their respective counties a sufficient sum to pay them for their, time and labor, as in many of the counties these officers have spent much time and expended more money than they have received in fees. There is in the fish and game fund in many counties sufficient money to pay the wardens a sum great enough to balance their expenses, and as this money has accumulated through their faithfulness it should be allowed to their use.

In parts of the State the duties of the warden are so arduous that men cannot be secured for the office who will give their attention, and there are now ten less officers than when the last report was made. Unless some such action is taken it is feared that some of the present wardens will become discouraged and retire from the field. It is also again recommended that a warden for the State be appointed as this would improve the efficiency of the local wardens and the result would pay for the expenditure, as many calls are made for special work, such as getting evidence in places and cases in which the county warden cannot or does not succeed as well as one trained by experience for this special work. Of the fifty-six county wardens all report great improvement except one. There were 190 arrests, 36 convictions and 34 cases carried up to court. The amount of fines was $862, and 20 nets were confiscated.

In propagation of fishes there was success in all branches except the brook trout, which were to be carried through the summer in the ponds of S. B. Smith, in Logan county, but a dry season cut off the supply of water and the fish began to die and were turned out into Mud River. Fifty millions of whitefish had been turned into Lake Erie from the Sandusky hatchery, and at the writing of the report the jars contained nearly one hundred millions of eggs. The jack-salmon prospered fairly well, and a million young eels were transported from Cohoes, N. Y., and planted in the lake.

Supt. Henry Douglass submits to the Commissioners his fourth annual report. He has endeavored to fill the Sandusky hatchery with the destructive and death-dealing "lake pickerel" (*Esox?*), but fortunately the season was unfavorable and only three million fry were hatched and sent into the streams to destroy better fish. Mr. Douglass says: "It requires about twenty days for hatching and the work of distributing should begin at once, as the young fish, before they are a week old, will begin devouring each other." Yet he hopes to propagate this engine of destruction whose only food is fish and whose digestion has been compared to the action of fire. He also believes in the introduction of the eel, an animal as destructive as the pickerel and one that renders the life of the trout breeder on Long Island an unhappy one. He reports an unusual supply of whitefish eggs, having secured one hundred millions, and here we rejoice with him that this excellent and harmless fish yields its eggs in profusion. Many carp have been distributed and are doing well in different parts of the State.

SHAD IN THE HUDSON.

OF the shad in the Hudson River a writer in the Troy *Times* recently said: "Fifty years ago the Hudson teemed with shad; shad then sold in this city at $4 per 100, but the reckless catching of them in nets without restraint or protection had at one time about exterminated them. Now no shad are caught here. The same may be said of striped bass and other fish. Through the efforts of the State Fish Commissioners, however, the Hudson has been restocked with shad, although through stupidity, all the work done by them has been in the interest of the fishermen upon the river below Catskill, and in such a manner that none of the fish bred reach their best food condition; neither has their propagation been conducted in such a manner as to add to the artificial propagation the important conditions of natural spawning. All the shad hatched by the State Commission are set free in the sluggish waters of the Hudson at Catskill Creek instead of being liberated in the more highly aerated waters of the upper Hudson, where during the early stages of their development the conditions and surroundings would favor a more lusty growth and enable the young fish to better fight the battle of life in their way to the sea. As fish seldom ascend a stream beyond the point where they are bred, the fish artificially propagated and set free at Catskill never ascend to their proper spawning grounds, and consequently about all the annual catch consist of shad which are artificially hatched."

In comment on this, our correspondent, Mr. A. N. Cheney, writes to the same paper on June 3 as follows:

"It was not until last evening that I noticed in the *Times* of May 31 the article in regard to shad and salmon which have been planted in the Hudson. I at once mailed the paper to a prominent fishculturist, who has had much to do with stocking the river, so that I have not the article before me, but I can add a little to the subject of which it treats. It is true that the operations of the State Fish Commissioners in shad hatching have been confined to that part of the Hudson near Catskill and Castleton, and of necessity the fry have been turned loose where hatched; but your correspondent has overlooked the work of the United States Fish Commission, which remedies, largely, the matter of which he complains, viz.: That the planting of shad fry by the State are made so far down the Hudson that the vicinity of Albany and Troy receives little direct benefit therefrom. In 1882 the United States Fish Commission planted 1,000,000 shad fry between Troy and Albany. In 1883 the United States furnished a smaller number of fry to the Hudson, and I do not know the place where they were deposited. In 1884 the late Prof. Baird, then United States Fish Commissioner, Col. Marshall McDonald, the present Commissioner, and Fred Mather, superintendent of the Cold Spring Harbor hatchery, and assistant to the United States Commission, consulted, and decided that it was better to make future plantings of shad fry further up the Hudson, where they would be in less danger from predaceous fishes, find better water and more abundant food. As a result of this determination I received a wire from Mr. Mather on the 16th of May of the same year, saying he would arrive at this place that evening with a United States Fish Commission car containing 1,500,000 shad fry. Upon their arrival they were deposited half above and half below the falls, and during the succeeding autumn two fish of this plant, while making their way to salt water, were caught in a mill flume and found to be four inches and four and one-half inches long. May 22, 1885, 1,250,000 shad fry were planted by the United States Fish Commission in the Hudson, at Mechanicville. May 31, 1886, 1,036,000 shad fry were deposited in the Hudson at Albany from a United States fish car; and Mr. Mather about the same time hatched 1,586,000 shad fry, which I feel sure he told me he planted at Troy, although I cannot find a memorandum of it.* I do not yet know where the shad were planted last year, but the 31st of last month Mather received 3,000,000 shad eggs from Washington, which he is now hatching at Cold Spring Harbor station for the Hudson, and I presume, in view of the McDonald fishway to be built in Troy dam this year, he will deposit the fry above Troy. As to the salmon, the United States Fish Commission hatched at Cold Spring Harbor this year 440,000 fry, which were planted in the upper Hudson waters. From 1882 to 1888, both years inclusive, 2,200,000 Penobscot salmon fry have been planted in the Hudson by the United States Fish Commission."

*The shad to which Mr. Cheney refers were planted from Green Island, opposite Troy.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Aug. 30 to Sept. 1.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) H. P. Frothingham, Secretary, 2 Wall street, New York.

Sept. 4 to 7.—Second Annual Dog Show of the Michigan Kennel Club, Detroit, Mich. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffendorffer, Secretary.

March 23 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6362.**

THE NATIONAL DOG CLUB.

THE committee appointed to draft constitution, by-laws and rules for the National Dog Club have submitted the following, and the club will take action upon them at the meeting to be held at the Metropolitan Hotel, New York, on Thursday, July 5, at 12 o'clock:

CONSTITUTION.

ARTICLE I.

This club shall be known as the National Dog Club.

ARTICLE II.

The object of the club shall be to promote the general improvement of dogs, dog shows and dog competitions.

ARTICLE III.

SEC. 1. The club shall consist of an unlimited number of members, whose election shall be by ballot, and is vested solely in the executive committee—two black balls to exclude.

SEC. 3. Candidates must be proposed in writing by one member of the club and seconded by another, and a list of such candidates must be sent to each member of the executive committee not less than ten days prior to the date of the meeting at which their names shall come up for election.

SEC. 3. The annual dues shall be five dollars ($5.00), payable on the 1st of January of each year, and no person shall be considered a member until the dues are paid, which must be within thirty days of his election and the close of the fiscal year.

SEC. 4. A member may become a life member upon payment of the sum of twenty dollars.

ARTICLE IV.

SEC. 1. The officers of this club shall be a president, five vice-presidents—of which four shall be chosen at the annual meeting—and a secretary-treasurer.

SEC. 2. The secretary-treasurer shall give bonds in the sum of $2,000 for the faithful performance of his duties.

ARTICLE V.

SEC. 1. The management of this club shall be intrusted to an executive committee of fifteen members, who shall be elected by a vote of all the members in good standing, for a term of three years, except that of the first committee. In order that five members of this committee shall be elected annually, five shall be chosen by lot to retire at the end of the first year, and five at the end of the second year, but to continue in office until their successors are elected and take office. The retiring members of the committee are eligible for re-election.

SEC. 2. The election shall take place at the annual meeting of the club, thirty days prior to which the secretary shall forward to each member a printed slip containing the names of the committee and of all members in good standing, together with a stamped addressed envelope indorsed "Election." Each member will check off the names of five members he desires to vote for to fill the vacancies about to occur on the executive committee, and also the names of four members as vice-presidents, and sign his name on the slip. All such sealed envelopes shall be cast as ballots at the annual meeting and counted by the tellers as votes. Members present at the meeting shall deposit their ballots personally.

SEC. 3. The members of the committee so elected shall assume office on the first of May of the year of their election, and continue in office until their successors are elected and take office.

SEC. 4. The executive committee shall, at its first meeting subsequent to the first day of May of each year, proceed to organize by the election of a president and vice-president and secretary-treasurer, who shall perform the duties as prescribed in the By-Laws, and generally such duties as pertain to their office.

SEC. 5. The executive committee shall have power to fill vacancies on the committee until such time as a regular election is held.

ARTICLE VI.

SEC. 1. The annual meeting of the club shall be held at the call of the executive committee, but must take place during the months of February, March or April, and if practicable, at the time and place of a leading dog show, of which at least thirty days notice must be given. A special meeting shall be called at the request of twenty members, or may at any time be called by order of the executive committee.

SEC. 2. The executive committee shall hold three meetings during the year, one each in the months of February, April and August, at such places and dates as may be determined upon at the preceding meeting.

ARTICLE VII.

No alterations can be made in the Constitution or in the Rules Governing Dog Shows, as adopted by this club, except at the annual meeting or a special meeting of the club called for that purpose. At least thirty days notice of any such proposed change must be given to the executive committee, of which due notice shall at once be sent to the members who shall have five days in which to file with the executive committee any amendments thereto, due notice of all of which amendments must at once be furnished to the members. No alteration can be made except by a two-thirds vote of the members present.

ARTICLE VIII.

The executive committee shall have full power by a two-thirds vote to suspend or expel any member, and the member so suspended or expelled shall not be entitled to recover any portion of his annual dues or have any claim against the club. Such member to have the right of appeal to the club from the action of the executive committee at the annual meeting, or at any special meeting, provided notice of appeal has been given.

BY-LAWS.

ARTICLE I.—DUTIES OF OFFICERS.

President.

SEC. 1. The president shall preside at all meetings of the executive committee, appoint all committees, audit and approve all bills and shall order meetings of the committee whenever in his judgment he may deem it necessary. He shall submit a report of the work done during the past year at the annual meeting.

Vice-President.

SEC. 2. The vice-president shall perform all the duties of the president in his absence.

Secretary.

SEC. 3. The secretary shall keep the minutes of each meeting of the committee and of the association; conduct the correspondence, and have charge of, and be responsible for all the books and papers of the executive committee. He shall collect and have charge of all moneys belonging to the association, shall pay all bills when properly approved, and submit a report thereof to the committee at every meeting. He shall keep a book containing a list of the members with their addresses, which book shall be open for the inspection of members at all reasonable times.

Trustees.

SEC. 4. The president and secretary-treasurer shall act as trustees, and have charge of the property of the association.

ARTICLE II.—MEETINGS—EXECUTIVE COMMITTEE.

SEC. 1. The regular meetings of the executive committee shall be held as provided for in the Constitution.

SEC. 2. Special meetings of the executive committee shall be called by the secretary, either at the written request of three members of the committee, or by order of the president, and two weeks notice of such meeting shall be sent to every member of the committee.

SEC. 3. At all meetings of the executive committee five members shall constitute a quorum.

ARTICLE III.—PAYMENT OF BILLS.

SEC. 1. All bills shall be presented to the president or vice-president, and shall be audited by him; in case of approval he shall affix his signature and date of approval. After such approval the secretary-treasurer shall pay said bills.

ARTICLE IV.—ORDER OF BUSINESS.

1. Roll call. 2. Reading of minutes. 3. Reports and communications. 4. Unfinished business. 5. New business. 6. Election of officers, 7. Adjournment.

ARTICLE V.—AMENDMENTS, ETC.

These By-Laws may be altered, amended, or suspended at any meeting of the executive committee by a simple majority vote, provided two weeks notice shall have been given to every member of the committee of the proposed alteration, amendment, or suspension. In the absence of such notice a two-thirds vote of the members present shall be required.

RULES GOVERNING DOG SHOWS.

I. The word dog, where used in these rules, includes both sexes.

II. Every dog entered at any show held under these rules must be the *bona-fide* property of the person making such entry, on the day of closing the entries. The entry must clearly identify the dog to be exhibited by name, and, if known, its date of birth, name of its sire and dam, and the name of its breeder. Should any of these particulars be unknown to the exhibitor, it must be so stated on the entry blank and inserted in the catalogue.

III. If the name of a dog, which has won a prize, has been changed, the old name must be given on the entry blank and inserted in the catalogue, together with a list of all prizes won by the dog, until such times as it wins a prize under its new name.

IV. If the dog has been entered without being clearly identified, as directed in Rule 2 and 3, it shall be disqualified and forfeit any prize which may have been awarded to it.

V. The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

VI. A puppy is eligible for competition in either the puppy or open class, or both, unless prohibited by the special rules of any show.

VII. The authorities of any show may reserve to themselves the right of declining any entries they may see fit, or of removing any dog on account of disease, vice or other cause.

VIII. A castrated dog or spayed bitch shall be disqualified, and forfeit any prizes which may have been awarded it.

IX. Total blindness, deafness and lameness shall absolutely disqualify. If the judge or veterinary surgeon is satisfied that the deafness or lameness is temporary, the dog shall be allowed to compete.

X. A dog suffering from mange or any contagious disease shall be disqualified and forfeit any prizes which may have been awarded to it, and shall be removed at once from the show building. The regularly appointed veterinary surgeon shall alone decide as to mange or contagious disease, and his decision must be given in writing.

XI. A judge may disqualify a dog which, in his opinion, has been improperly tampered with, subject to the decision of the veterinary surgeon. Should the judge's disqualification not be sustained, the class must be immediately rejudged.

XII. Full discretionary power is given to the judge of each class to withhold any or all prizes for want of merit. The judge's decision will be final in all cases affecting the merits of the dogs, and appeals can only be entertained where misrepresentation or breach of the rules is discovered.

XIII. Should an appointed judge be unable to fulfill his engagement, the committee shall have the right to fill the vacancy in such manner as they see fit. All the separate classes of any one breed of dogs must, however, be adjudicated upon by the same judge or judges acting in conjunction.

XIV. In any class where there is a limit of weight, the person in charge of dog entered in such a class may claim of the show committee the right, at any time before the judging, to have his dog weighed, and the weight of the dog shall be registered and hold good at the time of judging.

XV. A dog to compete in a champion class must have won five first prizes—exclusive of puppy classes, and classes not confined to one breed—at shows approved by the National Dog Club, a list of which, together with these rules, must be published in the premium list and catalogue of each show.

XVI. In estimating the number of prizes a dog has won, with reference to whether it should compete in a champion class or not, the number of prizes won shall be calculated up to 12 P.M. of the day preceding the closing of the entries of the show.

XVII. In entering a dog in a champion class, it is necessary to specify on the entry blank a sufficient number of first-prize winnings to entitle him to compete in such a class, and this record must be given in the catalogue.

XVIII. No dog eligible for special prizes can be withdrawn from competition unless it has been stated on the entry blank "Not to compete for special prizes."

XIX. No special prizes can be accepted of offered by a show committee after the show is opened.

XX. The age of a dog shall be calculated up to and inclusive of the day preceding the show. A dog whelped April 30 shall not be eligible on May 1 of the following year to compete in a class for dogs under 12 months of age.

XXI. An objection to a dog may be made by any person, but must be in writing and be lodged with the secretary of the show within ten days of the last day of the show. The objection must (unless in the case of an objection made in the name of the National Dog Club or by the committee of the show, in which case a deposit shall not be necessary) be accompanied by a deposit of five dollars, and if the objection is decided to be frivolous the deposit shall be forfeited to the committee of the show. From the decision of the show committee appeal may at once be made to such members of the executive committee of the National Dog Club as may be present, and if the show committee's decision is sustained by them, the five dollar deposit is thereby forfeited to the show committee. From any such decision or decisions, appeal may be taken to the full executive committee of the National Dog Club, but such appeal must be forwarded to the secretary within seven days of the decision being rendered, together with a deposit of ten dollars. If the decision appealed from is sustained the ten dollar deposit shall be forfeited to the National Dog Club; but if the decision is reversed, then all deposits must be returned to the appellant.

XXII. Any person who has been guilty of misconduct of any kind in connection with dogs, dog shows or field trials may be suspended by the committee of any show. Notice of such suspension, together with all testimony in the case, must be forwarded within twenty-four hours to the secretary of the National Dog Club. The secretary shall thereupon notify the president or, in his absence, the vice-president, who may, upon investigation of the case, suspend the penalty until the next meeting of the executive committee. At such meeting the penalty must either be removed or the person suspended be disqualified for such a period as the executive committee may decide.

The disqualification of an owner shall apply to all dogs connected with the perpetration of a fraudulent act, but the executive committee of the National Dog Club may use such discretion in the enforcement of this penalty as shall protect innocent persons.

XXIII. No person under suspension or sentence of disqualification can exhibit or take a prize at any show held under these rules.

XXIV. Entries made in the name of a kennel, must be accompanied by the name of the actual proprietor or proprietors, but not necessarily for publication. The partners in a kennel will be deemed equally culpable in the case of fraud perpetrated in the kennel name.

XXV. The premium list of each show must contain the names of officials under whose management the show is being given, each of which, except paid employes, shall be held personally responsible for the payment of all prizes within sixty days from the last day of the show. The secretary of the National Dog Club shall, upon evidence being produced that any such prize or prizes remain unpaid, issue notice of suspension of each and every official, and otherwise proceed as provided for in rule twenty-two.

XXVI. The person presenting the identification ticket shall be recognized as the agent of the ower in the latter's absence, and his receipt for prize money shall be binding on the owner, unless notice to the contrary is indorsed on the identification ticket.

XXVII. All prizes offered by the club or committee in charge of a show must be paid in accordance with the description given of them in the premium list. Medals of silver or gold must be of the purity of United States coin.

XXVIII. The show committee may adopt such regulations as they see fit, provided they do not conflict with the foregoing rules.

APPROVED SHOWS.

Winners of five first prizes at the following shows must be entered in the champion classes when such classes are provided.

Albany, 1888.
Am. Fox-Ter. Club, 1886, 1887.
Boston, 1878 to 1888.
Buffalo, 1887.
Chicago, 1883 to 1884.
Cincinnati, 1884, 1885, 1886.
Cleveland, 1882, 1884, 1886.
Detroit, 1887.
Hartford, 1886, 1887.
Hornellsville, 1886, 1887.
Milwaukee, 1886, 1887.
Nat. Breeders' Show, Phila., 1884.
New Haven, 1884 to 1888.
Newark, N. J., 1886 to 1887.
New York, 1877 to 1888.
Philadelphia, 1879 to 1888.
*Pittsburgh, 1881 to 1887.
St. Louis, 1879 to 1885.
St. Paul, 1887.
Troy, 1888.
Utica, 1888.
Waverly, N. J., 1886, 1887.
Winsted, 1885, 1886, 1887.

*The dog shows to be hereafter held by the Western Pennsylvania Poultry Association will not be recognized by this club unless something is done by them to amend the past.

THE SOUTHERN FIELD TRIAL CLUB.

ATLANTA, Ga., June 23.—*Editor Forest and Stream:* Referring to our letter which appeared in your issue of June 8, exposing the flimsy pretexts and excuses of a Chicago paper for declining the paid advertisement of the Southern Field Trial Club; we regret that we are compelled again to ask the courtesy of your columns and the attention of your readers to correct what appears to be a willful error and deception, which the editor of that paper is attempting to perpetrate upon our club and the public.

In his apology for the fact that it took about ten days to get a reply to our letter inclosing our advertisement and draft for $50 to pay for same, the editor says: "Pressure of business has prevented me from replying before, so you will therefore accept this as my apology for not having done so." Well we do—and console ourselves with the reflection that possibly ours was not the only "ad" clamoring for space in the crowded columns, while the heroic and sensitive soul of the editor and proprietor was engaged in the terrible conflict between duty and interest, in considering the acceptance or rejection of other advertisements of honorable competitors, or rival clubs, or enterprises, who, or which, had previously sought the protecting ægis of the editor; and then, too, it must have taxed even his fertile imagination to fabricate the fanciful so-called reasons he assigns from the uneven fragments of irresponsible and prejudiced rumors to which this high-minded, justice-loving editor refers for his significant silence.

Now of course it is not for us to account for the remarkable conduct on the part of the Chicago paper, but the following story, accredited to the Philadelphia *Times*, is a trifle suggestive:

Some time ago there was a dog show held in San Francisco, and among the various prizes offered was one for the quietest dog. Upon the opening day a stranger entered the building carrying a locked dog box, which he carefully deposited among the setter class. It contained a queer-looking specimen of a setter, and the chief characteristic of the animal seemed to be that it never changed its position, but sat up boldly and regarded the spectators with a sort of stony glare that was apt to terrify the more nervous portion of them. During the judging of the dogs the owner of this strange animal objected to its being taken out of the box for competition. It was there, he said, to try for the prize as the quietest dog, and in justice to himself it would be wrong to expose the pup to the excitement of being judged with the rest of the class in the ring. This demand was acceded to by the judges, and sure enough during the whole three days of the show this one dog was never known even to bark. Of course it obtained the special prize and the show broke up. Afterward many dog fanciers came to the successful exhibitor to ask by what means he got his animal so completely under control. Under promises of secrecy he divulged his plan, "The pup," said he, "is always quiet, 'cos why, he died two years ago and is stuffed."

Admitting that this editor may have been sincere when his letter of May 24 was written; his hallucinations having been dispelled, his errors corrected, and imputations upon motions rebuked in our former letter; to produce and publish his letter without our correction and denial of its insinuation and charges, is surely malice prepense.

In the issue of his paper for June 16, 1888, the worthy editor pretends to explain, as follows:

"As the president of the Southern Field Trial Club has seen fit to make public, in two other journals, our refusal to publish the advertisement of the club, we think it proper that we should make public our letter to the secretary of the club, so that erroneous impressions may not be formed. We thereby append it without further comment, and leave our readers to judge for themselves."

Eliminating as much as possible subterfuges and verbosity; the alleged reasons and points are:

First—"It is my duty to protect a club, which is in existence and is carrying out the object for which it was formed, from a rivalry and competition that has for its chief object the disintegration of that club."

This duty of protecting the weak and divining the motives of worthy gentlemen seems to be altogether gratuitous and self-assumed, and a generous public would most cheerfully excuse the "Doctor" from its further performance. The preservation of his health, and relief of his already overtaxed brain is of far more concern to his family and neighbors than his opinion is to the public on such matters.

Second—"I am forced to the conclusion that the chief object of the formation of your club is to break up the American Field Trial Club."

Who forced him?

Third—"I learned several weeks since that your club was being formed 'to break up the American Field Trial Club.' The information came not from one, but from many, and each one understood the object to be 'to break up the American Field Trial Club.'"

Learned? From whom? Not from any of the officers, who alone are authorized to speak for the club. Not from any of its members, all of whom know better. Evidently from some one who did not know, and like the "Doctor," it seems, did not want to know. To deny such a foolish charge in our former letter, was almost a compromise of dignity and affront to the intelligent reader of your paper.

Fourth—"Your club having waited until the American Field Trial Club announced its date, and then selecting Dec. 3 as the date for commencing its trials, corroborates the information I received."

As fully answering this we quote from our letter as follows:

The 10th of December was agreed upon by those of us who could get together and consult before the meeting, as the time for our trials, but before the day arrived for our organization there appeared in another number of the Chicago paper a card that the American Field Trial Club had reconsidered, and named the 10th of December for their trials to begin. This left us with no other alternative but to set our trial to come off between the closing of the Eastern and commencement of the American trials, or go over into next year, and thus take the rainy season, or go so

far into the year that the farmers would be at work. Now, in view of these facts and vacillation of the American Field Trial Club, we would have been perfectly justifiable in holding to Dec. 10, but in order not to conflict with any other club, we decided upon Dec. 3 (first Monday) and appointed a committee with instructions to select grounds as near and as accessible as possible to the grounds selected by the American Field Trial Club. In this they have succeeded beyond our most sanguine expectation, and those wishing to patronize both clubs can easily do so, as the grounds are only 25 miles apart and four trains a day.

With the advantageous grounds we have and the great abundance of birds our Setter Stakes can easily be run off in one week, and our Pointer Stakes will not interfere, as the American Field Trial Club have no Pointer Stakes, and if necessary the Pointer Stakes can be run at the same time, as we have plenty of ground.

We presume, of course, there can be none so ignorant or prejudiced as to deny the right of the Southern Field Trial Club to organize and fix a time and place for the trials to suit its own convenience; but as above shown it was its pleasure to exercise these rights with a respectful and corteous regard for convenience and appointments of others.

The fifth point he makes is this:

Had you chosen a date which would not interfere with the trials of the American Field Trial Club, I should feel it to be my duty to aid your club; but your club must know that it is impossible to get through with its trials in one week; therefore by getting the dogs to its trials your club would tie them up and prevent them from going to the American Field Trial Club's trials.

Did not the Chicago paper advertise and advocate other field trials which were run within a week of each other? How about the National Field Trials and trials of the New Orleans Club? In that case dogs had to be hauled some two hundred miles, and yet they were run in both, and both trials were advertised and encouraged by the Chicago man. For other illustrations of the editor's glaring, we may say, reckless inconsistency in the position above assumed, refer him to his own paper.

Sixth—"Were I to aid and encourage your club's trials, I would be setting up two clubs in antagonism to each other, and encouraging each to destroy the other."

Now here the "Doctor's" arrogance is amusing. The other club to which he refers may be "set up" up by his "encouragment," but we desire to be distinctly understood that the Southern Field Trial Club is not "built that way."

Seventh—"It is not my intention to oppose your club in my columns, or privately. I propose to remain passive, so if any injurious consequences arise from the antagonism of the two clubs I will not have been a party to it."

The "Doctor's" utterances and actions, we regret to say, are to us irreconcilable. Knowing the facts were not as imagined when his letter of May 24 was written, he reproduced and published that letter which was calculated to deceive and mislead the public, and thus he attempts through his paper "to oppose" and injure our club; and *has also written private letters to parties asking them not to enter dogs in our trials.* And this is what you call passive, is it, "Doctor?" Comment is unnecessary.

Eighth—"I am not a member of the American Field Trial Club, did not conceive the idea of forming it, have not at any time had anything to do with its management, in suggestions or otherwise, and am not a member of the guarantee fund, nor do I know the name of a member of that fund."

Of this we have only to say—"as fellow feeling makes us wondrous kind"—we congratulate the American Field Trial Club.

If his suggestions are not given until they are asked for, it is probable that the "Doctor" and the public will enjoy his protracted silence.

Finally says the Chicago editor: "My course is simply one of principle." Just the kind of principle we do not admire. "What I consider just and right." "Another Daniel come to judgment." In conclusion we tender the sportsman's journals, notably the FOREST AND STREAM and *Turf, Field and Farm*, our thanks for the courtesy and kindly interest they have taken in our club, which has been organized only for the highest and most commendable purposes, and which will be run in the most honorable way. We are sorry the Chicago paper should have shown itself unworthy of the courtesy we extended it, but content ourselves with access to public attention through the columns of worthier papers. J. W. RENFROE.

The Southern Field Trial Club running rules have been published; they will be given in our next issue. The judges for the Derby will be Dr. R. J. Hampton, of Athens, Ga.; Mr. Thos. L. Martin, of Lexington, Ky., and Mr. S. B. Duryea, of Brooklyn, N. Y. The acceptance of the last named gentleman has not yet been received by the club, but it is believed he will act.

DOG TALK.

THE Wacouta Kennels, of St. Paul, Minn., have recently purchased in England the mastiff bitch Vistala. She is by Montgomery ex Nell. At the last Warwick and Manchester shows she was respectively reserve and second. Two of her puppies, by champion Beaufort, the Lady Virginia and Sir Stafford, took first and second in a very strong class at Warwick. Vistala is yet in England, where she will remain until again bred to Beaufort. This union should give the Wacouta Kennels some choice prize winners, as the two puppies above referred to are far above the average. Mr. R. Cook, the honorary secretary to the Old English Mastiff Club, said of the Lady Virginia, "If I know anything of a mastiff I say she is the best that has appeared on the bench since Cambrian Princess—and is a better bitch at her age than Cambrian Princess was." The kennels have recently sold their well-known mastiff dog Wacouta Nap to the St. Joe Kennel, of Niles, Mich., for a large price. Breeders in the West will lose nothing by the transfer, as his new owner will continue him in the stud.

The judges at Buffalo in September will be Messrs. C. H. Mason, James Watson, John Davidson and W. Stewart Diffenderffer. The premium list is a liberal one, many of the classes being given prizes of $20 and $10; and there are a number of kennel prizes, with specials to be added.

Mr. W. S. Jackson, of Toronto, Ont., is soon to sail for England, and will take over the Bedlington terrier Domino to be bred to Hairdresser.

Mr. Frank Dole, of Philadelphia, is just now receiving the congratulations of his fellow fanciers on his recent marriage.

The well-known Clumber spaniel Johnny has been retired from competition on the show bench.

The Bristol, Conn., show will be held Sept. 25 to 28.

ROCHESTER DOG SHOW.—*Editor Forest and Stream:* Please insert the following in your list of bench shows to occur: March 19 to 22, 1889, first annual show Rochester Kennel Club, Rochester, N. Y.—HARRY YATES, Secretary. [These dates have already been claimed by the Maryland Kennel Club for their first show at Baltimore.]

PET DOG CLUB.—New York, June 29.—A meeting of the American Pet Dog Club was called for June 29. A quorum not being present, no business was transacted. The secretary will give the members due notice of the next meeting, when a full attendance is requested, as matters of vital importance will come before the club.—C. ORMSBY.

THE AMERICAN KENNEL CLUB.—New York, June 29.—*Editor Forest and Stream:* For the information of Mr. Wade or any reader of your paper who may have been misled by Mr. Wade's letter to you of June 19, I beg to say that it was I, with the concurrence of as many delegates of the A. K. C. as I could conveniently reach (and in all we numbered nine in our conference), who authorized Mr. Vredenburgh, the secretary of the A. K. C., to publish his letter in your issue of the 14th inst., disavowing on the part of the A. K. C. any connection with Mr. Hall's speculative shows. I beg further to say that Mr. Child can speak for himself with regard to his reasons for resigning the presidency of the A. K. C. For my part, since assuming the presidency, I have nothing to say but praise for Mr. Vredenburgh. He acts always strictly within the limit of his proper powers and functions.—AUGUST BELMONT, JR., President of the A. K. C.

DEATH OF BEAUFORT.—The celebrated pointer dog champion Beaufort died suddenly on Tuesday of last week. A post mortem showed that the cause of death was a tumor. Mr. Mitchell Harrison, who owned him, writes us that he has two good bitches in whelp to Beaufort, and in the progeny he looks for something to worthily represent their sire. A more extended notice of Beaufort will be given in our next issue.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Royal Reba. By A. C. Collins, Hartford, Conn., for lemon and white pointer bitch, whelped July 27, 1887, by Gabb's Chief (Bob—Fly) out of Belle Gleason (Bang—Olivette).

Minnehaha Turk. Fawn mastiff dog, whelped Jan. 6, 1887 (A.K.R. 5149), owned by Otto Schultz, Minneapolis, Minn., June 18.

Lion IV. Fawn mastiff dog, whelped Dec. 3, 1887 (A.K.R. 6223), owned by Otto Schultz, Minneapolis, Minn., May 16, from distemper.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, June 30.—A large number of riflemen were present at the Massachusetts rifle range to-day, and some fine scores were made. J. Francis (Rabbeth) made 118 out of a possible 120, at rest, being two points higher than was ever made before with the same kind of rifle, and one point higher than ever made on the same target with a telescope rifle. Below are the best scores finished:

Rest Match 200yds.

J Francis	12	12	11	12	12	12	12	12	12	12	—118
A T Warren	10	11	11	10	11	11	12	11	11	11	—109

J W Deloria	4	3	3	4	4	4	4	4	2	4—36

THE NEW WIMBLEDON.—The Duke of Cambridge, head of the British army, having ejected the British N. R. A. from Wimbledon to improve his rent roll, there is a great search for a new range. It is now understood that the objection to Richmond Park as the site for the meeting of the National Rifle Association have been removed, and that in all probability the thirtieth meeting will be held there in July of next year. The ground has already been surveyed, and as it lies within easy distance from the metropolis, the disappointment of removal will after all not be so great as a change to a far distant spot from London.

OTTAWA, June 23.—The eighth spoon competition of our rifle association was participated in by 23 members of the club at 500 and 600yds. ranges. About 4:35 P. M. a hurricane on a small scale swept across the range from the northwest, and the scores, which had been good up to that point, quickly showed the decline; the windage bothered the rest of the Martinis. Making all due allowance—just as one got thar—the puff either came stronger or dropped dead for a few seconds. W. A. Jamieson won, with 81 out of a possible 100, and A. McFarlane came second with 75. Following is the score:

	500.	600.	Tl.		500.	600.	Tl.
W A Jamieson	47	34	81	W E Cook	32	34	66
A McFarlane	36	39	75	Capt Sherwood	35	31	66
F W Smith	44	30	74	Capt C F Cox	29	36	65
J McJanet	39	34	73	Maj H F Perley	28	34	62
H Pink	39	33	72	T C Boville	36	25	61
A Morrison	33	38	71	J P Nutting	39	22	61
Thos Carroll	38	33	71	C S Scott	33	27	60
E D Sutherland	39	32	71	Lieut Fairweather	42	15	57
Maj W P Anderson	37	33	70	R Moodie	23	28	51
Lt-Col Macpherson	35	35	70	H R McKay	29	14	43
Geo H Hutchinson	35	33	68	R N Bishop	16	22	38
J H Ellis	40	28	68				

W. E. Cook first prize in junior class.

TORONTO, June 23.—A rifle match between the King City and Orillia rifle clubs was shot by telegraph on Monday, June 25, and resulted in Orillia winning by 46 points. The match was under the Ontario Small Bore Rifle Association rules. Following are scores, 20 shots per man:

King City.		Orillia.	
R Cull	81	T Reid	89
J W Crossley	79	C Fortier	86
Dr Norman	74	W Wood	82
W Ross	74	R Strathern	81
E J Davis	73	F Toogood	78
W A Ross	73	T Millichamp	78
J H Ross	71	C Wood	74
H Rogers	61	G E Whiten	74
T Scott	62	H Broughton	66
C H Hall	54—706	A Paine	44—752

Below is result of a match shot at Orillia June 26, between the Aurora and Orillia rifle clubs, under the O. S. B. A. rules:

Orillia.		Aurora.	
I T Fortier	82	I C B Johns	87
G E Whiten	79	E J Brond	85
W W Wood	78	Eli Braund	76

SCHUETZEN KINGS.—New York, June 20.—To-day was the last day of the annual festival of the Independent New York Schützen. The main feature of the festival was the coronation of the new shooting king, which dignity had fallen to Mr. Henry J. Behrens. After a short and witty address by William V. Weber, Hugo H. Hoenack, the last shooting king, presented his successor with the insignia of his office, and King Behrens, who received the name of "Henry I.," delivered his speech from the throne, which was loudly applauded. The best shooters were: H. Weller, J. J. Riehl, A. Rodler, L. Berndt, Adrian Feyh, Buhring, Rohe, L. G. Witt, A. Schumacher, F. Wacker, M. Heuman, F. Meier, J. Bopp, G. Reisser, H. Hofele, S. Zuschlag, H. H. Hoenack, William V. Weber and H. Weber. Franz Mayer, who was shooting king some years ago, displayed two beautiful life-saving medals, which he had received from the cities of New York and Philadelphia. The next big excursion will be made by the Independent New York Schützen in 1890, when the Society will go in a body to Berlin.

June 26.—The New York Schützenbund celebrated its annual shooting festival at Washington Park during the last two days. The members of the seventeen companies forming the bund paraded through the streets. A large number of guests were present, among them the New York Central Schützen Corps, Captain Sieburg, and the Manhatten Schützenbund. John Wolf of Enterprise Company No. 1, was crowned as shooting king with great ceremony. Miss Dora Knobloch made the address, presenting the king with his laurel wreath, medal and royal sash. The best shooters were: Karl, 67 points, Schneider 66, Nolze 66, Nowski 63, Schill 63, Bauernschied 62, and Dr. Kolb 62. The team shooting was won by Blumenthaler Company No. 6, Captain Schill, which received a silver cup in value of $200, given by the bund. The second prize, a silver cup worth $100, donated by Captain Sieburg, was captured by the Freischütz company, No. 16, Captain George Gross. Among the other winning teams were Enterprise Company, Steuben Company, Harlem Company and Union Company.

FITCHBURG, Mass.—The first of a series of rifle matches was opened Wednesday afternoon, June 20, at the range of the Fitchburg Rifle and Gun Club; off hand:

A B Small	10	7	8	7	7	8	6	9	7	8	—77

E. B. T.

SAN FRANCISCO, June 24.—One of the largest and most enthusiastic gatherings of marksmen that has yet assembled before the butts at Harbor View was gathered there to-day at the festival of the Germania Schützen Club. The day, barring a high wind, which swept over the range, made the shooting somewhat uncertain, was all that could be desired. The shooting commenced at 9 o'clock, and it was past 6 o'clock in the evening when the final shot was fired, and the hungry contestants repaired to a near compartment, where a good dinner was served. The following is the result of the shooting, public target, open to all comers, first prize won by A. Johnson, with a score of 95 out of a possible 100. In the contest for 3in. centers for cash prizes J. Utschig, Dornbier, King, Klotz and Heeth won.

The heavy wind which prevailed all day prevented target-shooters who assembled at Shell Mound range from making large scores, and the majority of the teams represented contented themselves with practice shooting, of which no record was kept. Companies D of the First Regiment, C of the Second and H of the Second Artillery kept scores, however. In the former the score was, in a possibl 50: Captain Quinn 39, Sergeant Sands 28, Private Dumont 38, Sergeant Squires 37, Private Griffin 37 Private Burke 36, Corporal Robinson 35, Private Lummson 35, Lieutenant Leo 34. Company D made the following record: Lieuteuant Zeising 43, Captain Jansen 39, Private Moore 35, Private Donahue 34. Company C of the Second scored: F. Hock 41, O. Lempk 40, D. Wilburn 40, C. Wilbrick 39, J. Ruger 37.

BALTIMORE, June 27.—About a month ago a match was arranged between Ira H. Melvin, of Laurel, Del., champion rifle shot of Delaware, and Wm. F. Fettenmore, of the Fettenmore Rifle Team, of Baltimore, who holds the championship medal of the South. The agreement was to shoot three matches, the winner of the first to receive a purse of $175, and the winner of two out of the three to receive a gold championship medal, presented by the Fettenmore Rifle Club, of Baltimore. The first match, which was shot at 200yds., came off to-day on the banks of the Jones River, and was won by Melvin by 94 points.

NEW YORK, June 25.—The German-American Shooting Association of New York city, to-day laid the corner stone of a new building at 12 East Eighth street. The association marched up from the Germania Assembly Rooms with a band of music, and then back again to a banquet in honor of the event. President Fischer and Judge Nehrbas made speeches at the laying of the stone, and Coroner Levy and others at the banquet. The new building will be a three story structure of brick, with extensive shooting galleries on the lower floors.

SUFFOLK, Va., June 19.—At the first regular meeting of the Colt's Amateur Rifle Club the following officers were elected: W. N. McAuge, President; John F. Lotzia, Vice-President; W. E. Hines, Secretary and Treasurer. H. E. Smith, Merritt Briggs, J. H. Newton, Directors; John F. Lotzia, Shooting Master; Harry Causey, Scorer. For the present the club will practice at their gallery every Tuesday night.

CINCINNATI.—The Cincinnati Rifle Association elected the following officers for the ensuing year: H. Neiman, President; Al Bandle, Vice-President; Jabob Best, Secretary; Louis Stegner, Treasurer; Mat Gindele, Captain; I. B. Copeland, Assistant Captain.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CANADIAN TRAP NOTES.

TORONTO, June 23.—The following are the scores made by members of the Owl Gun Club at their semi-annual shoot for the cup presentented by Mr. J. P. Moore at C. Ayre's shooting grounds, Eastern avenue, to-day:

C H Riggs	1100111111111111101111011—21
J Rice	1011110100111001101011110—16
W McDowell	1110000011110111100110110—15
G Carruthers	0111101101011110011010001—15
F Wallett	1110110010111001010110010—14
C Kemp	0101111001000011001100110—12
C Ayre	1001100001101100001010110—11
W Paul	1110110010100011000100000—11
A Austin	1100101000000001001110110—10
H George	0001110111010000010010000—10
J Gould	0010010100100111100010100—10
H Robinson	0100110011001100000000101—10

OTTAWA, June 23.—It was a rattling hot day, but at the range by the Rideau there was just enough of a westerly breeze to make it bearable to face the score. A sweepstake at 15 birds each, 18yds. rise: Dr. A. Martin 14, A Throop 13, P. Trudeau 12, J. Desiaurier 11, Ed. White 9, R. G. Dalton 9, L. C. Labelle 7, Geo. White 8. In the second sweep Dr. Martin made a clean run of 10, thus giving to his gun a score of 24 out of 25.

On Monday the St. Huberts select their team for the Montreal tournament, and though short two of the best shots, Mr. P. Thompson and Mr. Jas. McLelan, still they will put a good party at the score, and will not need any outside help to keep their end up. They are highly jubilant to learn that the Torontos have resolved to send a team to Montreal. The tournament will be a good one, and though the money is not large as a rule among gun men they look upon the trophy as the gentleman sport's ambition.

TORONTO, June 23.—The West Toronto Junction Gun Club shot a telegraph match against Port Colborne Gun Club to-day at D. Blea's. A large crowd of spectators were present, and the shooting was good. Following is the score: Teams of 5 men; 20 Canadian blackbirds each.

West Toronto Junction.		Port Colborne.	
Clark	20	J B Neff	19
Blea	18	H Smith	18
Bailey	17	F Smith	16
Dollery	16	Herckaden	15
Wakefield	15—86	White	15—83

The following sweepstakes were shot afterward: First shoot—Bailey 9, Clarke 8, Wakefield 8, George 7, Blea 5. Second shoot—Bailey 8, Clarke 8, Wakefield 7, Blea 7, George 5. Third shoot—George 9, Blea 8, Dollery 8, Wakefield 7, Charlton 5, Gabel 2.

TORONTO, June 28.—The second competition for McDowell & Co.'s gold medals was shot at their grounds this afternoon. The weather was favorable and a large number were present. Twenty-three competitors took part with the following result: Conditions, 16 Peorias from 3 screened traps, 18yds. rise.

First Class.			
Carruthers	15	Pearsall	11
Kemp	14	Paul	8
McDowall	13	Rickley	7
Blea	12	Johnson	7
Second Class.			
Wilkinson	13	Sawden	11
Wilson	13	Swift	9
Kipp	12	Smith	7
McClure	12	Park	1
Pearson	12		
Third Class.			
Steel	13	Barrett	8
R McCready	10	Bayles	5
Romain	9	Tomson	5
Austin	8		

First sweep, 10 birds: Kemp 8, Blea 8, Smith 7, Jones 7. Second sweep, 10 birds: Blea 9, Kemp 9, Rickley 7, Jones 7. Third sweep, 12 birds: Paul 10, Pearson 10, Pearsall 10, Blea 9, Jones 8, Rickley 8, Johnston 8, Wilkinson 3, Sawden 6, Robinson 6, McCleary 5. Fourth sweep, 9 birds: Blea 6, Paul 6, McDowall 5, Rigley 5, Jones 4, Pearson 4.

CHATHAM, N. Y., June 29.—Chatham Gun Club, match at clay-pigeons, National rules:

G Skidmore	1001000101—4	E L Decker	0111100111—7
G Spingler	1111010111—8	Alfred Ford	1101111110—8
M Powell	0110111000—6	C Coffin	1101110111—8

Ties shot off on 3 birds: Ford 3, Spingler 2, Coffin 2.

Match at standard targets, 18yds. rise:

Dexter	0111111011	01 01 01 10 10—13	

The club will hold a day's shoot at the grounds July 4.

FITCHBURG, Mass., June 26.—The first of a series of shoots for prizes took place at the range of the Fitchburg Rifle and Gun Club May 23. Number of birds broken by each out of a possible 20 are as follows:

	C.P.	B.R.		C.P.	B.L.
Weymouth	10	9—19	Burbank	5	8—13
Putnam	8	10—18	Houghton	6	6—12
Cummings	8	9—17	Haines	4	7—11
Colony	5	9—14	Baker	5	6—11
Stratton	7	6—13	Sheldon	6	2— 8

The following is the result of the first shoot in the above series: Class A, Weymouth, B. Putnam, C. Cummings, D, Colany and Powers, E, Burbank and Stratton, F, Houghton and Mackay, G, Baker, Haines and Harris, H, Spencer, I, Roby, J. P. Sheldon and S. D. Sheldon. Result of the second series of prize shoots: Class A, Putnam, B, Powers, C, Mackay, D, Haines and Stratton, E, Burbank and Weymouth, F, Cummings, Colony and Baker, G, Roby, H, S. Sheldon and Harris, I, Spencer and J. P. Sheldon.

CINCINNATI.—The dates for the Bandle centennial shooting tournament have been changed to Sept. 4, 5, 6 and 7.

CINCINNATI, June 19.—The scores of to-day's shoot, shot on the grounds of the Price Hill Gun Club are appended below. The attendance was good, and the sparrows, if anything, a bit better than the match shot here one month ago. Match No. 1, 10 live sparrows, entrance $3—Bandle 8, Shott 5, Murdock 3, Topf 3, Griffith 5, Kessler 5, Burt 8. Match No. 2, 10 live sparrows, entrance $3—Bandle 6, Shott 7, Keller 3, Burt 4, Murphy 8. Match No. 3, 10 clay-birds, entrance $2—Shott 9, Murdock 5, Bandle 8, Griff 7, Burt 7, Topf 5, Murphy 8, Kessler 8. Match No. 4, 9 blue rocks, entrance $3—Bandle 9, Kessler 6, Burt 4, Murphy 7, Shott 9, Bing 9, Topf 6, Griff 7, Murdock 7, Cole 7, E. Fey 7, Berringer 5, Bemis 8, Mark 6, Keller 7. Match No. 5, 9 blue rocks, entrance $3—Keller 6, Merrick 4, Parvin 3, Murphy 7, Bandle 6, Shott 7, Cole 7, Fey 7, Berringer 6, Froehlich 2, Bemis 8, Mark 9, Griffith 4, Bing 7, Topf 7, Guy 7. Match No. 6, 9 single blue rocks, entrance $3—Shott 8, Mark 6, Murphy 8, Bandle 9, Topf 5, Keller 5, Bing 9, Froehlich 5, Guy 7, Bemis 8, Werges 5, Behringer 6, Griff 5, Cole 7, Fey 5, Gastright 4. The big sparrow shoot, 5 single live sparrows, from 5 ground traps, 26yds. rise, entrance $3.50; purses divided, 50, 30 and 20 per cent.:

Bandle	11100—3	Gastright	11010—3
Cole	10010—2	Kessler	01110—3
Shott	11011—4	Barker	01001—2
Bemis	00000—0	Murdock	01110—3
E Frey	11000—2	Guy	11000—2
Behringer	01011—3	Topf	11001—3
Bing	10001—2		

Shott won first money, Kessler in shoot-off second, Bing and Guy third.

BOSTON, June 27.—A perfect day favored the party of shooters who engaged in the second competition in the gold coin match, and in the regular practice and sweepstake matches at Walnut Hill to-day. In the gold coin match 10 clay-pigeons and 10 blue rocks, points were scored by the following: Stanton first with 16, Curtis, Burt, Rule and Websters second with 15, Chase, Hosmer and Swift third with 14, Bartlett, Eames, Knowles and Mahard fourth with 12, Snow, Willis, Walker and Nichols fifth with 11, Burbank and Crompton sixth with 10, Durand seventh with 9, Allen eighth with 7. Following are the first prize winners in the sweepstake match: 1, six clay-pigeons from five traps, Swift; 2, six blue rocks, Curtis; 3, 10 clay-pigeons, five traps, Burt; 4, six blue rocks, Allen; 5, five clay-pigeons, five traps, Stanton and Allen; 6, six blue rocks, Knowles; 7, six Macomber targets, Bartlett, Swift and Snow; 8, ten blue rocks, Chase, Rule and Webster; 9, ten clay-pigeons, five traps, Snow and Stanton; 10, three pairs clay-pigeons, Burbank, Knowles and Burt; 11, three pairs blackbirds, Rule and Burt; 12, five clay-pigeons, five traps, Knowles, 13, six Macomber targets, Swift, Walker and Snow; 14, six pair, Knowles and Chase; 15, three pair clay-pigeons, Burt; 16, three pair clay-pigeons, Rule and Burbank; 17, three pairs blackbirds, Burt and Rule; miss and out, won by Stanton. The next competition in the gold coin match and the regular sweepstake contests will occur July 11.

PHILADELPHIA, June 26.—The North End Gun Club, of Frankford, and the Wingohocking, of Germantown, shot the first of the series of three matches on the grounds of the latter club this afternoon. The targets were Standard pigeons, eighteen yards rise, fifteen singles and five doubles:

Wingohocking Gun Club.			
H Thurman	1111111111101111	00 11 11 10 10—20

TROY, Ohio, June 16.—The Trojan Gun Club held its initiatory shoot for the club's gold medal to-day. There were but seven entries, though the attendance of spectators was large. The grounds are difficult ones for the making of good scores, but some fairly good shooting, considering, was done. N. J. Magel won the medal for the first time on a tie score with Rook of 20 out of 40 each. The shooting was at American clay birds, thrown from 5 ground traps. National rules governing. Scores: Rook 29, Magel 29, Senaur 22, Penrod 18, Miller 22, Prill 22, Noonan 27. An individual race of 30 small birds, between Rook and Magel, finished the day's sport, Magel winning, as follows: Magel 24, Rook 18. Best straight runs, Magel 8, Rook 7.

WELLINGTON, Mass., June 30.—There was a good attendance at the grounds of the Wellington Club to-day, when ties in the Merchandise match were shot off. In this match Stanton won first, Swist second, Bond third, Sanborn fourth, Shumway fifth, Chase sixth, Schaefer seventh and Bradstreet eighth. The winners were: Six blue rocks—Brown. Three pairs blue rocks—Brown and Chase. Six blue rocks—Trible, Sanborn and Snow. Six clay-pigeons, Grimes prize—Chase and Moore. Six blue rocks—Stanton, Perry and Chase. Six clay-pigeons—Perry and Brown. Six clay-pigeons—Brown, Chase and Stanton. Six blue rocks—Brown, Perry and Grimes. Six blue rocks—Brown. Chase won the Grimes prize.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

FIXTURES.

JULY.

4-11. Atlantic Div., Cruising Meet.
7-23. W. C. A. Meet, Ballast Is.
12. Mohican, Gibson Badge, Alb'y
16-25. Pequot C. C., Meet.
17-23. Pequot Camp, Norwalk Is.
19. Mohican, Gibson Cup, Albany
21. Ianthe, Newark, Record Races.
23-Aug. 4. Northern Div. Meet, Lake Couchiching.
26. Mohican Oliver Cup, Albany

AUGUST.

2. Mohican, Gibson Badge, Alb'y
4. Springfield, Cup, Springfield.
10-24. A. C. A. Meet, Lake George.

13. Mohican, Oliver Cup, Albany
15. Ianthe, Newark, Annual.
15. Springfield, Cup, Calla Shasta
20. Mohican, Gibson Badge, Alb'y

OCTOBER.

6. Springfield, Cup, Calla Shasta.

GOSTER GLEANINGS.

"HELLO!" says the station agent, "More of you this time and some different boats?"

Yes; and this time we are going to climb a good deal higher up the hill and come down the Russian River from Gloverdale, some thirty-five miles above Healdsburg, our starting point last year, and don't you forget it. It looks much the same old crowd, here we have the Commodore and his little daughter (Tucker) in the Tuck, they being also upset there before then Mrs. Commodore and her son (Nipper) in the Nip. These are the additions to the old party and are full of pleasant anticipations; Columbia and Mrs. C. in the Columbia, and finally Snolly in the Snolly Goster, or Snolly's Goster, or plain Goster; four canoes and seven canoeists.

Gloverdale is a lovely spot; surrounded on all sides by the great hills and Mount Helena in the east, it appears very lovely to the happy seven who arrived dusty and tired one April evening and hastily repair to the hotel for the dinner they have sworn to utterly annihilate. After a good night's rest, dreaming of rushing waters, shady pools and happy camp-fires, the canoeists appear equipped for business. Various are the garbs presented, each one the especial pride of his owner, as being the most convenient and best adapted for canoeing and camp life.

The Commodore quickly got the canoes from the box cars and have them transported to the river side, while the others make necessary purchases in town. All are assembled at the spot chosen for launching about 11 o'clock, together with a large crowd of youngsters and loafers eager to see the start. Nipper says this will make a fine beginning for his series of photographs and proceeds to shoot the scene, the canoes, two of them on the wagon and two in stages of packing, duffle spread out in all directions, children to fill in all crevices, and lastly, the smiling canoeists. It does not take long to get everything stowed away, and finally "All aboard," and away we go, shooting the first ripple in fine style, amid thundering cheers from the assembled multitude. Now at last we are free and afloat on the roving river, care we know not, every breath seems one to do good, and the ripple of the water is music to hear. The Goster draws less water than any of the others and goes on ahead to prepare the way, as it were. A wave of the right paw signifies keep to the right shore; one of the left, to the left shore; both hands, keep in the middle; excited animation of whole frame, lookout for yourselves; and a big splashing and puffing with glimpses of garboard streak, "the Goster is in trouble." This code of signals arranged to everybody's satisfaction the journey proceeds, nature smiles and placid content reigns. Were it not that most of them had been there before it would be hard to convince of the possibility of catastrophe in this peaceful procession. Alas! too soon was it to be demonstrated that in the midst of fancied security dread danger lurks. A roaring sound is heard ahead, while the water begins to travel swiftly, the Goster and Nip dart around a curve, disappear behind some rocks, down an incline of rushing foam, reappear paddling vigorously, fly another swirl and round to in the eddy below, breathless and joyful. Not so the fated Tuck. Gallantly does she negotiate the first series and enters on the last rapid. Down she comes, the Commodore and Tucker putting in terrific licks on the starboard side, but in vain, for when on the eve of victory, she is carried broadside on under the treacherous boughs, a little squeak from the Tucker and the river claims its own.

Grabbing the keel in one hand and the Tucker in the other in the pool below, the Commodore bravely comes ashore amid the plaudits of his companions and a minute later the Columbia arrives with a dash, full of anxiety as to the fate of his predecessor. There is a pebbly beach handy and it is presently covered with an assortment of blankets, clothes and duffle of every description. Nothing has been lost, with the exception of a few bottles of beer and tins of canned fruit, as previous experience has taught the expediency of tying things in. The Tucker now takes to the water again and refuses to come out, so to compromise the matter a universal bath is agreed on, the men ferry over the river and find a sunny dressing place in the grove, the Commodore's wet clothes are wrung out and hung up as scarecrows, and soon the whole crowd are disporting themselves in the water. It is simply delightful to struggle up shore to the foot of the rapid and then cast yourself in and float swiftly down on your back. On coming out, the Commodore is rigged up in borrowed garments and luncheon produced. How that crowd did paralyze that feed, well well, it was a caution. Cold meat, sardines, and other delectables disappeared like smoke and still they cried for more till the supply ceased and every one was too lazy to go down to the canoes for more, then a friendly pipe in a semi-somnolent condition and the cup of happiness brims over.

In two hours the blankets and other articles are completely dried out and the flotilla again on its way. It was getting a little late, and as it is expedient to get into camp with two hours of daylight to spare, a good lookout is kept for a comfortable site. This appears in the shape of a fine grove of trees, with soft grass around and lots of firewood in easy reach. The canoes are quickly got up on shore and the camp is soon arranged, everything falling easily into place. The chief peculiarity in this camp lays in the spectacle of misguided pertinacity; beautiful in death at the foot of a magnificent oak lies the carcass of a noble horse. He had evidently climbed the tree, and when after many attempts he had achieved the higher altitudes had been dashed to the ground and yielded up his little life a hero. Whatever his story he had laid there so long as to be an entirely inoffensive and purely ornamental neighbor. Dinner of the real Goat Island style and scrambled cackleberries; the estimated consumption of the latter is four dozen per diem; camp-fire and songs follow in their turn till bedtime. It is now that the Commodore is found fast asleep in the beautiful bed Columbia had made for himself under a tree close by, and with much difficulty awakened and removed. Snolly, finding a soft piece of turf some ten yards from camp, seeks his humble couch and is soon wrapped in slumber. He is awakened about 2:45 by stealthy footfalls, and, hastily turning, perceives in the bright moonlight the gruesome form of a skeleton steed. Remembering his facetious suggestions to put him in the soup, jellify his hoofs, and similar remarks, he groans in spirit; but, behold! after a cheerful "Good evening" and a murmured quotation, something about "Rock me to sleep," the defunct equine passes on and next morning has resumed his grassy couch under the oak. Ill-natured people have ascribed this phenomenon to a preserved ginger, honey and claret dessert, but the Goster knows it for an appalling fact and shudders at the recollection.

The next morning at breakfast, after a glorious swim, it is suggested to stay all day in this delightful spot, and every one being agreeable it is so ordered. The time is spent in loafing, eating and sleeping, varied with an occasional dip in the river, the Nipper had an encounter with a jack rabbit but neither were hurt, and peace and content were apparent all around.

After a splendid night's sleep the camp was astir about 6:30, as a good, long trip is contemplated to-day. By 8 o'clock breakfast has vanished and the canoes are packed; with a farewell shout to their pleasant resting place paddles are dipped and away they go. The riffles are not to be despised all along here and there are several close shaves from immersion. About five miles lower down a roaring announces the worst rapid yet encountered; in fact, it proved the liveliest of the whole trip. It was deemed advisable for the ladies to disembark and walk around, when the skippers, disencumbered of responsibility and weight, shoot it in fine style. There was a huge rock under water half way down, causing a long, round wave, passing over which was a delightful sensation, and at the foot quite a little whirlpool.

The scenery is now very fine, one pool after another separated by easy riffles; and taking it leisurely to admire the scenery the canoes glided along without incident till about noon, when they arrived at a fish dam. These are built of willows by the Indians, to catch hard-mouths, and there were a number entangled in this one. Breaking a way through, a pleasant spot is found half a mile below for luncheon which is enjoyed under the trees. A short distance further on the river divides into two branches and Snolly on ahead chooses the right hand one, as there appears to be more water there. This of course makes it pretty shallow on the riffles and all the blame is visited on the head of the luckless Goster, though it must be confessed he had the best of it otherwise, watching the others come bumpity-bump over the rocks. It turns out afterward, however, that they took the best course after all. When the two branches joined again some three miles below, there seemed a much larger volume of water and capital time was made for five or six miles till another fish dam came in sight. Something was said about a big d-m but has since been denied. However, the obstacle must be surmounted; after nosing around, a little channel was found at one side and looked promising. A little distance down it is a gravel bar, in shoving over which Snolly breaks one blade of his double paddle short off. This is a serious matter and is promptly attended to. The Commodore is always to the fore in cases like this and produces some copper rivets, after inserting which the break is carefully wrapped with waxed cord and the journey continues.

It is getting rather late and as it is proposed to reach Healdsburg before camping, there is no dallying by the way. It was a pity no photographs could be taken of this portion of the trip, as the rocks and pools were very fine, but "forward" is the cry. Suddenly the Commodore's paddle breaks in an exactly similar manner to the other and is promptly spliced. This so excites the Commodore that he announces his intention of reaching Healdsburg or bust. Forward, brave souls, we must not lose our chief in so untidy a manner. Columbia was bringing up the rear and the canoes had got spread out somewhat, so that conversation was not possible. "What was that?" says Nipper, "A cry of distress; no, it couldn't be," Alas! yes, wafted on the breeze from behind, comes faintly, "Goster, oh Goster, help, we perish." Hastily turning and paddling with much difficulty up the swift current a piteous spectacle is disclosed. Wedged under the roots of a tree broadside on in mid-stream is poor Columbia, the water boiling against the sides and threatening to swamp the whole business every moment. Snolly puts in terrific licks—Mrs. Columbia said afterward she thought he would never get there—and lands on a sort of gravel island a short distance off. Then producing a rope specially carried for this purpose he gravely lassoes them, and in another moment they are hauled bodily out, and all are off again down stream.

Evening begins to draw near and still no Healdsburg. Alas, dear Commodore, things look bad for you. A little further and a most good-natured female form is discovered on the bank. "How far to Healdsburg?" "Well, some call it fourteen miles, some sixteen, by the river, but it is only five by land across the hills there." A further inquiry regarding the cackleberry crop in that district being answered satisfactorily, Snolly makes up his mind he will stay by the female on the hill. The Commodore looks round for an encouraging glance, then down stream, and then alas, for human resolutions, runs ashore and steps out, conquered but happy. Never did canoeists make a happier venture. Taking two of them up to the ranch that bountiful lady loaded them down with milk, fruits, hot rolls, cackleberries and other invigorating and delectable articles. Dinner was a feast, and when they repaired to the camp-fire not one of the party ventured on conversation, being, in classical language, too full for utterance. Later on the ranch folks came down, and then the stillness of the night was broken by choruses of darky melodies and college songs, in which all took part, the flute-like tones of the Goster being especially apparent and causing one of the visiting ladies to remark, "It reminds me of one of them there mountain jays," which compliment has been so often repeated as to have become a proverb in the O. C. C.

The next morning was quite cold, a strong north wind blowing. The hospitable friends of the evening before came down to see the start and wish the canoeists "bon voyage." An elderly and kind-hearted Confederate soldier embraces the Commodore, and with many regrets the journey is resumed. From information received some stiff rapids are expected, and it is not long before plenty are encountered, in the midst of one of which Snolly's patched paddle goes again. The Commodore having misgiving about his, there are mutual condolences, which ends in the Tuck and Goster being tied up alongside as a catamaran; a good paddle on each side and away they go together, but it is nevertheless found necessary to cast off when shooting riffles. The miles go by, and Healdsburg cannot be far off, really it looks as if there were to be no casualties to-day, the river is not quite so interesting here, running at the base of high hills and winding like a snake. Presently a very nasty place appears, and the catamaran would have calmly glided into the jaws of death had it not been for the promptness of the Commodore, who, realizing that her unwieldy form would stand no chance, got overboard as she swept by a gravel bar at the top and hauled in near shore. Along comes the Nip, the Nipper wielding his paddle like a Trojan, down she rushes and barely manages to clear the ugly stump sticking out of the water at an angle just where the full force of the current sweeps sideways in the turn, Mrs. Commodore lying flat back in the boat to avoid it. Now comes the Columbia with a rush, and appears to be making it first-rate under the powerful strokes of her skipper; all clear; no, at the last moment the fatal cross current catches her and hurls her across under the tree. Mrs. Columbia ducks under it but before he realizes anything it takes Columbia under the chin and the next scene in the drama is that of his graceful form turning a back somersault in the air. He goes in head foremost, his gum boots waving in the breeze and disappears from view. This appalling sight so terrifies the Tucker that, regardless of the Commodore and Snolly, she climbs overboard, clean over gum boots and everything, and makes a break for the shore, and with clasped hands she watches the course of events. Columbia, coming up in the pool below, looks around for the canoe with a mystified air and perceives Mrs. C. sweetly smiling at him close by. Considerable water got in from the lurch but she was otherwise all serene. Landing, the usual dry out ensued and luncheon was eaten.

All such incidents take time, and it was past 2 o'clock when the canoes were again afloat. Columbia promises not to leave his wife again and good progress is made. The river is the sole highway, the great hills coming right down to the water, it was impossible to keep one's bearing in the many turns, but down stream is the course and Healdsburg is somewhere ahead. Casting off from the Tuck to tackle a rapid, the Goster breaks his remaining blade in the first descent, pathetically running the rest backward, making frantic grabs at passing rocks with a boat hook. Happily he arrives safely at the bottom, and again joins forces with the Tuck, using half of the Commodore's paddle. At last the bridge heaves in sight and is appropiately celebrated, and half an hour later camp is pitched close to the town.

The whole next day is spent in making repairs, two double paddles, 8½ and 9½ft. respectively, have to be cut out of solid wood, the Nip and Tuck covered with asphaltum varnish below the waterline and various other things attended to. It is no good chafing at the delay, it must be endured, but excellent jobs are made and everything put in readiness for to-morrow, including a stock of fresh meats and supplies.

Nine o'clock the next morning sees the canoes afloat. A photo of them going down the first ripple in line being taken, but afterward proving a failure. There is now lots of water and easy fall, so with no need of caution the canoes keep together, often getting abreast and paddling lazily along in the bright sunshine, the crews raising their voices in festive jubilee, and thoroughly enjoying themselves. About noon a halt is made for a bathe and lunch. The bill of fare is very recherché on account of a hamper received from San Francisco, it consists of first toddy, then cold roast chicken, paté de four giraffes (fois gras), marmelade, bread, butter and beer. This feast so exhilarated certain members of the party that they executed a war dance on the sand, on which they were accused of being in an inebriated condition and if it was, an intoxication of pleasure, good health, good food and good beer, they undoubtedly were. Some five miles below this, the huge rock, so admired last year, looms in sight; and the Nipper is right on deck with his camera at once. Two excellent pictures result, the canoes being alongside of the cliff which goes sheer up out of the water about 50ft. and has so smooth a face that it is difficult to get a sufficient hold to remain still. To the inspiring strains of "Old Glory" from Columbia the fleet moves on. Mrs. C. is nearly asleep in the bow and dreaming of dinner, when the canoe, without the slightest warning, suddenly attempts to climb a tree, that is she tackles the submerged portion and runs up hill. Having considerable deadrise she then flops over on her side; without a word Mrs. C. leaves the ship, not into the water but into the tree and her aerial movements in the upper foliage much astonished the others, who cannot make out whether she is birds-nesting or saying the country; the canoe relieved of her weight regains the perpendicular and she is persuaded to return on board again from on high. It is late when camp is made, no favorable site turning up for sometime. As it is the parties sleep on sand beds for the first time on the trip, but no one apparently suffers. So sleepy a crowd was it that a chorus of snores greeted the Commodore's most cherished yarn by the fire, which, however, in no way dismayed him, as with the assistance of a mug of hot grog he safely spins it to the bitter end.

What a dip that was in the river next morning early. It is growing hotter every day and it pays to rise and get things packed before the excessive heat begins. The redwood country is now being approached, clumps appear here and there on the banks, giving grateful shade. Lunch was eaten at Lovell's, and though fearful of repetition, that menu must be given: Soft toddy à la Goster, cold beer canoeuse, paté de four ginger snaps, sardines à la Nipper (what a twist that boy had on them fish), marmelade and hard buns. It was shortly after this epicurean banquet that a tearful scene was enacted. The Goster was feeling good and putting in some very healthy licks about fifty yards ahead. All of a sudden the bow of the Snollygoster was observed to shoot up and point skyward, and a hasty reconnoissance divulges a log dam, quite hidden from above, with a drop of about four feet into a deep pool below. Poised on the apex amidships, where his impetus had driven him, sat poor Snolly sadly inviting any one wishing to see his instant demise to look that way. Slowly the stern begins to drift round and in another moment he will be rolled over the abyss. But no, a foot from the edge a snag protrudes and catches the canoe. The party look on in breathless suspense while he removes his nether garments. Saved! He is overboard and edging for shore. Hurrah! Let joy reign, and singing merrily the Goster resumes his seat and lights out for the front. The heat is terrific, the log entries get blurred, and with difficulty the following extracts were made out: "Photographs of railroad bridge. Lovely paddle. Encounter of Columbia and Snolly with fierce cows, the Goster successfully boards one, carrying off her brush, but Columbia is routed with slaughter, breaking a paddle. Arrival at Guerneville. Amicable overtures of natives. Heat worser and worser. Commodore and Mrs. Com. peacefully slumber under bridge while purchases are made. Camp a mile below in grand pool. Royal dinner. Desert of strawberries and cream. Fishing experiences of Snolly and the Nippor. Fishless retreat. Hay beds. The camp sleeps."

Yes, those hay beds were so luxurious that it was really quite late when the early bathers gave their morning concert. This, alas! is the last day on the river. The goal is approaching. Duncan's Mills is only fourteen miles below. In this stretch, however, there lies the most beautiful scenery of the whole trip. The Nipper and camera are to the fore, several pictures of the pool are taken, with the grand redwoods reflected in its depths; and then for the homestretch. Nip and Tuck now go on ahead, while a new bottom is put in the Columbia. A combination of brass sheeting, white lead, rivets and elbow grease finally effect this, and the others are rejoined a few miles below in the famous Bohemian Pool. Here a lovely creek flows in, just made to ice the beer in, but first of all a bath and photos of a group in the water. Unfortunately this proved a failure. It is possible to take headers from any height you like into 40ft. of water, the rock going sheer up from the pool. The lunch was of the usual expansive order, and then before starting a final photo was taken of the gang just as they were, sitting down all in a row behind the Goster's 9½ft. paddle. Nipper pulls a string to shoot off the arrangement, the picture representing seven individuals, each one tougher than his neighbor, but sublimely happy, the canoes in the background.

The remaining miles were reeled off in good style, slow at first on account of complaints of too much lunch, and faster later when the afternoon drew on. At last the bows are run ashore at Duncan's Mills. Resolved to drink to the last dreges their cup of enjoyment, camp is pitched on the river bank and a gorgeous evening spent. The train does not leave till mid-day to-morrow and there will be ample time to pack canoes and clean up. Why enumerate the future sufferings, the breaking camp, the last stew, the final flapjack, Tucker's tears and the universal regrets, let them pass. Ten days of delightful open air vacation has done every one good. True, the bottom of the Columbia would be somewhat sounder if she had stayed at home, but her crew feel splendid; the Nip and Tuck have survived their scraping; the Goster, what of her? That fatal dam has cruelly crushed her fragile form, her back is broken, but her spirit undaunted. Will she survive? Snolly has some sticking plaster and string and much perseverance. Perhaps she will live to take another trip, perhaps she will have to make room for a later love, time alone will tell. Alas, poor Goster!!!

THE A. C. A. MEET.

Editor Forest and Stream:

With Mr. George M. Foster, of the committee on camp arrangements, I visited Long Island, Lake George, on June 23. Mr. D. S. Sanford, the owner of the island, had taken up his residence there and welcomed us most cordially. He is doing a good deal of work in laying out paths around the shore, which will be very useful to the Association as well as to himself.

We found the site for the camp at the southern end of the island, a most delightful and picturesque place, with abundance of shade from cedars and other trees in clumps and groves. The ground is broken and varied in character, some of it rocky, other parts covered with beautiful short grass in open glades between the woods. There is a good deal of cedar along the shore, with gaps or intervals, at which the landing places will be made.

In the channel, between Long Island and South island, is a fair sized strip of sand, which will no doubt be a favorite place for landing. There is open ground behind, sufficient for the location of a large part of the camp. All the land is high and dry and healthy, the air being laden with the delicious odor of the cedar trees. The water is all around deep enough for convenient landing and it is unnecessary to praise its quality. Arrangements are already made for the restaurant, which will be conducted in the usual way and under the management of Mr. Ferris, of Horicon Lodge Hotel. The Association may expect very satisfactory attention at his hands. The necessary store and steamboat communication will be provided, and are now being arranged. The postoffice address will be "A. C. A. Camp, Lake George, N. Y." Letters thus addressed will be carried into the camp in the A. C. A. mail bags. A delightful spot is selected for the ladies' camp, with abundant shade, the open grass around being surrounded by cedars. This is rather nearer to Mr. Sanford's house than the main camp. There are three or four hotels within convenient distance of the camp, and many ladies are preparing to stay at the camp, encouraged by the convenience that those will afford, to fall back upon in case of need. The water, which will probably be selected for the sailing courses, is to the southwest of the island, bearing southeast from Lorna Island, but this will be determined by the regatta committee.

The committee on cruising will issue its programme shortly, which will be a new feature in the A. C. A. meet. When this and the other information is finally gathered in the camp programme will be printed and sent to members with full information on all points, this preliminary notice being intended only to show that preparations for what promises to be the most successful meet in the history of the A. C. A. are in good progress.

Last, but not by any means least, it may be well to mention that the Royal C. C., of England, have sent their challenge, and several members will be present to race for the International trophy.

ROBT. W. GIBSON, Com. A. C. A.

DELAWARE RIVER.—*Editor Forest and Stream:* Contemplating a cruise down the Delaware River during the latter part of this summer in a 14×28 sailing canoe, starting from Port Jervis down, I would like to know: 1. Where can a chart be obtained of the Lower Delaware River? 2. Is there any publication on points of interest in that vicinity, if not, to whom could I write for such information, also in regard to rapids, dams, etc.? 3. Is there much fishing to be had and of what kind, during the latter part of August or first of September? 4. At what rate about does the current run?—J. G. R. [Charts of the river from Philadelphia down can be had of D. Eggert's Sons, 76 Wall street, N. Y. Per- some of our readers can answer the other questions.

NEW YORK C. C.—The postponed regatta of the New York C. C. was sailed in a good breeze on June 30, the sailing race being won by Mr. Reginald Blake, B. C. C., in his new and unnamed canoe; Tamer, Dr. Powers, won the novices sailing race; Messrs. Brokaw and Blake, in the Minx, won the tandem paddling, and Com. Munroe the upset race.

THE COMING YACHTING SEASON.

III.—THE RACING FLEET.

[CONCLUDED.]

THE reports of races for the past three weeks have prevented the conclusion of our forecast of the season, but we take it up where it stopped on Page 422, in the issue of June 14:

Continuing down the list, Troubadour has been altered in rig, as stated, and has been generally overhauled and refitted and will outer the regular races. Sachem has had some 8 tons of lead bolted under her keel, the same amount of iron being removed from inside, while her spars are somewhat longer and her canvas has been increased, so that she evidently is prepared to make a hard fight against the new comers. Miranda was not raced last year, but this season she will come out with new canvas and copper, and a general overhauling, and will be in all the races. Her tiller has lately been replaced by a Diamond steerer and a wheel. Few would recognize in the schooner Elma the sloop Priscilla, so complete has been the change above and below. The bottom has been cut away and replaced by a trough keel filled with lead, the draft being now 11ft. 6in., while the sloop rig has given place to one much like the Sea Fox, but with more of the main boom outboard. She will be used by her owner for cruising but will be in all races, and with wings long enough to take her up near the first place. The changes in the Grayling we have already noticed, as they where chiefly done last fall when she was put into Mr. Burgess's hands. They included a lead keel of 25 tons, 25in. deeper draft, a pole bowsprit and one jib, a longer counter, and a coat of white paint. This spring the mainmast has been replaced by a new one 3ft. longer, while the main boom and gaff are also longer than before.

After Sachem's success the performance of Mr. Burgess's second venture in the two-stickers will be one of the events of the season. The new Marguerite is unfortunately at the extreme end of the class, being but 80ft., compared with Sea Fox, 90, Sachem and Miranda 86, and Elma over 85, so she will be at some disadvantage. She is a modern craft, and chiefly noticeable from her great depth, drawing 11ft., in short, a keel boat, though provided with a centerboard. This latter, too, is housed below the cabin floor, a new feature in large craft, and one whose working remains to be tested. Of course she is painted white. Of a length with her is the steel Iroquois, a new boat in 1887, but too well known to need any description. She will be a good match for Marguerite, though too small for Sachem. Another new craft from Boston is the wooden schooner Oenone, also designed by Mr. Burgess, for Col. Cochrane, but she will not be completed for some time, and for the present at least will not race. Vaviator, a wooden craft with a keel, Viator, the 62ft. Burgess boat for Mr. Wyeth, and Fonella, building at Mystic for Mr. Jackson, of New York, complete the list of new schooners, but will not be in the racing fleet.

The prospects thus far for any sport in the first class of the single-stickers are very poor, as of the four boats in the fleet one is so much the best that she can take anything she cares to enter for. Volunteer will be in commission and under her old owner; she made first appearance in the E. Y. C. regatta of June 28, Capt. Haff is still in her, but with a new crew. Mayflower will be under the same owner and skipper as last year, Atlantic will not be raced, Puritan will have a new mainsail and will be raced during the season. Altogether the glory of the class has departed, and for a long time as it now appears, unless a challenge can be coaxed from the other side.

The second class lately created has as yet no representatives, nor is it likely to have, as it was established simply to fill a gap in the classification. The old second class, formerly the first, the 70-footers, is now the third, and this year it is likely to obtain again the prominence that the Cup racers have robbed it of for three seasons. Of the old boats both Bedouin and Gracie are unchanged from last year, but Gracie will not race this season. Shamrock has been lightened inside, her keel ballast has been increased by about five tons, her spars have been lengthened, the bowsprit and spinaker boom being hollow, and she is like all wooden craft, lighter in topsides and spars and heavier in bottom than in her first season. All these changes are for the better and strengthen her where she was weakest, so that she promises this year to make a far better showing than last, as far as her old rivals go. Last year she managed to take care of Titania on most occasions when they met, and she has been improved more during the winter than the latter has, as the steel hull was very light last year and capable of little improvement. Unfortunately the two will not meet, at least not for the present, as Mr. Iselin is absent in Europe. The chief interest in the class is centered in the new addition, Katrina; what she will do with Bedouin and Shamrock. Though she will be in the early races, it will be at least August before she is in proper shape, as there has been delay in the building and she is as yet untried. The indications now are that she will ultimately head the class; but for the present both Bedouin and Shamrock have the advantage of previous racing and trial, and this should carry them through a good part of the season. Of the smaller boats in the class, Stranger is likely to return to England, as her owner will make his home there; Fanny, Huron and Hildegarde, the latter with double head rig, will race; while Mischief will be for sale.

The new class from 53 to 61ft. is as yet only in existence on paper, and it is doubtful when any yacht will be built to it. As far as racing goes, the class below is hardly any better off, as Clara will not fit out, her owner being abroad; Cinderella is in new hands and will not race, so the life has gone out of the class. There is a real demand for one of these classes, boats of either 53ft. or 61ft. l.w.l., and it is time that some decided action was taken by the clubs to encourage building and racing in one of them, whichever shall be deemed the most desirable. The 53ft. class offers very fair accommodation at a moderate cost, while as far as racing is concerned it is as good as any. A modern steel craft of 53ft. l.w.l., either keel or centerboard, would give a very fair amount of room for a bachelor's boat, the cost is within the reach of many of the younger and more enthusiastic yachtsmen, the boat is large enough to make passages in safety, and yet small enough to be raced by a Corinthian crew. All of these points make it a very desirable size to encourage, but circumstances just now have stopped the racing in it for a time. In the 46ft. class there are several yachts that would make some good racing, but it is hard to say just what the entries will be. Fanita, the fastest of the class about New York, has lately gone to Boston. A new boat in the class is the Bayadere, built three years since, but never in commission. She is a Watson cutter of moderate beam, 45ft. l.w.l. to 10ft. beam, and should be fairly fast. She has lately found a new owner, and will be raced this season.

The greatest amount of racing and perhaps the best sport, is promised in the two classes 30 to 35ft. and 35 to 40ft., especially in the latter. About New York two additions have been made; one, the Banshee, built last season from Mr. A. Cary Smith's design, the other, the Nymph, built this year from a design by Mr. Burgess. Banshee is 39ft. 9in. l.w.l., 14ft. beam, 6ft. draft, with lead keel and centerboard and cutter rigged. She was designed for cruising use, but will be raced this year, as her owner has found her quite fast. Nymph is of the same beam and draft and but an inch or two shorter, also a modern centerboard with cutter rig. The Boston fleet has been increased by a most interesting trio, all keel cutters 39ft. 6in. l.w.l., of Mr. Burgess's design, but one with a board in addition. The latter, Chiquita, for Mr. Hemmenway, is 13ft. 6in. beam and 7ft. draft, with the board entirely below the cabin floor. Mr. Adams's new boat, Baboon, the successor to Papoose, is 13ft. 2in. wide and 8ft. 3in. draft, while the third, Xara, is 2in. narrower, of the same draft, but with more displacement and less hollow to the floor. The three are built for speed and will be raced together throughout the season, and perhaps may be seen about Newport and New York. These boats with Roamer and Crocodile and some of the older craft should make very fine sport and further should do much toward solving some important problems as to dimensions and displacement.

In the 35ft. class the chief addition about New York is the Ellsworth boat Eurybia, built for Mr. Chas. Pryer. She is 35ft. l.w.l. and of the beam and draft of Nymph and Banshee, with lead keel and board. In model she is similar to the little Arab, but with a clipper stem; a very bulky boat with long bow and very full quarter. The class will be pretty well filled with the old boats this year, and there is likely to be rather more racing than usual in all the clubs. In Boston the small fleet has been increased considerably by the the addition of a number of cutters of 25 to 30ft., and there will be plenty of racing in all the small classes, both keel and board, this season.

On Lake Ontario there is considerable activity among all the classes, new boats have been added in the smaller sizes, and a strong rivalry exists between the yachts of the different ports. The regular round of races will give plenty of opportunities for trial, and besides some private matches are likely to be made. The large limits of the classes, as from 36 to 50ft., are a hindrance to racing, and it is time that the classification was thoroughly revised. An advance has been made this year in the substitution of l.w.l. for corrected length as the basis for classification, but further than this more sizes are needed.

SAIL AREA AND MEASUREMENT.

Editor Forest and Stream:

When I opened the FOREST AND STREAM of May 24, the first thing that caught my eye was your excellent review of the present state of yachting.

I read it, of course, and was especially pleased with the criticism on the racing rules now in vogue, showing their inadequancy and pointing out the nature of their ultimate product.

As to the formation of a national association of yachtsmen, I have always advocated it, believing it to be for the best interests of the sport. But the thing at this time most needing discussion is the subject of rules, and with this in view I offer a few ideas.

The present sail or rather spar measurement of the principal yacht clubs evidently tends to compactness, though the same area of sail; more openly disposed, gives better speed, indicating that the true area should be taken, and there yet remains a sufficient tendency to compactness.

It is my opinion that taking the maximum light-wind area, including spinaker, is the only way to avoid distortion of the sail plan, for if any part escapes measurement it is sure to assume larger proportions than it naturally would have.

While the actual sail used and the time it is carried seem necessary at first sight to the accurate gauging of the relative values of body forms, yet the maximum light-wind area is preferable, as it puts no tax upon daring and seamanship, nor upon the strength of vessel and rig.

That any restriction upon length of hull deforms it, more or less, a look at the vessels built under the old rules, and for that matter under the new, is sufficient testimony.

It was to avoid the deformation inherent in rules of this character that led me to suggest in the FOREST AND STREAM of Sept. 8, 1887, a substitute for what is known as the length and sail rule.

My idea was to rate a yacht by square root of sail alone, but when this exceeded the l.w.l. then by the l.w.l. alone. But as in most if not all yachts the square root of sail exceeds the l.w.l. it follows that only a per centage of the square root of sail should be used. The rule would then read square root of sail multiplied by 70 per cent. or any other per cent., according to proportion of sail to l.w.l. favored. By this means the designer has more freedom to shape the hull as he pleases, although only a sail rule can give complete freedom. Yachtsmen who keep abreast of the times are aware that none of the rules at present in use have any restraining effect upon the large sail spreads, now all the fashion; and the fact is that measurement by sail alone or an equivalent, if any, will eventually, by force of circumstances, come to the front. True, the exponents of the idea in Great Britain have for a time been silenced, partly by the influence of American practice, but if some of the yachts now building there have the sail plans which their dimensions indicate, it will not be for long.

The main objection that is urged against a sail rule is that it may produce unduly long and deep boats—by the way, a good many noted craft would be easier and do better for a little lengthening and deepening.

At average regatta speeds friction is by far the largest consumer of power, so it would hardly pay to lengthen and narrow a vessel already possessed of sufficient lateral resistance, unless the present area of wetted skin can be retained by cutting forefoot and heel. However, this can be overdone.

As to the objection above stated, it is well to note that in the home of deep, narrow yachts the extreme style would fare poorly under a sail area rule. In fact it bars out monstrosities, whether of the wide or narrow kinds, and I think it would be a good thing to limit draft, so that with or without centerboard it would not exceed the beam; and might also add, that it should not be less than one-third the beam, and thus secure safe craft. The tendency of a sail rule is in the same direction, and where it is employed renders these restrictions quite unnecessary. Vessels that are extremely deep and narrow are unfit for cruising, lack room above and below, as compared with the medium type, and have too much inertia in waves, rendering them wet unless freeboard is immense; yet a little inertia makes a vessel easy. The medium type is, as you say, better in everything that goes to make a cruiser, and there is as yet no proof of it being deficient as a racer—rather to the contrary.

Another thing about a sail area rule is that it discourages very small rigs quite as much as it does large ones, and I shall hold this view until somebody brings forward proof that a vessel with full sail cannot save her time off of a similiar vessel reefed. I would say that just as in fast yachts propelled by steam the highest attainable speed with a given power is the object sought for, so it should be in those propelled by wind. Comparing large with small yachts of similiar types, appearing in the same races, I find that the speed varies as the square root of the square root of the sail area, and this formula may serve as the basis for computing time allowance under a sail rule.

S. F.

SOUTHWARK Y. C., June 18.—The 14th annual regatta of the Southwark Y. C. was sailed of June 18 over the club course, from Dickinson Light wharf, Philadelphia to Chester buoy and return, 35 miles. The full times were:

	Start.	Lower Buoy.	Finish.
FIRST CLASS.			
Maid	10 59 00	1 38 00	5 19 00
SECOND CLASS.			
Dell	10 36 00	1 52 00	. . .
Emma A	10 36 00	1 45 00	. . .
Thos. J. Carroll	10 36 00	1 54 00	. . .
Hattie	10 36 00	1 42 00	. . .
James Irvin	10 36 00	1 32 30	. . .
Julie Strien	10 36 00	. . .	. . .
Freddie I	10 36 00	1 53 00	. . .
Mary C	10 36 00	1 44 00	. . .
James Dealy	10 36 00	1 42 00	. . .
THIRD CLASS.			
Thomas Ledyard	10 46 00	1 27 00	5 00 00
Harry Bucklew	10 46 00	1 31 30	5 02 00
Myrtle	10 46 00	1 30 30	5 03 00
Hugh Boyle	10 46 00	1 42 15	5 13 15
Charles Korb	10 46 00	1 34 00	5 04 00
R. S. Patterson	10 46 00	2 20 30	4 56 00
George Flick	10 46 00	1 25 00	4 58 30
Seagull	10 46 00	1 50 00	. . .
FOURTH CLASS.			
Emma S	10 44 30	1 38 30	5 13 00
A. L. Rival	10 44 30	1 49 30	5 34 00
Okey No. 1	10 44 30	1 34 00	5 28 00
V. P. Drop	10 44 30	1 41 00	5 22 00
Charles Deputy	10 44 30	1 51 00	. . .
Wm. Korb	10 44 30	1 56 00	. . .
Thomas J. Dougherty	10 44 30	1 34 00	5 20 00
Joseph Nobrey	10 44 30	1 27 00	5 04 00
Bessie	10 44 30	1 32 30	. . .

No race was made in the second class, the first boat, Jas. Dealy, being 1m. over the time limit of seven hours. The regatta committee included Julius Hoffman, Jos. P. Stephens, V. V. Drop, F. B. Maxwell, Isaac Sharp, Geo. Lance and H. Butler. The judges were Thos. Troutt, S. J. Duckett and M. Kraft.

NORTON'S SYSTEM OF NAVAL CONSTRUCTION

Editor Forest and Stream:

I have read your article in your issue of June 20 upon the "Norton System of Naval Construction," and feel greatly obliged to you for the space that you have allotcd to a description of this truly valuable invention. Permit me to say, however, that your criticisms satisfy me that you have failed to realize just what it is, and that you have a limited knowledge of the laws of hydrostatics, which this invention brings into operation so thoroughly. Permit me to add also that your mild insinuation that the gentlemen who have indorsed this invention are men of no account, is in very bad taste. The invention has been closely examined by many recognized experts (not amateurs) in this country, and in Europe. The men who have given it their indorsement are recognized as authorities by their own Governments.

The Norton boat possesses all the merit that is claimed for it by its supporters. It is non-capsizable, and practically unsinkable, and it derives its perfect seagoing qualities for what is new in the invention, and not as you insinuate, from what is old. It is particularly what is "new" and what has been recognized by the Governments of the U. S. and Europe as "new" that makes it what it is, a perfect life-protecting boat. Various boats and yachts now afloat, and those soon to be launched, will settle the question; and no newspaper discussion of its merits will affect it, pro or con.

The Heron has been launched and tried, and proved perfectly satisfactory to her owners. They recognize that she has been greatly improved.

A sixty-foot yacht, to be yawl rigged, now being completed at Baltimore, Md., will soon be launched at that port, and I shall be ready to accept any challenge to race her against any yacht of similar size from New York to Bermuda and back, in September next.

At Wilmington, Del., a 40ft. yacht is under construction, and four lifeboats—two 30ft. long, one 16ft. long, and one 12ft. long. They will soon be afloat in this harbor, and the public will be able to judge for themselves whether a Norton boat will, as you say, capsize. Whenever you hear of one of them doing so, we trust you will notify your readers without delay; but I fear that you will have many more gray hairs on your head than you have at present when the time comes that you will have the opportunity to make such a statement.

The Norton boat is a true lifeboat, constructed on sound, scientific principles. The seafaring world has need of this boat, and, as one of the most eminent naval constructors in the country recently remarked, "It will live."

FRANCIS L. NORTON.

JERSEY CITY, June 26.

[We fail to find in any of the testimonials offered by the Norton Company that the peculiar features connected with the open air and ballast chambers have been thoroughly examined and indorsed by competent authorities. The indorsements refer mainly to the ordinary features of the lifeboats offered for test. In one case, the test by the United States Naval Board, the examiners absolutely decline to indorse the boat as non-capsizable; while no tests are given of yachts, or any other craft than lifeboats, fitted with the invention. This endeavor of the Norton Company to make it appear that the United States Government experts have indorsed his peculiar system is of a nature to mislead the public. It would be useless, however, to prolong the discussion when a practical test is promised soon.]

EASTERN Y. C. REGATTA, JUNE 28.

COMPARED with previous years, the annual regatta of the Eastern Y. C., sailed June 28, was a very tame affair in spite of good weather, the only features being the race between the new Burgess cutters, Xara and Baboon, and that between Volunteer and Puritan. The former was a close and exciting race, the boats being new and of the same waterline length (40ft.) and sail area, though of somewhat different model. The race between the two big ones was close enough to be interesting, but it has been a foregone conclusion for so long that Volunteer could beat Puritan that little excitement attended it. There were several other entries, all old boats, some sailing alone in their class. In the first class schooners, Gitana, now painted white, was matched against Adrienne, 9ft against 6ft. l.w.l.; in the third class schooners only Bohemian and Diana, both old boats, started, the latter giving up on the first leg. In the first class of single-stickers were Volunteer and Puritan; in the second class only Stranger; in the fifth class Hesper; in the sixth class Xara and Baboon, and in the seventh class Clytie.

The day was cold and the sea rough, with a strong breeze from E.S.E., only Gitana, Volunteer and Puritan carrying clubtopsails. The course was the same as last year, a triangle with 12 mile sides, starting from Half Way Rock, the first mark being at Harding's Bell Buoy, off Hull, the second bearing nearly east from it. The third class schooners and the fifth, sixth and seventh class sloops sailed from the Rock out to the second mark and back, making 24 miles. The first leg was a reach, with wind nearly abeam, the second was to windward, a long and short leg, while the third was free. The smaller boats beat out to the second mark, arriving just in good time to turn and come home free with the big ones. The start was given at 11:35 and at 11:35:52 Puritan crossed. She carried a small jibtopsail, but near the line the tack parted and let it run up to stay, so that it was necessary to lower it and repair the damage. Gitana crossed at 11:36:49, Adrienne at 11:37:46 and Volunteer at 11:38:49. On the first leg Volunteer gained a little on Puritan and both left Gitana, the latter losing some time by an accident to her jibtopsail, the time being timed: Puritan 12:40:30, Volunteer 12:42:00, Gitana 12:42:30.

The two leaders held on toward Cohasset after rounding the mark, but Gitana tacked and stood in on starboard tack, only holding it for a short time. Volunteer soon overhauled Puritan when on the wind, and had passed her by 1 P. M., near Minot's Ledge. On the next tack, heading into the sea which was rolling in quite heavily, Volunteer easily left Puritan, gaining a very long lead on her. When they came to the buoy the small boats had already turned, Xara having beaten Baboon over the windward part of the course, while both had beaten Hesper. The times at the second mark were: Xara 2:24:00, Baboon 2:27:15, Hesper 2:33:13, Volunteer 2:37:50, Puritan 2:53:15. Gitana was not timed. Xara set her balloon jibtopsail but the stops were too heavy and the sail had to be lowered and the stops cut. Baboon set spinaker as well as ballooner and gained on Xara until the latter also set her spinaker. The large boats contented themselves with big jibtopsails only, Volunteer outrunning the small ones before the finish was reached. The times were:

	Length.	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS SCHOONERS.					
Gitana	95.00	11 36 49	4 22 15	4 45 26	4 45 26
Adrienne	85.00	11 37 46	4 44 54	5 07 08	4 59 57
THIRD CLASS SCHOONERS.					
Bohemian	46.00	11 50 00	4 39 58	4 49 58	4 49 58
Diana	38.00	11 50 00	Did not finish.		
FIRST CLASS SLOOPS AND CUTTERS.					
Volunteer	90.00	11 38 49	3 43 59	4 05 10	4 00 51
Puritan	85.00	11 35 52	3 57 56	4 22 04	4 12 36
SECOND CLASS.					
Stranger	68.00	11 46 37	4 32 00	4 47 00	4 17 50
FIFTH CLASS.					
Hesper	51.00	11 51 07	4 52 57	4 02 57	. . .
SIXTH CLASS.					
Baboon	46.00	11 51 37	3 49 41	3 59 41	3 59 41
Xara	46.00	11 51 25	3 48 42	3 58 42	3 58 03
SEVENTH CLASS.					
Clytie	36.00	11 52 07	4 34 37	4 44 37	4 27 23

Prizes.—First class schooners, Gitana, $250; third class schooners, Bohemian, $50; first class sloops and cutters, Volunteer, $200; second class, Stranger, $100; fifth class, Hesper, $50; sixth class, Xara, $50; seventh class, Clytie, $40.

Volunteer was sailed by Capt. Haff, Puritan by Capt. Crocker, Xara by Capt. Harry Haff, and Baboon by Mr. Adams, her owner.

THE ACCIDENT TO THE SEA FOX.—The mishap to Sea Fox's centerboard in the New York Y. C. regatta, which occurred when she was near Buoy 7, was due to the poor construction of the centerboard winch, one of the patented makes. The wooden barrel on which the pendant is wound was fastened to the iron gear wheel which turns it by four small nails, which were cut off by the weight of the board, allowing the latter to fall almost clear of the trunk. It dragged in the mud until a tackle was rigged from the masthead, and even then was raised with difficulty, the board being badly sprung. After the Seawanhaka race a new oak board was made at Poillon's.

AID FOR A YACHT CAPTAIN.—A subscription is now being made up in England for the late captain of the 10-ton cutter Queen Mab, Benjamin Harris, who was seriously injured, losing the use of one hand when Queen Mab carried away her mast last season. Harris, who is but 34 years of age, has a wife and three children dependent on him, but has been unable to obtain any work which he could do, and an effort is being made to raise sufficient money to purchase a small business for him. Subscriptions may be sent to George Wilson, 20 Glasshouse street, Piccadilly Circus, London.

LAKE ONTARIO.

BELLEVILLE, Ont., June 28.—In contrast with the prevalent dullness in yachting circles here, I note with pleasure the active spirit which prevails in the new clubs at Hamilton and Montreal and the Toronto and Rochesters clubs. At Hamilton and Toronto a great impetus has been given to the whole sport by the holding of a regular series of matches, chiefly for the smaller yachts, with an occasional chance offered for the larger ones. This is a long stride in the right direction. It is in the smaller classes that yachtsmen are made, and their competitions are as interesting to the initiated as those of the larger ones, or even more so, because more depends upon their skilful handling in heavy or tricky winds. The grand results of these races will be apparent within a very few years. At Montreal, owing to circumstances, there are no large yachts, nothing bigger than the third-class Black Eagle, but the racing has been keen, and our old friend, the Minnie A., has carried off the honors in all except the last race, wherein she was beaten by a few seconds by a still smaller craft

The local club has added a few new members and presents a good programme for the coming circuit regatta. Our representatives will be in good fighting trim; the Atalanta with a new suit and the Iolanthe perfectly found in all respects. The Norah will also don a new suit, but whether or no she will race I am not informed. She will, however, be ready to defend the Fisher cup, emblematic of the sloop championship of the lakes; as to which it is in the air that challenges from Atalanta and White Wings are among the probabilities.

The owners of the Merle, of Oswego, and of the Iolanthe are or have been in correspondence as to a race on the lake, for which the former, owing to the greater power of their boat, have a strong preference over racing in the bay. Why not a series of three—one on the lake, one on the bay and toss up for the third?

Mr. E. B. Burrell has added to the boat fleet a cabin sloop, which he purchased in Gananoque. She is of about 33ft. waterline; was called the Tornado and has been renamed Argo. Her record as a racer has yet to be made.

Mr. W. P. Clarke lately launched a scow 24x8.2, which he has rigged as a schooner, and which holds well with other craft of her length. PORT TACK.

NON-SINKABLE YACHTS.—*Editor Forest and Stream:* It strikes me that your correspondents are a trifle hard on "Captain Norton's system," for, while it is quite apparent that his boat is likely to do just what he says she will do, and not do what he says she will, at the same time it would seem that somebody should give friend Norton a little credit for at least trying to produce something that our yacht-designing "scientists" in and out of your columns have for years been more or less ingenuously stating they desire, namely, a fast, perfectly safe cruising and racing yacht. Surely the genuine "cutter man" can not honestly condemn the efforts of Capt. Norton, for the reason that while the latter attempts, though without success, to give us a safe boat, those who advise us to trust ourselves at sea in a deep, heavy craft, overloaded with lead, would send us to the bottom without shrift in case of collision or a bad leak sprung. It is all very well to quote Sophia, Mystery and the rest as warnings against capsizable boats, but, supposing none of them had sunk when they capsized would not their occupants have had a better chance for their lives? And this brings me directly to the statement I have more than once made in your columns, and can at any time practically prove that a safe, seaworthy yacht may easily be built, which will not capsize, and, if she could be capsized, can not sink. There is nothing, also, to prevent her being very fast, inexpensive to build, easier to manage than any lead-laden, oversparred "machine." Her stability will be due to her form, not to any scientific method of excessive ballasting, and her unsinkability is gained by constructing her of light, tough wood, plenty of it, with no snares or expensive delusions in the shape of air tanks, bales of cork and other clumsy contrivances. The designing of a sinkable yacht for safety appears much like setting fire to one's house in order to save it from future risk of burning.—THOMAS CLAPHAM (Roslyn, L. I., June 29).

YONKERS Y. C. ANNUAL REGATTA, JUNE 26.—In spite of a good list of entries the regatta of the Yonkers Y. C. on June 26 was robbed of all interest by the calm weather, with squalls and rain thrown in, which prevailed all day. A special prize was offered to bring out the best boats between 30 and 40ft, but only two entered, the course being to Sing Sing and back, 30 miles. All the others sailed to Tarrytown and back, 22 miles, except Class H, which sailed a 16-mile course. The greater part of the race was a drift. The times were:

The winners in the respective classes are Edith, H. W. Beecher, Columbia, Little Deane, Vixen, G. B. Deane, W. H. Harned and Mabel. The winner of prize for best corrected time over the Tarrytown course was Columbia.

WEST LYNN Y. C.—The postponed race of June 18 was sailed on June 30 over a seven mile course, from judges' boat to Point of Pines Buoy on port, thence to Western Lobster Rocks Buoy on port, then to Old Sink Buoy on port, thence to judges' boat. The wind was fresh southwest. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Blanche, Besson & Wylie	22.04	1 31 00	1 06 21
Nordeck, Rich & Howe	22.07	1 32 35	1 08 16
SPECIAL CLASS.			
Flying Yankee, Sargent & Rich	18.05	1 27 50	0 59 19
Inez, Goodridge Brothers	18.07	Not taken.	

The judges were William Burrill, F. Smith and Herbert Robinson. A match was also sailed, three miles to windward and back, between the cats Alice L., P. Lynch; and Wild Cat, C. H. Alley, for $50. Wild Cat beat by 5m. 30s.

NEW CUTTER.—Design No. 19 has been sent by C. P. Kunhardt to Mr. Curtis, of New York. These plans call for a cutter 42ft. long on deck, 30ft. waterline, 10ft. beam and 6ft. draft. Least freeboard to top of planksheer is 25in. The iron keel weighs 7,000lbs., total ballast about 11,000lbs. The boat has good deadrise, easy bilge and slight round to side, with the flare forward induced by a clipper stem of 4ft. rake. The after overhang is of the cutter style, now universally in vogue. The cutter has a flush deck, with broad gangways 3ft. 6in. wide in wake of the skylight. Below deck there is 5ft. 8in. headroom over a floor 3ft. wide. Mast 37ft. deck to hounds; topmast 18ft. above cap; bowsprit 12ft. beyond stem; boom 33ft.; gaff 24ft. Like all boats from this source, she will present a very handsome and stylish appearance afloat.

QUINCY Y. C. REGATTA, JUNE 29.—The first championship regatta of the Quincy Y. C. was sailed on June 29 in a strong N.E. wind, the courses being as follows: First class—From off club house, passing between Sheep and Grape Islands to red buoy between Bunkin Island and Downer Landing, leaving it on port; thence, leaving Bunkin Island on starboard, to red buoy off Hull, leaving it on port; thence, leaving Sheep Island on port, to buoy on Channel Rock, leaving it on starboard; thence, leaving Raccoon Island on port, to judges' yacht, passing between it and a flagboat; distance 8 miles. Second class—From off club house to barrel marked Q. Y. C. off southwest end of Sheep Island, leaving it on starboard; thence to buoy on Jack-knife Ledge, leaving it on starboard; thence leaving Raccoon Island on port, to flagboat near judges' yacht, leaving it on starboard; thence to barrel off Sheep Island, leaving it on starboard; thence to buoy on Jack-knife Ledge, leaving it on starboard; thence, leaving Raccoon Island on port, to judges' yacht, passing between it and a flagboat; distance 7 miles. Third class—From line to barrel marked Q. Y. C., off southwest end of Sheep Island, leaving it on starboard; thence to buoy on Channel Rock, leaving it on starboard, thence to barrel off Sheep Island, leaving it on port, to judges' yacht, passing between it and a flagboat; distance 6 miles. The times were:

FIRST CLASS.

Nevena	20.11	2 45 00	Did not finish.		

Winners: First class keels, first, Saracen; second, Elf. Second class keels, first, Carmita; second, Echo. Third class keels, first, Mosca; second, Wraith. First class centerboards, first, Atalanta. Second class centerboards, first, Expert. Third class centerboards, first, Myrtle; second, Hoiden.

DORCHESTER Y. C., JUNE 30.—The Dorchester Y. C. sailed its 103d regatta on June 30 in a reefing breeze from S. W., the classes and courses being: Fourth class, yachts 18ft. and less than 21ft. w. l.; fifth class, yachts under 18ft. l.w.l. Courses—For fourth and fifth classes, No. 3, from line between judges's boat and flag boat, leaving Farm Bar buoy No. 3, on starboard; Half-Tide Rock buoy on port; Old Harbor buoy, No. 4, on port; Farm Bar buoy, No. 3, on port; Half-Tide Rock buoy on port; Old Harbor buoy on port; Farm Bar buoy on starboard, to starting line. Distance 7 miles, limit of time 3 hours. Prizes—Fourth class, first prize, $10; second prize, $5. Fifth class, first prize, $10; second prize, $5. The times were:

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Mabel, F. L. Dunne	21.05½	1 27 06	1 01 23
Water Witch, T. W. King	20.02	1 37 16	1 10 33
Jester, W. H. Besarick	20.09½	1 37 52	1 11 42
Marion, F. L. Came	Withdrawn.		
FIFTH CLASS.			
Scamp, Frank Gray	19.05½	1 27 28	0 59 37
Mirage, G. E. Jordan	18.08½	1 36 06	1 07 44
Sheerwater, C. H. Woodsum		1 36 42	. . . .
Guenn, John Deerborn	19.00	1 38 50	1 10 53

Rocket, H. M. Flaxon	Withdrawn.		

The race was the first under the new length and sail area rule of the club. The judges were: Messrs. A. J. Clark, Hartford Davenport, C. J. Means and W. C. Knowlton. In the evening a supper was served at the club house, followed by dancing.

GREAT HEAD Y. C. PENNANT REGATTA, JUNE 30.—The first pennant regatta of the Great Head Y. C. was sailed on June 30, starting in a fresh S. W. breeze, which fell toward the latter part of the race. The courses were: For first and second classes from judges' boat to Sculpin's ledge, red buoy No. 2, leaving it on starboard, to black buoy No. 7; leaving it on starboard, to red buoy No. 6; leaving it on port, back to judges' boat, 7½ miles; for third class, from judges' boat to red spar buoy No. 2; leaving it on starboard, to red spar buoy No. 8; leaving it on starboard, to Apple Island red buoy No. 6, east of the island on port, back to judges' boat, five miles. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
E. W. D., E. W. Dixon	25.01	1 25 40	1 01 42

THIRD CLASS.			
Modoc, D. W. Belcher	15.07½	1 12 05	1 49 05
Laurel, C. L. Smith	16.08	Withdrawn.	

The judges were Messrs. J. S. Cushing, George Cartwright and Clarence H. Billings. The club cruise will start on July 7 for Portland.

KEEL VS. BOARD AT MARBLEHEAD.—In the Corinthian Y. C. regatta off Marblehead last Saturday, the new Burgess keel cutter Saracen easily defeated the well-known centerboard crack Atalanta, beating her to windward as well as off the wind. Saracen is 29ft. 3in. l.w.l., 10ft. beam, and 6ft. 6in. draft; while Atalanta is 27ft. 7in. l.w.l., 11ft. 1in. beam, and 3ft. 6in. draft without board. In the third class both Mosca and Traitor beat the four centerboard boats in their class. Mosca is a new boat, 18ft. 9in. l.w.l., 7ft. 8in. beam, and 5ft. draft.

THE STEAM LAUNCH DISASTER.—All the bodies have been recovered from Newark Bay where the launch Olivette capsized, six persons being drowned in all. The evidence at the inquest shows that the boat was overcrowded, while there was no one on board competent to run or steer her, neither engineer nor steersman being licensed. The boat was licensed to carry twelve, but had twenty on board, with only three life preservers. The men, with one or two exceptions, scrambled on the dyke and left the girls to drown.

CAPSIZED CENTERBOARD.—On July 2 the fast open boat Thorne, of Hoboken, capsized in the Hudson River, throwing 18 men into the water. Fortunately the flagship Richmond, of the North Atlantic Squadron, was anchored near by, and her boats were quickly sent to the rescue, all hands being picked up.

SAVIN HILL, MASS., Y. C.—Third club regatta, June 30. Courses—For boats over 15ft., from starting line between float and flagboat, leaving Mushroom Island on port, Cow Pasture Buoy on port, stakeboat off lumber wharf at Harrison Square on port, Mushroom Island on port, to finish; 6 miles. Under 15ft., from starting line, leaving Farm Bar Buoy on port, Cow Pasture Buoy on port, Farm Bar Buoy on starboard, to finish, same as start; 2 miles.

15FT. AND OVER.

	Length.	Elapsed.
Alice, R. O. Harding	21.01	1 38 00
Annie Maud, F. O. Vegelahn	23.03	1 42 00
Avis, I. H. Odell	18.09	1 48 00
Blue Bird, M. J. Shugrue	26.01	1 53 00
Cygnus	18.00	2 02 00
UNDER 15FT.		
Gull, C. A. Dutton		0 43 45
Lillian, H. Coombs		1 02 00

Strong west wind at start, but after the first round of the course had been sailed the wind died down to almost a drift. Regatta committee, W. H. Besarick, I. H. Odell and J. L. Corr. Judges, J. L. Corr and F. N. Damon.

SOUTHWARK.—Continuation of 14th annual regatta, July 1, 1888. Course, from Mifflin street wharf to Chester Buoy and return. Distance, 28 miles; weather, cloudy; wind, N. N. W.; tide, ebb.

	Start.	Turn.	Finish.	Elapsed.
H. S. Boardman, Jas. Dealy	10 44	12 15 00	4 01 00	5 17 00
Dell, Geo. Creasy	10 44	. . . .	. . . .	. . . .
Emma A., Henry Anderson	10 44	12 11 00	3 55 00	5 11 00
Thos. J. Carroll, Wm. Baitzel	10 44	12 18 00	4 03 30	5 19 30
Hattie, A. G. Watson	10 44	. . . .	. . . .	. . . .

Harry E., Harry Eisenbrown	10 44	. . . .	. . . .	. . . .
Mary C., G. W. Engle	10 44	. . . .	. . . .	. . . .
Jas. Dealy, G. A. A. George	10 44	12 11 45	. . . .	. . . .

Winner first prize, Emma A.; winner second prize, Jas. Irvin. Delle broke her mast coming to starting point. Freddie I. swamped at the Salt Works. Mary C. capsized at the Greenwich Coal Piers. Hattie broke her rudder opposite Eagle Point. Dealy broke her rudder at the lower buoy. Harry capsized at the lower buoy. The Freddie I. baled out and proceeded over the course. Judges, M. Kraft, Thos. Trout and S. J. Duckett.

MIRAMICHI Y. C. CUPS AND SWEEPSTAKES REGATTA JUNE 7.—Course, on Miramichi River, Newcastle to Chatham and back, being five miles to windward and eastward and return. Weather cloudy and threatening at first, but improved after start; strong east wind, last of ebb tide.

	Length.	Start.	Elapsed.	Corrected.
Killride, I. C. Miller	22 6	12 48 35	1 52 35	1 52 35
Kittoch, Jas. Miller	22.3	12 48 42	1 53 24	1 53 04
Fedora, I. L. Stewart	23.4	12 54 30	2 06 45	2 03 14
Blandy, Gould	19.0	12 50 40	2 18 47	2 14 30
Coventry, Capt. Coventry	17.0	12 50 10	2 42 55	2 35 14

Winners: First, Killride; second, Kittoch; third, Fedora. The weather looked so bad in morning that only four yachts of first class and one of second turned out, and as the latter (the 17ft. boat) consented to sail in first class, there was no second class race. However, as the wind was strong and steady, we had a very pretty and exciting race and the best time yet made around this course by any at least of the three first boats named above. Regatta committee, C. Sargent, P. Cox, E. Hutchison, H. A. Muirhead, E. L. Street. Judges, R. R. Cael, J. Sadler, W. A. Park, E. Hutchison, E. L. Street.

CAPE ANN Y. C., GLOUCESTER CUP, JUNE 27.—The first race of the series was sailed in a fresh N.W. breeze on June 27, over an 8 mile course. The times were:

	Length.	Elapsed.	Corrected.

Lark, Bishop and Murphy	18.05	Did not finish.	
Siva, Ward		Did not start.	
White Wings, Perry and Docherty		Did not start.	

SOUTHERN Y. C. CHALLENGE CUP, June 28.—The challenge cup of the Southern Y. C. was sailed for on June 28 over a five-mile triangular course, three rounds, making fifteen miles in all, the wind being moderate from S.W. with squalls at times. The race was for cruising sails only, but out of the four entries carried her racing canvas and was disqualified. The entries were: Edith L., owned by P. Labouisse, sailed by Alex. Brewster; Stella, owned by J. M. Bourg, sailed by Carlos Christina; Zoe, owned by H. W. Brown, sailed by Emil O'Brien; Susie B., owned and sailed by S. Gautier. The times were:

Judge, Wm. Alcorn.

STEAM LAUNCH WHEELS.—*Editor Forest and Stream:* I had a Whitehall rowboat 5ft. beam lengthened to 21ft. 3in., to receive a 2 horse power Shipman engine working a 16in., 3-flanged wheel. The launch now draws about 18in. light, and when all is favorable makes about 6½ miles an hour. Steam is kept at 110lbs., but I do not have power enough to get the best speed out of it. Short spurts show (until the steam goes down) that ½ to ¾ miles more per hour can be made by revolving the wheel faster. As I am already using ½gal. kerosene per mile, and as the boiler is a fixture, no more power can be looked for in that direction, and it occurred to me to ask through your columns of those familiar with such problems, if replacing the present with a 16in. 2-flange wheel would not solve it. I see it frequently stated, that by reason of reaching unused water at each revolution the 2-flanged wheel is as effective as the 3-flanged wheel. It follows of course in this case that less power is necessary, and this excess can be applied just where I want it, in revolving the wheel faster.—C. C. PETTIT (Galveston, June 15).

BEVERLY Y. C.—The 129th regatta will be sailed on July 14 off Marblehead, a sweepstakes open to all yachts in the N. E. Y. R. A. not over 42ft. l.w.l. The 130th regatta, open to all catboats, will be sailed off Monument Beach on the same day.

PORTLAND Y. C. CRUISE.—On June 30 the fleet of the Portland Y. C., including the yachts Viva, Marie, Daphne, Geneva, Willie, Gracie, Nun and Clarence, started on the annual cruise.

HULL Y. C. CRUISE.—The annual cruise of the Hull Y. C. started on June 30, Marblehead being the first port. Gloucester and Portland will be visited.

ROYAL CANADIAN Y. C.—The postponed race of June 16 was sailed on June 26, Yolande winning, with Maria second and Pixie third.

MISCHIEF.—Messrs. Auchincloss have sold the sloop Mischief to Mr. C. Underhill, of Oyster Bay, a member of the Seawanhaka C. Y. C.

TORONTO Y. C.—In the 4th class race on June 23, twelve yachts started, Caprice winning first prize, Mischief second, and Alavetta third.

NEW JERSEY Y. C.—The race for classes D and E not having been made within the limit will be resailed on July 17.

New Publications.

AMERICAN FISHES.*

THIS is, by far, the best popular work which has ever been published on the fishes of America, and is a book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss. The work covers nearly 500 pages and is handsomely printed and profusely illustrated, the cuts being, in many cases, reduced copies from the great work on the "Fisheries Industries," by the same author, and are therefore scientifically correct. It is intended for the use of the angler, the lover of nature, and the general reader, and not for naturalists, the author being as well qualified for this work as any man in the country, by reason of his long study of the subject under the most favorable conditions, and he has aimed to include every North American fish which is likely to be of interest to the general reader, either because of its gameness or its economic uses.

The perplexing question of what fishes are entitled to rank as game is thus defined: "A game fish is a choice fish—a fish not readily obtained by wholesale methods at all seasons of the year, nor constantly to be had in the market—a fish, furthermore, which has some degree of intelligence and cunning, and which matches his own wits against those of the anglers, requiring skill, forethought and ingenuity to encompass its capture." This is perhaps as good a definition as has been given and is an improvement on his former definition in Scribner's "Game Fishes," by himself and Kilbourn. In his "prologue" he says: "Perhaps some may feel aggrieved because there are no discussions of rods, reels, lines, hooks and flies, and no instructions concerning camping out, excursions, routes, guides and hotels. To such the author would say that he has at present neither time nor inclination to enter upon these subjects. Men who know them better than he have already written what should be written," and he cites several such authors, journals and magazines, and all through the work he has given credit to writers for such facts as he has taken from them, a virtue not always practiced by angling writers, ancient or modern.

Prof. Goode has included in his title the "game and food fishes," and this disarms all criticism regarding what is properly game and what is merely food, unless it should be asked under which head the fresh water drum should be placed, although it is said that men have eaten them and lived to tell it, and, after carefully looking over his work to find a flaw, this is the only thing we find to carp at, for, while we have no use for this fish, either as food or game, our author says: "Its value as a food fish depends on the water and food, and, unlike most fishes, its quality seems to improve to the southward. Although from its size and abundance it becomes an important market fish, it cannot be considered one of high quality. Its flesh is tough and coarse in fibre, and often of a disagreeable shark-like odor, particularly in the Great Lakes, where it is never eaten. The flesh of partly grown specimens is better than that of the adult." So it will be seen that we cannot quarrel with him about this.

When we come to look at the excellent points of this work it is not an easy task to name them, and we will not try. It will suffice that we have called it the best popular work on fishes ever published, and the angler who cares to distinguish the species which come to his hook, and to know of their habits and relationship, will prize it as the best thing of its kind ever written, while the novice will find it of great value to him in showing him by correct plates what a certain fish is like, when a technical description would be more than "Greek" to him. The only one who will be disappointed in this work is he who has just awakened to the fact that there is something to be learned about fishes and wants all knowledge on the subject of species, angling, camping, tackle, woodcraft, fisheulture, etc., in a pocket volume. To the reading angler who owns several works on fishes this one will be welcome.

From the yellow perch, which begins the volume, to the smelt, which concludes it, there is not a dull line, nor a bit of padding. The chapter on the "catfish, or bullhead" begins: "The catfish is somewhat like *paté de foie gras* or pickled olives. Those who do not very much like it detest it. The metropolis of its popularity is Philadelphia, but whenever taken from clear, cool water it is palatable, and when properly cooked even delicious, its texture and flavor resembling that of the eel. Since every small boy begins his angling experiences with catfish, instructions for its capture would be superfluous." Then follow several pages on this excellent breakfast fish whose main fault is that his head weighs as much as the rest of his body, but the way in which Prof. Goode writes what we have quoted is not only charming but true.

A work of this kind has been needed, something on the relationships and habits of fishes which, being free from technical descriptions, can be read and understood by the mass of anglers, and Prof. Goode has happily accomplished this.

* American Fishes; a popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. Brown Goode, Assistant Secretary of the Smithsonian Institution; corresponding member of the Zoölogical Society of London, the Deutsche Fischerei Verein, the National Fishculture Association of Great Britain, the Northern Fisheries Society of Japan, etc., etc.; late United States Commissioner of Fisheries, and Commissioner to the International Fisheries Exhibitions in Berlin and London. With numerous illustrations. New York: Standard Book Co. 1888.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

STUD MASTIFF GROVER (A.K.R. 6033) BY Ilford Caution—Countess. For terms apply to J. ATCHISON, Woodbury, Conn. apr5,3mos

In the Stud.

IN THE STUD

To a limited number of approved bitches,

THAT GRAND MASTIFF DOG

Sears' Monarch

(A.K.R. 6037).

A Prize Winner Every Time Shown.

Fee $50.00.

An excellent litter of puppies by Monarch now ready for delivery. If taken at once $25 each.

WYOMING KENNELS, Melrose, Mass.

AT STUD. FEE $50.

The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS, Niles, Mich.

Morningside Kennel.

BRANDON

Royal Rock (E. 10,163) ex Lewis Nellie (A. 4555). Remarkably strong, compactly built lemon belton, great fielder, rapid, courageous, enthusiastic worker. Winner 3d, Members' Stake, E. F. T. ANSWERS TO CORRESPONDENTS.

THE NATIONAL DOG CLUB.

AT a meeting held in this city last Thursday the new dog club was finally organized under the title of the National Dog Club of America. The preliminary steps of formation have been watched with great interest by owners, breeders and exhibitors; and now that the club has been fairly launched this interest will be intensified.

It goes without saying that there is in this country abundant room for a club established on the lines marked out by the National; indeed, more than this, there has been an actual crying need of just such an association. Rank wrongs have been perpetrated by individuals and by show managers, and these have gone unpunished for the simple reason that there was no body which had recognized authority, and backed it up by a willingness to dispense justice with an even hand. The National Club, if rightly conducted, might readily constitute itself such a court of justice in the kennel world; to do this is one of its proclaimed purposes; and in this single field of work, if it shall aquit itself honorably, there will be found for its existence ample justification and a public support hearty and sufficient.

If the scope of action marked out by those who have been chiefly instrumental in its establishment shall be followed, the National Club will not only provide protection for dog owners, but it will also advance kennel interests by promoting shows. The club has taken its first step in this direction by preparing for the use of managers a set of show rules, which surpass in merit any code heretofore in use. These new rules are of a character to commend themselves, and they have already been adopted, without any solicitation on the part of the National Club, by the Buffalo show managers. We are advised that it is within the scheme of the National Club to give special prizes at the several shows, and in other ways to encourage these exhibitions. In short, the club, being made up of breeders and owners, will take such action in its several lines of work as will be for the recognized good of breeders and owners.

We have already pointed out that in principle a club formed on the basis of the National Club is stronger than any other can be. This club is composed of individual owners and breeders. The individual owner or breeder is, after all, the one who needs protection and encouragement. A club of owners and breeders will work for the good of owners and breeders. Their interests are its interests, their policy its policy, their injury its injury. There can be no real clashing of interest between the National Dog Club and any other kennel organization which is honestly striving for the good of the kennel world. The National Dog Club, composed of owners and breeders, will work for the good of owners and breeders; if that work clashes with the work of any other club it can only be because the work with which it clashes is not for the good of owners and breeders. In principle then, the club is sound.

The new club by reason of its form of organization and its proclaimed purposes should have the hearty, cordial and active co-operation of all who are concerned; its membership should be all-embracing.

We believe in the plan of the National Dog Club, and the FOREST AND STREAM will give to it its fullest support in all measures which tend to advancement in the kennel world, and so long as its counsels shall be governed by wisdom and justice. And it gives us pleasure to express our belief, which must be generally shared by the public, that the present control of the club is such as to warrant the fullest confidence in its integrity, fair-mindedness and discretion.

ADIRONDACK ABOMINATIONS.

IN the North Woods the work goes bravely on. Landlords, guides, tourists, "sportsmen" and railroad managers are doing what their hands find to do in the work of destruction. The State has its elaborate and expensive systems for the conservation of its forests and game and fish, but the destroyers make away in a year with more than these cumbrous and inefficient bureaus can replace in a decade.

The trout hog, the deer butcher, the dynamite cartridge fiend, the night-hunter, the steel-trap deer stalker and the like are increasing instead of decreasing. For example, at the State Dam on Salmon River, sixteen miles from Malone, a trout hog from Malone caught in three days' fishing 1230 trout, the total weight of which was 173lbs. Elbow Ponds, one of the sources of the Salmon River, near Loon Lake station of the Chateaugay Railroad, a magnificent fishing ground for the fly-fisherman, was recently dynamited and the lower pond almost totally cleaned out. The same thing has recently happened at Plumedore Pond. Fish are shot and speared every year on their spawning beds.

Night-hunting for deer is being regularly practiced at Paul Smith's, at State Dam near Malone and at Jones Pond near Wardner's Rainbow House, also at the various ponds near Loon Lake. Worse than all, much of this night-hunting is done by "guides," and participated in by so-called "sportsmen." Even if it were not illegal to night-hunt at this season, if the deer were fit to eat and not black and ragged and the hides good for anything; if the night-hunters were poor natives who needed the meat for food, there might be some excuse possibly. But there is not even this excuse.

For the game protector or constable to stop a few days here and a few there, at the best hotels, riding around the country in the daytime and tacking his cards up on stumps is all nonsense. The law-breakers don't care a rap for him and laugh at mention of his name and his methods.

It needs no expert to obtain names and facts. Any one can obtain all the necessary proofs if they go about it right. This night-hunting, taking trout of less than six inches, spearing and shooting on spawning beds and the like is being done near large hotels as well as by campers in the wilds. It is a shame and a disgrace that these marauders should go unpunished, working as they do in so open and barefaced a manner.

But this is by no means all. There is yet another abomination. The course of the new railroad that has recently been extended to Saranac Lake is a desolate waste. "Burn and destroy" seems to be their motto, and the fires are extended for miles back into the forest, making even whole mountains brown and desolate and lowlands mere marshy, blackened stumps and charred ground. Between the fish-hog, the railroad, the Italian railroad hand, the night-hunter, the pseudo-sportsman and the like this grand region is becoming yearly less and less like its old self and a few more years will witness its entire destruction from a sportsman's and nature-lover's point of view.

Read by the light of these Adirondack forest fires and with the report of the night butcher's gun echoing from lake to lake over the North Woods, the newspaper statement that Forest Commissioner Townsend Cox has been on an excursion to the Catskills to see about a park for deer, hares, wild turkeys and guinea hens, is received with a cynicism which is not dispelled by the further announcement that it is proposed to establish a moose park in the Adirondacks next year. If those whose business it is would establish some way to punish the trout and deer and timber thieves, some good might come of it; but until the bunghole is stopped up there is nothing short of lunacy in pouring in at the spigot.

THE NEW YORK FISH COMMISSION.

IN the selection of Mr. Henry Burden, to succeed Mr. R. B. Roosevelt as Commissioner of Fisheries for New York, the Governor could not have made a better choice. Mr. Burden is well fitted to fill the position by reason of having the time to attend to the duties and also great interest in the work, as has been manifested during the past two years by his securing the passage of laws establishing fishways in the Hudson River and for the protection of the salmon in it. We believe that his appointment will strengthen the Commission and materially aid in developing the broader policy advocated by some of the members who have been in the minority heretofore, and that soon this Commission will take the rank in fishculture which its liberal appropriations entitle it to do. The lack of discipline among the employees of the Commission, as well as a lack of system and accountability, at most of the stations, has long been apparent, but such has been the hold of old methods that the Board was practically powerless to remedy the evils. The old Board, which consisted of Messrs. Roosevelt, Seymour, and Smith, seldom met, but allowed the whole work to be run by the Superintendent in his own way, and not until Messrs. Sherman and Blackford succeeeded two of the original members was there any attempt made to use the authority vested in the Commissioners, who are the ones responsible for the conduct of the work. Now that Mr. Burden is one of the Commission we expect to see more attention paid to the food fishes, and greater results from the work. Fishculture to-day produces ten times the results, at a much less expenditure, that it did ten years ago, and this is accomplished by the methods in use by the United States Fish Commission, improved apparatus, system and discipline, all of which have been lacking to a great extent in New York. The Board, as now constituted, is a good and progressive one, and will bring the State into the front rank of fishculture.

THE FOREST AND STREAM GUN TESTS.

ARRANGEMENTS are now under way for the establishment of a gun-testing ground by the FOREST AND STREAM near this city. Its primary object will be the ready determination of the question of pattern and penetration of any particular gun loaded with any particular ammunition. There is a great deal of rule of thumb work in the loading and manipulation of gun charges, and it is with the object of gathering a mass of data that it has been thought advisable to establish this central gun-testing stand. It will be a permanent fixture and the tests made will become standard, as they will be carried out with the same care for detail as was followed in the trajectory tests of the flight of rifle bullets which were undertaken by the FOREST AND STREAM some years ago. The results then reached have become recognized as standard in small-arm work, and the gun tests as reported from time to time in our columns will be of the same reliable character.

THE FOURTH OF JULY CRANK, by which is meant the individual who is possessed of a man's estate and an infant's brain development, was as active as ever this year An aggravated instance of his murderous fun is reported from Cleveland, O. A saloon-keeper in that city plugged one end of a piece of gas pipe, filled the pipe with powder, laid it down in the street and touched it off. This pipe recoiled with such force as to strike Mr. W. E. Bond, the well-known ship-builder, in the leg, which it was found necessary to amputate. And this was only one of hosts of casualties where criminal foolishness on the Fourth worked irreparable mischief.

The Sportsman Tourist.

IN CAMP.

ABOVE the pines I see the starlit dome,
The mystic silver moon serenly shines,
The fire burns low; my thoughts in fancy roam
Above the pines.

The pale rays cross the lake in shimmering lines,
While on the beach the wavelets break in foam,
And gentle night winds stir the trees and vines.

The pictures in the firelight go and come,
My heart, dear love, your fair, sweet face enshrines.
In castles in the air we are at home
Above the pines. W. A. B.

MOOSEHEAD, June 10.

IN THE LAURENTIAN WILDERNESS.

SOME time ago a friend sent me a copy of the *Boston Herald* containing one of Mr. Murray's letters from this region. Mr. Murray speaks of the death of animal life in these woods, and so I was prompted to write my friend an account of a journey I took last summer. Having kept a rough draft of the letter I rewrite and send it to you.

In my many tramps through part of the country north of Quebec I have noticed always this apparent scarcity of animals, but now I have come to the conclusion that the rarity is apparent rather than real, and that there is a great deal of life that does not show itself, and that only the experienced *chasseur* would note.

In company with two friends from the vicinity of Boston, in the month of August last, I started out for a trip among the Laurention Hills. We had two bark canoes and three guides. One was the faithful Nazaire, who has piloted me through these forests for many a summer and broken out snowshoe paths for me for many a winter, a woodsman to the last hair on his gray head, but no hunter. Then Damase, Nazaire's friend and crony, woodsman and hunter both. Strong as to his shoulders and sturdy as to his legs, if you are not a good walker it is not safe to trust to Damase's ideas of distances. They are too much like those of the Indian, who, when asked how far it was to the settlement, answered, "*C'est tout proche, on voit le bocagne; rien que quinze lieues.*" (It is quite near, you can see the smoke; only fifteen leagues.) This *rien que* as pronounced by a French Canadian is a puzzler by the way. Y-ā-n-k comes as near to it as anything I can think of. You soon learn what is meant by the expression, but you might try in vain to make it out by your dictionary.

With the other two came Narcisse, hunter and canoeist, but not an expert woodsman. Thirty pounds lighter than Nazaire, he was all muscle. Not a pound of extra flesh on him. He could go as far and carry his load as easily as either of the others.

The Professor and the Doctor with Damase and Nazaire in the big canoe, and Narcisse and myself in the other, we started out. I confess we were heavily loaded. We carried a full fortnight's provisions, for we should be absolutely beyond the reach of further supplies, and could not tell how long our journey might last. Then we had tents, blankets and comforts. We had no intention of making ourselves miserable for the sake of a little pleasure. I will camp under a tree when it is necessary, but I much prefer a tent and plenty of boughs, especially when it rains. And so do the Professor and the Doctor.

And that reminds me. Mr. Murray mentions cedar boughs. Now I don't like cedar, and never met a woodsman who did. Give me the sweet-smelling *sapin* (fir) every time. I have had a good many beds made for me in the Laurentian bush, but no man ever offered me cedar.

I must say we did not go far the first day, though we started early. There were trout in shady pools and trout in the rapids and trout under the falls. We wanted some of them. Then there were three rather stiff portages, and it required three trips of the men to get the canoes and all our impedimenta over each of them. The *bourgeois* is not expected to carry anything. I concerned myself with nothing but my little hand bag and my fishing tackle. Nazaire says in winter that little satchel will hold almost everything, only that when we put the stove into it we cannot get in the snowshoes. In reality it barely holds a change of flannels and a tooth brush. A hair brush sometimes—but, indeed, my hair brush has so little work to do of late years that I almost reckon it a superfluity.

We camped quite early, and I sent Narcisse back for the latest letters or telegrams that could possibly reach us. We felt some uneasiness about going so far beyond reach of communications, for a very dear relative was lying very ill.

Flies? Yes, there were flies, and ravenous ones. The Laurentian mosquito is a voracious creature, and the little sand fly is a most pestiferous beast. He gets behind your ears and down your neck and into your beard, and though he is so small you don't see him, the first thing you know you feel as if you were being touched up with red hot needles. But we were prepared for them. We had "Fly Fluid" from Hubbard, of Cambridge, and "Fly Poison" from McLeod, of Quebec, both very good. Upon occasion we "doped" exposed surfaces with one of these, and our annoying enemies made themselves scarce. Another preparation we had that was better than either, an experimental concoction got up by the Doctor and Professor together. It was sweet smelling and clean, lasting and efficacious. We christened it *chasse-mouche* at the first trial. Unfortunately we had not enough of it to go round.

A very neat and even elegant protection for hands and wrists when fishing is to take a pair of old stockings—perhaps new ones would do as well—cut off the toes to let the fingers through, and snip holes in the heels to let the thumbs out; draw the legs of the stockings up over your arms, and those parts are secure and your hands are at liberty. My informant told me to take a pair of my wife's stockings, but I found that others would answer, so that even an unmarried man may use this device. What with our fly fluids and our camp-fires the flies did not trouble us. The fire clears them out pretty well. They cannot stand the heat, "*et bien moins le bocagne*" (and much less the smoke), says Nazaire.

Early next morning Narcisse was back with good news for us, having made his seven miles of walking and paddling without breakfast. We saw him eat, and made mental calculations with some uneasiness regarding our supplies. Afterward Nazaire took me aside and expressed his doubts. He already knew Damase to have *un gros appétit*, and Narcisse seemed likely to be a match for him. He wished we had four more loaves of bread and ten pounds more of pork.

So we packed up and went on. It was one long portage to our next camp ground with only a few yards of canoe water. Down, down, down. Fierce rapids and falls in quick succession. We knew there were trout in every eddy, but the hunters' road we were following made short cuts and took us mostly away from the river until quite at its mouth. And there were trout again, but we got no very large ones, and the sun was hot. So we took only enough for supper and breakfast, and then built a smudge, supplied our various ointments, smoked, talked and loafed, while the men got over our baggage and set up our tents once more.

Next day was up the river into which the one we had been following down discharges. A broad and rapid stream. Regular up-river canoe work in a time of low water was this. Alternate paddling and poling, lifting canoes over shallows and holding on to rocks, made more interesting by frequent heavy thunder showers. The sight of the great black clouds gathering and rolling down over the mountains was superb, and we enjoyed the day. Getting wet is not nice, but once you are wet a little rain more or less does not much matter.

While the men were setting up camp again we fished, but the weather was too unsettled for trout. We fished in deep water; and here I made the acquaintance of a fish I had never found before, though he is well known to most fishers in these waters. I could not undertake to spell the name the men gave him, and I have had no opportunity to make inquiries since. The small ones rose to bits of minnow, but the large ones only took near the bottom. The largest we got would weigh about two pounds, and they were as strong as a trout and very gamy, though not quite as lively as trout. They were capital eating. Damase said they are the same as the landlocked salmon of the Lake St. John region, and are called salmon there, but I am almost certain he was mistaken. The weather was of the kind said to be good for ducks, but was not pleasant for fishing. That night we had thunder, lightning and rain, and the next day was not much better. The men went out to explore and clear out our path, while the rest of us fished spasmodically without much success. It was one of the regular rainy days in camp, familiar to all campers out as of the sort to be passed in smoking, lounging and reading novels. We were on a little river called the Bostonais, and there is another river and a lake of the same name not very far away. I supposed the name to be a corruption from some Indian name, but find it is not so. The land about belongs to Americans, and among the old *habitants* and *chasseurs* all the Americans used to be known as Bostonians—*Bostonais*. The origin of this is connected with the early expeditions—military and naval—that, starting from Boston, came to invade Canada.

The region had not been visited for many years by any but an occasional hunter or fisherman. We were beyond the lines of civilization. Between us and the Arctic Circle not a dwelling of civilized man, unless about James's or Hudson's bays some isolated post of the old Hudson Bay Co. should be stumbled on. All a wilderness. Forests, lakes, rivers, water courses, swamps and granite hills everywhere, but not a farm or a homestead, hardly an acre of land fit for one.

But here we found the evidence of animal life that prompted me to write this letter. It was in the home of fur-bearing animals, creatures that do not show themselves but are all about us. The woods are full of them. Damase's sharp eyes were constantly on the watch for signs of them. Crossing a small lake he calls softly to us: "*Un castor! un castor!*" (a beaver, a beaver), and away ahead of us we see a little black head just out of the water. It is gone long before we are near it, for a party of six is not likely to get within gunshot of much game. If Damase were alone he would steal quietly round with his ever-ready rifle and make no sound till that nose came within its range. On one lake we saw three beavers, and there were beaver dams, meadows and cabins all about. One cabin stood almost in our track, and we visited it. The family were not at home. The cabin was of about the size and shape of an ordinary haycock and made of sticks, of from half an inch to some two inches in diameter, not interlaced but laid across each other at all possible angles, and plastered thickly with mud. As the entrance to it was under water we declined to examine the inside.

Every now and then we passed a *glissette de loutre* (otter slide), some of them quite fresh. These animals have a habit of choosing a spot where a smooth bank slopes rapidly to the water, and there amusing themselves with sliding on their bellies into the stream and coming up and sliding again. They seem to do this as purely for sport as a boy slides down hill. Nazaire says he has seen as many as a hundred of these slides on one hill. Nazaire is as truthful a Canadian as I ever knew, but a hundred otter slides seems to me to be a good many.

Caribou tracks we found in plenty in marshy ground near the streams and lakes. In one place was a perfectly well trodden path, as if dozens had passed in single file. The tracks were quite fresh. We got sight of three of the creatures. It was the close season, but I am afraid that if Damase had got a shot at one we should have eaten him. We often heard the crashing of bushes in the woods. We would not really hurt them in summer, but they did well not to tempt us too much.

All along our portage paths we found mink and marten traps, scores of them, left by a couple of hunters who have spent several winters in that region. The traps were the common wooden dead falls. Many of them were gnawed and eaten on the inside by the hapless creatures taken in them. We passed and visited the deserted camp of these two hunters. It was stocked with boards on which otter, beaver, marten and mink skins had been streched. Muskrat also appeared to have been very plenty.

Bear tracks were not uncommon though not as plenty as we had found them nearer the settlements. We came across two spruce trees that had been torn by the claws and teeth of an especially hungry one. I would not have liked to meet that fellow at that time. Bark and wood were gone to the depth of two inches or more. Marks of claws and teeth were plainly visible. Near the settlement from which we had started on our trip, a few days afterward Nazaire and I had occasion to walk along a new road through the woods some five or six miles from the nearest houses. We constantly came across fresh spoor of bears, and only three days ago I was sitting in a cabin at that same settlement when I heard one woman say to another, "*Il parait que les ours rodent pas mal,*" which, freely translated, would mean that the bears were going round lively. She went on to tell how, the evening before, she had been visiting a neighbor and when she was coming out of the neighbor's house with her baby in her arms to go home she saw a bear coming away from the spot at the river bank where she was in the habit of going for water. It seems curious that some people should be so desperately afraid of bears and others not mind them at all. As a fact the instances of their attacking people are rare in the extreme. Damase and Nazaire both say there is no creature more afraid of man. Nazaire tells with great unction—for Nazaire is as loquacious as Damase is quiet and taciturn—a story of how he was once eating wild cherries in an opening in the woods, when he saw a bear a little way off engaged in the same occupation. The bear kept coming nearer until he was about 30ft. away, when Nazaire called out, "*Tu es assez proche. Va-t-en!*" (you are near enough, clear out), and the bear turned tail and went away.

I know of so many other wild animals in those woods, that are never seen by the ordinary traveler, and so many of them are carnivorous, that I believe there must be a great deal of life that makes but little show or sound but carefully avoids either. I see squirrels oftener than I hear them. A noisy chatterer would be liable to come to grief through his deadly enemy the martin, and I suspect he has learned to keep quiet.

We saw a good many ducks and some partridges, but the latter, like the bear, as a rule prefers the neighborhood of settlements. As they say in New England, "the law was on" and we are scrupulous about the killing of any game out of season. We were not in the season for any kind of game, and as we went on we noticed with dismay that the further into the mountains we went the warmer was the water and the scarcer and smaller the trout. We were bound for a lake that we knew from many reports teemed with the *Salmo fontinalis* of three and four pounds and upward. We found the lake at last and found the water almost lukewarm. Away at the top of the watershed dividing two of the great river systems of this part of Canada, with no very considerable rain for weeks and exposed to the blaze of the August sun the water was low and heated and the trout, as Damase expressedit, were sick. No wonder. We knew the season of the year was unfavorable but, it was the only time my professional friends could spare, and to tell the truth I expect we all cared as much for the woods as we did for fish. Trout are an expensive fish to the sportsman, whatever may be their value in city markets. I have heard it said that sportsmen's trout cost them ten dollars a pound. Perhaps this is an under estimate, I am inclined to think it is, but they are cheap at the price if you take into account the air and sunshine, the trees, the brooks, the smells, the sounds and all the delights of the woods. My two friends I am sure doubled the capital of health, strength and freshness of mind and body with which they expect to do business for the year to come.

We fished all round the lake, in deep water and shallow, off the points and in the coves, with flies and with bait, but not the fin of a trout did we see. But if I do not get to that lake again about the time the ice breaks up next spring I am mistaken. It is a beauty, the prettiest of all the forty or more lakes that I wander about, except my special pet and favorite, Lake Clair. It is rather hard to reach in summer. I could get there easily in winter, but there is no sport in winter trout fishing. Nazaire and I go anywhere in winter, with our good tent and little sheet-iron stove, making ourselves happy and comfortable wherever approaching night tells us to make our camp.

So we packed up and turned back, making in a day and a half the distance it had taken us seven days to make going up. We had made two caches of provisions, etc., to say nothing of all we had consumed. Nazaire set his teeth together and doubled every man's load. Each of us took something, and we made great time to the main river. There we abandoned fishing, and down this noble stream we paddled to its junction with the St. Lawrence.

It was pure poetry, though there were few very exciting rapids to be run. There were eleven portages to be made, but all short except the last, a smooth, strong, rapid current all the way, except where broken by steep falls. At one place where we stopped for a day, we saw on the opposite side of the river a small dog sitting motionless for a long time. Damase went over and brought him to us. He was not frightened nor very hungry, but after sniffing about for awhile he went a little way down below the rapids, swam back and resumed his watch. How came he there and what was he there for? Down the river on that side there are no houses for miles; above, on either side, none anywhere. Had his master been drowned in the rapids? and was the faithful creature still waiting for him? We made inquiries at the first houses we came to, but no one knew anything about him. We left him the next morning still waiting and watching, sitting on his haunches, just where we had found him.

We had no adventures on the way down, but simply were lazy and enjoyed ourselves. The demands of the inner man required us to travel on Sunday, and we arrived at a considerable village, just as mass was over. The number of people that came out of church and the neat and tidy appearance of the men and the good looks of the younger women, equipped in all the next but one to the latest inventions in "dress improvers" and general fixings surprised us. The Professor's knickerbockers and Damase's legs surprised them equally. Damase's baggage consisted of what he stood in, and his only trousers had given out above the knees some days before. I had lent him a pair of my longest winter stockings, surreptitiously packed among my belongings by a woman who thinks it her duty to provide me with such matters. He sewed them on the remnants of his trousers, well up his thighs. His legs are shorter, if much stouter, than mine, and the stockings were a tight fit. He looked fine and I wished I had his photograph.

What amused us most, however, was the man selling cucumbers about a foot long, in lots of two, at auction, in front of the church. "*Encore deux. Un cent, deux cents, deux, deux, trois cents. Vendues à Madame Veillette.*" (Two more. One cent, two cents, two cents, two, two, three cents. Sold to Madame Veillette.)

Having supplied ourselves with bread, sugar and other necessaries, and left a telegram announcing our homecoming, which telegram, with the dispatch characteristic of the telegraph service of Canada, so far as my experience goes, has not arrived yet, we put off, and by good luck reached the mouth of the river and the railway station before dark without loss or damage, except to our pockets and Damase's breeches.

Though we often say in winter, "*le bois est pauvre*" (the woods are poor), yet I find there is more life in it than I thought of. That health, strength and endless pleasures were in them I knew before.

*The cent and dollar have now taken the place of the sous, chelin and louis of my earlier days here.

PORTNEUF, P. Q., Dec. 2, 1887.

Natural History.

SOME NOTES ON THE OTTER.

THE otter is by no means a rare animal among the Sea Islands, though one of the most difficult to observe. Of keen senses and always on the alert, he skulks on the first intimation of danger, and it is only the most experienced hunter who can say with certainty as a delicate ripple appears far down the creek, "There goes an otter."

For a year or two past most of my time has been spent in solitary rambles about the good old Hunting Islands and surrounding creeks, and I have made quite an intimate acquaintance with some of the habits of these very interesting animals. In a creek back of Edding's Island I often came upon several at a time. One afternoon in February I was sculling cautiously after a buffle-head drake, when a large otter slipped out of the marsh and treated me to a long stare at a distance of only about 20ft. Without making any sudden movement I allowed my oar to trail down to the mud, and as my little skiff deadened her headway a puff of wind swung her bow toward shore, and I saw further back two more otters coming to join the first. The two others put up their heads down stream and glided up the bank to their companion. After fully a minute's close study of the situation they seemed to realize the fact that I intended them no harm, and then began a game of romps which exceeded in grace and agility anything I ever witnessed. With arched backs and swinging tails two would approach each other, rise on their hindlegs, spar a little daintily, and glide under and over each other; a third would join in—all joined in, and the top of that mud bank was a glowing picture of graceful animal forms and flashing purple brown fur. There seemed to be no emulation or strife of any kind nor anything resembling a dance. The play consisted of gliding and turning about in a space perhaps four feet by ten, and the interchange of hilarious glances and polite—that is the only term I can express it by—motions as two members of the group came face to face. There was no crowding nor jostling, and no pausing in movement for one to pass before another. After about fifteen minutes of this sport the largest one gave them a few high curving leaps among the group and shot like a flash into the water. Each one followed closely in turn down the same track, and without waiting a moment in the water returned to re enact the feat. This last performance seems to partake of the nature of a race, and once or twice there was quite a scuffle for precedence at the head of the slide. The smoothness of the diving could not be excelled. There was scarcely a spatter or a bubble as they entered the water. Suddenly one rose so close by me that I lost my presence of mind and turned my head quickly. In an instant all was confusion. The two that were on the bank dashed into the water with all the noise and spatter they could make, and the next I saw of the party was a succession of little black dots appearing and disappearing some hundred yards or more down the creek.

This is the largest number of otters that I have ever seen sliding together. Single ones and pairs I have often watched, and I think they always engage in a short preliminary gambol before the real sport begins.

I think that otters always catch their fish by the middle. I have often seen them raise their heads above water and shake a large fish as though to terminate its struggles, and then go out on the bank to eat it. When two are fishing together each shares the other's luck. After landing his fish one will sometimes wait a minute or two for his less fortunate companion to join him. There seems to be much of the honest gentleman in this handsome fellow's character.

The young are brought forth late in the winter or during the spring. A hollow under roots is selected often at some distance from the water. It often surprises me to see what a small opening these otter nests have. The first time I ever saw one I found a dog digging at a little hole that I thought might contain a small 'possum, but most likely a large rat. Judge of my surprise then on unearthing three young otters. The dog to my disgust killed two, but the other I suceeded in saving and raising "on the bottle."

Such an appetite as the rascal had. He waked me up at all hours of the night for that bottle, and was as much trouble as the most fractious human baby. This business lasted only about two weeks, however. At the end of that time he could fight for his meals with a little terrier bitch that occupied the same quarters, and Madam always had to give up to *Lutra*. For a month or six weeks he followed the tramp's rule of "no work between meals," sleeping all his spare time. Suddenly one Sunday morning he seemed to realize that I had some claim on his attention. He nosed about my slippers till I took him up, and then he made such a fuss pulling my beard and knocking my pipe stem half way down my throat that I had to compromise by treating him to a swim and myself to a bath at the same time. After this he was with me always. Wherever I went he was close by. And his untimely death was caused by my heartlessness in not taking him out to play cards on Thanksgiving Day.

I have never seen but one honest fight between an otter and a dog. The dog got pretty much the worst of it. It was my dog Nat. Nat is short for naturalized citizen. I must digress a little and tell about that dog. He was a foreigner of some sort, red with black muzzle, a powerful seizer, deep voice, and the best trailer I ever owned. He selected me for his master, stole himself on me in fact, in Port Royal, and I gave the mate of the vessel he came on five dollars. When I got back there the next week the Captain offered me ten dollars to get him back. I agreed. Next morning when I opened my door the old fellow was there. Just turned an eye upon me and rapped the piazza three times with his tail and went to sleep again. That was the only good dog trade I ever made. We got along together first-rate, only he knew no English and I no double-Dutch or whatever his language was. The word to come to heel that the captain used sounded to me profane. Never swear at your dog, even if you are not a gentleman he will perhaps mistake you for one.

I had got left by the tide one day on a little marsh island, and having nothing to eat, I went to pick some oysters. Returning through some low rushes I came upon an otter making for the water. I happened to want an otter skin just then, so having no gun I went in with my oysters, when the animal made a rush for me and I had a lively job to kick him off. I tried to call my dog. When Nat came up he needed no bidding but seized at once by the back and tried to shake, but it was no go. His slim antagonist had him by the flank in no time and I had to ply the boot again. His next grip was on the cheek, and the otter seemed to be getting the worst of it, but he doubled up with all four feet on the side of Nat's head and fairly tore loose, leaving his lower eyelid hanging. Both were badly blooded, but not at all groggy, and now began to rush and tear at each other as if there was money on the result. But the otter kept edging for the water. Just as he got pretty near the bank he succeeded in fastening on poor Nat's muzzle, and, bracing firmly, backed for his own element. I might have interfered easily now, for the oars lay handy in the boat, but after such a sturdy fight I wished to see fair play to the end. I let them wrestle for a few minutes, till I saw that if I hesitated any longer I should lose my dog, so I helped him back by his tail and the otter broke his hold and dove. Nat took the water almost as quickly as he did, but luckily for himself did not succeed in finding him there.

FROGMORE, S. C. WALTER HOXIE.

BLACK AND SILVER GRAY FOXES.

WINNIPEG, Man., May 14. — *Editor Forest and Stream:* Sportsmen and students of natural history should ever be seeking more light and be open to conviction; as I am a firm believer in the theory that we should practice what we preach, I must admit that I have lately had several set backs in my expressed belief that all black and silver gray foxes are males; and I have seen that to-day which makes me feel that my last prop has been knocked from under me. Yes, my friend Mercier, of the Alaska Commercial Company, and other northern friends and the writer have been mistaken. Mr. Hine, a taxidermist of this city, showed me this morning a young black or silver gray fox that he had just set up that was, so he says, when in the flesh a female; and he also informed me that Mr. E. McColl, Indian Commissioner, had at his residence near the city several tame black foxes, and that he was of the opinion that part of them were females.

Half an hour's walk took me to Mr. McColl's residence, where I found him, an agreeable gentleman and pleased that I had walked out on purpose to see his pets. He has among his collection several red foxes, two male cross foxes and four beautiful female black foxes; that is, he claims them to be females, and from their coquettish actions I firmly believe he is right. They would rush up to us in a most pleased and charming manner, but when a hand was extended to caress them, with a flirt and a wriggle they were away like a flash; then would either waltz around us in a tantalizing way or sit down out of reach in such a sedate and demure manner, staring at us like big black-eyed houris, that one not versed in their deviltries would think that any number of chickens would ba safe in their company. Mr. McColl has a large roomy loft for them to run in, but has not as yet been able to breed from them. But in the face of this fact, I believe that they belong to the gentle sex. The black foxes were from the same litter and varied in color; one was a beautiful silver gray and one other almost a pure black. I would advise any of the readers of the FOREST AND STREAM who may be in this northern prairie city to visit Mr. Hine's rooms; and should they have another couple of hours to spare to visit Mr. McColl, who is a courteous, hospitable gentleman. He has besides his living pets quite a collection of rare furs and Indian curiosities.

VICTORIA, B. C., May 26.—Mr. K. N. L. McDonald has lately arrived here from his far northern home, Cassiar, B. C., and in company with that prince of good fellows, John Fannin, of this city, and the writer, the black fox question has been discussed over again. Mr. McDonald has weakened somewhat in his opinions regarding the sex of the black or silver gray fox. He admits that he has seen a young black male cross and a red fox in one litter; and also says that other northern H. B. men agree with my former belief that all black foxes are males. They account for this fact in this manner, that the males of many of our birds and wildfowl have a far heavier and more beautiful plumage than that of the females. So you will occasionally find among the fur-bearing animals that the male has a much finer and darker coat than the female. In some families this difference is more common and more strongly marked than in others, and would seem to reach its climax in the fox family. That is, if the blacks are all males.

Another question comes to the front. What is a cross fox? Are they the progeny of a black sire and red dam? Has any of your readers seen a female cross fox, if so were they fertile or barren?

Sergeant S., whom "Yo" has occasion to remember so well, has so far recovered his health as to be able to return to duty. Some time ago the sergeant captured the litter of a she red fox and there was a young black fox among those whelps. Enough said.

When the editor has settled this fox controversy we trust that we shall see the bighorn and mountain goat receive attention, and when this comes up all small boys will need "stand from under." The writer could give a few facts concerning these animals, but there's a dangerous glitter in Mr. Fannin's eye that betokens mischief, so we keep silent. STANSTEAD.

THE LOON IN CAPTIVITY.

ABOUT a week since a loon was caught in a net in the St. John River, a few miles above Fredericton, by a man who was engaged in drifting by night for shad and salmon. The bird was freed from the net and brought to Fredericton, where it was purchased by Mr. Wilmot Guion. This loon, which has a green ring around his neck, and whose black back is spotted largely with white, probably does not weigh over 10lbs. When first caught, and for some time after, he was very cross, and threatened with his long sharp bill those who came near him, striking viciously at them with it. In front of the City Hall at Fredericton stands a fountain, the basin of which has a clear diameter of 14ft., exclusive of the pedestal in the center; in this the loon was placed. The water falls into the basin from a series of small jets, and he is very fond of taking up his position under the dropping spray. Since he has been placed in this basin he has become very tame and allows himself to be handled and caressed in the most confiding manner. He likes to have the back of his head and neck scratched by the visitor's hand. When there is a crowd looking at him he comes to the side of the basin where they are. He seems not to care about being in the water for more than an hour at a time; then he wants to be taken out and placed upon the grass; when he is anxious to be removed from the water he utters a low cry and readily allows himself to be removed, coming, indeed, up to the person who is ready to do him this kind turn. As soon as he is out of the basin he begins pluming his feathers.

After having been out of the water for a length of time he is frantic when he is returned to it. The other day when replaced, he went three times around the basin under water without ever coming to the surface. He is very voracious, and yet dainty, as he will eat chub only when just freshly killed, if at all stale he at once rejects them. A few days ago three small chub swimming around in a pail of water were brought to him, he drew himself up, his eyes all the while glittering as he looked at his finny food, and uttering a low note somewhat similar to that of the wild goose, just as the fish were being poured out into the basin he caught one before it reached the surface of the pond. The other two went, one to the right, the other to the left; that which headed to the right got but the loon's own length before he was caught, that to the left got no further than six feet before he shared a similar fate.

Last evening an eel 18in. long was put into the basin, and this, having concealed itself, the loon failed to catch it. This morning, however, while he was diving he brought the eel up, which twisted itself all around his neck, but he held it tightly in his bill, moving it slowly around until he got to its head; he then succeeded in swallowing, head first, about half of its length without difficulty, but was seven or eight minutes getting the rest of it down, the tail meanwhile twisting about his bill in a most singular manner. At the time the loon was put in the basin there was a sturgeon about eighteen inches long in it; this has disappeared and it is presumed that the bird has made away with it. When not otherwise engaged the loon occupies its time in snapping at the flies which hover around the edge of the basin or surface of the water. EDWARD JACK.

FREDERICTON, Canada, June 29.

THAT BUFFALO CORRAL.

CHICAGO, Ill., July 5.—*Editor Forest and Stream:* The latest advices received by myself in regard to Mr. C. J. Jones's buffalo hunt in the Neutral Strip and Panhandle country, reference to which was made in FOREST AND STREAM of June 21, would indicate that the hunt was a great success, and show that sanguine audacity does sometimes "get there." Eleven adult buffalo and seven calves were taken, and at the date of my latest information were being safely driven, with some of the Jones domesticated buffalo herd, well on the way to Garden City. Only about forty buffalo were found on the range. As a piece of well-planned and well-carried out bit of plains work, this hunt deserves a great deal more than ordinary notice, as any plainsman or any buffalo hunter will know. It was admirable. No man not possessed of a perfect knowledge of the habits of the buffalo, and possessed besides of a vast amount of go and pluck, could have made such an enterprise successful. And just now it seems to me that odd, eccentric, indomitable and good-hearted "Buffalo Jones" deserves our compliments and congratulations. May his herd never grow less.

E. HOUGH.

A DUCK IN A CHIMNEY.—Sherbrooke, Que., June 28.—One day last week the household of one of our city residences were astonished at what they supposed was the unusual amount of noise made by swallows in one of the chimneys. As it continued at intervals for three days, the lady of the house investigated the chimney-opening in the cellar and thence extracted a live wild duck. Knowing I would be interested, she sent it to me. Its primaries were badly broken, but otherwise it was uninjured, as when I set it free on the river a mile or so from town, it had no difficulty in getting out of the way of a farmer's dog that had followed me unnoticed from the road. How did it get there? Down the chimney, of course. But what induced it to make such a mistake? I did not recognize the species, but it was not a wood-duck, or it would not have been so surprising. Is there any other kind that nests in trees and which might have made the mistake of thinking the chimney a tree?—JOS. G. WALTON.

UNIOS AND RATTLERS.—Eliasville, Tex.—I note the remarks of your correspondents on my query about the mussels of the Brazos, and I thank them for the edification they give me concerning this creature. I intended to test their edibility with mine own mouth, and duly to make report thereon; but the Clear Fork of Brazos from which I should get them, has been, ever since the early days of spring, like "a woman moved," "muddy, ill-seeming and bereft of beauty;" and none could be got except such dead ones as are cast ashore. However, a woman moved in an evil way ceases to be so after a while, if she be not an uncommon bad one, and the good spirits take possession of her; when she again puts forth her seemliness and beauty, inviting to be kissed. So the Clear Fork of Brazos will in due time cease to be angry and swollen, and then we shall go in and catch mussels. "Awahsoose" asks if I have examined the unios for

pearls. No, but have thought of it, as I saw it stated in a paper some time ago that an idle fellow of San Angelo had taken over 200 pearls, many of them large and valuable, out of unios in the Coulho River. "Awahsoose" uses the word "examined," by which I suppose he means that the pearl is hidden in the shell and must be carefully hunted for to be detected. What part of the shell is it hidden in? Is it loose in the shell or is it attached to it? Would like to be informed. I inclose a rattlesnake's tail, which, as you will see, has seventeen rattles and a button. The snake was killed by some boys near my shelter, who described him as a little over 4ft. long and as big as a man's arm a little above the wrist. The rattles, though so many, seem to me to be unusually narrow. I do not recollect ever seeing one with so many rattles before. What is the highest number of rattles actually seen and counted on a rattlesnake's tail?—N. A. T.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. The Still-Hunter. By T. S. Van Dyke. Price $2.

MASSACHUSETTS GAME LAW.

WE were in error in a late issue in giving the Massachusetts game seasons as they were in 1887. The law was amended at the last session as follows:

CHAPTER 292.—Section one of chapter two hundred and seventy-six of the acts of the year eighteen hundred and eighty-six is hereby amended so that it shall read as follows: Section 1. Whoever takes or kills a pinnated grouse at any time, or a woodcock between the first day of December and the first day of September or a ruffed grouse, commonly called partridge, between the first day of December and the first day of September, or a quail between the first day of January and the fifteenth day of October, or a wood or summer duck, black duck or teal, or any of the so-called duck species, between the fifteenth day of April and first day of September, shall be punished by a fine of twenty dollars for every bird so taken or killed. Approved May 3, 1888.

THE BUSH BUCK.

STANDING about two feet and a half in height, of a dark reddish brown color, flecked with white on the haunches, and frequently weighing over 150 pounds, the bush buck (*Tragelaphus sylvaticus*) is by far the finest of the forest antelopes of Natal, and consequently most eagerly hunted by the colonists. The male is the most dauntless of all the antelopes I ever met, and unless killed dead in his tracks, his assailant can safely reckon on a vicious charge, in which his almost straight and stiletto-like horns, about a foot in length, are used with dire effect. The sexes are so unlike in appearance that one uninitiated would be apt to suppose them of different species, particularly if he is guided by the Zulu names, who call the male *n'konka* and the female *imbabala*. Another peculiarity about them is that on being suddenly startled they will bound off a short distance, then turn and face the intruder, giving a short, sharp bark, very dog-like in sound.

Soon after my arrival in Natal and my bush-wandering propensities became known, my friends warned me to be on my guard, and never to fire at a bush buck without being certain of killing it outright, and to be sure of having a sheltering tree close at hand, behind which I could take refuge. It was some time before I crossed one, and the numerous stories of their vindictiveness, when wounded, served only to stir up the mule in my disposition to such a degree that I determined to fire at the first one I met, no matter what might be the surroundings.

I had several ambushes close to my house, which I visited regularly for the purpose of shooting blue bucks (*Cephalophus pygmæus*) and red bucks (*C. natalensis*), and while sitting in one I noticed a vervet monkey (*C. laliandii*) in a tree, under which I had seen red bucks pass several times, but refrained from firing for fear of wounding and not killing them dead, as they are noted for an exceedingly tough hide. My immobility bothered the monkey, and he started to climb higher, in order to get a better look. While he was passing behind some intervening boughs, the gun was raised and sighted for the first open space, and so soon as he appeared he was instantly killed. He had unwittingly solved the problem, and I afterward shot several bucks passing under the same tree. After reloading I picked him up and started for home, intending him as a present for the Kaffirs, who consider monkey a great delicacy. They skin it carefully, reserving the pelt for finery, pass a long wooden skewer lengthwise through it, two shorter ones transversely at the fore and hindlegs, and cook over a brisk fire, and from personal experience I can recommend broiled monkey to *bon vivants* as a toothsome dish, but horribly suggestive of grilled baby.

Passing along the path with my eyes cast down, watching for the spoor of bucks, I had just reached an open space, when there was a rush, and dropping the monkey the gun was thrown up, and glancing along the barrels found they covered the stern of a buck bounding away with a fawn by its side. Just as she reached thick cover she turned to have a look at me, when a slight elevation of the gun planted a charge of buckshot square between her eyes and dropped her in her tracks. Stepping up to bleed her I was surprised to find the hair seemingly worn off in a circle around her neck, as if it had been done by a rope. Of course I naturally supposed that some one's pet antelope had been killed, and somewhat crestfallen started for the house for the purpose of sending the Kaffirs for the carcass. I had in my employ an old colonist, and so soon as I reached home he wished to know at what I had fired. Pitching the monkey toward him I answered:

"There's a part of the morning's bag."

"But there were two shots. Where's the balance?"

"I think the less said about that the better, as I am afraid some neighbor's pet buck will never reach home."

I then gave an account of my hasty shot, adding a description of the animal, and wound up by expressing the fear that I had gotten into trouble. He laughed and relieved my mind by telling me that the short hair on the neck was one of the distinguishing marks of the species, and I had evidently killed an imbabala, which was certainly a wild one, as he did not know of a pet one anywhere in the neighborhood. I felt much eased; the Kaffirs were called and directed where to find the buck, with which they soon returned, and my mentor remarked: "If it had been a male, instead of a female, and not killed dead, you would have had some trouble in dodging his horns." The warning did not pass unheeded, and ever afterward I always endeavored to get a forehead shot when firing at one.

I had a barnacle acout my establishment in the shape of a Kaffir, who went by the name of Isambane (Antbear), a sobriquet from his habit of digging pitfalls for catching game. I hired him as a laborer, but he constantly shirked work and sneaked about setting all kinds of snares, which I endured, as he frequently led me to ambushes where I would be certain of getting bucks. My proneness to forget what we were after, particularly if some new object caught my eye, frequently caused him to lecture me soundly on my inattention to his counsels, followed by the prediction that I would never become a successful hunter, as I never gave the slightest thought to the pot, that *summum bonum* of a Kaffir's life. Beetles were his especial aversion, and he could never understand why I should become oblivious to the chances of getting meat while watching the motions of some insect. On one occasion, while sitting at night skinning a bird, Isambane put in one of his many appearances with the request of a little tobacco. Knowing that something was behind it, he was immediately presented with a piece, when he remarked, "If you will only let the bugs alone and attend to my directions I will show you where a male bush buck can be killed to-morrow morning." Of course I promised obedience, and he started off to make snuff, which the Zulus use in inordinate quantities instead of smoking. They grind the tobacco between two stones, mix some wood ashes with it, and carry the mixture in a large reed, passed through a slit in the lobe of the ear, or in a small gourd fastened around the neck by a string. A small circular bone spoon stuck in their wool serves as an appliance to convey the snuff to the nostrils in sufficient quantities to produce a prolonged fit of strangulated coughing, which is supposed to be the acme of enjoyment.

The next morning found Isambane and myself seated at the foot of a large tree, and the monotony of waiting began to wear on me, when the inevitable beetle made his appearance. I was intently watching its movements when "*nansia*" (there it is) in a subdued, but angry whisper caught my ear. Raising my eyes, they rested on the head of a male bush buck, thrust through a leafy screen, just in front of us, and just as he was in the act of barking, the gun was thrown up, giving him a forehead shot. Whirling around behind the tree, the heel plate of the gun came in contact with Isambane's head, as he sought refuge from the opposite direction, and sent him spinning all of a heap, for some distance. I immediately ran to him, and found that he was stunned and suffering from an ugly gash, just above the ear. Giving a shrill whistle, to call the Kaffirs, who were in hearing, I tore the sleeve off my flannel shirt and endeavored to staunch the bleeding. Help soon arrived, and I was deafened by the exclamations of a lot of excited Kaffirs, such as, "You must stop this." "You'll get hurt and we'll be blamed." "If you get killed, who's to pay our wages?" etc. Any one, high or low, who has had any experience with Zulus, will know that this is no unusual language, and it cost me many a severe trial before I became accustomed to it. Isambane relieved me by staggering to his feet, and shouting, "Shut up! Pick up the buck and be off with you. Don't you see I was with him? He's not hurt and my head is broken." With a profusion of "waus!" the buck was carried off, while I supported my guide to the house, where a few strips of sticking plaster and a drink of rum made him all right.

At the conclusion of one of my customary prowls, I found myself, late one afternoon, nearly a mile from home, and had started to return, when the hoarse croak of a white-crested touracou (*Corythaix albrocristata*) sounded close at hand. Turning in the direction of the sound, I had just reached the edge of an opening in the bush, and peering across it, trying to discover the bird, which was evidently in a tree on the opposite side, when a movement in the undergrowth attracted my attention. The head of a female bush buck appeared, and as I aimed at her the sharp horns of a male became visible immediately in her rear. Keeping the gun at my shoulder I prepared to give him its contents, when I was startled by the phenomenon of another pair coming into view directly behind. Holding the gun level with my right hand, the left was rubbed across my eyes to banish the seeming mystery. But after brushing away the supposed cobwebs the three animals were still in view, slowly advancing toward me. Then it suddenly flashed through my mind that I was privy to a love-making scene. The female came nearly to the center of the opening and turned sharply to the right, closely followed by both males. Selecting the hindmost one, as he had the finest horns, which could be just seen above the undergrowth, the gun was lowered until I thought the charge would strike him fair behind the foreshoulder. At the report he whirled and savagely charged toward me, but dropped before he reached the tree behind which I was secreted. While reloading he staggered on to his feet, which put me on the lookout, but after standing for a few seconds, he floundered off a short distance, and a crash of the undergrowth notified me that he had again fallen. No Indian ever advanced on an enemy with more wariness than I exercised while progressing toward that buck. The knowledge of his wickedness kept every nerve in my body tingling with excitement, and when he tottered up in front of me the muzzle of the gun almost touched him, but seeing it was his last effort I did not fire. Throwing up his head with a convulsive gasp, a sharp quiver shook him, and he dropped stone dead. Game to the last! was my mental ejaculation, and I squatted down alongside him, lit my pipe, and quieted my relaxed nerves by violent smoking. By the time I reached the house it was dark, and on ordering the Kaffirs to bring the game home I was met with a flat refusal, and Isambane underwent no end of chaff for not being present at the death. Matters were finally compromised by an agreement on my part to act as an armed guard to the party. Some rough torches were manufactured to keep off prowling leopards, which were what was feared, and by following the broken twigs, twisted by myself on the way out of the bush, we managed to find my quarry. A pole was cut and thrust between his legs, which had been previously lashed with "monkey rope" (liana), and we started on our return. On reaching the open roadway the Kaffirs regained their courage and broke forth with the strains of the "unkuhubu" (Zulu hunting song, invariably sung at the termination of a successful hunt). The monotonous but inspiring air, the flashing torches, and naked dusky forms of my attendants, carrying the buck, formed one of those weird hunting scenes peculiar to South Africa.

I had passed a restless night, on account of the heat, and just before daybreak had fallen into a doze, when a stamping on the cement floor of my veranda half awakened me. The head of my cot was alongside the open window, and slowly turning my half-opened eyes in that direction, I thought "the evil one, horns, hoofs, tail and all," was paying me a visit. Gradually coming to my senses, I finally made out the head of a bush buck within a few feet of me, staring in the window. My first impulse was to spring up and catch him by the horns but remembering that the loaded gun stood just at the foot of the cot, I endeavored to slowly slide down and grasp it, so as to shoot him. But my movements betrayed me, and he sprang away, and in a few seconds I heard his well-known bark. As more sleep was out of the question, I got up and found day just breaking. Stepping out in the garden, I wrenched off a pineapple from the plant, and while waiting for more light, munched away at it and enjoyed its refreshing coolness. So soon as I could distinguish my disturber's tracks in the sandy walk, I stepped indoors, picked up the gun, and started on his spoor. He had started on the jump, but gradually came down to a trot, and then to a walk. After turning and twisting about among the banana trees for some distance, he finally passed into a park which led up between my sweet potato and millet patches in the direction of the bush. When about half way up it he had fallen into one of Isambane's pitfalls, dug for catching cane rats (*Aulacodus swindernianus?*), out of which he had floundered and galloped off for the bush. Before reaching it he again reduced his pace, and on getting inside, walked along, nipping off the twigs. He kept straight along the path for some distance, or I would have been bothered in following his tracks, until he suddenly turned off, as if seeking shelter, to lie by during the day. I now realized my lack of forethought in not calling Isambane before starting after the buck, as his notorious tracking accomplishments would have been of infinite service to me. Turning off from the path at the same point at which the buck had left it, I slowly pressed through the heavy undergrowth, with a sharp lookout, and had gone but a short distance when there was a rush almost behind me. The buck had allowed me to pass him and then ran up alongside, as if he intended charging before being wounded. Springing on one side, the gun was pitched up, awaiting the impending bark, and as soon as he stopped to give it a charge of buckshot landed between his eyes and dropped him, while I took to a convenient tree. Hastily reloading and hearing no indications of movement, I stepped out from behind my retreat and found him quite dead. After bleeding him I was admiring his compact form and glossy coat, when the bushes parted and Isambane's black form appeared. I prevented all fault-finding exclamations by instantly saying, "I've got him, without a broken head this time, Sambane." "Wau!" he answered, passing a hand over the scar on his skull, and busied himself tying the legs with monkey rope. Just as he had finished the hum of voices sounded close by, and he said, "There come those fools," as the balance of the Kaffirs joined us. He showed himself equal to the occasion, stopping all ejaculations and interjections by saying, "You fellows sleep too much. Why don't you get up early and show N'kos how to kill a bush buck—as I have done?"

FRANK J. THOMPSON.

A MOOSE HUNT.

WITH what a sigh of relief did we throw off our packs and canoes after one of the longest and hardest of the the many portages we had made in the last ten days. The old trail through the swamp had been made, who can tell where? the blazes on the trees had almost disappeared, and the broken branches had long been replaced by others; but by dint of close scrutiny and perseverance we had "made it," and that was enough. Why is it that the faintest trace of human beings, when seen in the wilds of forest and plain, impresses the mind with a sense of the mysterious? What curious and fantastic thoughts one has when, suddenly, some old relic of a bygone time—a broken hatchet or decayed cabin—appears across your path? There is a mystery about the wilderness that begets mysteries and leads to thought. But here we are in the very center of the moose country.

"Bob, did you see them cow and calf tracks made right ahead of us over this foot-blisterin' portage? Why, the moss is etarnally all tore up with the darned critters, and if it hadn't been for this bloomin' canoe, I reckon I could a' seen 'em."

These remarks were made by Hank, one of the strongest men it has been my fortune to meet, and if he was strong in body he was even more so in "cuss words," which rolled from his square jaw with all the ease and volume of a cataract. As we lighted our pipes and prepared for dinner our appetites were sharpened by the still roily tracks of the cow and calf in the bed of the stream at our feet. It was a pleasant sight, and one that made all our hard work seem but child's play. Our square-jawed friend is about to speak; in fact I had seen that something more than usual had been hovering about him since early morning, and now it had to come. Some one says that if a man has something to say, he can't resist saying it; it is true, and was fully exemplified in this case.

"What am I thinkin' about?" says Hank. "Why, just this: I've just been bustin' all the mornin' to yell. I feel so good at seein' moose sign all over this blasted swamp, and if those etarnal Injuns ain't been around this fall, I guess we'll have some sport and get a skin or two to make moccasins and such stuff. The moose is a curious critter," continued Hank; "I've known 'em to be all around a fellow one day and the next not an animal in a thousand mile, more or less. What becomes of 'em? where do they go to, and what are they doin'? It wasn't that they was skeered, for I done nothin' to skeer 'em, and to show that they wasn't they'd turn up again in a day or two and stick about for may be a week, and me a huntin' all the time. I've seen 'em so wild you couldn't see a hide or hair, and some other time the blasted critters would be around camp, and me a choppin', a cookin' and smokin' and actin' as though I was tryin' to see if I couldn't drive 'em into the next county. I've heard men tell just the

crack of a stick would drive a moose forty mile, and how they was so cunnin' that they'd sneak off through the bush like a tomcat. It may be so in some parts where a moose is hunted every day for a month; it may be that they run from a sound, but not always; but I tell you it's agin natur' to think that an animal the size of a dray horse with a yoke on his head can sneak off and make no noise worth speakin' of. Why, every bull I ever skeered made more noise than a freight train crashing through the brush, and their horns just a poundin' the trees like sledge hammers. It's agin reason to think that a big moose can squeeze through close trees without makin' a noise; I tell you they make a thunderin' noise and no mistake. I sometimes think if you go sneakin' along, that it skeers 'em more than if you plump right ahead; for a moose makes so much racket himself that he thinks there must be another one a coming. I know these ain't hunter's rules, and I know when I am after a bull I make no more noise than I can help; but I've walked right on top of a moose when sticks was so dry that you could hear a chipmunk forty rod."

This and much more had worthy Hank to say about "our mysterious friends," and I had to admit that on this trip at least his experience proved true, and knocked on the head some of my preconceived notions. This was my first moose hunt, but I mentally sized the moose up as an animal like other animals of his family, wary when much hunted, and more or less careless where it has been unmolested. Such had been my experience with large game in the West, and I had no reason to believe that the moose should prove a single exception.

After dinner we paddled leisurely up the creek, looking for good ground to make camp. The stream is clear and cold, and trout shoot out from under our canoes as we silently glide along. Occasionally a duck skims out from behind some point, and the muskrat flops with so much energy that it fairly makes us jump.

The afternoon is still and beautiful, and the constant hope of seeing something keeps us tuned up to the highest pitch. Hank's low voice sounds to my ears like a muffled drum, and an exclamation of surprise or interest from him at some unusually fresh sign makes the time pass quickly.

"Them tracks in the mud look uncommonly natural," whispers Hank, "and I almost 'spec' to hear a cow bell tinklin' over there in them spruce." Cow bell indeed; the nearest cow bell is not less than an hundred miles as the crow flies. But his remarks give me a new train of thought that lasts until a nice bit of clear high ground is reached, just right for our little tent.

The season is long past for catching trout, but who can resist the temptation of a trout fry, especially after such work as we had been having? Human nature is the same all the world over, and given a hungry man and a stream full of trout, and game laws and constables to enforce them nowhere about, there can be but one result. Oh, how good they were! and we had come so fast that only one deer had been killed, and the last of him went for some bait to give us our meal.

A pipe or two, smoked while comfortably seated beside a small "squaw fire," and Hank's intermittent comments on the habits of the game we were after, closed the evening; and as we rolled up in our heavy blankets we had no doubt that success would reward us after our long trip.

Whoever says that a drizzling rain is a pleasant thing, just to make the contrast more pleasant, is a person for whom I have but little respect. A drizzling rain meant wet clothes, wet canoes, wet gun, wet everything, and we got it. The morning broke about the same time as Hank's snore, and in fact the two were so closely associated in my mind that if I heard the break in the snore before I could see the first glimmer of light, I knew it was time to roll out. It was the kind of morning that does not prompt a man to cheerful converse, nor does it lead him to the stream with any idea of cleanliness, in truth there was water enough on us without going to the creek for more, and not being greedy we resolved on the eighth ballot to leave the stream severely alone. After breakfast the sky began to look more cheerful, and several breaks in the clouds were greeted with joy. We decided to separate, Hank to go up the creek and I down, to meet again for supper. For about two miles I paddled with rifle in easy reach, the muskrats performed in their usual way, an occasional beaver dam was passed and a fox scurried along with what looked suspiciously like a rat in his mouth. I also passed a few sleepy-looking spruce grouse, whose heads offered most tempting shots, and visions of a potpie very nearly overcame my caution. For a long space nothing but alder bushes lined the shore, but some holes at the water's edge and a few broken branches clearly showed where some moose had crossed. At last a marshy opening came in sight, and Great Scott! what is this? A runway "all tore to blazes," as Hank says, and tracks so fresh that I fancied I could see the slough grass springing back into place.

In a minute I was on the bank, and in another the canoe safely landed and I on the war path. For about twenty rods or so the trail led through the long grass, and then turning somewhat went up a high bank into and through a clump of pines and spruce. I could almost smell moose, so fresh were some of the tracks. From the further side of the pines a most desolute scene appeared; for at least a quarter of a mile directly in front of me and a mile or more to the right, nothing was visible but charred stumps, fallen trees, and about a year's growth of "browse." The runway was now explained. Some Indian or trapper, intentionally or otherwise, had set fire to the brush and the fire had spread as described. Tender shoots growing from the unburnt roots of trees had made a splendid feeding ground, and had tempted the moose to remain. But how could they get through, over or under this mass of fallen timber? It was as if some giant hand had rooted up the whole forest and let it drop like a bunch of jackstraws. The runway now branched off in several directions, but all disappeared in the burnt land. Here, right in front of me, was an immense pine tree, charred and black, which had fallen and lay on top of innumerable small spruce trees, making an almost impregnable fence, six feet high; and beyond this all was the same. Can a moose fly? Are his legs made of steel springs? Does he run along from trunk to trunk like a squirrel? These questions and many more presented themselves to my bewildered mind as to how they "did it." Ugh! I shall have to sit up half the night darning those holes in my trousers; these burnt spruce branches are as sharp as needles and crack like pistols. I should like to hear a bull moose creep quietly away in this jumble. What to do next is the question.

Were there any moose in the burnt patch at this time of day? Probably not; and if there were it would take me all day even to cross it. After much thinking I decided to play Indian and wait and watch. Just beyond me was a pine stub about 10ft. high; this stub I finally reached, not, however, without several bruises, much climbing and perspiration. Hank would have made the air blue with "cuss words," and I am afraid that on this occasion a slight azure tint was added to the atmosphere. Here I was, nicely seated on the stump with the autumn sun pouring down again, and not a breath of wind. The very day to hear all the various sounds of the surrounding forest. It is not an easy thing to play Indian and sit. There is always some place just a little beyond that looks better; there is an intense longing just to take a little turn through some tempting-looking spot; and were it not for these holes in my lower coverings, and sundry bruises on my legs just as reminders, no doubt I should have taken just a "little turn." But what more could be asked for? a superb day, no wind and all nature calm and restful. My favorites, the chickadees and migratory birds of many kinds, chipmunks and squirrels, all seemed to enjoy life, and the woodpecker, pounding for his morning meal, could be heard, it seemed to me, for miles.

Twelve o'clock, my luncheon gone to the last crumb, and still playing Indian. Not that I expected to see anything at this time, but still anticipation is a great pleasure, at least half of actuality. One o'clock, two o'clock, three o'clock, four. Oh, great thunder! what was that? Who is shooting off cannons? Is Hank over there popping at something or has a tree fallen? There it goes again, not so loud, and there to the right is another cannon report. Remembering all the noise I made trying to reach my stub, it finally dawned on me that nothing smaller than a moose could crack such timbers.

How my legs shake, and now there is another sound, it's like a man chopping wood in the distance. Hank said a bull made just such a noise. For about half an hour now the sounds greeted my ear, and the sun was getting low. Was I not to be rewarded by at least a sight of one of those moose I had come so far to see? Yes, one is certainly coming; the sounds are more regular and not so loud; the going must be better. What is that moving? Yes, it is a moose, black and shiny; I can only see a little of its back, but it is moving slowly along, and coming my way. I am sure my knee-pans will drop off. The idea, and I an old hunter. How Hank would laugh. Presently a sight was unfolded that I never expected to see this side of the happy hunting grounds. Following the first moose was a second, both cows, and a little to the left and further away a bull. They came slowly, browsing and nibbling the brush, stopping now and again, flapping their long ears, and looking altogether so lazy and cow-like that my legs recovered their composure. It was evident that if they advanced as they were now headed the cows would pass me within a few yards, and the bull in rifle shot. How I patted myself, and praised my pluck for sitting still and not allowing my restless Yankee blood to get the better of me. Now the cows are so near that every line and muscle can be fairly seen. With what interest I watch them can be imagined. The bull is not near enough yet, so I can study the cows. How are they to get over that log? Why, they are stepping over; but there is one that will puzzle them; not a bit; with a light bound first one and then the other are over.

Sticks that would have crippled a horse were either broken or pushed aside with the greatest ease. Their facility for getting along, however, was principally due to the length of their legs, which, though I knew it, seemed astonishing. And now for the bull. What a glorious fellow he is; blacker than the cows and larger. He must be a hundred rods away, and yet he looks like an elephant. Who can describe my feelings as this truly lord of the forest quartered nearer to my dear old pine stub? He is now within good rifle shot and not moving a muscle. Does it not seem a pity to shoot such a creature? Close as the cows are to me they are unsuspicious, and all three are standing lazily as if to catch the last warm rays of the setting sun. My nerves are steady, and the mark is large, and as my rifle booms out, sending echo after echo over the surrounding country, I can distinctly see a shudder pass over the noble animal. Two more shots follow in close succession, and then, as if still unhurt, he walks a few steps ahead. Is it possible that he is not hit? A stumble and crash give the answer to my scarcely formed thought, followed by two or three loud grunts, and all is quiet. But the cows, what are they doing all this time? Are they panic-stricken and rushing headlong? Not at all; they are as unconcerned as a man after a square meal. To be sure they are looking around and trying to smell something, but evidently I am not discovered. Why don't they see me? they are but twenty yards away. It must be that they are unaccustomed to look for danger in trees. I wave my arms. Ah! they see me and take a few steps. They have now made up their minds that something is wrong, and are swinging along with an easy trot that would make Maud S. hide her head with shame. Right over the tangled mass of fallen timbers they trot as if it were smooth as a ball ground, and in a few moments their shiny coats leave my excited gaze.

To crawl down my stump, and work my way to the dead moose is the next thing in order, and my agility in overcoming obstacles, and jumping from tree to tree would have made even Mr. Crowly of zoological fame envious. What a magnificent animal is this with his glossy black hide and tawny points. He was larger than I had thought, and looking back at my pine, I realized that the distance was greater than I had supposed. His head was certainly worth working for, and how Hank would laugh and grin. I had determined with him that should his assistance be needed that I would discharge my rifle in a certain way, and if possible he was to come. This I did. The long shadows were strong arguments against loitering in the work cut out for me, so baring my arms to the elbow I cleaned and bled the moose, and had begun to skin him, when a low whoop from Hank on the creek announced his arrival. Talk about skinning; never in my life had I tackled such a skin, except on a bull buffalo. Every inch had literally to be cut away, and around the neck the skin was so thick that we could hardly manage it. Even the sharp spruce branches could make no impression on such a hide. It was quite dark when we completed our work, and shouldering, for the present, a piece of meat, it was with the greatest difficulty that we reached the water.

What a cheerful and pleasant camp we had that night! Hank told me how he heard a moose calling, how he tried to creep up to it and failed owing to the thickness of the cover, and then how he made a horn of birch bark, and unsuccessfully tried to bring one to him. It was late that night before we thought of turning in, for all the events of the day had to be discussed, and Hank, with his generous mind, was more pleased than if he had himself killed the bull.

R.

BUFFALO, N. Y.

A CHASE IN MISSOURI.

Editor Forest and Stream:

I coincide with Mr. J. W. Schultz in his statement in FOREST AND STREAM, Vol. XXX., No. 21, that "panthers never climb trees, and lay in wait to pounce on game or children," also that "young cubs do climb to a certain extent in play," but I am not quite certain that adult panthers do not also enter trees for their own amusement. In 1886, while still-hunting for deer in Wisconsin, I killed a panther in a tree (a very small female), but as I did not find any marks of the claws on the trunk, I am inclined to believe she entered it by jumping, the branch on which I discovered her being only about 12ft. from the ground. In the summer of 1887 a cub was captured with a lariat, in a sycamore on the Yellowstone River, by a friend of mine; as I am not in possession of all particulars, I cannot state under what circumstances; the animal I think is still a captive on his ranch.

In the fall of 1887 I, with a companion, hunted in the foothills of the Ozark Mountains, in southeastern Missouri. On the 27th of October we halted in a secluded place, in the so-called "Irish Wilderness," on big bend of Current River, and having unsaddled our bronchos and pack animals, we at once started to build camp, and make things comfortable in general. Being out of meat we concluded to replenish our larder by securing a venison with the hounds in the morning. I, being more familiar with the lay of the country than my pard, by an unanimous vote of one, was placed in charge of the pack, (as "Master of Hounds," as my pard jokingly remarked) consisting of Charley, a large, very fast and powerful animal, who could boast of being a descendant of a greyhound on paternal, and a bulldog on maternal side; Bleuth, Don, Gin and Flora, good, long-winded hounds, equally familiar with the cunning tricks of the fox and coon, the ferocious charge of the silver-tipped grizzly, or the swift chase of the fleet-footed deer, and last, but not least, my faithful turkey and squirrel dog All, a mongrel, representing (as his name indicates) a compound mixture of nearly every known species of the genus dog, but certainly possessing vastly more of the good canine qualities than the faults of his numerous ancestors.

Having placed inside our belts nearly everything eatable to be found in camp for supper, and toasted our shins sufficiently long before the council fire, while deciding the route of our next morning's hunt, we soon retired to our blankets. In the morning, before the first rays of the sun had thrown their golden lustre upon the eastern sky, the camp presented a lively scene, and after a refreshing plunge into the crystal clear water of Current River, and a scanty breakfast, we quickly saddled our bronchos. According to previous arrangement, my partner started off on a brisk canter toward his stand, on the crossing at Pine Bluff Hole, while I, followed by our canine friends, trotted off in the opposite direction toward Long Ridge, where I intended to commence the drive. Failing to start any game there beyond a gray squirrel, who, terror-struck at the sight of so many enemies at one time, scampered up in the top of a little sapling, where, with loud barks and yelps, he protested against such an uncalled for disturbance at so early an hour, I decided to cross Round Swamp, and go down High Ridge, but before fairly entering the swamp old Bleuth struck a trail, and rushing into the laurel (rhododendron) thicket, at once gave tongue, and immediately Flora joined in, followed by all the rest, and away they went on a full cry, with Charley, as usually the case, well in the lead, toward the river; but presently I heard them turn and go across High Ridge toward the upper part of the bend. I at once concluded to head them off if possible, well knowing that the deer would not attempt to cross the river on account of the high and almost perpendicular bluffs before reaching Jones's Crossing, a shallow ford, where deer nearly atways take water when closely pursued by hounds. Being mounted on my favorite hunting pony, Fanny, a very swift and sure-footed animal, and the woods being comparatively open in that direction I lost no time in getting there, and on arriving at the ford, after about ten minutes' furious galloping over some very rough country, I heard, to my sincere delight, the hounds swiftly approaching. It was but the work of a moment to find a well concealed spot for the pony, and placing myself against the trunk of a large tree I calmly awaited developments.

Presently the game came in sight. Imagine, however, my astonishment when, instead of a big fat buck, I saw a large yellowish-looking animal, evidently belonging to the feline family, coming over the top of the ridge at that long loping gait peculiar to the panther, and which no hunter can mistake when once seen. Until that moment I had always boasted of being buck ague proof, but to do full justice to truth I must confess that I was not far from "hearing my own bones rattle" just then. As yet the panther did not see me, his whole attention being centered on Charley, who, running close at the heels of the panther, would now and then snap his teeth in a very significant way, as if his whole and only ambition in life would be to get a good square hold on that fellow's terminal appendage. Coming straight toward my stand the panther approached to within thirty steps, when I raised my rifle, and covering the vital spot pulled the trigger, and scored a clean miss. Whether the panther or I at that moment was the most surprised party is a mystery that to this day remains an undisputed problem, but at the report he suddenly stopped short. In an instant Charley closed in with him, and for a moment there was music in the air. It would have been a caution for any would-be intruder to see the way hair, fur and dust was flying about; it strongly reminded me of a Kansas cyclone. Meanwhile the other dogs had arrived on the scene of action, and at once pitched in for their share of glory and scratches. Seeing so many odds against him, and undoubtedly believing caution the better part of valor, the panther with one mighty effort shaking off

his antagonists, with a single bound cleared a space of 24ft. to the root of a large pine, and after the manner of our common house cat proceeded to scale the tree with about the same agility our "puss" would exhibit if she had her tail pinched for half an hour by our small brother, and been chased around the barnyard by three or four lively curs in the bargain. On reaching the first large limb, about 35ft. over the ground, the animal remained there, crouching close against the trunk, watching every movement of the disappointed canines below, his eyes gleaming like balls of fire, and his tail spasmodically twitching from one side to another, the very picture of intense excitement and fury. Once more the echo from the report of my .45-70 Marlin rang out on the clear mountain air, borne by the light autumn breeze from hill to hill, from bluff to bluff and returned a thousand fold from every nook and corner in the crags, and before it finally died away in the far distance the bleeding, lifeless form of our noblest animal of the forest lay stretched at my feet. It was a male, the largest it has ever been my good fortune to kill, measuring from end of nose to tip of tail 7ft. 9¾in. (before skinned), and I have reason to believe it the only panther killed in the State of Missouri in 1887. The tree in which he was killed was a pine, 47in. in circumference 2ft. from the ground, and about 68 to 70ft. high, the first mark of the claws was 14ft. 2in. from ground. This is the fifth panther I have killed, but the only one I have actually observed in the act of climbing a tree.

H. J. K., ex-Cowboy.

ST. LOUIS, Mo., June 28.

THE NATIONAL PARK.

MAMMOTH HOT SPRINGS, June 30.—*Editor Forest and Stream:* The weather management in this section of the mountains gave us an abundance of rain for the past month. Summer, according to the almanac, commenced on the 20th inst. To have a variety, something different from the regular thing and standard article for the Park, ours commenced with a snow storm. This continued for three days on the high mountains, and cold showers with now and then a few flakes of snow lasted for two weeks longer; then warmer showers the rest of the time. The sun, when it did show itself, made the intervals between showers very hot, giving every green thing renewed life. There are more grass and flowering plants than usual at this time of the year.

The roads, notwithstanding the abundance of rain, are in splendid condition. Some repairs have been made, rocks and trees removed and washouts filled. Major Allen, of the U. S. Engineers, made a visit of inspection. There are only a few hundred dollars available for repairs left over from last year's appropriation. Nothing as yet for new work. This depends on the action of Congress.

Game has been very abundant in sight of the wagon roads. Elk, deer, antelope and bear were often seen by the tourist, and buffalo were seen by parties riding over the unfrequented parts of the Park. Ed Wilson, the scout, saw over twenty young buffalo calves belonging to one band, while on a scout. Buffalo are still using the Alum Creek country, six having been seen but a short time ago. In the same section a band of over one hundred and fifty elk were seen by a party of tourists. In a day's ride from the Yellowstone River to the Lower Basin, through the Alum Creek country, one cannot miss seeing a great amount of game thus early in the season.

The Excelsior Geyser, the great attraction this season, has been very regular in it eruptions, much more so than while in action years ago. It was feared that the geyser would not continue to be active for more than a short time, and that as it threw out so much loose material and rock it would soon be nothing but a hole in the ground or a lake of hot water. It now looks as though it would last all summer or longer, as there are only a few pieces of the loosegeyserite thrown up at each eruption. More people have visited the Park up to this time than ever before.

H.

OLD CRUSHER CRUSHED.

AFTER summing up the evidence that has lately appeared in FOREST AND STREAM no one can doubt that panthers or mountain lions do climb trees, though as I stated in my first note of inquiry it would be hard to make some of the old hunters about here believe that such is the case.

About three weeks ago I started on a little hunting and fishing trip. I had to go up Rifle Creek to procure some burros to pack our "chuck," or duffle, as "Nessmuk" would probably prefer to term it. When I reached the ranch of old Capt. Watson, who lives alone on his place, where I intended to stay that night, I found him wrought up to the hightst pitch of excitement and blasphemy, recounted about what had befallen Crusher. Crusher was a large white bulldog of fair blood, which had been owned by twenty different people in this county, and was famed for his grit; he was almost seventeen years old and had but one stump for a tooth. He had been in so many rows that his head was covered with hairless scars; he more resembled a mammoth toad than any other creature, and withal he was a most affectionate and gentle old chap.

Capt. Watson's statement was (omitting the blasphemy) something like this: "Last night when I was reading on the bed, I heard old Crusher groan in his box outside. I thought he had a fit or maybe he had the hydrophobia, I looked out and all was dark, but I could see his white body rolling on the ground, then I could see his eyes as large as dollars. 'He's as mad as a hare,' I said, so I got my six-shooter out and determined to put the old fellow out of his misery as soon as he ceased to thrash about.

"In a few minutes I went out to where he was, just between the house and shed, and some sort of an animal gave two springs away into the darkness. I picked up the old dog and brought him into the house. He was badly used up; both eyes were struck out, and his scalp was gone. He still wished to fight. After bathing and bandaging him, I put him in his box under the shed, just outside the house door.

"In about twenty minutes I heard the dog growl again. I went to the door but could see nothing, though they were fighting not twenty feet from me. I shot at the noise, I could see the lion make two jumps with old Crusher in his mouth."

The old gentleman was very wroth, and had my Scott, a .44 Smith & Wesson, a .41 Colt's, as well as his old sword, at the head of his bed ready to hand if the lion returned. I suppose the lion must have been a female, and she probably had kittens away up some gulch. It is not usual for a lion to come so near a man, nor return after being once driven off.

The next day we started for Trapper's Lake (one of the largest in the State, though it would be only a pond in the East). Without giving a detailed account, after much hunting for seven days we at last found the lake. We passed through some of the grandest country I ever saw, a succession of parks, ponds, peaks, forests and rim-rock wastes.

Game was plenty, we could have killed any number of elk, deer and grouse. We saw no bears, though there were plenty of signs. We shot only one elk, as the meat would keep for only a short time.

The trout in the pond vary between one-half pound and one pound, never smaller and seldom larger.

If I had not seen them I should have supposed any one telling of their numbers was prevaricating to an abnormal extent. In walking my horse across a little inlet of about twelve feet wide he stepped on and killed two trout, they were so thick that they could not get out of the way.

PAUL BIGELOW.

COLORADO, June 29.

BEARS IN MAINE.

THE Maine newspapers are full of bear stories, even more so than a year ago, when the fact was particularly noted in the FOREST AND STREAM. There can be no doubt that this animal is on the increase in Maine, as well as the larger game, moose and deer. The accounts of getting bruin into traps are numerous, and still the old bear trapper contends that with his concealed and baited weapon of steel springs is about the only way that his bearship is ever brought to his end other than in a natural way. The moose and deer poacher leaves the carcass that he dare not bring out to the light of the settlement in the tracks where it fell; then early in the spring he gets himself to the spot, armed with his big bear trap. This he conceals in the proper position at the carcass, where bears are bound to come and eat. It is also said that the carcass is sometimes dragged for a long distance, after the snow is off, by the bear trapper, in order to make a line of scent, which the bear is sure to follow up to where the carcass is left. There he falls into the trap. The farmer's sheep that hungry bruin is sure to run down and kill, if they are suffered to stay out over night in spring and early summer, furnish another attractive bait, and here the bear trapper loves to set his traps. But of late years hunters of more courage than the mere setter of a trap have found these spots where the sheep have fallen just the places to try their nerve and skill with the rifle or shotgun. The killing of the big bear at Andover, Me., a year ago, by J. A. French and his son Tom, will be remembered by the readers of FOREST AND STREAM. This year Charley Bessee, of North Woodstock, in the same State, has killed his bear with the rifle. His bearship, an old one, was thought to have been chased over the mountains in that section for several days last year, by a party suddenly improvised, but bruin gave them all the slip. This spring he early began the slaying of sheep and lambs, and some of his prey was left where it fell, while the live sheep were carefully housed. About the third day, though he was being pursued by all the men and dogs in the neighborhood, the bear came out at nightfall to feast on the dead sheep. But Charley Bessee was there in ambush, and a bullet put an end to the sheep slayer. He was a big one and an old one, weighing some 300lbs. His presence created a good deal of excitement in the neighborhood of Bryant's Pond, and when he was slain the farmers breathed easier.

SPECIAL.

HOW I SPENT THE FOURTH.

Editor Forest and Stream:

As there seems to be an increasing interest in .22-cal. rifle shooting, perhaps the following may interest some of your readers. Living near a dam which supplies water to a large flouring mill and which, including the races and streams supplying it, affords good snap shooting at rats, etc., I went to the head of the dam yesterday, and finding snappers plentiful, basking on a fallen tree, I staid there for seven hours killing and retrieving seventeen snappers, one red-bellied turtle, a water snake 28in. long with a catfish 4½in. long fast in his jaws. I killed him just as he caught it, the splash he made as he rushed it attracting my attention in time for a shot, which hit his head as he made for the rushes at the side. I also bagged a crow shot at flying, and killed with the second shot, and killed two water rats swimming near the edge and got them out. I use the Colt lightning .22-cal., Lyman fore and hind sights, extra large hole, Winchester .22-cal. short cartridge, field-cleaner home-made, of whip cord, with bit of lead at one end and loop for rag spliced on the other; it works good and saves the nuisance of carrying a long brass cleaning rod to catch in everything. I wish to thank "Iron Ramrod" for his papers and ask for more.

COLT .22.

DELAWARE CITY, Pa.

GAME PROTECTORS OF NEW YORK.

AT a meeting of the New York Fishery Commission, held at Albany on Friday last, several fish and game protectors were appointed. The office of chief of game protectors is still vacant; two or three protectors are yet to be appointed. The following is the list, those marked * being reappointments:

*Matthew Kennedy, Hudson, Columbia county.
Francisco Wood, Schoharie, Schoharie county.
Fred P. Drew, Washington Mills, Oneida county.
John Sheridan, Penn Yan, Yates county.
*S. C. Armstrong, Riparius, Warren county.
Wm. N. Steele, Clayton, Jefferson county.
Willet Kidd, Newburg, Orange county.
Thomas Bradley, Rockwood, Fulton county.
Henry C. Carr, Union Springs, Cayuga county.
*Geo. M. Schwartz, Rochester, Monroe county.
Peter R. Leonard, Ogdensburg, St. Lawrence county.
Chas. Ripson, ———, Niagara county.
George Moyer, Lowville, Lewis county.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

FISH IN MAINE WATERS.

THERE are accounts of a big landlocked salmon being taken with the fly in Long Lake, one of the upper lakes of the Sebago chain, Bridgton, Maine, but this story I am not able to confirm. Fish Commissioner Stanley is still of the opinion that the landlocked salmon will rise freely to the fly, under the proper conditions.

Sportsmen, so far as I have learned, are not very well pleased with their success at Tim and Seven Ponds this year. A gentleman from Webster, Mass., who for several years has visited Richardson Lake, was overpersuaded by a friend to try Tim Pond. On their way out they were met at Portland by another friend on his way to the old fishing ground. The two new converts to Tim and Seven Ponds were much disgusted. When they reached the ponds some trout were being caught, it was true, but the size was so small that the newcomers did not unpack their tackle, but started the next day for home. A Boston gentleman, well known in the dry goods trade, has just returned from Tim Pond. He says that the fishing was fair, but the size of the trout was "dreadfully small."

I see by the last FOREST AND STREAM that one of its correspondents says that the fishing at Rangeley is "played out," and he goes on to extol some other pond or lake that he has found. Well, when he speaks of Rangeley, he probably has in view the vast lake system of the Androscoggin River, where it is true that the fishing is not what it should be, nor what it would be, if such as our friend were true sportsmen and content with trout enough for the camp. But just so long as sportsmen will continue to fish to pack in ice and carry to Boston or any other city or town, just so long we shall hear this complaint of no trout. But the truth of the matter happens to be that the record of trout taken in the Androscoggin Lake is larger this year than usual. Drop the fresh fish business, my friend, and learn that it is not all of fishing to catch hundreds of trout that you do not need, and then you will be content with waters near, and not be obliged to hunt the world over for some spot where the trout are unacquainted with the form of the sportsman.

SPECIAL.

Editor Forest and Stream:

What your correspondent Kit Clarke says in the present week's issue of your paper about the great amount of damage done the shores of the Rangeley Lakes by the high water, and the fishing at the lakes being played out and a thing of the past, is untrue and outrageous. Is this the way he takes to champion his old fishing companion, A. T. Stewart? I have but a few moments for writing this evening, but will give you a little idea of what I am knowing to as being caught. In one week, the last days of May and the first days of June, the guests from Camp Bemis alone took 429 trout, 13 of which weighed 5lbs. and over. All of a quarter of this number were caught from the steamer wharf close to the camps. Since June 20, Mr. Hart (of Waterbury watch fame), and a friend took in a few hours' fishing with a fly at Sunken Island, near Brandy Point, 65 trout, many of them weighing over a pound. The same day parties at Bemis took 70, most of them on a fly. Mr. C. W. Stevens, of Boston, among the rest, took 30, all on a fly. Mr. Stevens is the author of "Fly-Fishing." A few days previous to this Mr. Charles Cushman, of Auburn, Maine, took two trout, one of 6¾lbs., one 4¼lbs. weight. The following day he took a 3-pounder and several between that and a pound. Mr. Peck, of Waterbury, Conn., in not over three hours' fishing with a fly at Brandy Point, took 20 fine trout. To-day Messrs. Long and Seymore, of New York, both new beginners, have taken 29 nice ones near Bemis. These catches which I have given you, are not over half of what have been caught on a part of the Mooselucmeguntic Lake alone; on other parts of the lake and on the other lakes good catches have been made, and the Rangeley Lake has this spring gone away ahead of any of its previous records on salmon fishing. I will try and see that you have something of that later.

CAMP BEMIS, Me., June 30. F. C. BARKER.

Editor Forest and Stream:

In looking over your paper of June 28 I find the annual tirade by Kit Clarke against the Rangeley Lakes, and these emanations from his pen increase in malicious falsity each year, while they come as regular as the fishing season. For about the fifth time Mr. Clarke has found the best place for trout fishing and the easiest of access from New York of any in the country, and this yarn will hold good with him until about next June, when he will find another place. It is not my purpose to detract from this latest paradise (?) of Mr. Clarke, for his article is a first-class puff for the Quebec and Lake St. John Railway and the hotel proprietors at Lake Edward, therefore I am willing that they should have all the benefit that may come from it. But his statement that "good fishing at the Rangeley Lakes is a thing of the past," is not only false, but malicious. I have been visiting the Rangeley Lakes for sixteen years, and in my opinion there are more trout in number and more large ones taken from those waters now than there were twenty years ago. In fact the poorest fishing I ever saw at the lakes was on my first visit. It is true that opening and closing the gates in the dams disturb the trout, and they seek new places in the lake for feed and spawning, but this is a benefit to the fish.

My opinion also, grounded on sixteen years' observation, is that there is very little "jigging," "gang-hook fishing," or "marauding the spawning beds" done, and certainly no more is done at the Rangeley Lakes than in other fishing waters of Maine, New Hampshire or Canada.

Neither are those who visit the Rangeley Lakes "doomed to disappointment." The most of the fishermen who visited the lakes this spring made very fine catches of trout and landlocked salmon, the fish running unusually large, and there are plenty of sportsmen who visited the lakes this spring that could give the lie to Mr. Clarke's assertions, if they choose to publish the scores of the fish they caught.

The scenery of the Rangeley Lakes has not been injured to any extent by the rising of the waters. In a few places for a short distance the trees that fringe the lake shores have been killed, but to offset this the lakes have been very considerably enlarged, the waters covering many unsightly places and largely increasing the feeding grounds for the fish. As stump willows or willows of any other description never grew around the lake shores or anywhere in the lake region, it is a conundrum to me how they could have been injured. But this is another of Mr. Clarke's facts (?) and as false as the rest of his assertions. Neither are the shores lined with "decayed spruce trees" from the fact that the number of spruce trees that grew around the lake shores was very small, the principal growth around the shores being cedar, white birch and poplar. Mr. Clarke's ignorance of the subject on which he writes is as amusing as his false statements are provoking. Good fishing at the Rangeley Lakes is not played out, but the trouble with Mr. Clarke is that he is played out at the Rangeley Lakes, and if he can get along without the Rangeley Lakes, the Rangeley Lakes can very well get along without him.

The New Hampshire Legislature at its last session passed an excellent law, that no person should carry away more than ten pounds of speckled trout or landlocked salmon, not of each kind, but of the two taken together, and it would be a very good thing for Maine fishing waters if the next Legislature of Maine would pass the same law, or at least cut the amount now allowed, 50lbs., down to 25lbs. It would also be a good thing if the Maine Fish Commissioners would visit the Rangeley Lakes once in a while during the fishing season and watch the management of the water. I think they might see some things in connection with it that would at least call for a protest if nothing more. These lakes are the finest fishing grounds in New England, and it would be a profitable enterprise for the State of Maine to appropriate sufficient funds each year to annually stock the waters with large numbers of small trout and landlocked salmon. CHAS. A. J. FARRAR.

PORTLAND, Me., July 2.

Editor Forest and Stream:

I returned Saturday, June 30, from my annual fishing trip to Kineo, Moosehead Lake, Me. Arrived there June 12 and found the lake very high, but it had not made any difference in the fishing, as up to that time more fish had been taken than during the same time for a good many years. There were no black flies on the lake this year, and one could be as comfortable as at his own home, and get splendid fishing besides. Have kept an accurate score of fish taken during my stay there in June for the past five years, and am satisfied that the fishing is growing better every year in regard to numbers and weight. Moosehead is truly a great lake for trout, and with the splendid accommodations at the Mt. Kineo House and the best of guides, what more could be desired?

The trout began taking the fly this year about June 1, and fly-fishing continued to be good all the time I was there; in fact the best fishing was the last week in June. The fish that one will take with the fly in June will average 1¼lbs., and for sure fly-fishing I know of no better place.

I have been very much interested in the articles written by your correspondent "Special" about Maine fishing, but he must be misinformed in regard to Moosehead when he says that a 2½lbs. trout is a large one to be taken with the fly in that lake.

As I never fish in any other way than with the fly I give you my score of trout taken the past two seasons of 2lbs. and above. In 1887—2 of 2lbs. each, 2 of 2¼lbs. each, 1 of 2½lbs., 1 of 2⅝lbs., 1 of 3lbs., 1 of 3⅛lbs. and 1 of 4⅛lbs. In 1888—3 of 2lbs. each, 1 of 2¼lbs., 1 of 2½lbs., 1 of 2⅝lbs., 1 of 3½lbs. and 1 of 3¼lbs. The largest trout (*S. fontinalis*) brought into Kineo during my stay in the past five years weighed 5lbs. and was taken with the fly by E. H. White, of Meriden, Ct.; the next largest was taken by the writer in 1887, of 4½lbs.

The above fish were all accurately weighed, and my experience has been that fully as large fish are taken with the fly in Moosehead Lake as are taken in any other way of fishing, but perhaps a season's catch with the fly would not average quite as large as a season's catch with bait.

The most taking flies in June are the scarlet-ibis, grizzly-king, silver-doctor, quack-doctor, Montreal and the various hackles.

The above flies should be tied on No. 5 or 6 sproat hooks for those waters. So little reliable information can be learned, of even our best known fishing resorts, I have written the above thinking it might be of interest to some of your readers who contemplate visiting Moosehead Lake. N. A. PLUMMER.

BRATTLEBORO, Vt., July 2.

Editor Forest and Stream:

Kit Clarke says good fishing at Rangeley Lakes is a thing of the past. How does he know? Has he tried the fishing this season, or does he get his information from some one who had poor success, or would not be satisfied with good fishing? I will state for a fact, and think I can prove it to the satisfaction of any true sportsman, that the fishing has been better this season than for several years. I have been located here for twenty-six years, and have heard the least fault found with poor fishing I have ever heard. More large trout and landlocked salmon have been caught this season than I have known before. Two sportsmen took sixty trout with flies, in the big lake, in one day last week, and two others took seventy in the same lake on the same day, near Beamis Stream. I do not feel disposed to call such fishing as that a thing of the past. I do not vouch for the fishing in the lower lakes and at the Upper Dam, where the jigging process, the villainous gang hook and the marauding of spawning beds is the *modus operandi*.

C. T. RICHARDSON.

INDIAN ROCK, Me., July 6.

THE LARGEST SALMON.—Chicago, June 25.—*Editor Forest and Stream:* Messrs. A. Booth & Son, the well-known dealers in fish in this city, display a huge salmon in their show windows, with the following placard attached to same: "Largest salmon ever caught; weight 81½lbs." How do the records stand on this question? Is this the largest salmon ever caught?—INQUIRER.

SEA BASS OFF LONG BEACH.

Editor Forest and Stream:

Last Friday Col. Hugh R. Garden, of the Sawyer-Mann Electric Light Co., asked me to come down to Long Beach for a day's fishing. I left Long Island City by the 6:30 A. M. train next morning, and in less than a couple of hours had stowed away a good breakfast at the hotel and boarded Capt. Van Wyck's schooner. We beat out of the inlet, put out three squids and cruised for an hour or so, taking a couple of two-pound bluefish. By this time a strange catboat, whose society the Captain did not like, had gone off about its own affairs, so presently we went about, the lines sagged, and when they were taut again there was a sea bass on one of the hooks. We cast anchor and began to get them in. I was fishing with a light stiff rod and Mr. Garden had a couple of Leonard bass rods. We twisted a ring out of the wire from a bottle of Appollinaris, whittled a short top out of a bit of pine, whipped the wire on and then there was a chance to strike. We fished with two-ounce sinkers in about eight fathoms of water, with two good-sized hooks on wire snells.

The Captain looked after me, his man "Dave" after Mr. Garden, and all hands were kept busy, for when we counted the spoil, being fairly weary of winding in, there were by actual count seventy-eight sea bass, averaging from five pounds and a half down to a pound or so, and there then were a couple of dozen between two and three pounds. I got tired winding in and rigged up the other Leonard and had some sport, stripping the line in with my right hand, although I could not strike with the same certainty as when using the stiff rod. Captain Van Wyck knows where to go; his schooner is forty-five feet over all, so there is lots of room to move about, and both he and his son are clever, companionable folk who will earn the ten dollars which he charges for the day. I've got a notion of taking down a gallon of menhaden oil and casting the same upon the waters some other day. The fishing ground is about three miles from shore, and it might get the bluefish round. Has this oil business been tried? Or how could we get menhaden to Long Beach?

GRAY JOHN.

THE SALMON FISHING.

METAPEDIA, July 2.—*Editor Forest and Stream:* You often hear of the finest fishing in the world at many different places. Look at this one. Last week the shipment of anglers' catch, via express from Metapedia to U. S., was 135 boxes, many of them, of course, two fish, but many four and six, and some eight. The shipment this morning is 40 boxes. There have been in the last week nearly 100 rods of the River Restigouche and its branches. The fish average about 21lbs.; 30, 32 and 34lbs. fish are not uncommon, and one of 46lbs. has been caught. Some rods, having better places than others, and also knowing better how to kill as well as hook a fish, are doing better than others, and run a score of five, six and eight fish per day. As for trout, they are not counted in; in fact the first salmon completely spoils a trout fisherman. Of course the Restigouche Salmon Club own nearly all the waters; still there are a few spots left where a fish can be caught. If there is any place, either on this continent or in Europe, like the Restigouche for salmon angling, please inform your readers where it is. M.

WEAKFISH IN JAMAICA BAY.—One of the handiest spots to reach for New Yorkers who want salt-water fishing is Jamaica Bay, on the south western end of Long Island. The advance guard of the weakfish are now there, and within a fortnight the fishing promises to be excellent. The Long Island Railroad runs trains to Rockaway Beach, via Woodhaven, and this branch crosses Jamaica Bay on a great trestle, on which is a station called Broad Channel, established especially for fishermen. This is the place to get off, and Broad Channel is the channel to fish in. Anglers must not take the Far Rockaway branch, via Lawrence, but must go from Woodhaven direct to Rockaway Beach. This route is not on the general time table of the railroad. It is about an hour's ride from Brooklyn or Long Island City. Some trains stop at the station, others do not; be sure to get on one that does. Boats are there at fifty cents a day. Meals at Chas. Fuller's hotel cost forty cents. Shrimp bait is there in abundance. Messrs. Reynolds and son, and Mr. Weeks, of Brooklyn, fished at this point one day last week, and in two hours of low water took 171 weakfish of good size. The fishing for weakfish and bluefish is reported to be growing better every day.

FISHING OFF NEW YORK DOCKS.—Forty years ago there was good fishing from the docks of New York and fine striped bass were freely taken, especially at the Battery. As the city grew and the water became fouler the fishing ceased. Of late fishermen have found out that at the upper end of the city, on the North River side, there are a few bass to be taken. This week a man took four striped bass of 1lb. each, at the foot of 138th street, and three more were taken from the cinder banks north of the Manhattan Iron Works. It is estimated that at least sixty bass were taken between the cinder banks and Spuyten Duyvil on Sunday last.

FISHING RECORDS.—For the benefit of anglers Spaulding Bros., on Broadway, New York, have opened a register, in which fishermen may write a faithful report of the number of fish caught, the condition of the tides, moon, clouds, atmosphere, etc., at the time they were caught. A chart locating the various ocean wrecks will be pasted in front part of the book. Anglers are requested to write full particulars about the kind of bait used, and in every other way assist brother anglers in making future fishing excursions successful. Knights of the rod and reel are indebted to Mr. Geo. Paddock for this interesting idea.

"THE GIANTS OF THE WEEKLIES" is the becoming title of a most attractive pamphlet, prepared and published by Mr. W. F. Hardenbrook, the well-known newspaper advertising agent, whose office is at No. 168 Washington street, Chicago. The considerations presented in its pages for advertising in weekly journals in preference to other publications are cogent and convincing.

Fisheulture.

SHAD IN THE HUDSON.

TROY, N. Y., July 7.—*Editor Forest and Stream:* In your issue of July 5 you quote from the Troy *Times* my article "Shad in the Hudson," and also Mr. Cheney's reply thereto. As the subject is one which may interest your readers, will you please in the same connection insert my reply to Mr. Cheney's article, which reply was published in the *Times* of June 9, and which is as follows:

Away from home at the time Mr. Cheney's article appeared in the *Times* of Tuesday last, I did not read it until my return, and on that account have not replied to it before. It will be remembered that in my former article the objection made to the system of shad culture followed by the New York State Fish Commissioners was on account of their confining their operations to the sluggish water of the Hudson at Catskill Creek for the setting free of the shad fry, instead of their liberation in the highly-aerated water of the Upper Hudson, and not the work done by the United States Fish Commission.

But the statement of Mr. Cheney suggests that the better rule has been followed by the United States Commissioners in planting in the upper waters of the Hudson some millions of young shad. And here again comes another question as to whether this procedure has resulted in any benefit to the stocking of the Hudson at all; if it has or not depends entirely upon the fact whether the young shad turned loose by the United States Commissioners belonged to the Hudson River family of this fish, or the Potomac, the Chesapeake or Delaware rivers. If they belonged to either of the latter they would affiliate with their family on their return the following year, and while it might help the Potomac, Chesapeake or Delaware rivers, it would do but little for the Hudson.

All migratory fishes of the shad and herring family (*Clupeidæ*), and also the salmon classed with the former as the *Physostomi*, are assumed from their origin to have their habitat in the deep waters of the ocean. This is inferred from their obvious descent from the *Thrissopidea* of the Oölitic period, their having a dense, heavy muscular tissue, and the fact that they still retain through life an air passage or kind of windpipe connecting the swim-bladder with the throat.

From their home deep in the ocean all of the shad return to our coast to spawn in families, and from the St. John's River in Florida to the Connecticut River, each of these families are distinct and well defined. So much so is this the case that we never find shad of the Connecticut family mingling with those of the Hudson, nor *vice versa*. It does not require much of a naturalist to tell a St. John's River shad from a Potomac River shad, or to tell a shad from any of the Southern rivers from a Connecticut River or a Hudson River shad. These family affinities are so well established that a young Potomac River shad if put into the Hudson must on its return to the ocean rejoin its relatives there, and it would obviously come back with them to the Potomac on the succeeding year; so that it is an open question whether the putting of young Potomac shad in the Hudson adds anything to the shad stock of the latter river, and from a naturalist's point of view it would not, for the same law that led them to arrange themselves in families at the start would tend to their continuance as such.

With the salmon this tendeney to family association is sometimes closely adhered to, and in other cases it is not. In some of the Canada waters, even where two rivers unite by a common mouth, there is a family of salmon for each branch, and the fry of one branch of the river being placed in the other branch will not return to the one wherein placed, but to the one where its family belongs. Here in the Hudson we have seen Kennebec salmon become enough suited with the Hudson to return to it, weighing from eight to ten pounds, and then again weighing from twenty to twenty-five pounds, with evidences of a lusty development, and the best of tendencies to obtain a large growth. We may reasonably infer from these facts that the Hudson furnishes good conditions for the development of salmon, and that it is only a question of fishways and proper protection to make this most delicious of food fishes abundant under the continued and well-directed work of Fred Mather, acting for the United States Fish Commission. W. E. H.

THE NEW YORK COMMISSION.—Last week the Governor appointed Mr. Henry Burden, of Troy, to be a Commissioner of fisheries in place of Mr. Roosevelt, resigned. The board met in Albany on Friday last, and elected Mr. E. G. Blackford as president; it now stands: E. G. Blackford, President, New York; R. U. Sherman, New Hartford, Oneida county; Wm. H. Bowman, Rochester; A. S. Joline, Tottenville, Richmond county; Henry Burden, Troy. Thirteen game protectors were appointed, among them a few of the old ones, but there are still several vacancies, as well as that of the chief game protector, who has not yet been selected.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Aug. 29 to 31.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 22. H. P. Frothingham, Secretary, 2 Wall street, New York.

Sept. 4 to 7.—Second Annual Dog Show of the Michigan Kennel Club, Detroit, Mich. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6362**.

THE NATIONAL DOG CLUB.

A MEETING was held at the Metropolitan Hotel, New York, July 5. Those present were Dr. M H. Cryer, of Philadelphia; Messrs. H. W. Huntington, of Brooklyn; K. E. Hopf, of Arlington, N. J.; Dr. J. H. Meyer, of New York; F. Windholz, of New York, and James Watson, of Philadelphia. In the absence of the president, Dr. J. Frank Perry, of Boston, Dr. Cryer took the chair.

The constitution, the by-laws and the rules governing bench shows were taken up article by article as printed in our columns last week, and adopted with such amendments as appear in the following text.

By vote of those present the secretary, Mr. H. W. Huntington, was instructed to cast a ballot for the officers of the club as elected by the mail votes; and lots were drawn to determine the terms of office for the members of the executive committee. In recognition of the services of Dr. Perry and Mr. Huntington in the preliminary work of the club, their names were withheld from the drawing, until the one year and two years terms had been determined. The officers of the club are:

President, Dr. J. Frank Perry.

Vice-Presidents, Miss Anna H. Whitney, Mr. W. S. Jackson, Mr. E. S. Porter, Dr. C. E. Nichols.

Secretary-Treasurer, Mr. H. W. Huntington.

Executive Committee: For one year, Dr. M. H. Cryer, Messrs. S. R. Hemingway, A. C. Krueger, J. H. Naylor, John E. Thayer. For two years, Messrs. John Davidson, Jean Grosvenor, K. E. Hopf, J. F. Kirk, Frank Windholz. Three years, Messrs. Mitchell Harrison, H. W. Huntington, Ed. Lever, E. H. Moore, Dr. J. Frank Perry.

It was voted that the executive committee be requested to consider the propriety of making provision for special prizes to be given by the club at the coming Buffalo show, which will be held under the National Dog Club rules. It was also intimated that some of those present would give special prizes at this show, offering them through the club, and it was the sentiment of the meeting that as the Buffalo show was held under National Club rules it would be a graceful and fitting thing for all members to give it their support by sending their entries.

It was further voted that the executive committee should at once prepare a scheme to provide suitable special prizes to be offered at dog shows as National Dog Club prizes. The sentiment of the meeting was that by making liberal provision in this respect the club could wield a powerful influence to promote the interest in shows.

The greatest harmony prevailed at the meeting and the proceedings were characterized by an earnestness which could not be misinterpreted.

CONSTITUTION.

ARTICLE I.

This club shall be known as the National Dog Club of America.

ARTICLE II.

The object of the club shall be to promote the general improvement of dogs, dog shows and dog competitions.

ARTICLE III.

SEC. 1. The club shall consist of an unlimited number of members, whose election is vested solely in the executive committee, and shall be by ballot, two black balls to exclude.

SEC. 2. Candidates must be proposed in writing by one member of the club and seconded by another, and a list of such candidates must be sent to each member of the executive committee not less than ten days prior to the date of the meeting at which their names shall come up for election.

SEC. 3. The annual dues shall be five dollars ($5.00), which must accompany the application for membership and be subsequently payable on the 1st of January of each year, and no person shall be considered a member until his dues are paid.

SEC. 4. A member may become a life member upon payment of the sum of twenty dollars.

ARTICLE IV.

SEC. 1. The officers of the club shall be a president, a first vice-president, four vice-presidents, a secretary-treasurer and an executive committee of fifteen members. The president, the first vice-president and the secretary-treasurer shall be chosen annually by the executive committee from among its members, and shall hold office for one year or until their successors shall be elected. The four vice-presidents shall be elected by the members of the club at the annual meeting, and shall hold office for one year and until their successors shall be elected.

SEC. 2. The secretary-treasurer shall give bonds in the sum of $2,000 for the faithful performance of his duties.

ARTICLE V.

SEC. 1. The management of this club shall be intrusted to an executive committee of fifteen members, who shall be elected by a vote of all the members in good standing, for a term of three years, except that of the first committee, in order that five members of this committee shall be elected annually, five shall be chosen by lot to retire at the end of the first year, and five at the end of the second year, but to continue in office until their successors are elected and take office. The retiring members of the committee are eligible for re-election.

SEC. 2. The election shall take place at the annual meeting of the club, thirty days prior to which the secretary shall forward to each member a printed slip containing the names of the executive committee and of all members in good standing, together with a stamped addressed envelope indorsed "Election." Each member will check off the names of five members he desires to vote for to fill the vacancies about to occur on the executive committee, and also the names of four members as vice-presidents, and sign his name on the slip. All such sealed envelopes shall be cast as ballots at the annual meeting and counted by the tellers as votes. Members present at the meeting shall deposit their ballots personally.

SEC. 3. The members of the executive committee so elected shall assume office on the first of May of the year of their election, and continue in office until their successors are elected and take office.

SEC. 4. The executive committee shall, at its first meeting held subsequent to the first day of May of each year, proceed to organize.

SEC. 5. The executive committee shall have power to fill vacancies on the committee until such time as a regular election is held.

ARTICLE VI.

SEC. 1. The annual meeting of the club shall be held at the call of the executive committee, but must take place during the months of February, March or April, and if practicable, at the time and place of a leading dog show, of which at least thirty days notice must be given. A special meeting shall be called at the request of twenty members, or may at any time be called by order of the executive committee.

SEC. 2. The executive committee shall hold six meetings during the year, one each in the months of February, March, April, May, August and December, at such places and dates as may be determined upon at the preceding meeting.

ARTICLE VII.

No alterations can be made in the Constitution or in the Rules Governing Dog Shows, as adopted by this club, except by a majority of the vote cast including mail votes, at the annual meeting or a special meeting of the club called for that purpose. At least thirty days notice of any such proposed change must be given to the executive committee, of which due notice shall at once be sent to the members who shall have ten days in which to file with the executive committee any amendments thereto, due notice of all of which amendments must at once be furnished to the members.

ARTICLE VIII.

The executive committee shall have full power by a two-thirds vote to suspend or expel any member, and the member so suspended or expelled shall not be entitled to recover any portion of his annual dues nor have any claim against the club. Such member shall have the right of appeal to the club from the action of the executive committee at the annual meeting, or at any special meeting, provided notice of appeal has been given.

BY-LAWS.

ARTICLE I.—DUTIES OF OFFICERS.

President.

SEC. 1. The president shall preside at all meetings of the executive committee, appoint all committees, audit and approve all bills and shall order meetings of the executive committee whenever in his judgment he may deem it necessary. He shall submit a report of the work done during the past year at the annual meeting.

First Vice-President.

SEC. 2. The first vice-president shall perform all the duties of the president in his absence.

Secretary-Treasurer.

SEC. 3. The secretary-treasurer shall keep the minutes of each meeting of the executive committee and of the club; conduct the correspondence, and have charge of, and be responsible for all the books and papers of the executive committee. He shall collect and have charge of all moneys belonging to the club, shall pay all bills when properly approved, and submit a report thereof to the executive committee at every meeting. He shall keep a book containing a list of the members with their addresses, which book shall, at all reasonable times, be open for the inspection of members in good standing.

Trustees.

SEC. 4. The president and first vice-president shall act as trustees, and have charge of the property of the club.

ARTICLE II.—MEETINGS—EXECUTIVE COMMITTEE.

SEC. 1. The regular meetings of the executive committee shall be held as provided for in the Constitution.

SEC. 2. Special meetings of the executive committee shall be called by the secretary, either at the written request of three members of the executive committee, or by order of the president, and two weeks notice of such meeting shall be sent to every member of the executive committee.

SEC. 3. At all meetings of the executive committee five members shall constitute a quorum.

ARTICLE III.—PAYMENT OF BILLS.

SEC. 1. All bills shall be presented to the president or first vice-president when acting as president, and shall be audited by him; in case of approval he shall affix his signature and date of approval. After such approval the secretary-treasurer shall pay said bills.

ARTICLE IV.—ORDER OF BUSINESS.

1. Roll call. 2. Reading of minutes. 3. Reports and communications. 4. Unfinished business. 5. New business. 6. Election of officers. 7. Adjournment.

ARTICLE V.—AMENDMENTS, ETC.

These By-Laws may be altered, amended, or suspended at any meeting of the executive committee by a simple majority vote, provided two weeks notice shall have been given to every member of the executive committee of the proposed alteration, amendment, or suspension. In the absence of such notice a two-thirds vote of the members present shall be required.

RULES GOVERNING DOG SHOWS.

As adopted by the National Dog Club of America.

I. The word dog, where used in these rules, includes both sexes.

II. Every dog entered at any show held under these rules must be the *bona-fide* property of the person making such entry, on the day of closing the entries. The entry must clearly identify the dog to be exhibited by name, and, if known, its date of birth, name of its sire and dam, and the name of its breeder. Should any of these particulars be unknown to the exhibitor, it must be so stated on the entry blank and inserted in the catalogue.

III. If the name of a dog, which has won a prize, has been changed, the name under which it won the last prize must also be given on the entry blank and inserted in the catalogue, together with a list of all prizes won by the dog.

IV. If the dog has been entered without being clearly identified, as directed in Rule 2 and 3, it shall be disqualified and forfeit any prize which may have been awarded to it.

V. The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

VI. A puppy is eligible for competition in either the puppy or open class, or both, unless prohibited by the special rules of any show.

VII. The authorities of any show may reserve to themselves the right of declining any entries they may see fit, or of removing any dog on account of disease, vice or other cause.

VIII. A recognized veterinary surgeon must be appointed at each show held under these rules. Each dog received at a show must be passed upon by him before being benched.

IX. A castrated dog or spayed bitch shall be disqualified, and forfeit any prize which may have been awarded it.

X. Total blindness, deafness and lameness shall absolutely disqualify. If the judge or veterinary surgeon is satisfied that the deafness or lameness is temporary, the dog shall be allowed to compete.

XI. A dog suffering from mange or any contagious disease shall be disqualified and forfeit any prize which may have been awarded to it, and shall be removed at once from the show building. The regularly appointed veterinary surgeon shall alone decide as to mange or contagious disease, and his decision must be given in writing.

XII. A judge may disqualify a dog which, in his opinion, has been improperly tampered with, subject to the decision of the veterinary surgeon, which must be given in writing. Should the judge's disqualification not be sustained, the class must be immediately rejudged.

XIII. Full discretionary power is given to the judge of each class to withhold any or all prizes for want of merit. The judge's decision will be final in all cases affecting the merits of the dogs, and appeals can only be entertained where misrepresentation or breach of the rules is discovered.

XIV. Should an appointed judge be unable to fulfill his engagement, the committee shall have the right to fill the vacancy in such manner as they see fit. All the separate classes of any one breed of dogs must, however, be adjudicated upon by the same judge or judges acting in conjunction. An exhibitor may, however, at his option, withdraw from competition under such substituted judge his entries of any one breed, provided he withdraws all of such breed.

XV. In any class where there is a limit of weight, the person in charge of dog entered in such a class may claim of the show committee the right, at any time before the judging, to have his dog weighed, and the weight of the dog shall be registered and hold good at the time of judging.

XVI. A dog to compete in a champion class must have won five first prizes—exclusive of puppy classes, and classes not confined to one breed—at shows approved by the National Dog Club, a list of which, together with these rules, must be published in the premium list and catalogue of each show. A first champion prize won at an approved show shall be counted as a first prize win.

XVII. In estimating the number of prizes a dog has won, with reference to whether it should compete in a champion class or not, the number of prizes won shall be calculated up to 12 P.M. of the day preceding the closing of the entries of the show.

XVIII. In entering a dog in a champion class, it is necessary to specify on the entry blank a sufficient number of first-prize winnings to entitle it to compete in such a class, and this record must be given in the catalogue.

XIX. Every dog entered in a regular class is eligible to compete for special prizes, and no such dog shall be withdrawn from competition unless it has been stated on the entry blank "not to compete for special prizes." To compete for a special prize a dog must have been entered in its regular class, but a dog may be entered "to compete for specials only."

XX. No special prizes can be accepted of offered by a show committee after the show is opened.

XXI. The age of a dog shall be calculated up to and inclusive of the day preceding the show. A dog whelped April 30 shall not be eligible on May 1 of the following year to compete in a class for dogs under 12 months of age.

XXII. An objection to a dog may be made by any person, but must be in writing and be lodged with the secretary of the show within ten days of the last day of the show. The objection must (except in the case of an objection made in the name of the National Dog Club or by the committee of the show) be accompanied by a deposit of five dollars, and if the objection is decided to be frivolous the deposit shall be forfeited to the committee of the show. From a decision of the committee of any show held under these rules appeal may at once be made to such members of the executive committee of the National Dog Club as may be present, and if the decision is sustained by them, the five dollars deposit is thereby forfeited to the show committee. From any such decision or decisions, appeal may be taken to the full executive committee of the National Dog Club, but such appeal must be forwarded to the secretary within seven days of the first decision being rendered, together with a deposit of ten dollars. If the decision appealed from is sustained the ten dollar deposit shall be forfeited to the National Dog Club; but if the decision is reversed, then all deposits must be returned to the appellant.

XXIII. Any person who has been guilty of misconduct of any kind in connection with dogs, dog shows or field trials may be suspended by the committee of any show. Notice of such suspension, together with all testimony in the case, must be forwarded within twenty-four hours to the secretary of the National Dog Club. The secretary shall thereupon notify the president or, in his absence, the first vice-president, who may, upon investigation of the case, suspend the penalty until the next meeting of the executive committee. At such meeting the penalty must either be removed or the person suspended be disqualified for such a period as the executive committee may decide.

The disqualification of an owner shall apply to all dogs connected with the perpetration of a fraudulent act, but the executive committee of the National Dog Club may use such discretion in the enforcement of this penalty as shall protect innocent persons.

XXIV. No person under suspension or sentence of disqualification can exhibit or take a prize or act as agent for any person at any show held under these rules.

XXV. Entries made in the name of a kennel, must be accompanied by the name of the actual proprietor or proprietors, but not necessarily for publication. The partners in a kennel will be deemed equally culpable in the case of fraud perpetrated in the kennel name.

XXVI. The premium list of each show must contain the names of the officials under whose management the show is being given, each of whom, except paid employes, shall be held personally responsible for the payment of all prizes within sixty days from the last day of the show. The secretary of the National Dog Club shall, upon evidence being produced that any such prize or prizes remain unpaid, issue notice of suspension of each and every official, and otherwise proceed as provided for in rule twenty-two.

XXVII. The person presenting the identification ticket shall be recognized as the agent of the owner in the latter's absence, and his receipt for prize money shall be binding on the owner, unless notice to the contrary is indorsed on the identification ticket.

XXVIII. All prizes offered by the club or committee in charge of a show must be paid in accordance with the description given of them in the premium list. Prizes described as of silver or gold must be of metal of recognized purity.

XXIX. The show committee may adopt such regulations as they see fit, provided they do not conflict with the foregoing rules.

APPROVED SHOWS.

Winners of five first prizes at the following shows must be entered in the champion classes when such classes are provided. See Rule XVI.

Albany, 1888.	Pittsburgh, 1881 to 1887.
Am. Fox-Ter. Club, 1886, 1887.	St. Louis, 1879 to 1885.
Boston, 1878 to 1888.	St. Paul, 1887.
Buffalo, 1887.	Troy, 1888.
Chicago, 1883 to 1885.	Utica, 1888.
Cincinnati, 1884, 1885, 1886.	Waverly, N. J., 1886, 1887.
Cleveland, 1882, 1884, 1886.	Winsted, 1885, 1886, 1887.
Detroit, 1887.	New York, Fanciers'.
Hartford, 1886, 1887.	Toronto, Ont.
Hornellsville, 1886, 1887.	London, Ont.
Milwaukee, 1886, 1887.	St. John, N. B.
Nat. Breeders' Show, Phila., 1884.	Ottawa, Ont.
	Pacific Kennel Club.
New Haven, 1884 to 1888.	New Bedford.
Newark, N. J., 1886 to 1887.	Stafford Springs.
New York, 1877 to 1888.	Montreal.
Philadelphia, 1879 to 1888.	

CONSTITUTION.—Art. I. The words "of America" were added to the title that the scope of the club might be understood as including Canada.

Art. II. An amendment adding "to protect the interests of breeders" was proposed, but not adopted, as it might suggest an antagonism which does not exist.

Art. III. An initiation fee of $5 in addition to the $5 annual dues was talked of, but not adopted, because an exaction of $10 might discourage membership.

Art. IV. The most noteworthy change here is the provision that the officers shall be chosen by the executive committee from among its members. Thus while the executive committee is elected by the members at large, it is wisely intrusted with the election of its own officers. The mail vote (Sec. 2) gives every member, whether present or not, his own individual representation.

Art. VI. The months chosen for the six meeting were those in which, it was thought, there would be most occasion for the services of the committee in adjusting questions which might arise at the shows.

Art. VII. This article was very carefully considered, and the intention was to make a rule here which should insure the fair representation of the entire membership in making any alterations, so that no obnoxious rule could ever be adopted by a clique.

SHOW RULES.—II. It was suggested that the color must be included in the details of description given in entries, but this was not adopted, it being held that a precise color description was in many instances too difficult to give.

III. A change of wording without any change of the intended meaning.

VII. There was much discussion of this rule. While the authority it gives was recognized as highly important, it was also urged that it gives show managers power to vent their personal spite and gratify piques. One case was related where an exhibitor of prizes had written on the entry blank of one of his dogs a statement that he wished the club concerned would give more valuable prizes in that class. The show managers took offense at this, and returned all his entries. As a remedy for such child's play as this, it was proposed that the show managers should be required to give their reason in writing; this, on appeal to be approved by a committee appointed from the executive committee of the National Dog Club. After discussion, however, the rule was left as originally worded; and it was suggested that managers giving shows under these rules would not be likely to provoke the displeasure of the National Dog Club by injustice in this matter.

There was much discussion of Rule VIII. It was the general sentiment that show managers should be compelled to employ competent veterinaries, but the rule as adopted was so worded as not to work any hardship to the smaller shows. A judge may at times be better able than the veterinary to detect faking (Rule XII.), but it was urged that only in very remote contingencies would a veterinary venture to give his written opinion conflicting with that of the judges.

Rule XIII. The secretary had received a letter from a member urging that judges should be compelled to award the prizes in all classes where there were any entries; but it was held that the rule was a wise one, and it was retained.

Rule XIV. was adopted as an important innovation, which will give every exhibitor an opportunity to protect himself against having an unwelcome judge forced on him. While a judge might feel offended at such withdrawal, it was thought more important to look out for the interest of the exhibitor than for the feelings of the judge.

CHARTER MEMBERS.

Arnold, P. W., Pawtucket, R. I. Mastiffs.
Andrews, Fred. F., 3 Exchange street, Rochester, N. Y. Spaniels.
Backer, J., South Glastonbury, Conn. Irish setters.
Backer, L., South Glastonbury, Conn. Irish setters.
Bannister, Chas. D., Cranford, N. J. Pugs.
Barnard, J., Jr., 23 Myrtle street, Boston, Mass. Bulldogs.
Bell, G., Walker House, Toronto, Ont. Wire-haired fox and Irish terriers.
Bent, E., North Attleboro, Mass.
Blake, Thos., Woodward street and Jefferson avenue, Detroit, Mich. Cockers, pugs, bulldogs, black and tan, fox, bull and Yorkshire terriers.
Bross, John, Dexter, Mich. Beagles.
Bailey, Dr. G. H., Portland, Me.
Broome, L. H., 364 Bergen avenue, Jersey City, N. J. Greyhounds.
Barry, Richard, Lock Box 29, Peabody, Mass. St. Bernards.
Cryer, Dr. M. H., 1527 Arch street, Philadelphia, Pa. Pugs.
Coffin, H. R. T., Glens Falls, N. Y. St. Bernards.
Craig, R. A., St. Paul, Minn. Mastiffs.
Callender, W. N., Albany, N. Y. Irish setters.
Coombs, P. H., Bangor, Me. Yorkshire terriers.
Carlton, E. G., 63 Court street, Boston, Mass. Yorkshire terriers.
Cook, H. E., Hillsdale, Mich. Foxhounds.
Crook, S. W., North Attleboro, Mass. Mastiffs.
Campbell, Wood, Woodward street and Jefferson ave., Detroit, Mich. Cockers, pugs, black and tan, fox, bull and Yorkshire terriers.
Coles, John, Linden, Mass. Mastiffs.

Thurston, J. O., Erminie Kennels, Mt. Vernon, N. Y. St. Bernards.
Vieth, Capt. F. H. D., Ottawa, Can. Clumber spaniels.
Von Hummell, Q., Omaha, Neb. Deer and greyhounds.
Van Winkle, E. B., 117 East 70th St., New York, N. Y. Greyhounds.
Windholz, F., 528 6th ave., New York, N. Y. English setters.
Wade, W., Hulton, Pa. Mastiffs.
Wiley, J. P., Salmon Falls, N. H. Cocker spaniels.
Watson, J. H., 29 Downing st., Brooklyn, N. Y. Greyhounds.
Whitney, Miss Anna H., Lancaster, Mass. St. Bernards and pugs.
Wixom, C. S., Covert, N. Y. Greyhounds and beagles.
Westlake, R. E., Waverly, Pa. Pointers.
White, F. W., Worcester, Mass. Pointers.
Watson, Jas., P. O. Box 770, Philadelphia, Pa. Collies.
Warner & Hamilton, H. J., Canaan Four Corners, N. Y. Pugs, Irish setters, pointers and collies.
Whittaker, John, 1847 South street, Philadelphia, Pa. Bull-terriers.
Wilson, F., 253 South 37th street, Philadelphia, Pa.
Wheeler, F. C., London, Ont. Fox-terriers.

BEAUFORT.

THE death of the well-known pointer dog Beaufort is a misfortune not only to his owner, but to the pointer breeder as well. We have often said that Beaufort was the best of his breed in this country, and we have never heard a good judge of pointers dispute the fact. He was not only king of the bench, but was a good fielder as well, and as a stud dog his get prove that he had very few equals. That he was not more extensively bred to is to be regretted.

We first saw Beaufort at the Washington show in 1883, and were greatly impressed with his many good qualities, but it was not until we had opportunity to compare him with other good dogs that we became convinced that he had no peer. Although he was a very handsome and taking looking dog, his excellence was most apparent when he was placed beside a worthy competitor and the two were carefully compared point by point. We shall never forget his battle royal with Graphic at Newark, in 1886. We had cursorily examined the latter and half believed that he would be the winner, but when we placed them side by side and very carefully compared their merits we found somewhat to our surprise that Beaufort was the better dog at nearly every important point. When Beaufort was first shown at Washington his owner, Mr. C. H. Nixon, offered to sell him for $500.

Wishing to see so good a dog brought out in public in a manner commensurate with his merits, we advised a member of the Westminster Kennel Club to purchase him, but the price was thought to be too high and the negotiations fell through. He was afterward purchased by Mr. Charles H. Mason, who paid $1,000 for him, the largest price, at that time, ever paid for an American-bred pointer. That so good a judge of the breed as Mr. Mason should pay so large an amount for a single specimen is ample proof that the dog was worthy the high honors he won. "Love me, love my dog," in this instance at least, was proven to be a good rule, as it worked both ways, and hate me, hate my dog, appears to have been the case among those who disliked the owner of Beaufort for his outspoken and straightforward course in dog matters. On account of personal animosity toward his owner the dog was vilified, and it was regarded in some quarters as little less than a crime to breed to him, and it was mainly for this reason that he was not more extensively used for stud purposes.

Beaufort was sold last spring to Mr. Mitchell Harrison, of the Chestnut Hill Kennel, and it is to be hoped that he will succeed in securing in the get of the grand old dog something approaching him in merit. Beaufort was a white and liver dog, handsomely marked and ticked, weighing about 67lbs. when in good condition. He was bred by Prof. W. W. Legare, Walhalla, S. C., and was by champion Bow and out of Beulah, a full sister to the well-known champion Rush. His winnings are: First Washington, 1883. First and special for best pointer, best large pointer and best sporting dog New Haven; first and special for best large pointer Philadelphia; champion and special for best pointer National Breeders' Show, 1884. First and special for best large pointer Philadelphia (May); champion and special for best pointer, best large pointer, one of brace and one of kennel Toronto, 1885. Champion and special for best pointer Newark; champion and specials for best pointer, large pointer and handsomest pointer or setter that has run at field trials New Haven, 1886. Champion and specials for best pointer and pointer dog Boston, 1887. Champion and special for best pointer dog Philadelphia; champion and specials for best pointer and stud dog Boston, 1888. He was also the "runner up" in the Pointer Stakes of the Eastern Field Trials Club, 1885.

Many of his get have proved his worth as a sire both by their performances in the field and on the bench. The many admirers of the grand old dog will learn of his death with regret, and will, we are sure, deeply sympathize with Mr. Harrison in his loss.

THE FOX-TERRIER CLUB'S SHOW.

WE have received the premium list of the third annual show of the American Fox-Terrier Club, to be held at Saratoga Springs, N. Y., August 29 to 31. The classes and prizes are as follows: Fox-terriers—smooth—champion dogs $15 and $10, bitches the same; open, dogs, $20, $15, $10 and $5, bitches the same; puppies, dogs, $15, $10 and $5, bitches the same; novice class, dogs and bitches, $10 and $5, selling class the same. Wire-haired—champion, $10, open $10 and $5, puppies the same. Welsh terriers, $10 and $5 and diploma. Irish terriers the same; puppies, diploma. White English terriers, same as Welsh. Black and tan terriers, over 16lbs., the same, under 16lbs., the same. Bedlingtons, the same. Hard-haired Scotch, the same, puppies $5 and diploma. Skye terriers, dogs $10 and $5, bitches the same. Dandie Dinmonts, $10 and $5, puppies $5 and diploma. Bull-terriers, $10 and $5; under 30lbs., the same, puppies $5 and diploma. Yorkshires, over 6lbs., $10 and $5. Toys, under 6lbs., rough-haired, the same; smooth-haired, the same. Selling class (any variety except fox-terriers), to be sold for $50 or less, $15, $10 and $5. In addition there is a number of valuable specials offered for the different breeds. The club's third Home-bred Stakes, third Apollo Stakes, and second Grand Produce Stakes will be decided, and the club's Grand Challenge Cup will be competed for. Mr. James Mortimer will judge all classes. Entries close Aug. 22. The address of the secretary is H. P. Frothingham, 2 Wall street, New York.

THE SOUTHERN FIELD TRIAL CLUB.

Editor Forest and Stream:

Major Renfroe states in his communication, which appeared in your last issue, that I have written private letters to parties asking them not to enter dogs in the trials of the Southern Field Trial Club. I have not written a letter to any one regarding entries for the Southern Field Trial Club in any way, shape or form, nor have I discussed the subject with any one personally; and I defy Major Renfroe to produce a letter or an individual to controvert my statement. Moreover, I have not asked, either by letter or personally, directly or indirectly, an entry for any other club.

N. ROWE.

CHICAGO, Ill., July 7.

DEATH OF FROST.—Lynchburg, Va., July 5.—*Editor Forest and Stream:* It is with great sadness I announce the death of old Frost, which occurred this morning. She was twelve years and four months old, gentle, affectionate and obedient and with rare intelligence for a dog, she endeared herself to my entire household, white and colored, and we all regret the loss.—W. S. STROTHER.

STANDARDS FOR JUDGING.—FOREST AND STREAM's compilation of the "Standards and Points for Judging all Breeds of Dogs" is very complete in the new enlarged edition. It gives all the Stonehenge standards and all the standards adopted by the specialty clubs. The price is 50 cents.

THE MASTIFF BALDUR.—*Editor Forest and Stream:* Rev. Father Van Doorne advises me that the mastiff Baldur was whelped on May 16, 1887, that the entry in the Agricultural Hall Show of May 10, is a printer's error.—W. WADE, (Hulton, Pa., July 2).

SYRACUSE DOG SHOW.—Syracuse, N. Y., July 7.—*Editor Forest and Stream:* The Syracuse Kennel Club claim the dates of Sept. 18, 19, 20 and 21, 1888, for their first annual dog show.—HOWARD B. RATHBONE, Secretary.

SOUTHERN FIELD TRIALS CLUB.

RUNNING RULES.

RULE 1. The management of the meeting shall be under the control of the governing committee. They shall decide all matters pertaining to the trials not provided for in these rules.

RULE 2. The interpretation of these rules lies with the committee on running rules or their representatives.

RULE 3. For all stakes the names, pedigrees, ages, colors, and distinguishing marks of the dogs shall be detailed in writing to the secretary of the club at the time of making the entry. Any dog's age, marking or pedigree, which shall be proven not to correspond with the entry, shall be disqualified and all stakes, winnings and entry money shall be forfeited to the club.

RULE 4. Dogs to be eligible to the Southern Field Trial Derby must have been whelped on or after Jan. 1, the year preceding the trials for which the dog is nominated.

RULE 5. The forfeit money must accompany every nomination and the balance of the entrance fee must be paid before the drawing.

RULE 6. Any objection to an entry must be made in writing and addressed to the secretary, who will refer the same to the governing committee, whose action shall be final.

RULE 7. Dogs afflicted with any contagious disease, or bitches in season will not be permitted on the grounds.

RULE 8. Immediately after the dogs are drawn, the name of the first brace together with the place and time of starting shall be posted by the secretary of the club in a prominent place.

RULE 9. All stakes shall be run in the order of the programme when possible. Should, however, the competitors or their representatives agree otherwise the same may be changed, with the consent of the judges.

RULE 10. Dogs shall be drawn by lot and numbered in the order drawn. The first two dogs so drawn shall run as the first brace and the next two as the second brace and so on in a like manner until all the dogs in the series have run in heats. The winners of a series shall run together in a like manner in the next series, and so on until only one unbeaten dog remains, which shall be declared the winner of first prize.

The last dog beaten by winner of first prize shall compete for second prize with the best dog previously beaten by the winner of first prize. The winner of this heat shall be declared the winner of second prize.

The discretion is given the judges of deciding which is the best of the beaten dogs in the competition for second, either by selection or by running an extra heat. After first and second prizes have been awarded, the judges may select the winner of third prize from the beaten dogs in the stake without regard to heats won or lost, but the beaten dog that runs for second place shall have at least fifty per cent. of third prize, and in no case can it be divided with more than three dogs.

RULE 11. If two dogs owned or handled by the same person should come together in the first or subsequent series, the second dog so owned shall change place with the first dog not so owned or handled. This change shall be made in the order of running if possible. If not possible, then in the reverse order of running. The running together of two such dogs may be permitted when a separation is impossible, but in no other case. The secretary shall announce the order of the running in the first series, but all subsequent series shall be arranged and announced by the judges before the beginning of each series. If in any series there should be a bye, such bye shall run with the winner of the first heat of that series as the first brace in the next series.

RULE 12. If a dog be withdrawn, or fails to appear, the dog drawn to run against him shall run with the bye. Should there be more than one dog withdrawn or fail to appear, the dogs drawn to run against them shall run as a brace. The dog who has the bye can only be made to run in the series when a withdrawal leaves an odd dog.

RULE 13. At the commencement of each heat the handlers in the next heat shall be notified and be required to keep together until ordered down, and any dog absent more than ten minutes when called shall forfeit the heat to the competing dog, at the discretion of the judges.

RULE 14. Each brace shall be run thirty minutes, and at the expiration of that time a decision rendered if possible. If not possible they shall be then run fifteen minutes and decision made, and so on in intervals of fifteen minutes. No dogs can be taken up, except at the end of periods as above.

RULE 15. Each dog or brace of dogs shall have but one person acting as handler at the same time, and the person so acting shall perform his duty without assistance from any other person.

RULE 16. No person shall be allowed to accompany the judges, except owners of dogs running in charge of a handler and the reporters of recognized sporting journals. In cases where the reporters or owners expect to handle a dog in the series, they will not be allowed to accompany the judges.

RULE 17. Gentlemen authorized to accompany the judges under these rules will not be allowed to converse with the judges on any subject while dogs are under judgment. The spectators will not be allowed nearer the judges than 50yds. to the rear. The marshal and judges will strictly enforce this rule.

RULE 18. All stakes shall be run to a finish if possible. If not possible, the judges may select the winners according to work done.

RULE 19. No dog can be withdrawn except upon the unanimous consent of the judges. Should a dog be withdrawn without the consent of the judges, the owner or handler shall be barred from further trials, and all prizes won by such owner or handler in the stake shall be forfeited to the club.

RULE 20. In case there should be a bye in any series, the bye dog must run a side heat under a judge appointed by the regular judges, for the same length of time, under all the conditions, and at the same time as the dog with which he will compete, the object of this rule being to give the bye dog an equal quantity of work with his competitor.

RULE 21. Handlers of dogs running shall go together and keep within sight of the judges and of each other when possible. They shall work their dogs as if a brace, and in such manner that each dog will have equal advantages in regard to wind, ground and opportunities for pointing.

RULE 22. No person shall make any remarks about judges, handlers of dogs within hearing of judges or handlers, concerning location of birds, or any information whatever calculated to affect the action of handlers or the result of the heat. Any person so offending shall be expelled from the grounds, and points of merit will not be allowed any dog whose handler acting upon information imparted by such person, or when acquired by any unfair means whatever. A protest on this point must be made to the judges before the close of a heat, and their decision shall be final.

RULE 23. The judges shall appoint a spokesman from one of their number, and all orders or information upon any point concerning the heat shall be given by him in a clear and impartial manner, so that each handler may have full benefit thereof.

RULE 24. If any handler or owner of dogs annoys the judges after having been ordered to desist, the judges may order such dogs as he owns, or is handling, up and out of the stake. The governing committee shall have the power to suspend or debar from handling or entering dogs in any field trials of the Association any person who uses abusive language to the judges or officers of the Association.

The person handling a dog may speak or whistle to him or work him in any way that he may deem proper, not contrary to the rules of this club, but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct calculated to interfere in any way with an opponent's dog. In such cases an appeal should be made to the judges, but, should the handler of the dog interfered with not ask for protection, it shall be the duty of the judges to call the offending party to order and see that this rule is at all times strictly adhered to.

Owners and handlers are allowed the privilege of asking the judges for information or for an explanation upon any point of issue, and may call their attention to any deviation from these rules.

RULE 25. Pending important questions, the dogs shall be ordered up until the questions are decided; but in no case shall they be ordered up when on a point or working a hot scent unless for the purpose of deciding a heat.

RULE 26. The dogs shall be handled in all respects as nearly as possible as in an ordinary day's shooting, as defined by these rules. The dogs shall be worked over such ground and in any direction that may be designated by the judges; though the general course of the handlers should be directed "up wind" if practicable. When necessary to work the dogs in any other direction, especially "down wind," due allowance for flushes will be made, and penalties, if any, graded according to the character of the flush.

RULE 27. Each brace shall be started with a view of finding a fresh covey of birds if practicable. When a covey is found and scattered, the heat shall be continued on the scattered birds to a finish, if possible. Two successive heats shall not be run on the same ground and birds, unless both handlers were engaged in the preceding heat; and the order of running may be changed to enforce this rule. In case of necessity a brace may be started on a marked covey of scattered birds, provided that neither of the handlers have a previous knowledge of the ground or location of the birds; but the handlers shall be notified of the fact, and information given them concerning location, numbers, etc.

RULE 28. When necessary to alter the general course of handlers, they shall be duly notified and allowed a reasonable time to change the course of their dogs; so that each may start over the new course upon equal conditions. One or both dogs may be ordered up to enforce this rule; but in no case shall the course be altered when either dog is on a point or working a hot scent.

RULE 29. Each dog shall be required to hunt throughout a heat, except only when ordered up by the judges. When so ordered up, such dogs shall be kept "to heel" or under restraint until ordered on again. Handlers will be required to work their dogs over ground within limits specified by the judges, and will be allowed to work them in accordance with their own mode of handling, provided the method is in harmony with these rules, and may maneuver them anywhere within the prescribed limits; but no dog shall be allowed to range beyond his handler, or be afforded an opportunity to point or back by being led or by following his handler into a favorable location. Points for merit will not be allowed when acquired in violation of this rule.

RULE 30. No person shall be allowed within ten yards of any dog when pointing or working a hot scent, except his handler. If the nature of the ground prevents a fair view of the dog pointing, this rule may be suspended for the benefit of the judges only; and upon no other occasions.

RULE 31. If either dog finds or points staunchly, the other shall be required to back immediately. This rule shall be enforced at all times when practicable, as it brings the dogs together in the vicinity of the game, so that when ordered on, each has equal opportunities. If both dogs find and point different birds, simultaneously, either handler may be directed to flush the bird his dog is pointing; and after flushing, his dog will be required to back the dog pointing. If both dogs find and point the same bird, either handler may be ordered to flush.

RULE 32. The handler of the dog pointing shall discharge one barrel of his gun at every bird ordered to be flushed by the judges, unless otherwise directed; and he shall not shoot at any other time unless especially directed. Excepting only when fur or feather runs before a dog when pointing, either handler may shoot and kill, at any time, in order to prove the honesty of his dog. No shooting shall be allowed at any other time, by any person, unless directed by the judges. When so ordered, it shall be considered as irregular, and the dog shall not be penalized for inattention to irregular shooting. If a dog exhibits signs of gun shyness or unsteadiness to shot, the fact shall be proven by ordering each handler to discharge both barrels when the bird is flushed. To avoid a useless destruction of birds, handlers will use blank cartridges when so ordered.

RULE 33. A handler shall not wilfully flush a bird until ordered by the judges. When the order to flush is given, the handler of the dog pointing may flush the bird or order his dog on to a flush. If doubts exist concerning the staunchness of a dog when either pointing or backing, the fact must be proven to the satisfaction of the judges before the order to flush is given. No person shall be allowed within a distance of ten yards from a dog when backing, until the order to flush is given; and then only his handler shall be allowed to go within that distance. This rule may be suspended to enable judges to obtain a fair view, or the handler of the dog pointing an opportunity to flush, and on no other occasion.

RULE 34. When a bird has been flushed and shot at, handlers and dogs shall not move on until ordered to do so by the judges; and in case a dog is ordered to retrieve, not until the bird has been delivered to the judges and the dog retrieving is ready to go on. Dogs shall not be required to drop to shot and wing, but shall remain passive and under perfect control until ordered on. Guns must be carried empty.

RULE 35. When a dog is ordered to retrieve, the dog so ordered shall find the bird with only such assistance from his handler as may be given by commands, verbal or otherwise, from the position occupied when shooting. In case the nature of the ground obstructs a fair view of the location of the dead bird, the handler may move to a more favorable position, but on no occasion can he go to the bird. Retrieving shall not be required nor considered as a point of merit in the Derby.

RULE 36. The governing committee may refuse any entry they may think proper to exclude; and no person who has been found, to the satisfaction of the governing committee, to have misconducted himself in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for money due under an arrangement for division of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the club, shall be allowed to compete in any trials that may be held under the auspices of the Southern Field Trial Club. This club, however, will not bar under this rule unless its secretary shall have been officially notified and furnished with a copy of the charges under which an offending person has been barred, at least thirty days before the beginning of the trials.

INSTRUCTIONS TO JUDGES.

To relieve the judges of the responsibility of deciding heats between dogs possessing superior natural qualities, imperfectly broken, and those of inferior qualities well broken, the Association insists that all dogs entered for competion shall be thoroughly broken. Each heat will be conducted in a manner calculated to give the competitors an opportunity to display the several qualities under judgment.

Judges are instructed to insist upon perfect backing, steadiness to shot and wing, obedience and retrieving, and penalize disobedience, unsteadiness, chasing, breaking, false pointing and all other faults which detract from the actual value of a dog for breeding or field purposes to the fullest extent to which the rule will admit.

The judges will be provided with suitable score-books and score-cards by the secretary of the Association. Upon the score-books will be kept a record of the merits and demerits of each dog upon every heat. At the finish of the heat, after having compared notes and arrived at a decision, the score-cards shall be filled up in accordance with their judgment and signed by at least two of the judges, and delivered to the secretary. This score-card shall constitute an official record of the heat to be published and entered upon the records of the Association as such.

The score-books shall be carefully preserved by the secretary until the prizes are awarded, when they shall be destroyed; except only in case of protest, when they shall be subject to examination of members of the governing committee in the discharge of their duty.

The rules are based upon the principle that each heat is a separate race, and judges must not be influenced by the performance of a dog in any previous heat.

POINTING.—Judges will allow only those dogs the maximum that voluntarily stop and rigidly point all birds possible, under existing circumstances. To earn the maximum under this head a dog must display a superior nose, exercise good judgement in locating, without hesitation or pottering, assume a rigid and stylish attitude while pointing and make no flushes that a dog with foregoing qualities would avoid in ordinary hunting. Inexcusable and wilful flushes shall always detract from a dog's score; but the character of the flush shall always be considered, and the penalty, if any, graded according to the nature of the offense. The state of the atmosphere, hour of the day, nature of the ground, and disposition of the birds, shall be duly considered, and no dog should be penalized for flushing if impossible for him to point under existing circumstances. Handlers shall be required to claim points before the bird flushes. If a handler claims a point and the bird rises from any cause not the fault of the dog, such points shall be allowed the same as a flush to order. If a dog is required to remain on a point an unreasonable length of time to prove staunchness, or to afford opportunity to back, due allowance shall be made if the point is apparently a false one. A dog drawing on, or pointing game which he has found independently, shall be afforded ample opportunity to locate the game without competition, and the handler ample time to flush the bird, it being left to the discretion of the judges to direct when the opposing dog shall be held in check. When a dog assumes the attitude of pointing, his handler shall claim the point promptly. Continual stopping when not actually on game shall always detract from a dog's score. If a dog assumes a rigid and unmistakable attitude, he is supposed to be pointing or false pointing as in ordinary hunting.

PACE.—The dog that maintains the fastest gait according to the nature of the ground throughout the heat, to receive the full number of points, his competitor to be graded by him.

BACKING.—The maximum only allowed those dogs that voluntarily stop and assume a rigid attitude at the sight of a dog pointing. A dog shall not be required to back unless the attitude of the dog pointing is erect, rigid and unmistakable, or be penalized for not backing a dog who continues false pointing to an unreasonable extent. A dog shall not be said to refuse to back unless he sees the dog pointing.

STYLE.—The judges will consider the action of a dog in ranging and quartering and his attitude while pointing. Style should be credited under these heads according to merit.

RANGING.—The maximum only allowed the dog that (throughout the heat) maintains the most killing range within controlling distance of his handler, *i. e.*, wide or close as the necessity of the case may require.

QUARTERING.—The maximum only allowed the dogs that work a specified course intelligently and thoroughly, utilizing the nature of the ground and wind and every natural assistance throughout the heat.

OBEDIENCE.—The maximum only allowed to a dog that is under absolute control of his handler and cheerfully obeys all commands without rating or punishment. Inattention to the whistle or verbal commands, or constant talking and whistling, will be penalized under this head, and also under the head of chasing when necessary.

RETRIEVING.—To receive the maximum under this head a dog must find the bird promptly and deliver it to his handler without mouthing or mutilation.

FALSE POINTING.—This rule applies especially to dogs that persist in stopping and pointing imaginary scent to the great annoyance of the competing dog, who is supposed to back both true and false points. Judges will allow a reasonable time to enable a dog to determine whether the point is true or false. Penalties for false pointing shall range from one to five points of demerit for each offense. But the fact must be clearly demonstrated and handlers are expected to protect their dogs by all honorable means.

POINTS OF MERIT.

Nose	25	Obedience	10
Staunchness	10	Backing	10
Style in pointing	5	Retrieving	10
Ranging	15		
Pace	10	Possible score	100
Quartering	5		

DEMERIT.—False pointing. Breaking in. Breaking shot. Chasing.

DEFINITIONS.

BREAKING IN—Is when a dog starts after a bird when it rises, whether a gun is fired or not and stops only at command. Dogs will be expected to stop at shot and wing of their own inclination, the result of previous training, rather than by command given on every occasion.

BREAKING SHOT—Is where a dog runs in when a gun is fired, whether the bird rises or not, and does not stop promptly at command. An attempt to retrieve before being ordered.

CHASING—Is where a dog chases feather or fur beyond control. The second chase after birds lose the heat.

THE RICHMOND DOG SHOW.—Richmond, Va., July 5.—*Forest and Stream:* I am happy to announce to you that everything looks propitious for our bench show here Oct. 9, 10, 11 and 12. The exposition management are building for us an exhibition hall, 200x125ft. long. All the railroads leading here agree to charge one fare, returning everything free. Our premium list is exactly the same as the Westminster Kennel Club, and already we are receiving assurances that we will have a fine lot of specials. Mr. J. M. Tracey consents to judge setters and pointers. Mr. James Mortimer has agreed to judge mastiffs, greyhounds, St. Bernards, deerhounds, fox-terriers, bulldogs, bull-terriers, other terriers and pugs; also spaniels and collies. Col. F. G. Skinner will judge hounds, beagles and dachshunde. We intend to spare no effort to have such a gathering of Virginia foxhounds as was never seen before, including some of the old "blue mottled" now nearly extinct, and will wind up the show with a great fox hunt. Already we are getting some entries. If work, spending money, advertising and securing the best judges to be obtained can make our show a success, ours will be at the head of the list. Will not the Pointer Club, the Irish Setter Club, the Gordon Setter Club, the Mastiff Club, the Fox-Terrier Club, the Collie Club, all the clubs, lend us a hand with specials?—JOHN S. WISE, President.

DOG TALK.

THE Brooklyn dog tax is thus discussed by a reporter of the New York *World:* Opposition to the payment of dog tax is growing quite strong in this city, and a good deal of trouble is experienced in collectiug it. S. L. Downing, of No. 201 Dean street, paid the tax under protest a few days ago. He takes the ground, as Furman T. Nutt, the hatter, did several months ago, that the tax is unconstitutional. Mr. Nutt was sued by the city for the violation of a city ordinance in not licensing his dog, but the decision of the court, or rather the lack of a decision, in his case showed that the authorities had no substantial ground for enforcing the tax. Mr. Nutt was seen by a reporter of the *World* and asked for a statement of his case. He said: "I have been called upon every year for ten years or more to pay this tax, but I always refused and never have paid a cent. I have spent more in not paying than I would if I had paid, but I was advised not to pay and have fought against it, as, to my mind, it is an imposition. I have often had two and sometimes three dogs. If the city believes it has any claim upon me it can go back ten years. I admit owning the dogs and have one now. It is the same dog that I refused to pay the tax for a few months ago. One of the newspapers stated that the reason no decision had been given by the court in my case a few months since was because the dog had died. It is not dead, and is now in the country. Why, I know lots of people who are around the City Hall every day and have had dogs for years and never paid for them. They boast of it. They know well enough that the tax cannot be enforced. Why, there would be just as much sense in taxing a canary bird or a horse as there is in taxing dogs. There is to-day a personal tax, but how many pay it?" "Before whom was your case tried last fall, Mr. Nutt," asked the reporter. "I was sued in Justice Walsh's court and employed as counsel Messrs. Salmon & Cook. They argued the unconstitutionality of the tax and quoted a number of decisions bearing on it. The city sued me through the Corporation Counsel. Justice Walsh did not give his decision at once. He finally notified the Corporation Counsel that he would have to give a decision in my favor—that he could not do otherwise with the other decisions before him. Justice Walsh was asked not to give his decision, and the matter was allowed to drop. It was seen by the authorities that they hadn't a leg to stand on. In case a decision had been given against me my counsel was instructed to carry the matter to the Court of Appeals." "Have you any idea what the dog tax amounts to yearly in this city?" "About $8,000 or $9,000, and the city does not get one cent of it. The papers are obtained and the tax paid at the City Clerk's office. Most of this money goes to the Police Pension Fund, and that is the reason the police are so active in finding citizens who have not licensed their dogs and reporting them at Headquarters."

Mr. Morris has found his Gordon setter dog Beaumont that was lost after the Albany show, and writes as follows: *Editor Forest and Stream:* Finding that many are aware that my Gordon setter champion Beaumont was lost after the Albany show, I write to say that he has been recovered after great trouble and search. It is but right that as he was not in the hands of the show authorities at the time of his loss, to make known that there was no neglect on their part and thus prevent a wrong impression and owners of valuable dogs from declining to trust them at the next Albany show. The president and secretary were untiring in their efforts for his recovery.—EDWIN H. MORRIS.

The Syracuse Kennel Club have just completed the kennels on their grounds at Hastings, N. Y. The buildings are spacious and well arranged, and it is the intention of the club to breed a kennel of dogs that will compare favorably with the best. The kennel is under the charge of Mr. W. C. Nelson, formerly of Trenton, Tenn.

Speaking of large litters, how is this? We were informed by good authority that the Newfoundland bitch Dot, owned by Mr. A. E. Smith, of Bronxville, N. Y., a few years ago gave birth to 24 puppies at one litter, 22 of them living.

At the show of the London Fox-Terrier Club, held at Kensington, June 23, no money prizes were given. The "new departure" of the club met with good success, there being 112 entries.

There were 1,400 entries at the London Kennel Club's show, held at Barn Elms last week.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Buck I. By C. Fred Crawford, Pawtucket, R. I., for black, white and tan English setter dog, whelped Aug. 14, 1887, by Buckeliew (Druid—Ruby) out of Ida (Dashing Rover—Ranee).

Bandanna. By Floyd Vail, Jersey City, N. J., for liver and white pointer dog, whelped June 4, 1888, by Naso of Devonshire (Nick of Naso, A.K.R. 4391—Devonshire Queen, A.K.R. 3127) out of Bertie (Rab—Ballona).

Katisha. By Fred F. Harris, Portland, Me., for liver and white pointer bitch, whelped June 10, 1886, by champion Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358).

Nantura. By Fred F. Harris, Portland, Me., for lemon and white pointer bitch, whelped Aug. 28, 1887, by champion Nick of Naso (A.K.R. 4391) out of Portland Lilly (A.K.R. 4058).

Slasher and Bonanza. By Fred F. Harris, Portland, Me., for liver and white pointer dog and bitch, whelped May 13, 1885, by champion Beaufort (A.K.R. 694) out of Zuba (A.K.R. 1359).

Flea, Nip, Click, Fidget and Fussy. By Dr. H. Montague, Detroit, Mich., for fawn pugs, four dogs and one bitch, whelped June 13, 1888, by Port (A.K.R. 5459) out of Dainty (A.K.R. 6322).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Jet Nellcs—Black Obo. Detroit Kennel Club's (Detroit, Mich.) cocker spaniel Jet Nelles (champion Brant—Bonita) to their Black Obo (champion Obo II.—Darkey), May 21.

Huntress—Black Obo. Detroit Kennel Club's (Detroit, Mich.) cocker spaniel bitch Huntress (Black Pete—Althea) to their Black Obo (champion Obo II.—Darkey), May 1.

Jess II.—Bruce II. Greenwood Mastiff Kennels' (Greenwood, Mass.) Jess II. (A.K.R. 6222) to their Bruce II. (A.K.R. 4643), May 5.

Salva—Sears' Monarch. Greenwood Mastiff Kennels' (Greenwood, Mass.) Salva (A.K.R. 6312) to Wyoming Kennels' Sears' Monarch (A.K.R. 6039), May 8.

Fancy—Bruce II. Greenwood Mastiff Kennels' (Greenwood, Mass.) Fancy (A.K.R. 5503) to their Bruce II. (A.K.R. 4643), May 12.

Greenwood Juno—Benjamin Franklin. Greenwood Mastiff Kennels' (Greenwood, Mass.) Greenwood Juno (A.K.R. 6306) to Theo. C. Gram's Benjamin Franklin (A.K.R. 6118), June 9.

Beauty—Royal King. Edwin Still's (Philadelphia) English setter bitch Beauty to Royal King, June 21.

Cara—Hector. J. J. Wilson's (New York) smooth-coated St. Bernard bitch Cara to champion Hector.

Queen of Thorpe—Strephon. Mr. Shearman's collie bitch Queen of Thorpe to Chestnut Hill Kennels' Strephon (A.K.R. 2730), July 3.

Bonnie—Dublin Scot. Mr. Yardley's (New York) collie bitch Bonnie (Rob Roy—Fairy) to Chestnut Hill Kennels' champion Dublin Scot (The Colonel—Jessie), June 21.

Bonnie Brae—Dublin Scot. Mr. Hughes's collie bitch champion Bonnie Brae (Red Gauntlet—Brenda) to Chestnut Hill Kennels' champion Dublin Scot (The Colonel—Jessie), June 26.

Jennie M.—Scotilla. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Jennie M. to their Scotilla (Dublin Scot—Flurry II.), June 8.

———*Strephon.* Mr. Johnstone's collie bitch ——— to Chestnut Hill Kennels' Strephon (A.K.R. 2730), June 28.

Jessie Dean—Strephon. Jas. Lindsay's (Jersey City, N. J.) collie bitch Jessie Dean to Chestnut Hill Kennels' Strephon (A.K.R. 2730), May 29.

Lady Charlatan—Dublin Scot. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Lady Charlatan (Charlatan—White Pearl) to their champion Dublin Scot (The Colonel—Jessie), June 13.

Bonnie Doon—Sailor Bruce. W. A. Wickham's (Cedar Bluffs, Ia.) collie bitch Bonnie Doon (Clyde—Gypsie May) to his Sailor Bruce, June 24.

Minnie—Rosco. F. C. Smith's (Groton, N. Y.) collie bitch Minnie (Gaffa—Flora) to his Rosco (Yacht—Chip), June 28.

Madge III.—Ilford Caution. Chas. H. Pratt's (Norwood, Mass.) mastiff bitch Madge III. (A.K.R. 4880) to E. H. Moore's Ilford Caution (champion Crown Prince—Ilford Claudia), June 20.

St. Joe Patty—Waconta Nap. St. Joe Kennels' (Niles, Mich.) mastiff bitch St. Joe Patty (A.K.R. 6038) to their champion Waconta Nap (A.K.R. 5435), June 24.

Jess II.—Prince II. Greenwood Mastiff Kennels' (Greenwood, Mass.) mastiff bitch Jess II. (A.K.R. 6222) to their Prince II. (A.K.R. 4643), May 5.

Salva—Sears' Monarch. Greenwood Mastiff Kennels' (Greenwood, Mass.) mastiff bitch Salva (A.K.R. 6312) to Wyoming Kennels' Sears' Monarch (A.K.R. 6037), May 8.

Fancy—Bruce II. Greenwood Mastiff Kennels' (Greenwood, Mass.) mastiff bitch Fancy (A.K.R. 5503) to their Bruce II. (A.K.R. 4643), May 12.

Greenwood Juno—Benjamin Franklin. Greenwood Mastiff Kennels' (Greenwood, Mass.) mastiff bitch Greenwood Juno (A.K.R. 6306) to T. C. Gram's Benjamin Franklin (A.K.R. 6118), June 9.

Belle—Beaufort. Mr. Lovell's pointer bitch Belle to Chestnut Hill Kennels' champion Beaufort (A.K.R. 694), June 19.

Beauty—Royal King. J. Neeld's (Philadelphia, Pa.) English setter bitch Beauty to E. Still's Royal King (Grouse—Maud), June 21.

Bessie Noble—Don Petrel. H. Pape's (Hoboken, N. J.) English setter bitch Bessie Noble (Count Noble—Lady May) to Dr. J. H. Meyer's Don Petrel (Don Juan—Petrel III.), July 4.

Zo Zo—Pete Obo. E. Gilchrist's (Charlestown, Mass.) cocker spaniel bitch Zo Zo (Obo—Darkie) to Geo. F. Willard's Pete Obo (Black Pete—Miss Ginger), June 14.

Moonshine—Dusky Trap. Clarence Rathbone's (Albany, N. Y.) fox-terrier bitch Moonshine (The Moonstone—Media) to Blemton Kennels' Dusky Trap (Dusky Splinter—Spider), June 25.

Euchre. Scotch terrier dog, age and pedigree not given, by Mr. Nusbaumer, Okawville, Ill., to Chas. Fehl, St. Louis, Mo.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

READER, Utica, N. Y.—I have a setter that will, after running awhile, cough and it seems as if it was hard work for him to get air through his nose, it looks to me as if his nose were stopped up, he seems to snort or breathe like a man who snores. He has never had distemper that I know of since I had him. He is eighteen months old and he has been troubled with this about six months. Ans. From the few facts you give it will be impossible to answer. See a veterinary or doctor and have your dog examined.

J. G. W., Quebec.—My fox-terrier, five years old, has been growing blind for the past three years until now he is almost totally sightless. He seems to be in good health. There is a dull film over each eye. Is it a case of cataract? Can anthing be done for him? Ans. It is impossible to say whether it is cataract without personal inspection. Get the following and let a few drops fall into the outer corner of each eye twice daily.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, July 4.—The glorious Fourth was celebrated to-day at the Massachusetts rifle range by the continous crack of the rifle and burning of powder by a goodly number of shooters. Some fine scores were made, especially by the militiamen. Following are the scores made to-day.

Rest Match, 200yds.

J Francis	9	11	12	12	12	10	12	12	12	8—110
D L Chase	11	12	11	12	12	10	9	9	11	12—109
J N Frye	12	12	10	10	12	10	9	8	12	10—105

SAN FRANCISCO, July 1.—This afternoon there was a large gathering at Harbor View of benevolent Germans in this city, who had organized an entertainment there, whose proceeds are to be devoted to the amelioration of sufferings in the town of Schneidemuhl, Posen District, Germany, through the recent disastrous floods. The rifle shoot was for the best three shots at a 25-ring target, the first prize being $50, and the balance, numbering 31, ranging all the way from $1 in money to a pair of cuff-buttons in kind. Following have been selected among the best scores, by which it will be seen that F. Kuhnle remained victor with 70:

F Kuhnle	24	24	22	70	C Meyer	22	23	22	67	
A Johnson	24	21	23	67	G Dornbier	20	22	25	67	
F Attinger	18	24	23	65	W Ehrenpfort	21	23	21	65	
A Bachman	22	22	21	65	A Ehrenpfort	17	23	20	60	
J B McCutchan	22	20	23	65	C Cross	18	20	25	63	
J Utschig	20	22	20	62	G Helms	22	22	21	65	
F A Kuhls	23	21	19	63	J Klein	20	21	25	66	
Val Schmidt	24	22	16	62	J Utschig	19	23	25	67	

SHARPSHOOTERS' WORK.—In the recent quarter-centennial gathering at Gettysburg, General Longstreet acknowledged that the services done by Berdan's sharpshooters on July 2, 1863, decided the fate of the battle. With 291 men from eight States, all armed with repeating rifles, from the woods in advance of Sickles's line, on the Emmittsburg line, Berdan, by his rapid fire, checked Longstreet's movement forty minutes. "Had I had even five minutes to spare I should have turned the flank of the Army of the Potomac and captured Little Round Top," said the Confederate leader.

LOS ANGELES, Cal., June 17.—The following scores were made to-day in the match between the Los Angeles and Military Rifle Teams, at the Creedmoor target, 200yds., 10 shots, off-hand. The Los Angeles Rifle Club having just completed a new building and target, and the day being very good for shooting, a pleasant time was enjoyed by all. Los Angeles Riflemen—J. Lockwood 42, W. A. Frick 44, R. Pridham 39, J. A. Lockwood 39, J. E. Frick 42, W. G. Hughes 40, C. D. Platt 42, R. H. Gray 44, J. Callahan 40, G. H. Wilson 40; total, 407. Military—H. C. Miles 42, A. D. Danley 38, J. A. Mathis 34, Geo. McLean 40, Theo. Myers 39, L. A. Cyrennis 30, R. Williamson 36, J. S. McCrory 40, J. E. Smalley 18, J. M. Dumphy 30; total 347. Upon the conclusion of the above, a match was shot at the American field target for the badges. The three highest scores were: W. A. Frick 80, R. Pridham 70, J. E. Frick 68.

CREEDMOOR.—New York, July 7.—The third qualification and marksman's badge matches of the N. R. A., were shot at Creedmoor on July 4. The attendance was very large and the weather conditions very favorable for good scores, although a brisk breeze came on in the afternoon, which proved rather troublesome at 500yds. Following are the scores of 42 and over:

	200.	500.	Total.
*John S Shepherd, Co D, 23d Regt	22	24	46
†G S Scott, Co A, 23d Regt	22	24	46
*E F M Wendelstadt, Co C, 23d Regt	21	24	45

P Finnegan, Co C, 69th Regt	21	21	42
R M Dunn, Co G, 7th Regt	22	20	42

* Winners of cash prizes. † Winners of medals. Matches will take place every Saturday, from July 14 to Sept. 3 (Labor Day), both inclusive.—J. MANZ, Ass't. Sect'y N. R. A.

ROBERT MCVITTIE.—This well-known Scotch rifle shot is now a Toronto resident and has taken the Canadian agency for the Field Martini-Henry rifle. He writes: "Having been appointed sole agent in Canada for the celebrated field Martini-Henry rifle I wish to say to the riflemn of the Dominion that every rifle will be thoroughly tested by myself before being sent out. I shall keep but one quality—the best—and will guarantee their excellence."

PITTSBURGH, July 3.—The second match of the leading members of the Pittsburgh Rifle Club and the Washington club was shot at the Salt works to-day. In the first match the Pittsburgh team was defeated by one point, and to-day they shot to win. The record is as follows:

J A Huggins	82	80	73	87	79—401
J B Satch	75	81	76	83	74—389—790
J W Rothwell	84	77	80	80	78—399
Dr Fulton	69	75	81	80	75—380—779

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DOMINION DAY SHOOT.

MONTREAL, July 2.—With all the conditions most favorable, the tournament of the Dominion Gun Club to-day was an unqualified success. The club had worked hard to make everything come out all right, and their labors were rewarded by having the most successful shoot ever held in Montreal. Not only was there some excellent shooting done, but spectators were interested, and during the day there was a continual stream of visitors to and from the grounds, among whom were many of the fair sex.

There was not much time cut to waste on the grounds either, the shooting for the ladies' prizes keeping all so inclined as busy as they desired to be, and as competitors could enter as often as they pleased, many of them who did not break the possible went back to the secretary and invested half a dollar for another ticket. Thus it was that some gentlemen who started out by breaking six kept at it until eventually the magic "nine ones" were marked after their names on the card. Then they were satisfied and quit the ladies, and paid all their attention to the "team" or the "individual."

Mr. Masterman acted as referee in both the team and individual shoot, while Messrs. Westcott and Larue acted as judges. Alex. Jacques had the monotonous job of scoring. At the ladies' shoot Mr. Brown took charge of the scoring cards.

At about 9 o'clock the Ottawa contingent came on the grounds and were heartily welcomed, shortly after which the team match began. There were seven teams entered, the St. Huberts of Ottawa, two teams of the St. Lawrence Club, Cote St. Paul, Lachine, Dominion and Montreal. Notwithstanding that the Ottawa men got on their way at daybreak and had traveled from Ottawa, they were as steady as rocks when they faced the score and won the five gold medals with the good score of 59. The St. Lawrence Club did turn out somewhat of a dark horse, their second team taking second place and the five silver medals. Cote St. Paul took third, and the Dominion, after shooting off the ties of 51, took fourth prize.

In the individual shoot there were 42 competitors, and below will be found the order and scores of the 20 prize winners. In the ladies' match there were 139 entries. The 22 prize winners with their best total is given below. Mr. J. Allan, of the Dominion Club, won the keg of powder for the best average on the team and individual competitions.

The following tables give the results of the matches after all ties had been shot off:

Team Match—Open to teams of five men from any recognized gun club in Canada, five traps, 15 birds to each man, 18 yards rise; Peoria blackbirds. Entrance, $5 per team. First prize, five gold medals; second prize, five silver medals; third prize, 2500 shells; fourth prize, five bags shot.

Montreal Gun Club.

In the shoot-off for ties for fourth prize, at 20yds. rise, 5 birds each man, the Dominion Gun Club won with a score of 19.

Individual match—open to members of all recognized gun clubs in Canada, 20 single Peoria blackbirds, 38yds. rise, 20 prizes:

Aubin	11110110011111111111—17	Lucas	11101110101110110111—15
G White	01111111111111101010—17	Wallace	01110001101111111101—14
Edmond	11111110101111111110—17	Trudeau	10101011110111101110—14
Lesage	11111110110111101011—16	Ed White	10101001111111111101—14
Allan	11101110311111101111—16	Penniston	10110101111010110111—14
Paquette	11101010111010001100—16	Cameron	10111011110000111011—14
Cook	11111101111101000111—16	Masse	11100100111110011101—13
Deslaurier	00001111111111111101—16	Throop	01110000111111101011—13
Verity	11111111101111101001—16	Daily	11010001111011111010—13
Martin	10111101101111110110—15	Robert	01110111001110111000—12

At the conclusion of the shooting of the 42 entries there were the following ties; 3 at 17 birds, 6 at 16, 2 at 15, 5 at 14, 3 at 13 and 4 at 12.

On the shoot off the following result was attained: C. Aubin first prize, G. White second, W. Emond third, T. W. Lozage fourth, J. Allard fifth, J. Paquette sixth, J. Cook seventh, J. DesLauriers eighth, D. Williams ninth, Dr. Martin tenth, R. Lucas eleventh, C. H. Wallace twelfth, P. Trudeau thirteenth, E. White fourteenth, A. Penniston fifteenth, W. L. Cameron sixteenth, P. O. Masse seventeenth, A. Throrpe eighteenth, J. Doig nineteeth, R. Robert twentieth.

The contest for first place in this competition was worth going a long way to see, the shooting between Aubin and White being of the most exciting character, and when Aubin, who is a mere lad, killed his last bird, which gave him the victory, loud cheering rent the air, and the delighted spectators would have nothing else but bounce him, which was done in true Canadian style.

Third, extra match, for 21 prizes, presented by lady friends of the club, 3 traps, entries unlimited, 9 Peoria blackbirds, 18yds. rise: A. Throop first, 9; J. Allan second, 9; J. Cook, third 9; Dr. Martin fourth, 9; T. W. Lesage fifth, 9; C. H. Wallace sixth, 8; Wooton seventh, 8; E. White eighth, 8; F. Dowd ninth, 7; Lamoureux tenth, 7; F. Verity eleventh, 7; W. L. Cameron twelfth, 7; J. DesLauriers thirteenth, 7; W. Emond fourteenth, 7; A. Penniston, fifteenth, 7; F. Orr, sixteenth, 6; Taylor seventeenth, 6; A. Ramsay eighteenth, 6; W. F. Robertson nineteenth, 6; A. Bou twentieth, 6; A. Aubin twenty-first, 6; E. O. Champagne twenty-second, 6.

The Vaudreuil Gun Club held their usual Dominion Day shoot on their new grounds, opposite the C. P. R. station, which they have been granted the use of by F. X. Archambault, Esq., Q. C. for two handsome prizes given by the club. The conditions were 25 Peoria blackbirds, 18yds. rise. R. J. Tooke won the first with 21 out of a possible 25, and M. Aquin the second with 12.

THE NEWARK TOURNAMENT.

THE first day of the big Schützenfest at Newark opened with rain, which was an affliction to those bent on parading, but did not interfere with some good work at the targets. There was some speech making with an address of welcome by Mayor Hynes and shortly afterward the shooting was started by W. Milton Farrow, of Holyoke, Mass., the present shooting king. He shot at the point target and made only one point out of a possible 3. James Brooke, of Pittsburgh, scored the first flag. Among the cracks present were Karl Klein, king of the New York Schützen Corps; B. Walther, of the Zettler Rifle Club; William Hayes, of Newark; Geo. Schlicht, of Hoboken; W. A. Koehler, of Syracuse; Capt. Heinecke, of Newark; A. C. Gates, a champion off-hand marksman; Emil Berg, of Davenport, Ia.; Capt. Horney, of Williamsburg; President Waller, of the Zettler Club, and George Thaster, of Carson, Nevada.

W. M. Farrow scored 150 points and won the first gold medal. He also won a special premium of $10 by making 23 bullseye shots, the greatest number made during the day. Others who won gold medals were C. F. Stewart, D. Miller, C. Schotte and A. Hoffmann. James Brooks made the first bullseye of the festival, prize $5, and the first bullseye of the day, prize $1. Barney Walther, of the New York Zettlers, made 135 points out of a possible 150 on the American standard target, and will probably capture the $100 cash prize. C. W. Hainey is high with 49 out of a possible 50 on the honor target, and with 94 out of a possible 100 is high on the man target.

The first silver medal of the festival was won by D. Miller, of the Miller Rifle Club, Hoboken, who scored the first 25 points. Other winners of silver medals were as follows: A. Koehler, A. H. Kolmetz, F. Laudoet, A. H. Merriman, W. F. Morris, Winsor Morris, H. Neumann, W. L. Riggs, C. F. Stewart, J. Trickle, John Shalk, J. Totker, A. Weigner, G. D. Weigman, F. O. Young, T. Fitzsimmon, F. C. Noone, G. Schwartz, G. Spangler, G. Salding, C. Schotte, A. Stein, F. Spaeth, G. Schlicht, G. Schalk, E. Berg, L. Burton, G. Bernicus, W. H. Bustleman, G. M. Cooke, J. D. Cooke, T. J. Dolan, G. L. Ellsworth, H. C. Koegel, W. M. Farrow, J. N. Frye, F. Freitag, A. G. Gates, Wm. Ginderle, L. S. Hulibard, C. M. Hill, F. Hauser, W. Hassenjahl, A. Hoffman, G. Homrighausen, C. W. Horney, J. Hefty, H. Hoehn, O. M. Jewell, C. Judson, G. Krauss, H. Rothart, C. Dorner, H. B. Murphy.

JERSEYVILLE, Ill., July 4.—The following are the scores made at the holiday shoot here to-day. Messrs. Spencer and Govro, of Bunker Hill, were here. The former, who is a good shot, was away off in his shooting to-day.

Six standards:

Parent	111111—6	Govro	110101—4
Spencer	011011—4	Stoeckel	5
Hansell	111101—5	Chappell	5
Smith	110111—5	Hutchison	4

Nine standards:

Govro	101111101—7	Hutchison	110110100—5
Chappell	011111111—8		

Six standards:

Govro	100111—4	Hutchison	111111—6
Cadwalader	101011—4	Stoeckel	101111—5
Smith	111001—4		

Nine standards:

Hanse l	101101011—6	Hutchison	111101111—8
Parent	100111111—7	Stoeckel	111111000—6
Spencer	010011110—5	Govro	111111110—8

Seven standards—Perrings 5, Spencer 6, Parent 6, Govro 5.

Nine standards—Parent 5, Perrings 7, Stoeckel 8, Govro 7, Spencer 5, Hutchison 7, Tack 6. Tack and Stoeckel first, Govro, Perrings and Hutchison second, Parent and Spencer third.

Six single and two pair—Stoeckel 8, Perrings 6, Spencer 5, Govro 9, Parent 10, Tack 8. Parent first, Govro second, Stoeckel third.

Three standards—Spencer 5, Stoeckel 7, Hutchison 6, Frits 6, Parent 9, Perrings 5, Tack 7, Govro 6, Chappell 7. Parent first, Hutchison second, Chappell, Tack and Stoeckel third.

Six standards—Hutchison 5, Parent 6, Perrings 4, Stoeckel 4, Chappell 5. Parent first, Hutchison second, Perrings third.

At the meeting of the club, on July 3, the following officers were elected for the ensuing year: President, Greg. B. Smith; Vice-President, Robert Whitehead; Treasurer, John Fox; Secretary, Cam. B. Hutchison. Executive Committee: G. S. Hansell, Walter Skelly, G. N. Burleigh, M. A. Warren, James D. Perrings.—HAMMERLESS.

CENTRAL ILLINOIS SHOOT.—The tenth annual convention and tournament of the Central Illinois Sportsman's Association opens at Jerseyville, Ill., on July 24 and run, four days. There are 24 shoots on the programme, some of them sweeps at various classes of targets, but others with valuable lists of prizes, including all manner of things to be appreciated by shooting men. All information may be had of Cam. B. Hutchison, secretary, Jerseyville, Ill.

WORCESTER, Mass., July 3.—Members of the Worcester Sportsmen's Club went out to Coal Mine Brook to-day. There were two prize shoots with a possible 10 birds first score, and a 15-bird race. The work in detail follows:

Prize Score, Class A.

E T Smith	1111111111—10	A G Larkin	1111111110— 9
M D Gilman	1111111111—10	C R Claflin	0001111111— 7

Hall	0100100000 —2		

T. J. EDWORTHY.

THE LYNCHBURG, VA., GUN CLUB, of which Mr. A. Strother is president, had a combination picnic and shoot on the 4th of July, and it was a grand success. Every necessary provision had been made for the amusement and entertainment of all who might attend in response to the club's invitation, and of the hundred and more, sportsmen and spectators, who were present, there was not one who did not find plenty of fun and enjoyment. The shooting contests were witnessed with great interest throughout. In shooting for the principal prizes there were some fine exhibitions of skill by members of the home club, each of which were greeted by applause. The scores made by the team of visitors who contended for the Visitors' Prize were below the average of the home club's score, although there were a number of accomplished sportsmen among them. Master Burwell Nelson, the youthful winner of this prize, however, made a score that would have made an older marksman proud under the circumstances. At 1:30 a bountiful lunch was served in the dining-room of the fair grounds building, to which all sat down with appetites sharpened by the exercise of the day. Enough eatables and drinkables had been provided for twice the numbers, and the remnants of the feast made a larger display than the repast itself. Lieut. Biggers, in response to repeated calls, signalized the occasion by an apostrophe to the "Fort' Yuly" in broken German, which brought down the house. The shooting was resumed immediately after lunch and the programme completed in the course of the afternoon. The winners of the prizes were: The Silverthorne Badge, to Judge Latham, who made a score of 19 out of 25. The Visitor's prize, a gold-headed cane, given by members of the club for the best score made by a visitor, to Mr. Charles Richards, of New York. Following the shoot prizes presented by citizens to be shot for: First prize, 1000 shells, won by T. F. Nelson, score 24 out of 25. Second prize, handsome pair leather leggins, S. B. Younger, 17 out of 25. Third prize, hunting shirt, R. S. Terry, 16 out of 25. Fourth prize, silver cup, E. A. Cleland, 14 out of 25. Dr. W. A. Strother won the fifth prize by a score of 14 out of 25. Shoot for Class B and C—Prize given by Mr. R. S. Terry, 50 loaded shells, won by Mr. Henry Allen. Judge Latham won 500 shells for the best general average during the day.

BRIGHTON, Mass., July 4.—The Brighton Gun Club held a shoot to-day at Faneuil for the Rivett medal, scores to count on the merchandise prizes. The medal was won by O'Connell. Scores, 15 blackbirds, 10 clays. Summary:

O'Connell	5355—21	Grace	4251?—13
J Coyle	4542?—17	M Coyle	11323—10
Rivett	3343?—14	Hansen	11431—10
Ryan	32224—13	Horrigan	13211— 8

Five blackbirds—O'Connell. Five blackbirds—J. Coyle. Five blackbirds—J. Coyle, Rivett and Hansen. Five clays—O'Connell. Double, clay and Peoria—J. Coyle. Five bats—J. Coyle. Five bats—O'Connell. The merchandise series closed, the winners are: O'Connell first place, 85 out of 100; J. Coyle second, 71; Horrigan third 65; M. Coyle fourth, 62; Breivogel fifth, 58; Rivett sixth, 46.

LONG BRANCH, N. J., June 22.—A pigeon-shooting match took place this afternoon at the East End grounds. The contestants were Lawyer W. D. Campbell, accounted the crack shot of Monmouth county; Postmaster W. R. Joline, also very good; and the two Philip Dalys, father and son. The elder Daly being nearsighted, and not, therefore, able to see the birds at which he shot, was placed at 21yds.; that is to say, 3yds. nearer than his son, and 9yds. nearer than Mr. Campbell. Young Daly made a very remarkable shot, killing a missed bird at 44yds. stone dead. Notwithstanding the disadvantage of his shooting without his eye glasses, and not being able to discern the birds, the elder Daly came within one of winning. Two of Campbell's birds fell just within bounds, or, by actual measurement, 79yds., 1ft. 1in. One bird of another contestant fell 79yds., 2ft. 10in. from the scratch:

P Daly, Jr, 24yds	16	W D Campbell, 30yds	14
P Daly, Sr, 21yds	15	W R Joline, 26yds	13

WELLINGTON, Mass., July 4.—To-day has been one of much interest at the Wellington Gun Club range. The interest centered in the dead shot and booby matches. The prize-winners were as follows: Dead shot match, 5 pigeons, 5 blue rocks—Perry, Thimble, Wheeler, Bond, Schaefer, Grimes, Sanborn, Bancroft, Snow, Melcher, Short and Durand. The booby prize, a silver cup, was awarded to Wheeler for the poorest score and most awkward shooting position, the judges being three small boys. The first prize winners in the sweepstakes were: Six bluerocks, Bradstreet and Wheeler; 6 pigeons Schaefer; 6 blue rocks, Wheeler; 6 pigeons, Snow, Wheeler and Sanborn; 6 blue rocks, Wheeler; 6 pigeons, Schaefer; 6 pigeons, Schaefer and Wheeler; 6 blue rocks, 5 pigeons and 5 blue rocks, Perry, Trible and Bradstreet; 6 blue rocks, Trible and Sanborn; 5 pairs pigeons, Melcher; 6 blue rocks, Perry; 6 pigeons, Short; 6 pigeons, Trible and Wheeler; 6 pigeons, standing with back to the trap, Trible; miss and out, Melcher and Wheeler; 6 pigeons, Hart; 6 pigeons, Sanborn and Wheeler; 6 blue rocks, walk 20ft. and pick up gun after the bird has been thrown from the trap, Wheeler; 6 pigeons, Snow and Trible; 3 pair blue rocks, Snow; 6 pigeons, Trible and Wheeler.

KANSAS CITY, June 29.—The regular monthly medal shoot of the Independent Gun Club was held to-day, at the Kansas City Shooting Park, near the Blue. There was a fair crowd in attendance and the scores were good. Mr. J. M. Anderson won the medal with a clean score of 10. The scores are as follows at 10 birds: Thomson 8, Sterne 4, Bingham 7, W. M. Anderson 9, W. M. Stark, 9, J. M. Anderson 10, Guinotte 4, Kunz 7, Everingham 6, Walmsley 8, Reiger 7, Wasson 7, Hill 9.

WINCHENDON, Mass., July 6.—At the last regular meet of the Winchendon Gun Club at their range the following totals out of a possible ten clay pigeons were made:

H J Lawrence	1011111101—8	Charles Bailey	1000111100—5
A H Felch	0011111101—8	E M Whitney	1100011010—4
F F Hapgood	1111100111—8	Amoa Lawrence	1000110100—4
P S Davis	1111010011—7	J Sutherland, Jr	0110000011—4
F E Munn	1100011001—5		

WEST NEWARK, N. J., July 4.—West Newark Gun Club, club shoot, shot at 50 Lockport bats, Ligowsky trap, 18yds. rise, National Gun Association rules:

J Adelman	11111111111111111111111111111111111111111111111111—49

ANGLESEA, N. J., July 4.—Several interesting shooting matches took place to-day at the opening of Keystone Rod and Gun Club. First match, 29 entries, $1 each, 5 clay-pigeons per man, won by J. Stermer with 5, W. French, Moore and H. French 4 each. Second match, for silver watch, 23 entries, won by Hanes 5, Danfield 4. Third match, $1 sweep, Danfield and Liebeck divided first and second. Fourth match, $1 sweep, Laurent first, Danfield second. Fifth match, $1 sweep, Laurent first with 10, French second with 9. Henry Winzel and Geo. French officiated as judges and referees.

READING, Mass., July 4.—The Reading Gun Club held a well-attended shoot at Reading to-day, and the following events were contested: 5 clays, G. Curtis; 5 Peorias, G. Curtis; 6 clays, Bradley; 6 blue rocks, G. Curtis and Bradley; 6 Peorias, Killam; 5 blue rocks, Arthur and Richardson; 6 clays, Blanchard and Richardson; 5 Peorias, Tuttle, Bradley and Greene; 3 pair Peorias, Tuttle; 5 clays, Greene; 5 clays, Bradley. In the shoot for the Hunt badge E. B. Evans won for the third successive time on a score of 23 out of 25 birds.

LEXINGTON, Mass., July 4.—A match between the Wellington, Jamaica Plain and Lexington gun clubs was shot at the grounds of the latter club to-day before a large crowd of spectators. The conditions of the match were 5 men on a team, 20 shots per man, 10 each at clay-pigeons and blue rocks. There was a bad wind for pigeons.

LOS ANGELES, Cal., June 17.—A shooting match was held at the Agricultural Park to-day, between J. C. Cline, of Los Angeles, and W. A. Hamilton, of San Diego, for $100 a side, at 50 birds each, resulting in a tie. There was little or no betting on the result, as both men were considered to be about even. The birds were very poor, consequently there was very little excitement occasioned during the match. The following is the complete score:

J C Cline.....1111111011010101111111111111111111111111111101011111101—42
W A Hamilton..1110110100111111111111111101011111111101101111111111—42

Cline killed with his second barrel 17 times, and Hamilton 16 times.

UPTON, Mass., July 6.—The West Upton Gun Club had a very successful meet on the 4th. The prizes offered included a Winchester repeating shotgun, 1500 club shells and 1000 wads. During the meet one trap was used for clay pigeons, the other for blue rocks and over 3000 targets were used. In the merchandise prize Burbank of Whitinsville made 25 out of a possible 30, Bonner of Grafton 24, Johnson of Whitinsville, Whitcomb of Southborough and S. Eames of Upton, each 22, while Howe of Southborough made 21.

WELLINGTON, Mass., July 7.—To-day's shoot was attended by an array of sportsmen who put in considerable practice in sweepstakes. In the Grimes match Shumway took the prize. In the other events the first prize winners were: Six pigeons, Shumway and Moore; 6 blue rocks, Chase; 6 pigeons, Newton and Moore; 6 blue rocks, Schaefer; 6 pigeons, Moore; 6 blue rocks, Richards, Chase and Moore; 6 pigeons, Baxter and Schaefer; 6 blue rocks, Chase, Moore and Schaefer; 6 pigeons, Perry and Schaefer; 6 blue rocks, Perry, Baxter, Chase and Richards; 6 blue rocks, "walk up," Bond; 6 blue rocks, Bond; 6 pigeons, Moore, Shumway, Chase and Bond; 3 pair, Bond and Shumway; 6 blue rocks, Baxter; 6 pigeons, 24yds., Shumway and Trible.

WINONA, Minn., June 29.—Alex Artz won the medal at the shoot of the Sportsmen's Club, killing 15 out of 20 birds. Gus Lever and N. Artz were tied for second with 14, L. A. Pennoyer third with 13.

WELLINGTON, O., July 3.—The shooting tournament of the Wellington Gun Club was fairly attended considering the other shoots on the same date. 1—Six single standards. C. Avery first, Rock and Bell second, B. McKinney third. 2—Nine single blue rocks. F. Wall first, C. Avery, B. McKinney and H. J. Martin second, L. O. Jones third. 3—Three single and two pair blue rocks. W. F. Crosier and C. Avery first, H. J. Martin second, Bell and Rock third. 4—Nine single blue rocks. Rock and Crosier first, Jones, Phillips, McKinney and Aldrich second, C. F. Avery third. 5—Twelve blue rocks. Martin first, Rock second, Jones and Aldrich third. 6—Twelve blue rocks. Rock first, McKinney and Aldrich second, Jones and Wallace third. 7—Nine blue rocks. Martin and McKinney first, Avery, Wallace and Aldrich second, Rock third. 8—Nine blue rocks. Martin and Rock first, McKinney second, Wallace third. 9—Nine blue rocks. Jones first, McKinney second, Brainey and Avery third. 10—Nine blue rocks. Jones and Martin first, McKinney and Avery second. Best average prize, one hundred blue rocks, was won by "Blue Rock." Second best average was won by H. J. Martin; and the poorest average was won by Bell.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. Gibson, } Albany, N. Y
Secretary-Treasurer: F. L. Mix, }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div.Henry Stanton...A. S. Pennington,E.W. Brown, 156 Fifth Av., N.Y.
Eastern Div..L. Q. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div. .A. D. T. McGachen. W. G. McKendrick. S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Atlantic Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

FIXTURES.

CANOEING IN THE SOUTH.—A good evidence of the growth of canoeing in the Southern States is found in the active demand for "Canoe and Boat Building" from that quarter which has lately arisen. The development of canoeing has been slower there than in any other part of the country, but the indications now are that its growth will be strong and rapid.

A. C. A.—The Yonkers, Rochester and Deowinster clubs have each sent $5 for prizes. The A. C. A. book, containing Stoddard's colored map of Lake George, will be ready this week.

TARPON AND THE RAG CANOE.

LAST week we were pleasantly surprised by a visit from "Tarpon," Capt. S. J. Kendall, who with Mrs. Kendall arrived by steamer from Florida. Beyond a heavy coat of tan, Captain Kendall has changed little since he left Lake George after the meet in 1882 on his long canoe cruise to the Gulf. He will be present at the meet again next month after his six years absence; returning to Florida in the fall. The "rag canoes" too, were shipped to New York, the cruise being abandoned on account of the failure of Captain Kendall's eye sight, owing to the glare of the water.

ST. AUGUSTINE, Fla., May 30.—We reached this place on May 27. Made the longest run of the cruise that day, forty miles. I am disappointed in the "Ancient" City. A huge pile of modern bricks and morter dumped down in a marsh, is about what I make of it. But people come to see it, and I suppose get the worth of their money.

But about Boca Ratone. On the night of May 12 there camped on the beach at that place, two as tired canoeists as are often met with. They had paddled and pushed, waded, poled, dragged and wrestled through as villainous a country as Florida can produce, perhaps some time in the year there is water enough to float a canoe, but we did not find it. Once in a while we would strike deep water, but so filled with bonnet that it was impossible to paddle, then the passage would spread out into innumerable little streams leading every way through the saw grass. But patience will accomplish anything, and at last we were rewarded with a sight of the Lake, Boca Ratone.

An hour's paddle brought us to the carry, which is only some twenty yards from lake to beach, and was soon got over. The canoes were partly unloaded and then carried over, the tent was pitched, a fire started, and we looked around us, and truly it was a pleasant camp.

The beach running north and south, just north of the carry a bluff 40 or 50ft. high, thickly covered with scrub; from the bluff a point of rocks breaks through the beach and makes out an eighth of a mile east, forming quite a harbor. In the angle formed by point and beach were the canoes, backed by the tent. To the south the beach stretched away in an unbroken line as far as the eye could reach. To the west lay Boca Ratone as calm and quiet as the Gulf was vexed and angry. And here were we, tired and hungry, but still able to enjoy it all and wish there were others to see and enjoy as well. H. finds an old arm chair on the beach, it is brought to camp and placed in position for the cook. The cook brings along two packing boxes which are set up, one for table the other forms a cupboard, and housekeeping arrangements are complete. To-morrow is Sunday, we have decided to lay over, and therefore are taking a little extra pains with our surroundings.

I believe a large part of the pleasure of cruising consists in planning and carrying out the details of camp. So much can be done with a little thought and labor, and results are so much more satisfactory.

I have cruised with men who seemed to think that cruising was simply an excuse to give themselves up to dirt and idleness, but I never go with such people twice. Our camp was soon complete, as we both worked with a will, and because we liked it. All night it rained. Sharp, spitefull squalls, veering from N. E. to S. E., but Sunday morning came bright and clear. H. starts off after breakfast for turtle eggs, while the cook cleans up, has a bath, dries bedding and makes himself generally useful.

As we had a very good dinner to-day, I will give you our bill of fare: Turtle soup, roast turtle, fried fish, scrambled (turtle) eggs, turtle egg bread, and dessert of pine apple and bananas—all washed down with good coffee.

This is a fair camp ground. A fresh water lake one side with splendit facilities for bathing, the Atlantic on the other, with the surf always ready to lull you to sleep, be you never so restless. It evidently was a pass here, and what is now a fresh water lake was once a salt water lagoon. It would be interesting to the student of natural history to find how many and what kind of fish survived the change.

Some one has evidently an idea of speculating on this point for a town, as the beach is planted with cocoanuts for miles up and down, and a mile or so above Boca Ratone we saw a camp with men engaged in cutting roads, laying off town lots, etc.

Our Sunday was spent in camp, pleasantly, if not profitably, and Monday finds us on the way to Lake Worth, some twenty miles north. There is no wind and we paddle along at our ease, making the haulover about 12 M. We have some little difficulty in landing, as there is a very heavy surf, but with care we get through it, and after dinner carry over to the lake.

We find Lake Worth a very pretty sheet of water, and the settlers are hospitable and social to a degree, but we notice a slight trace of insanity in them all. I think the climate develops it, and at Lake Worth it seems to be stronger than any place I remember; I mean the idea of the value of land. Ordinary land can be bought here for from one dollar to five dollars per acre, but there are only some favored few like Vanderbilt or Jay Gould that could afford to buy good land. Lake Worth is a pretty place all the same, may it prosper.

We spend two days on the lake and then haul over to the "Saw Grass" and work through Lake Worth Creek to "Jupiter," where we find different scenery; heavy hammock, high banks and deep water. The river, however, as we were told, is closed. We camp one night at Jupiter and fight mosquitoes, and then on through the Narrows to Indian River. Indian River is fine, there are lots of oysters, lots of fish. Some very pretty places, but, alas, there are also lots of mosquitoes. Yes, sir! lots of them; we thought we were mosquito proof; thought we had a rig that would defy them; but oh, how short-sighted we were. They stormed our works, they flanked us, they drove us out of the tent, they laughed at all our flimsy attempts at defense until in desperation we rushed for the canoes and paddled out into the river. But they followed us, oh, yes, they followed us, and when finally the sun arose after such a night of torture I never could live through again, we were ready to say, "Good-by" to Indian River.

When we went back to our camp in the morning we found the coons had demoralized our commissary, capsized our water jug, eaten all our bread, turtle eggs, etc. But we said it was all right; anything that had to live in a place like that deserved all they could get.

And so we came away, sadder, wiser, and, alas, sore and swollen. It is evident the insects are not always so bad, for there are people living there. With such trials as the above we worked along past Rockledge, where we saw the sharpie Tarpon; Cocoa, where we saw the Betsy Babbet, Titusville, the unterrified, and through the canal to Mosquito Lagoon. Mosquito Lagoon is worse than Indian River, and as I have no language fit for it, I will pass it by. We finally reached New Smyrna on the 23d. But as this letter is long enough, I will leave the rest to the next.

JACKSONVILLE, June 4.—Here we are at last. Should have been here May 1, but bad weather and other causes have detained us. I have been somewhat uneasy about my eyes of late; they are weak and somewhat inflamed. Shall consult a physician here and see what I have to do.

I believe my last letter left us at New Smyrna. We left there on May 24, after looking the place well over. Now I have seen both, I am of opinion that Smyrna is superior to St. Augustine in point of attractions. There are more ruins, they are apparently as ancient, and the surrounding country is far more attractive.

We ran to the inlet with light winds, cooked dinner, and after a ramble on the beach started up to Halifax with a rattling breeze from the S.W. We soon passed Port Orange and its mud flats, coon oyster bars, etc., and were fairly entered on the pleasant portion of the river. I notice improvements many and varied going on; this section bids fair to become a fashionable resort. There is much money being spent, and as far as I could see, very judiciously.

We found a fine camp ground opposite Daytona, and taking advantage of it, made ourselves comfortable for the night.

On the 25th we pushed on, passing Ormond and soon came to the mouth of Smith's Creek. Still onward and upward we ran until we came to the canal. Here was another of the unfinished works, of which we have seen so much on our trip around Florida. Just what the company ever expected to do with a canal through here is one of those things which no fellow can find out. Passing through a mile or more of the canal we found an old dredge, abandoned by the canal company, but occupied by a family who were building a house on the beach. We followed the creek, and at its nearest approach to the beach we found a trail leading out seaward and ending at a House of Refuge. We decided this was our chance for a portage, and accordingly the canoes were unloaded, contents carried over and canoes soon followed. We made a snug camp on the beach and set ourselves down to wait for good weather; in the meantime amusing ourselves hunting turtle eggs, etc. We had not long to wait, for on the morning of the 27th we got away; no wind, so we started a breeze of our own.

After paddling about ten miles we got a light air from S. E., which gradually increasing we made sail. Reached Matanzas Inlet about 11 A. M., had some trouble getting in, as the surf was high with strong ebb tide. We ran up to the Old Spanish Fort, where we had dinner, and then with fair wind ran through to St. Augustine, reaching the latter place at sunset. We spent the time very pleasantly here until the 31st, when we got away for Jacksonville.

From that date till June 4 we had a succession of squalls and calms, some rain and generally unpleasant. We spent two nights at Pablo, and on the 4th wound up at the club house of the Florida Y. C. in Jacksonville, just about tired enough.

We found some real live canoeists here, and met with a hearty welcome. And right here we wish to return thanks to the Florida Yacht and Canoe Club for the use of their club house and the many kind attentions which they showered upon us. Success to the Pelican, long may she wave.

June 6.—The doctor says that if I wish to save my eyes I must keep off the water for a while. I have decided to take his advice, and have engaged passage for the rag canoe on the schooner Tamas for New York, being determined that said rag canoe shall go, even if I cannot take her. But before I give up cruising entirely I shall explore the river above Jacksonville, with the many creeks and slews that abound. Shall go through the inside passage to Fernandina, and on to St. Marys, thus completing my circuit of Florida. That done I shall have another letter for your pages, and perhaps that will end my cruising, for awhile at least.

TARPON.

THE DELAWARE RIVER.

Editor Forest and Stream:

In response to your invitation *in re* "J. G. R.," in the FOREST AND STREAM, July 5, I willingly contribute my mite for the furtherance of his contemplated Delaware River trip.

With the peculiarities of the currents, falls, etc., of the river from Port Jervis to Easton, I am not personally acquainted, but from the description by friends who have made the run, there are plenty of rapids from the start. The channel will, with few exceptions, be found along the Pennsylvania shore.

The Delaware Water Gap will come in for a good share of attention, and is ushered in by a powerful rapid.

The *bête noire* of rivermen and canoeists on this course, and justly so, is the Big Foul Rift, below Belvidere. The bed of the river here is a curious formation of rocks, worn and serrated by the action of water and small boulders; if the river is very low—and it is at present—discretion would be commendable at this point.

A rapid will speed the canoeist into the river between the twin cities on the heights, Phillipsburg and Easton; the former with her extensive iron industries and canal terminal, and the latter with her Lafayette college, canal and railroad facilities and rich agricultural districts. They are truly representative cities of the two States.

From here the summary of rapids is as follows: Dam under the railroad bridge, keep to the right shore; rift at Carpentersville; rapids at Warren; Upper Blacks Eddy, Broughers or Hog Back Island and below (Fiddler's Elbow Rapids); at Riegelsville; below, caused by dam; at Durham Furnace; Narrowsville, here is raceway and mill on Pennsylvania side, island and rapids on both sides; keep to left. Continuous rapids from Milford, N. J., to Frenchtown and below; at Erwinna, and shallows and rifts to White Plains, channel will be found at base of Pennsylvania canal. Deep water to Bull's Island falls, caused by dam; sluiceway to left of center of river. The next place of note is Welles Falls, at Lambertville, with two places of entrance; one, the sluiceway in the dam, being accounted a dangerous fall, owing to the formation of the bed; with care these falls can be run, if the water is right; they are quite rocky and long. Scudder's Falls—dam and narrow sluiceway to left and island, and White's Island with rifts, taking Pennsylvania branch and keeping near to island, will float the voyageur in the still water above Trenton, whence by the aid of 40ft. in the thousand run tide water is reached. The fall of the river from Port Jervis is estimated at 1,200ft; the current averages three and a half mile per hour, and in the swift rapids eight miles.

Black bass afford the finest fishing, particularly so at Walpack Centre, Holland, Pincher's Point (below Phillipsburg), Brougher's Island, Riegelsville, Stockton and Washington's Crossing. The favorite baits are live or artificial minnow and spoon. Rockfish (striped bass) are found in the vicinity of Trenton.

These distances to Trenton may prove acceptable: Calno, 90 miles; Belvidere, 65; Phillipsburg, 50; Milford, 39; Bull's Island, 28; Lambertville, 20; and from Trenton to Bordentown, 5 miles; Burlington (Delaware River canoe meet held on island in 1887), 12; Delanco (meet held this year), 17; Camden, 30.

In the Delaware "J. G. R." has selected the most magnificent of rivers for canoeing. With the impressive and ever-changing scenery; delights of Nature's wilderness with the comforts of civilization; hospitality of its natives and abundance of produce, betokening the thrift of the farmer and the fertility of the soil, a trip through the Delaware Valley will stamp itself indelibly on the memory with pleasing scenes for remembrance and longing for a repetition.

May his trip be a success, and if he will stop in Trenton the latch string of the Unamis C. C. will be found on the outside and the Delaware turtles will accord him a hearty welcome.

TRENTON, July 9. WALLACE H. JOHNS.

THE PASSAIC RIVER MEET, JULY 1-4.

THE meet of the Passaic River canoeists was held this year on the east shore of Newark Bay, near Pamrapo, the camp being pitched on a high bluff overlooking the whole bay, on which very good sailing and paddling courses had been laid out. On Saturday canoeists arrived from Passaic, Paterson, Arlington, Rutherford, Newark and Perth Amboy, with two from Philadelphia *en route* to the Lake George meet, and by Monday there were about forty men in camp. On Wednesday Messrs. F. M. Sinclair, Brooklyn C. C., in the Jess, and C. J. Stevens, New York C. C., in the Vagabond, sailed up; while other canoeists came by rail for the day. The weather was clear and warm, with a very good breeze all day. Event 1 of the programme, paddling class I., was won by L. B. Palmer, Ianthe C. C., in the Scoot, with Alex. Oliver, Bayonne C. C., in the Stiletto, second. The paddling, classes II. and III., was won by Chas. Cook, Paterson C. C., in the Brunonia, with Alex. Oliver, Bayonne, C. C., in the Stiletto, and George Baxter, Ianthe C. C., in the Mineola, in second and third places. There were 7 starters in the class IV., paddling, the wind and tide together making it very hard work over the first half the course. F. B. Collins, Bayonne C. C., won, with Wm. Walker, Essex C. C., in the M'liss, second, and F. A. Beardsley, Bayonne C. C., in the Teddie, third. The tandem paddling was won by Oliver and Beardsley, Bayonne C. C., with Fredericks and Palmer, Ianthe C. C., second; there being 8 starters. The main sailing race was won by Mr. Sinclair, Brooklyn C. C., in the Jess, a very handsome canoe of his own design. Charles Cooke, Paterson C. C., was second, in the Brunonia, with Geo. W. Cox, Essex C. C., third. There were 10 starters in the race. The "man overboard" race was won by Mr. Cox, with Mr. Palmer second. The consolation race was won by Charles Cook, Paterson C. C., in the Brunonia, with C. J. Stevens, N. Y. C. C., in the Vagabond, second. After the races the prizes were awarded and some canoes started to take the flood tide and fair wind for the Passaic, a number remaining in camp until next morning.

THE ATLANTIC DIVISION MEET, JULY 5-11.

THE cruising meet of the new Atlantic Division started on July 5 at 8 A. M., from the rendezvous at Newark Bay, where many of the members had also attended the Passaic River meet. The fleet consisting of 32 canoes, under the command of Rear Com. Pennington, beat down with the tide, passing into Staten Island Sound, and in the afternoon camp was made on the beach above Tottenville, on the Staten Island shore. The spot had been selected and prepared by Mr. F. W. Kitchell and others of the Raritan Y. C., of Perth Amboy, some of whom are canoeists. The cruisers were welcomed by the R. Y. C., who brought over the material for a clam bake, and the evening was spent very pleasantly, there being a number of visitors, including ladies, in camp. On Friday morning the fleet ran over to the R. Y. C. house at Perth Amboy, where a race had been arranged, a handsome yacht clock being offered as a prize by the R. Y. C. The course was on Raritan Bay, with a good breeze. Mr. G. W. Cox, of the Essex C. C., finished first. In the afternoon the fleet ran over to Cheesequake Creek, where Seneca in his Barnegat cruiser joined. The night was spent here in camp, and on Saturday morning, with a west wind, the fleet sailed for Atlantic Highlands, camping over night and running up the Shrewsbury on the following morning. Camp was pitched on the beach near the Highland station, the party resting quietly all day.

The following races were held at the Horseshoe on Tuesday: Class IV., paddling, won by Yolande, C. J. Pockman, with Atalanta, L. B. Palmer, second, and Sweetheart, W. Hilliar, third. Tandem paddling, Yolande, Pockman and Palmer, first; Bayadere, Coe and Dorland, second. The cruisers' race was a very good one, the winner being Idlemere, J. L. Douglas, with Crab, E. Pennington, second.

The principal sailing race, 4½ miles, was won by Jess, F. M. Sinclair, with Atalanta, L. B. Palmer, second, and Idlemere third. The standing paddling was won by Essex, G. W. Coe, with Yolande, C. J. Pockman, second and Sweetheart, Mr. Hilliar third.

The remaining races will probably be sailed on Labor Day, in September. In the evening the meeting of the division was held in camp, Rear-Commodore Pennington being in the chair. Commodore Gibson, Vice-Commodore Stanton, Purser Brown and Mr. Stephens, who had started for Sandy Hook in Vice-Commodore Stanton's cutter, were becalmed in the Narrows and did not reach camp. The following officers were elected for the coming year: Vice-Commodore, W. P. Stephens, N. Y. C. C.; Rear-Commodore, L. B. Palmer, Ianthe C. C.; Purser, F. L. Dunnell, Brooklyn C. C.; Executive Committee, M. V. Brokaw, Brooklyn C. C. The cruise will disband on Wednesday or Thursday, but several of the cruisers will remain for some time about Sandy Hook.

CALLA SHASTA, JULY 4.

THE Springfield C. C. spent the day in camp at Calla Shasta, with four good races. The first was for the Springfield Cup, the second race of the series.

Second of five trial contests for the Springfield Sailing Cup; course, 6 miles, with two turns:

Fly, Paul Butler, Lowell, Mass., first	1 00 05
Girofla, F. A. Nickerson, second	1 04 45
Minnie G., F. E. Walch, third	1 23 25
Volunteer, C. H. McKnight	Disabled

Volunteer carried away her mast step.

The second event was the junior paddling race, open to all members of the club who have not won a prize; 1,000yds. straightaway to the windward:

Volunteer, Irving A. Quimby, first	0 03 00
Clipper, L. W. White, second	0 03 32
Narka, Sanford Lawton, third	0 03 39
Girofla, C. M. Shedd, fourth	0 04 30

The next was the Club Trophy sailing race; 3-mile sailing race for points for the club trophy; 1½ miles to the windward and back:

Agawam, Emil Knappe, first	0 30 00
Curlew, G. M. Barnny, second	0 30 02
Girofla, F. A. Nickerson, third	0 33 20
Vita, C. H. McKnight	Did not finish

The last race was the senior paddling race for the club paddling trophy; 1,000yds. to the windward:

Narka, H. E. Rice, first	0 03 32
Volunteer, Emil Knappe, second	0 03 44

BRITISH CANOEING.

AS Mr. Walter Stewart has challenged for the A. C. A. trophy this year, all that relates to his new canoe Charm will be of interest. The following from the *Field* shows that Charm won very easily from a picked fleet of the R. C. C. on June 16:

The annual race for the challenge cup was sailed for at Hendon on Saturday last, when eleven canoes entered and started. Throughout the race Charm seemed much closer winded than any of the other canoes, and at the conclusion of each round fetched up from leeward with the upper set of railings to abreast of the buoy, while the others all had to make a board off the south shore. Nina and Kitten both showed great improvement on their old form, and Diamond ought to be well in front when her new owner gets more used to her. Vanessa was going well when her rudder carried away, and it is to be regretted that she did not have a chance of sailing the race out. Nautilus will probably want some beating when she next appears under the balance lug rig, as her owner expresses himself perfectly satisfied with the bilge plates. The sail she carried in this race, however, evidently did not do her justice. The new Atalanta was over-canvased, and it may be doubted whether she can carry the 112sq. ft. allowed in the first class; but with the 75sq. ft. allowed in the second class, for which she was designed, she will probably make her mark. Sabrina kept right side up, but did not go as she ought to have done for some unexplained reason.

The race was officered by the mate, Mr. G. Herbert, and there were several members of the club and their friends down to witness the race.

Boat.	Owner.	Boat.	Owner.
Nautilus	Mr W Baden Powell.	Atalanta.	Mr R de Q Quincey.
Charm	Mr W Stewart.	Selene	Mr S F Staples.
Diamond	Mr G E Webster.	Kitten	Mr E A Leach
Vanessa	Mr B de Q Quincey.	Illawarra	Mr A B Ingram.
Nina	Mr H Church	Severn	Mr T H Holding
Sabrina	Mr Rede Turner.		

The wind at the start was from N.E., with occasional strong puffs, which proved too much for the stability of some of the canoes. Nautilus and Charm, after watching each other closely before gun-fire, got over the line almost simultaneously; but Nautilus, keeping well over to the south shore for breeze, soon got clear of the pack, and was first round the buoy in the bight, followed by Vanessa and Charm, the others being all in a cluster. After rounding, Atalanta capsized, and Vanessa carried away her rudder, and both retired, as did Selene. It was a run down to W. Buoy, and Nautilus kept the lead. In the turn to windward up the lake Nautilus kept ahead, but Nina, Diamond and Charm were pressing her very closely, Nina being abreast of her, but to leeward, when she got on the railings, and hung for a short time. Kitten had also done a good bit of sailing, and was only half a mile astern of the leader at the end of the first round, which was timed as under:

Nautilus	3 43 30	Nina	3 44 30
Diamond	3 43 40	Sabrina	3 45 30
Charm	3 43 50	Illawarra	3 50 00
Kitten	3 44 00	Severn	3 54 50

In the second round Charm passed Nautilus, whose new sail did not appear to stand well to windward, the upper half being in a continual flutter. Diamond and Nina rounded together, 30 seconds astern of Nautilus, Kitten being 4½ minutes behind them. In this round Severn capsized and Illawarra retired. In the succeeding rounds Charm increased her lead steadily, and Nautilus gained on the others. A reference to the times of the various rounds will show that an interesting race went on between Nina, Diamond and Kitten, until Diamond capsized in the last round. Charm finished the course at 5:45, winning the cup after a well-sailed race by 12 minutes. The times of the various rounds were:

	1st Round.	2d Round.	3d Round.	4th Round.	Finish.
Nautilus	3 43 30	4 15 00	4 48 45	5 22 30	5 57 00
*Charm	3 43 50	4 09 30	4 41 00	5 14 00	5 45 00
Diamond	3 43 40	4 15 30	4 54 00	5 34 00	Capsized.
Vanessa	Carried away rudder first round.				
Nina	3 44 30	4 15 30	4 52 00	5 25 00	6 01 00
Sabrina	3 45 30	4 33 30	5 15 00	5 47 00	Not timed,
Atalanta	Capsized first round.				
Selene	Retired.				
Kitten	3 44 00	4 18 00	4 56 00	5 33 00	6 08 00
Illawarra	3 50 00	Retired.			
Severn	3 54 30	Capsized second round.			

* Winner of cup and £5 presentation prize.

The following description of the new Nautilus is also from the *Field* of the preceding week:

"The latest addition to the Royal C. C. put on Hendon Lake is the Nautilus of '88, just launched, and as yet not completed in her rigging. The new craft has been delayed, owing to her owner's absence abroad just at the critical time of 'finishing, rigging and fitting,' and it is doubtful if her proper racing sails can be fitted in time for the challenge cup match of to-day.

"However, she sailed her maiden race in good company on Saturday last, under a suit of old sails rerigged for the occasion and developed quite a high turn of speed, keeping easily ahead from start to finish, and winning by about 1m. 48s.

"Her chief peculiarity is that she is fitted with 'bilge drop keels' instead of the ordinary centerplate, and the practical working result has in every way upheld the designer's anticipations and demolished the criticism. The Nautilus is a comparatively small canoe, her dimensions being: Length, 16ft.; beam, 30in.; depth (garboard to gunwale), 11in.; sheer, 7in. forward and 5in. aft. The keel, as a keel, does not exist, as it is fashioned off exactly to the slant or rise of the floors. She depends solely on her bilge drop plate for prevention of lateral slip.

"Her model is actually a cast back to the form (but not dimensions) of the Nautilus of 1879, a model of which is in the R. C. Club room. By contracting the whole of the frames as to beam, leaving the bilge and floor form intact, and so producing the 30in. instead of 33¼in., and by extra spacing of the frames so as to obtain 16ft. instead of 13ft. 6in. length, a fine but comparatively powerful model was produced. Some slight variation had to be made in the disposition of the displacement in order to keep in with the 'wave curve' of displacement.

"The internal arrangements of bulkheads and of hatchways has produced accommodations for two men for sailing, for one for long cruising, and for one for sleeping. The space into which water can find its way in a 'capsize' is owing to the bilge drop keel cases forming water-tight boxes in each bilge, so small that, on the canoe being righted, she would be in fair sailing condition, very unlike the water-logged state of most canoes after a capsize. The fore locker and the after locker are completely cut off from the well or main compartment by water-tight bulkheads, and are got at through hatches on deck. She is intended to carry from 40lbs. to 50lbs. of ballast as equivalent to an ordinary load of cruising gear, such as tent, stores, clothes, etc. Her drop keels are of the lightest make compatible with strength—*i. e.*, ⅛in. saw steels.

"The rig with which she will be raced on the cup day will only be on its trial, being novel in design, and quite unstreched. It may be described as hoisting battened spritsails, reefable and lowerable. The sprit being run through a pocket or band on the sail, is a far lighter spar than any yard could be; and the boom of the spritsail not crossing the mast—as in the balance lug rig it does—can be much lighter than a lug boom. The batten reefing gear of the lug is maintained, and the whole sail hoists or lowers with quite as much ease as the lug rig does.

"There should be some very good racing, seeing the state of perfection to which many of the competitors have brought their craft both in fitment and handling; and it would not be surprising to some of the older hands who have been looking on at the past races, if the cup should again change hands this season, and be won by one of the younger members. Notably well handled are the Vanessa and Diamond. The Nina, about the most powerful of the fleet, and going quite in new style, would not be far off being favorite if the piping breezes only blow hard enough. The craft, however, about which there has been most talk, but least seen, is the cream-colored Atalanta, which in her silver-fitted harness looks 'all there, but young, and perhaps skittish.' The Charm, last year's winner of the cup, has not so far sailed a match this season, hence there is still more room for speculation.

QUAKER CITY Y. C. CRUISE.

Editor Forest and Stream:

The Q. C. Y. C. has just completed one of the best events ever entered on its log-book. Trenton, the capital of New Jersey, is 33 miles up the Delaware River, and heretofore considered impracticable for large yachts. There is, however, quite a fleet of small craft owned there, and some of the most enthusiastic members of the Q. C. Y. C. hail from that port. The yachting spirit, probably on account of the difficulties of the sport here, reaches its highest exponent so far as the Delaware River is concerned. Notwithstanding the difficulties of navigation and loss of time necessary, the Trenton contingent is always present at all Q. C. Y. C. events, and invariably carry home all the prizes in the small classes.

A few months ago its members organized a local yacht club of their own, in no wise antagonistic to the Q. C. Y. C., and it was considered the proper thing for the parent club if possible to return them some of their numerous visits to us, so for the trip July 1 to 5 was set apart.

The yachts rendezvoused at Bordentown, heretofore the head of yacht navigation, on June 30, at 4 P. M., the fleet consisting of the flagship schooner Helen, Com. Chas. D. Middleton; sloops Monarch, Vice-Com. Chas. L. Work; Minerva, Rear-Com. Wm. H. Mickel; Consort, Capt. S. B. S. Barth; Osceola, Brereton Pratt; Comfort, John H. Britton; Igidious, Chas. W. Glaser; Alva, Wm. S. Allen; Gretchen, R. C. R. Binder, Jr.; Anita, Geo. Van Sant; Nahma, F. P. Ferry; steam yachts Lillie, Geo. DeB. Keim; Volanta, Alfred Box; Vinita, Horace F. Smith. There was also a large attendant fleet of small craft from Trenton and vicinity. Several tugs and the steam yachts made fast to the fleet and at 7 P. M. all anchored under Brower's Bluff, from which a magnificent view of the fleet was to be had. The sloops Monarch and Osceola sailed up, as they desired a little additional credit.

At 8 P. M. all the visitors as guests of the Trenton Y. C. were invited to a banquet on the bluff, after which the yachts were illuminated with Japanese lanterns, and cannon and fireworks made noise and light until Sunday was ushered in.

Sunday bright and early all of Trenton seemed to be down on the bluff. The fleet being a large and handsome one and consisting of larger craft than had ever before visited the city created considerable excitement. The newspapers devoted whole columns to a description, with the result that all the curious part of the town was there. The harbor was alive with boats, and as open house was kept, crowds were constantly passing through the fleet and examining it. It is estimated that not less than 2,000 people were on board each of the larger yachts during the day.

On Monday the fleet was dressed with bunting, and a repetition was had of the crowds of the previous day, breaking the hearts of the captains as they saw their holystoned decks being walked over, often with hob-nailed boots. In the morning the guests were conducted through the potteries and rolling mills, followed by a banquet at the American House, in the afternoon the Governor of New Jersey, mayor and city officials of Trenton inspected the fleet, in the evening the yachts were again illuminated and cannon and fireworks once more boomed and flared.

On Tuesday morning the fleet started down the river and on the morning of July 4 rendezvoused at Riverton, N. J., the guests of the Riverton Y. C. The annual regatta of the R. Y. C. was held in the morning, after which a pleasant interchange of visits took place. In the evening the yachts were again illuminated, and when the candles went out the fleet disbanded, each to return with pleasant memories of one of the jolliest cruises on record.

The Q. C. Y. C. fleet will cruise as far east as Newport this year, and twelve craft have entered for it. Six left at 3 P. M. on Saturday for Atlantic City, where three more are lying. These will stay there some time and early in August they will go up to New York, where they will be joined by the smaller craft, which will go through the canal, and take two weeks up the Sound. Those leaving now are flagship Helen, schr., sloops Monarch, Consort, Anita, Comfort and Osceola. Those already in Atlantic City are the sloops Vesper, W. H. Nickerson; Vinitza, M. Colburn; and Restless, Thomas Foster. The steam yacht Volanta is on a cruise down the Cheasapeake. The sloop Minerva down the Delaware Bay. The Eva (sloop) has just returned from Atlantic City. The schooner Rebecca M. has just gone down to remain all summer along the Jersey coast.

C. L. WORK.

BOSTON CITY REGATTA, JULY 4.

THE annual city regatta was sailed succcssfully at Boston on July 4 in a strong S. W. breeze, the courses being: For first and second classes, from judges' boat down West Way, leaving Thompson's and Rainsford islands on starboard, Long and George islands and Point Allerton Buoy No. 3 on port, and back through Narrows, leaving Fort Warren, Galloupe's Island and Nix's Mate buoys on the port, Buoy No. 7, Castle Island on port, to flagboat anchored off Marine Park pier, leaving it on port, passing between judges' steamer and flagboat; 15 miles.

For third, fourth, fifth and special classes, from judges' boat to Cow Pasture Buoy No. 6 (off pumping station), leaving it on port, to flagboat, southeast, leaving it on port, to Buoy No. 7, off Fort Independence, leaving it on starboard, to Sculpin Ledge Buoy, leaving it on port, to Buoy No. 6, lower middle, leaving it on port, to Buoy No. 7, Castle Island, leaving it on port, to flagboat off Marine Park pier, leaving it on poat, passing between judges' steamer and flagboat; 10 miles. The times were:

FIRST CLASS CENTERBOARDS—30 AND LESS THAN 40FT.

	Length.	Elapsed.	Corrected.
Shadow, John Bryant	33.10	2 05 36	1 29 20
Violet, H. G. McKee	33.00	2 22 26	1 43 15
Magic, E. C. Neal	30.02	2 27 46	1 47 09

KEELS—30 AND LESS THAN 40FT.

Hilda, C. P. Curtis	31.05	2 33 42	1 44 38

SECOND CLASS CENTERBOARDS—25 TO 30FT.

White Fawn, W. C. Cherington	25.01	2 33 14	1 45 17

Moondyne, W. H. Shaw	24.08	1 54 12	1 21 46
Nora, E. P. Boynton	20.06	2 08 13	1 30 32
Erminia S., John Stafford	23.00	2 05 30	1 31 07
Nellie D., E. Dixon	21.05	2 08 06	1 31 41

Francis and Posy withdrew after starting.

THIRD CLASS KEELS—20 TO 25FT.

Judith, W. B. Pigeon	22.08	1 50 49	1 16 01
Kitty, Tarbell & Adams	22.06	1 52 10	1 17 19
Echo, Burwell & Isham	24.00	1 51 24	1 18 12
Halcyon, J. R. Hooper	20.03	1 58 16	1 20 49
Wanda, G. W. Griffiths	22.07	1 59 58	1 25 04
Marguerite, F. Skinner, Jr.	23.08	2 03 20	1 29 55
Annie Maud, F. O. Vegelahn	23.03	2 04 22	1 30 17
Alice, R. O. Harding	20.07	2 09 19	1 31 45

The Thelga, W. L. Johnson, withdrew.

FOURTH CLASS CENTERBOARDS—18 TO 25FT.

Mabel, F. L. Dunne	19.04	1 51 58	1 12 13
Tartar, J. B. Forsayth	19.05	1 53 36	1 14 19
Peri, Driscoll & Tully	18.02	1 56 05	1 14 47
Jewel, W. E. Sheriff	18.08	1 58 44	1 17 59
Jester, W. H. Besarick	18.03	2 02 19	1 21 09
Buzz, Dr. C. G. Weld	19.00	2 03 24	1 23 18
Hester, P. R. Blackmar	19.11	2 06 48	1 28 16

FOURTH CLASS KEELS—18 TO 25FT.

Mabel, W. Bennett	17.03	2 09 54	1 27 01
Meteor, Backus & Mason	16.04	2 12 01	1 27 26
Hard Times, W. E. Geyer	18.06	2 12 12	1 31 27
G. L. Babb, J. W. Adams	19.00	2 17 26	1 37 30
Joli, J. F. Cashin	16.03	2 22 36	1 38 51

FIFTH CLASS CENTERBOARDS—CATS—UNDER 18FT.

Scamp, Frank Gray	17.09	1 58 09	1 16 09
Mirage, G. E. Jordan	16.07	2 00 21	1 16 15
Wildfire, H. A. Keith	16.06	2 00 34	1 16 18
Mirage, H. J. Bowers	17.02	2 00 08	1 17 06
Evelyn, L. J. Huntington	17.08	2 12 59	1 30 54
Imogene, M. R. Wendell, Jr.	17.00	2 15 08	1 31 45

Nonpareil, Rocket, Flora Lee, Nora and Elsie withdrew.

SPECIEL RACE.

JIB AND MAINSAIL CENTERBOARDS—LESS THAN 20FT.

Zoe, W. A. McField	17.05	2 05 14	1 22 48
Trouble, Mason Bros	19 08	2 04 50	1 25 56
Urchin, F. E. Dodge	17.06	2 20 56	1 38 30
Petrel, J. J. Strong	15.06	2 27 41	1 41 25
Eureka, E. B. Rogers	19.10	Withdrawn.	
Topsy, J. McGlynn	Capsized.		
Em Ell Eye, P. M. Bond	Capsized.		

The winners are: First class centerboards, Violet first, $40; Magic second, $25. Keels, Hilda first, $40. Second class centerboards, first, White Fawn, $30; second, E. W. D., $20; third, Erin, $10. Keels, first, Ione, $30; second, Elf, $20; third, Breeze, $10. Third class centerboards, first, Myth, $25; second, Wraith, 15; third, Sea Bird, $10. Keels, first, Judith; $25; second, Kitty, $15; third, Echo, $10. Fourth class centerboards, first, Mabel, $20; second, Metcor, $15; third, Wildfire, $10. Jib and mainsail class; first, Zoe, $20; second, Trouble, $15; third, Urchin, $10. The regatta committee included Messrs. W. P. Wilson, John C. Short, David F. Barry, Henry Carstensen, Samuel Kelley, Louis M. Clark, John Comerford, Edward F. Reilly, Homer Rogers, Edward J. Powers, C. C. Powers. The judges were Messrs. M. J. Kiley, chairman, and William Morris, D. G. Quirk, William B. McClennan and F. H. Blaney. Many of the boats mistook the sailing directions and sailed a wrong course, being obliged to return and round the last buoy, off Marine Park pier. Shadow was timed, but her owner discovered after the race that she had not turned the last mark.

PAPPOOSE AND BANSHEE.

AFTER the conclusion of the Larchmont regatta Mr. P. S. Pearsall, of the Banshee, challenged Messrs. Thayer and Simpkins, of the Pappoose, to a match over the same course for $250 per side. Nymph also was allowed to enter, but her mast had proved so weak that she sailed for Boston for a stronger and longer one. Banshee is a compromise boat, 39ft. 11in. l.w.l. and 41ft. 4in. sailing length, while Pappoose is a keel boat 36ft. 11in. l.w.l. and 39ft. 2in. sailing length. Banshee was again sailed by Mr. Smith, and Pappoose by Capt. Nat Watson. The start was given at 11:47, but both were handicapped trying to gain the best position for the start, Pappoose going over at 11:51:45 and Banshee at 11:52:30. The wind was light at first from S.W., blowing quite hard at times later in the race, with calm spots between, while rain fell at intervals. The Hempstead mark was timed:

Pappoose	12 50 00	Banshee	12 52 14

Jibing round, Pappoose set balloon jibtopsail, while Banshee tried a spinaker, gaining on and passing the leader until the latter also set a spinaker. The times at Captain's Island were:

Banshee	1 49 57	Pappoose	1 50 16

On the beat back to Hempstead the wind increased for a time, but finally fell. The times were:

Banshee	3 16 25	Pappoose	3 18 15

The finish was made in a very light air, Pappoose catching a stronger wind near the line which helped her along somewhat. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Pappoose	11 47 00	3 59 38	4 12 38	4 10 36
Banshee	11 47 00	3 59 49	4 12 19	4 12 19

Banshee was handicapped by a poor fit of canvas. Pappoose having much better sails. The match was timed by Messrs. Willard and Greacen from the flagship Daphne.

LARCHMONT Y. C. ANNUAL REGATTA, JULY 4.

THE Larchmont Y. C. was favored even more than usual in the weather for its ninth annual regatta on July 4, the day being clear and bright, with a strong S.W. wind during the race, blowing very fresh in the afternoon. In spite of liberal prizes there were no entries from the 70ft. or 62ft. classes, while the schooner entries were very slim. The chief interest of the racing was centered in the 35-41ft. class, in which were Pappoose, sailed by Mr. Adams; Nymph and Banshee, the former steered by Mr. Willard and the latter by her designer, Mr. Smith.

The courses were: For classes A, B and E from starting line to markboat in Hempstead harbor, thence to another near Stamford Lighthouse, back to Hempstead again and thence home; 27 nautical miles. Classes D, 5, 6 and 7 to markboat in Hempstead harbor, thence to Captain's Island, back to Hempstead, thence home; 20 nautical miles. Classes 8, 9, 12, 13, 14, 15 and 16 from start to Hempstead harbor, thence to Captain's Island, and direct home without making Hempstead a second time; 16 miles. Class 10 from Hempstead harbor to Matinnicock Buoy, back to Hempstead and thence home; 13 nautical miles.

The regatta committee, Messrs. Willard and Scott, were on the tug B. T. Haviland, the third member, Mr. Greacen, being on the club steamer, Albertina. The start was made at 11:30, the fleet going across close hauled to Hempstead harbor mark, with a very light wind, the leaders being timed:

Troubadour	11 59 00	Roamer	12 03 50
Magic	12 01 30	Banshee	12 04 10
Nymph	12 01 35	Eurybia	12 04 15
Anaconda	12 03 00	Lotus	12 04 17

Jibing here, spinakers were set to port, and a large part of the fleet ran over to Captain's Island, being timed:

Anaconda	12 57 15	Agnes	1 02 45
Nymph	12 58 55	Athlon	1 03 01
Roamer	11 58 57	Pappoose	1 04 38
Daphne	1 00 15	Regina	1 05 36
Lotus	1 01 23	Eurybia	1 08 19
Banshee	1 01 31	Volusia	1 09 00
Rival	1 01 52	Leona	1 09 20
Adelaide	1 02 12		

The schooners were not timed at Stamford Light, but Troubadour led Magic easily. The wind freshened on the beat back to Hempstead Harbor, some having all they wanted. No times were taken at the last mark, but the full times were:

CLASS B—SCHOONERS, 91 AND OVER 79FT.

	Start.	Finish.	Elapsed.	Corrected.
Magic	11 32 45	3 24 17	3 51 32	3 46 58
Troubadour	11 31 50	3 12 50	3 41 00	3 41 00

CLASS E—SCHOONERS, 59FT. AND UNDER.

Agnes	11 32 55	2 50 44	3 17 59	3 14 44
Leona	11 39 44	3 05 46	3 26 02	3 22 13
Lotus	11 33 18	2 45 50	3 12 32	3 12 00

CLASS 5—SLOOPS AND CUTTERS, 47 TO 54FT.

Anaconda	11 32 29	2 40 45	3 08 16	3 06 16
Roamer	11 32 14	2 49 40	3 17 26	3 12 50
Athlon	11 31 42	2 55 42	3 24 00	3 24 00

CLASS 6—SLOOPS AND CUTTERS, 41 TO 47FT.

Daphne	11 34 42	2 45 02	3 14 20	3 12 38
Regina	11 39 03	2 55 38	3 16 35	3 16 35
Adelaide	11 38 40	2 51 42	3 13 02	3 10 13

CLASS 7—SLOOPS AND CUTTERS, 35 TO 41FT.

Nymph	11 30 42	2 47 32	3 16 50	3 16 50
Banshee	11 33 09	2 54 25	3 21 16	3 20 50
Pappoose	11 37 42	2 56 29	3 18 47	3 14 37
Rival	11 31 12	2 52 50	3 21 38	3 18 47

CLASS 8—SLOOPS AND CUTTERS, 30 TO 35FT.

Eurybia	11 35 04	2 14 14	2 39 20	2 39 20
Volusia	11 34 54	2 20 58	2 46 04	2 43 39
Flora	11 33 27	Did not finish.		
Rajah	11 40 00	2 25 02	2 45 02	2 43 34

CLASS 8—SLOOPS AND CUTTERS 25 TO 30FT.

Kangaroo	11 37 25	2 25 05	2 47 40	2 45 37
Moya	11 34 42	2 31 28	2 56 46	3 22 15
Voyant	11 38 04	2 29 07	2 51 03	2 51 03
Gem	11 35 49	2 34 41	2 58 52	2 54 26
Amazon	11 40 00	2 39 44	2 59 44	2 54 54
Merlin	11 33 52	2 47 04	3 13 12	3 08 15

CLASS 10—SLOOPS AND CUTTERS 25FT. AND UNDER.

Vixen	11 36 10	1 53 38	2 17 23	2 17 23
Gleam	11 38 31	3 04 11	2 25 40	2 24 40
Pilot	11 40 00	2 13 20	2 33 20	2 31 47

CLASS 12—OPEN SLOOPS OVER 23FT.

Sirene	11 36 56	2 27 35	2 50 39	2 50 39

CLASS 13—OPEN SLOOPS 23FT. AND UNDER.

Cruiser	11 38 40	2 42 50	3 04 10	2 59 25
Apache	11 36 45	2 31 50	2 55 05	2 55 05

CLASS 14—OPEN YACHTS 23FT. AND OVER.

Lorna	11 37 16	2 28 30	2 51 14	2 51 14

CLASS 15—CATRIGGED, 20 TO 23FT.

Fairy	11 39 22	2 30 12	2 50 50	2 48 52
Olive N	11 40 00	2 44 57	3 04 57	3 04 21
Ada	11 40 00	2 31 50	2 51 50	2 51 50

The winners are schooners Troubadour and Lotus, sloops and cutters Anaconda, Pappoose, Eurybia, Kangaroo and Vixen, and open sloops Sirene, Lorna, Apache and Fairy.

CORINTHIAN Y. C., MARBLEHEAD, JULY 7.

—The 19th regatta of the Corinthian Y. C. was sailed on July 7 over the following courses: First and second classes—From judges' line, leaving buoys 5 and 3 on starboard; buoy off Tom Moore's Rocks on starboard; stakeboat anchored 200 yards southeast of Tinker's Island on port; Half-way Rock on port; buoy on Gooseberry Ledge on starboard; buoy on Cut-throat Ledge on port; buoy on Eagle Bar on port; to judges' line, 10 miles. Third class, from judges' line, leaving buoy 5 on starboard, Cat Island Rock on port, buoy on Gooseberry Ledge on port, buoy on Cut-throat Ledge on port, buoy on Eagle Bar on port, to judges' line, 6 miles. There was a reefing breeze from E. by N., but with little sea. The times were:

Test, C H. Hathaway	24.03	2 40 05	2 36 16
Kickamint, Chas. Barker	25.04	2 50 36	2 43 31
U. S., Capt. Ricketsen	24.09	2 52 36	2 44 39

FOURTH CLASS—CATS.

Ideal, W. L. Simmons	22.00	2 36 47	2 35 42
Barbara, Irving Cook	21.09	2 47 15	2 45 36
Faust, E. S. Wright	22.06	2 46 23	2 46 23

FIFTH CLASS—CATS.

Jerboa, J. D. Hedler	16.11	2 01 21	1 58 04
Unknown, E. D. Young	17.08	2 00 13	1 58 38
Bertha, P. F. Davis	16.11	2 02 25	4 59 08
Hesper, T. Haggerty	18.06	2 01 23	2 01 23
Fedora, F. Autaya	16.09	2 11 35	2 07 55

M. F. Swift took first prize, $30; Peri, second, $15; Kelpie, $20; Diamond, $10; Rhodia, $5; Madelini, $20; Test, $20; Barbara, $15; Jerboa, $12; Unknown, $10; Bertha, $8; Hesper, $6; Fedora, $4.

SOUTH BOSTON Y. C. CRUISE.

—The following yachts of the South Boston Y. C. started on July 7 on the annual cruise: Schooners—Frolic, Commodore Arthur Fuller; Kitty, J. M. Ward; Pastime, Marshall Black, of the Nova Scotia Royal Yacht Squadron; Nautilus, N. Neville. Sloops—Diana, H. Burgess; Breeze, C. E. Paget; Good Luck, J. R. Farrell; Violet, H. J. McKee; Vidette, P. F. Burke; Belle, Theodore Harold; Volante, A. Henry Hall; White Wings, J. Choeneck; Vivid, E. G. Meres; Oma, E. S. Gibb; Raven, J. Donovan; Optic, G. S. Hutchinson; Altane, A. J. McLeod; Dorcas L., W. H. Lyman; Echo, Burwell and Isham; Emily, W. P. Taylor; Ethel, Morrill Bros.; steamer Nerita and sloops Gracie G., Tip Top, Little Dell and Maggie. The fleet arrived at Gloucester on the same afternoon.

BUFFALO Y. C. OPEN REGATTA, July 4.

—Regular club course, starting between judges' boat and Stone light, and finishing near the club house, off end of Bird Island pier, distance 15 miles. Weather fair, wind fresh from S.W.:

FIRST CLASS.

	Elapsed.	Corrected.
White Wings, A. Jarvis	2 10 44	2 10 45
Cypress, Wm. Monk	2 26 50	2 11 50
Vera, A. Ball	Crossed starting line wrong.	
Sylvia, A. Chisholm	2 25 22	2 14 31
Emma, L. G. Northrup	2 28 34	2 13 51
Viking, Gunnell Bros	Not finished.	
Ganet, R. Talmie	Not finished.	
Alarm, J. S. Provoost	Not finished.	
May Belle, D. Oakley	Not finished.	
Dandy, ———	Not finished.	

SECOND CLASS.

Caprice	2 40 05	2 40 05
St. Julian	Crossed line wrong.	
Twilight	Not finished.	
Swallow	Not finished.	
Reatha, W. C. Cowees	3 25 30	3 25 30
Kaween, E. F. Bishop	3 20 52	3 20 52
Corsair	Not finished.	

First class—Whitewings first, Cypress second, Emma third. Second class—Caprice first, Kaween and Reatha divided second and third on account of Reatha stopping to pick up the crew of a capsized canoe and thus losing time. Regatta committee, H. D. Williams, D. P. Dobbins, E. C. Roberts. Judges, D. P. Dobbins, R. W. Chisholm. Referee, Geo. M. Stowe.

PLYMOUTH REGATTA, JULY 4.

—A race was sailed off Plymouth, Mass., over a ten-mile course on July 4, the wind being strong S. E. The times were:

FIRST CLASS CATS.

	Length.	Elapsed.	Corrected.
Wanderer, A. M. Watson	22.01	2 07 07	1 31 35
White Swallow, E. W. Watson	18.09	2 13 00	1 32 40
Marion, J. Watson	18.05	2 16 02	1 35 09
Hildegarde, W. T. Whitman	19.02	2 21 16	1 41 36

SECOND CLASS.

No Name, E. R. Ransom	16.03	2 23 38	1 38 53
Fair Play, G. D. Bartlett	16.07	2 23 15	1 39 09
Carrie B., J. C. Dawes	16.02	2 26 20	1 41 25
Soltaire, S. C. Winsor	17.01	2 24 58	1 41 42
Spray, C. F. Bradford	15.10	2 29 05	1 43 30
Mayflower, S. S. Richards	16.04	2 28 51	1 44 16
Mabel, B. B. Manter	16.01	2 29 21	1 44 16
Sachem, R. Winsor	16.09	2 28 35	1 44 47

THIRD CLASS.

Jessie, I. Morton	15.04	2 28 38	1 42 02
Dexter, H. L. Sampson	16.03	2 34 09	1 49 24
Jilt, A. M. Watson, Jr	15.00	2 37 11	1 49 52
Florence, F. Rogers	16.04	2 35 12	1 50 37

FOURTH CLASS.

Helen and Willie, S. Burgess	19.10	2 05 13	1 37 51
Mayflower, J. A. Hayden	18.00	2 34 30	1 52 55

No Name fouled Fair Play at the first stake boat, the latter protesting. Catboat White Swallow ran into and sunk the sprit sailboat sailed by Capt. Delano.

NEWARK BAY Y. C.—First regatta, July 4.

Course, from off foot West Twenty-fourth street, Bayonne, to Buoy 5, thence to stakeboat near the west end of the Bay bridge, thence to starting point, two rounds, 10 miles. Weather clear. Wind, steady S.W. Tide, young flood.

CLASS 1—JIB AND MAINSAIL.

	Length.	Start.	Finish.	Elapsed.	Cor'd
Leader, Otto Row	22.04	11 02 30	1 03 00	1 58 30	1 57 00
Our Own, Vreeland Bros.	23.10	11 00 30	1 04 30	2 04 00	2 04 00

CLASS 2—CATS OVER 17FT.

Millie, Thos. Windass	17.06	10 58 30	2 15 00	3 17 00	3 17 00

CLASS 3—CATS UNDER 17FT.

Bucky B., S. Mowry	16.07	10 59 30	1 48 00	2 48 30	2 48 30
Gala Water, J. Spavin	16.03	10 59 00	Did not finish.		
Addie, A. Van Buskirk	14.00	10 58 30	1 40 30	2 42 00	2 39 25

Sweepstakes and champion pennant in each class. Winners—Class 1, Leader; Class 2, Millie; Class 3, Addie. Our Own carried away jib at first turn. Millie had the upper withe on the mast slip off. Both repaired damages and finished. Regatta Committee—E. S. Seavey, C. H. Mayhew, And. Van Buskirk. Judges—Richard Cadmus, T. J. Bird, J. L. Mott.

QUINCY Y. C.—The postponed race of June 28 was sailed on July 2, the times being:

FIRST CLASS.

	Length.	Actual.	Corrected.
Folly, J. F. Sheppard	26.04	1 29 15	1 04 43
Posey, R. G. Hunt	22.02	1 38 38	1 10 17

SECOND CLASS.

Elf, W. P. Barker		1 22 10	. . . .
Hebe, Henry Edwards	19.00	1 42 50	. . . .

SECOND CLASS (JIB AND MAINSAIL).

Diadem, L. Hayward	18.01	1 14 42	0 45 40

THIRD CLASS.

Elsie, C. F Hardwich	16.06	1 12 08	0 45 35
Rocket, Secretary Faxon	16.03	1 13 10	0 43 19
Flora Lee, E. B. Glover	16.09	1 13 09	0 46 52

FIRST CRUISER CLASS.

Trackless, J. W. Sanborn		1 19 27	. . . .
Maisie, J. H. Slade	19.05	1 22 17	. . . .

ATLANTIC Y. C.—The programme for the cruise is as follows:

The fleet will rendezvous July 14 at Whitestone, L. I., and get under way for Black Rock, Conn., at half-past 9 o'clock. Here they will remain at anchor over Sunday, and divine service will be held on one of the yachts. On July 16, upon a signal from the flagship, the fleet will proceed to New London, thence to Shelter Island on the 17th, Stonington on the 18th, Newport on the 19th, and New Bedford on the 20th. At the last-named port final racers will be issued. There will be two divisions of the fleet during the cruise, all schooners and classes 1, 2, 3, 4 and 5 of sloops forming the first, and all others the second division. In all races the latter will start fifteen minutes in advance of the former. The daily runs will be trials of speed for all classes, and the first yacht arriving at the destined port will take its own time and that of the others and report the result to the Commodore. The run from New London to Shelter Island will be a special race, for which prizes will be offered. Members and guests desiring to join yachts at Whitestone can take trains of the Long Island Railroad from Hunter's Point. Those joining at Black Rock take trains to Bridgeport and then stage to the George Hotel, Black Rock.

THE ROCHESTER Y. C.

started on its annual cruise on Saturday to Niagara-by-the-Lake. The fleet consisted of the flagship Majel, under the command of Com. Newell; Madge, Capt. Goulding; Edith, Capt. White; Ripple, Capt. Tomer; Amelia, Capt. Schirck; Gem, Capt. Tripp; Velinette, Vice-Com. Walbridge; Florence, Capt. Turpin; Armada, Fleet Capt. Leary. The wind was N.W. and strong, with quite a sea on, and the yachts were obliged to reef, which made the windward work slow and tedious. At Niagara they meet the Toronto and Hamilton clubs. Among other attractions arranged for the occasion are a regatta free to all yachts for a handsome silver cup, and a ball at the Queen's Royal Hotel in the evening. That the Rochester yachtsmen will have a good time is an assured fact, as they are the guests of the Toronto and Hamilton clubs. The Rochester fleet will sail for home on Thursday, and if the wind is right will reach port by night. The first regatta will occur on July 23, the date of the L. Y. R. A. circuit race. The committee are busily engaged making preparations for the event, which will eclipse anything of the kind ever held here. The Madge will make the entire circuit and will be manned by members of the Rochester Club.

NEWARK BAY Y. C.

—The officers of this new club are: Com., Thos. Windass, catboat Millie; Vice-Com., John J. Vreeland, open sloop Our Own; Sec., L. S. Seavey, Bayonne, N. J.; Treas., Lewis Bonney, steamer Pearl; Meas., C. S. Braine. The club will sail its second regatta on Aug. 6 over the course on Newark Bay, starting off Bayonne, and a third regatta on Sept. 3, both being open to all in five classes. Catboats under 17ft., catboats 17ft. and over, jib and mainsail 20 to 25ft., cabin sloops 30ft. and under, and cabin sloops from 30ft. to 40ft. Entrance fee in the catboat classes $3, in the other three classes $5. Sweepstakes and handsome prizes in each class, second boat in each class to save her entrance fee. The course is from the club house, around Buoy 5, near Newark Bay Light, thence to markboat near the long bridge and home, 5 miles; with 6ft. of water at low tide over all of it.

THE LAUNCH ENID.

—The naphtha launch Enid was lately run down by the steamer J. W. Baldwin off Newburgh, two ladies on board being drowned. The collision was due to the steersman of the steam launch. The coroner's jury rendered a verdict to that effect, concluding as follows: "We are of the opinion that the proper authorities should classify naphtha, electric and other motor-power boats the same as steamboats, thereby avoiding the claim of naphtha and other craft that they are not subject to steamboat laws, so that parties in charge of these boats can be held responsible for their acts. We also deprecate the practice of inexperienced, incapable, and unlicensed parties assuming to run boats on our navigable waters."

THE KEEL AHEAD.—It seems now as though the sole interest of the present season was to be centered in the 40ft. class, and that the racing will show a decided triumph for the keel craft. The smallest of the keels, Pappoose, has disposed already of her two New York rivals, and though Nymph may be improved by the new rig she will get in Boston, and Banshee would be the better for a new suit of canvas, it would seem from what Pappoose has done that neither has much show with larger, newer, and presumably faster boats, such as Baboon and Xara. It is a curious sequel to the attempt to popularize the largest class of yachts, both schooners and singlestickers, that the racing is virtually dead in all but the smallest classes, while in these it is specially active. Some sport is promised for the Goelet Cup race, Sea Fox, Grayling and Sachem have a score to settle, while Shamrock and Katrina have yet to meet; but when the record of the season is fully made up it will be seen that the big boats make but a meagre display and the honors will go to the winning boat of the 40ft. class.

SOME STATISTICS.—*Editor Forest and Stream:*—The new club book of the Corinthian Y. C., of Marblehead presents a remarkable showing of the growth in popularity of cutters and keels. Out of 18 yachts ranging from 30 to 109ft., there are 12 keels and only 6 centerboards, of the 12 keel boats, 9 are cutters. In the next class 25 to 30ft. sailing length, there are 31 single stickers, of which 24 are keels, and only 7 centerboards. Among the keels are 11 cutters. In the class from 21 to 25ft. length, there are 27 single stickers, of these 18 are keels and only 9 centerboards. Among the keels are 9 cutters. The last class from 16 to 21ft. includes mainly catboats. Yet even among these 46 small crafts, we find no less than 17 keels, among them 7 cutters. 26 cutters and 71 keels in a single club! Who says cutters and keels are not booming. At the present rate of increase, the centerboard will soon be a thing of the past in such smart clubs as the Corinthian. While we are abandoning the board in America, our cousin John Bull is trying to take up our cast-off clothing as a new and meritorious idea.—FACTS.

CANARSIE Y. C.—A race was sailed on July 4 by the following boats: Cygnet, 24ft., F. H. Gallagher; So So, 20ft., Dave Van Wicklen; Ethel, 18ft. 9in., F. G. Kallenbach; Amaranth, 16ft. 4in., Phil Ketchum, and Edda D., 18ft. 7in., Chas. Henrichs. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Cygnet	4 04 30	5 26 00	1 21 30	1 21 30
So So	4 05 00	5 24 00	1 19 00	1 15 30
Edda D	4 06 00	5 35 00	1 29 00	1 29 00
Ethel	4 05 15	... ...	... ...	... ...
Amaranth	4 05 30	5 34 30	1 29 00	1 28 25

OYSTER BAY Y. C., JULY 4.—A race was sailed on July 4 over a 20-mile course for the challenge cup held by Meteor for two seasons, the entries being: Indolent, S. V. R. Cruger; Iseult, Chas. W. Wetmore; Nadjy, A. P. Montaut; Dodo, E. M. Townsend; Meteor, Wm. Trotter, Jr.; Eleanor, Wm. J. Youngs; Orion, F. H. Underhill, and Mist, Jas. Roosevelt. Eleanor finished first, but was protested by Meteor, the protest being sustained; so Meteor retains the cup permanently.

SEAWANHAKA C. Y. C. CRUISE.—The fleet of the Seawanhaka C. Y. C. was at anchor by the afternoon of July 2 at the rendezvous in Oyster Bay, the flagship Sea Fox, Medusa, Regina, Ruth, Mischief, Iseult, Elma, Merlin, Gracie, Banshee, Yampa, Ray, Bedouin, Bertie, Gaviota, Avalon and Katrina. On July 3 a garden party was held on the grounds of Mr. John A. Weeks, with a ball in the evening. On the following day, at noon, the fleet sailed for Black Rock.

GREAT HEAD Y. C. ANNUAL CRUISE.—The fleet of the Great Head Y. C., including the following yachts, sailed on the morning of July 7 from Great Head for Marblehead and Gloucester: Vivid, Com. H. E. Turner, Jr.; Rowena, A. E. Sears; Great Scott, C. B. Belcher; Water Lily, Frank Ferdinand; Erminie, F. M. Haley; Clytie, E. A. Cook; Zoe, W. A. McField; Virginia, Harry Hutchinson; E. W. D., Ed. W. Dixon.

GITANA AND ADRIENNE.—The regatta committee of the Eastern Y. C., on protest of Mr. Lancaster, owner of Adrienne, reversed their first decision giving the prize in the E. Y. C. regatta to Gitana, and declared the other the winner, whereupon Com. Weld, owner of Gitana, tendered his resignation as commodore and also as a member of the club.

PORTLAND Y. C. CRUISE.—The fleet of the Portland Y. C. was at Harpswell, Me., on July 1, including the following yachts: Viva, Com. Bray; Gracie, ex-Com. Senter; Willie, Capt. Gored; Clarence, Capt. Jones; Juno, Capt. Stone; Sachem, Capt. Stevens; Undine, Capt. J. P. Thomas; Lorelei, Capt. Longfellow.

NORTH SHREWSBURY.—A good race was sailed on July 4 in a fresh S.W. wind, Lulu being first in the cabin class, with Winifred second. Nedaya and Iroquois were first and second in the first class, Annie B and Wm. Mount in second class, while Little Spot won in third.

CEDAR POINT Y. C.—The postponed race of June 28 was sailed on June 30, over a 15 mile course in a very strong wind. The winners were: Class E—Hebe, Langdon Ketchum; Class F—Amateur, Francis Burrett; Class K—Compo, Ernest Brady.

CAPE ANN Y. C.—A race was sailed July 4, Trudette and Evelyn winning in the special class; Black Cloud, Hustler and Helen in the first class; Alpine, Sassacus and Spark in the third, and Doctor, Wiverna and Rocket in the fourth.

STRANGER, cutter, Mr. Geo. H. Warren, is now fitting out with a jury rig for the passage to Southampton, her spars having been sent by steamer. Mr. Warren lately sailed for Liverpool, where he will reside in the future.

DAUNTLESS, schr., Vice-Com. Colt, N. Y. Y. C., ran aground on Spring Point Ledge, off Portland, Me., on July 3. She was hauled off by a tug next day and docked, having been considerably damaged.

ALERT, schr., Mr. Henry Bryant, was out on July 7 for a trial trip, afterward sailing for a two weeks' cruise, with Messrs. Henry and John Bryant and a party of friends.

BEVERLY Y. C. JULY 4-7.—The winners in the 127th regatta were Mattie, Mist and Daisy. In the 128th regatta they were Atalanta, Witch, Holden, Wraith and Psyche.

CHAUBUNAGAUNGANAUG Y. C.—This club sailed a pennant race on July 4 in a good southwest wind. Siren won in first class, Mischief in second, and Elf in third.

BRENDA, sloop, while at anchor off Sandy Hook on July 2, was struck by the steamer St. John, losing her bowsprit and boom and seriously injuring one of her crew.

EASTERN Y. C. CRUISE.—The rendezvous will be at Marblehead on July 13, the cruise probably extending as far as Bar Harbor, lasting about ten days.

ARRIVAL OF CORONET.—On July 6 the schr. Coronet, Mr. R. T. Bush, arrived at San Francisco after a voyage of 106 days from New York.

PLEON Y. C.—In the regatta of July 4 R. C. Bridge's boat won in first class, with Lethman and Chapman's boat in second class.

THE FIFE 40-FOOTER.—Capt. Chas. Barr is now at work fitting out the new 40-footer at Fairlie for her Atlantic voyage.

MIGNONETTE.—This centerboard cutter, owned by the late Dr. Loring, has been sold to Mr. Henry Stanton, N. Y. Y. C.

BONNIE BAIRN.—Pryor, of Boston, is now finishing a small cutter by this name for Miss Fiske, of Newport.

WONA, cutter, has been sold by Mr. Cunningham, of Gloster, to Mr. Frank St. John, Atlantic Y. C.

Answers to Correspondents.

J. C.—The only way to stop them is by giving an abundant supply of fresh meat diet.

C. A. J.—The weight of gun must depend on your build. The 7lb. will perhaps be the better.

H. E. M.—This is not the season to sow wild rice to advantage Sow in late fall or very early spring.

BURNT BLUE, Cleveland.—We can only recommend you to the regular dealers who advertise the goods; they are reputable firms.

L. A. J. Sandwich, Mass.—The seal bounty provided at the last session of your Legislature is $1, payable by the town or city clerk, on production of the tail of the seal.

D., Rochester, N. Y.—1. What are the dimensions of canoes in classes A, B, C, I., II., III., of canoes? 2. Should a black and tan terrier have dew claws on hindfeet? Ans.—1. You will find full rules for canoes in Canoe and Boat Building, Canoe Handling, and in the annual book of the American Canoe Association. 2. Dew claws are occasionally seen on all dogs, they are easily removed.

Warren Rawson, the well-known market gardener of Arlington, has just returned from the Rangeley Lakes, where he spent the last ten days fishing, and he has a fish story to relate to his friends that assures him of an attentive audience anywhere. Hitherto the rule has been that it was the biggest fish that escaped. Mr. Rawson had a different experience, and this is the way he tells it: "The second day after I got up to the lakes I started out about 4 o'clock in the morning to try the trout. It was a good morning for fish, and I got one or two right off. Then I struck a three-pounder on the leader. He was a game fish, and I had a pretty little fight before I got him near the landing net. My guide was just going to put the net under him when away he went again, pulling like a whale, or rather a pair of whales, for just as he went away I got a glimpse of another big fish on the follower. Then I did have a fight. I was an hour and a quarter tiring out those fish, and they hailed me from the hotel and asked me why I didn't tie 'em up and come into breakfast. But I got them to the net at last, and found that I had an eight-pounder on the line beside the original three-pounder. The eight-pounder had taken the hook just as we were taking in the other." Mr. Rawson brought the fish home and had them photographed. They are handsome fish, and Mr. Rawson is very proud of his double catch.—*Boston Advertiser.*

Edition Illustrated Catalogue, 150 pages.
Brimful of new and improved apparatus.

The Amateur Guide in Photography.
THE REVISED EDITION
Is the most comprehensive treatise for the beginner ever published. It is not an advertisement for the publishers' goods, but is filled with advice and valuable information gleaned from a knowledge of the beginner's requirements gained by constant contact with students in Photography, while acquiring their knowledge of the art, extending over a period of seven years. Sent, post-paid, on receipt of 25 cents.

THE STANDARD WORK ON THEIR
MANAGEMENT AND DISEASES.
Price $3.00.
For sale by Forest and Stream Publishing Co.

Charles Daly 3-Barrel.

The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, $5.00
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

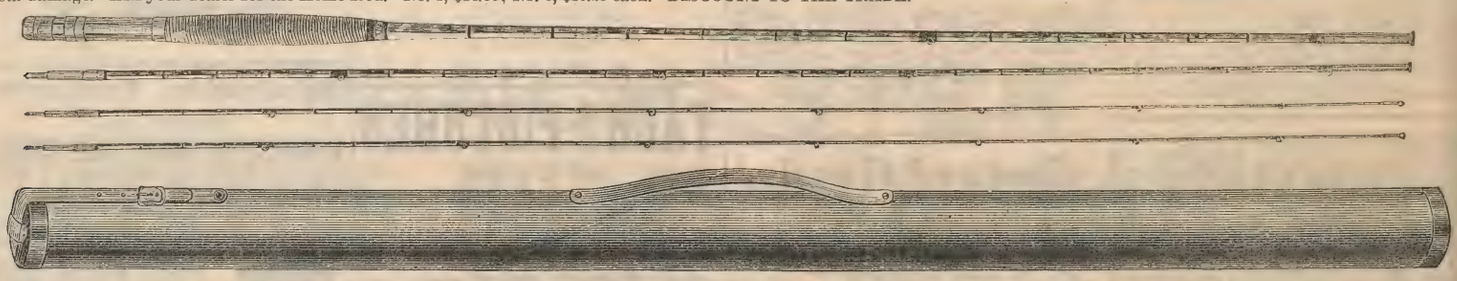
Fishing Tackle Department.



We wish to call the attention of Dealers in Fishing Tackle throughout the United States and Canada to the fact that we have recently purchased their entire stock of GUNS, PISTOLS AND FISHING TACKLE from Messrs. John P. Moore's Sons, and shall continue the business at 302 Broadway and 84 Duane Street. There being no time to get out a New Catalogue of Fishing Tackle for this season's trade, we have decided to use J. P. Moore's Sons' Catalogue, fourth edition. TO THIS CATALOGUE we have just issued a New Discount Sheet and Supplement. Dealers who have not the above Catalogue will please send for it. If you have it send for Supplement and Yellow Discount Sheet. CATALOGUES TO DEALERS ONLY.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 19, 1888.

VOL. XXX.—No. 20. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

KENNELL AUTOCRACY.

SUPPOSE that the North American continent were submerged until only ten square miles remained above water. Suppose that a thousand dogs should survive the flood. Suppose that the owners of these dogs should form themselves into a club with an executive committee or a board of control. Suppose that this executive committee or board of control should decree that all dogs in the ten-mile strip should be subject to the club's decrees. Suppose that some officious individual should issue notice that no field trial club might be formed in the southern five miles of the ten, nor any new dog club of any character in the entire ten square miles. Suppose all this; and we have here an ideal and delightful ten-mile dog-in-the-manger elysium, free from opposition and antagonism.

There is no gainsaying that on a ten-mile island such a system of kennel autocracy would flourish to the satisfaction and advantage of all concerned. But it is an equally impregnable proposition that in a continent of eight and one-half millions of square miles it cannot be made to work; and the man or set of men who may try to create and enforce it, by so doing simply make a display of their foolishness. It is not a whit less foolish to see in every movement to establish new kennel clubs of various kinds something which shall work disastrously to the interest of existing clubs. Thus we have lately heard the Southern Field Trials Club denounced, on the puerile pretext that it was gotten up to "pull down" the American Field Trials Club; and now we have attacks on the new National Dog Club of America, which are based on a like dog-in-the-manger apprehension.

This notion, that where one club exists in a great country like ours no other club has any justification for its being, is not by any means new doctrine, but it is not a doctrine shared by the general public. There is recognized room for more than one kennel club in this country; it was, in fact, the recognition of the demand for these two new clubs that led to their formation. The demand still holds good, and so long as there remains room for the Southern Field Trial Club, and for the American Field Trials Club, and for the National Dog Club of America, and for the American Kennel Club, they will all flourish. We believe in the old adage which exhorts to live and let live; and we repeat our friendly suggestion to those who stand aloof, that it would be in better taste to join in the feast and partake of the good things with their fellows in harmony and good will.

AT THE NEWARK TOURNAMENT.

THE recent gathering at the opening fest of the International Sharpshooters' Union was a notable one. It was the largest congress of off-hand marksmen which has been held in this country, and the work done under the untoward weather conditions which prevailed such as to show that in respect to accuracy there is little left to be accomplished by the artisan in the rifle-making craft.

A visit to the shooting shed of the Newark Park would have been a revelation to some who are not familiar with what peculiar sorts of devices are provided to secure good targets under the general condition of off-hand shooting. There were hundreds of rifles on the racks which would be barred off of any open range run under the Creedmoor rules. To be sure, the heavy weapons of precision which go under the head of rifles at the old style muzzle-loader tests were wanting, but between that class and the less than 10lbs. weight class required under N. R. A. rules there is a wide field in which the Newark rifles were found.

Custom has made the rest for the left hand a recognized part of the weapon at these shoots. By it the rifleman is enabled to get a steady hip rest to such an extent that off-hand shoulder shooting is reduced to a sort of off-hip shooting, and a mid-barrel support of the most pronounced sort is secured. At present any sort of a position where the body is not leaning up against a fixed support is called an off-hand one, but there are many differences, and the two extremes are to be found in the military position with left arm fully or nearly extended at one end, and the cramped up body twist which the expert German point target shooter under Schuetzen fest rules knows so well how to assume at the other. In reading the scores, and in noting the results of this or another shoot, these conditions and these extra appliances and adventitious aids to aim-taking must be regarded.

The objections to all these devices are that instead of simplifying the art of shooting they tend to complicate it. What is wanted is the simplest sort of a weapon to be used in the readiest sort of a way. The rifle in the soldier's or the hunter's hands is the type of what such an arm should be. Everything which departs from this simple standard is to be avoided. A cartridge with its patch and its need of extra lubrication, a sight which does not admit of the readiest possible sort of adjustment, and a rifle which is so heavy that its weight must be transmitted via a hand-rest down to the hips, all come under the category of unnecessary and unwise complications.

Granted that each and every one of these assist very materially in pushing the score up to the highest possible notch, but when it has reached that point all that has been proven is that the gun maker has produced a perfect piece of mechanicsm. What is then needed is to find out just what the shooter can do under conditions as near as may be to those which he will meet in actual practice on the field of battle or after game in the open. Imagine for a moment a company of soldiers trained only in ball practice with the class of rifles seen so largely at this recent fest, and compare their training with that of a squad using only the service weapon under service conditions, with open sights and the sharp, quick methods of sighting and firing in use at a garrison range.

Entirely apart from these points of criticism, there is much to be said in favor of the work done and to be done by the enthusiasts of the Sharpshooters' Union. In their endeavor to get the best results they may go beyond the line of practical field weapons into that of mere score-producing machines. At the same time they are working out in a practical fashion many of the problems of small arm work. In loading, the most exact shooter passes his bullet down from the muzzle and plants it at an exact spot above the cartridge chamber with a measured rod. Then he turns the rifle about and inserts the powder-charged shell. In this way he gets an accurately centered bullet which he could not get or at least which he so far failed to get from the metallic cartridge loaded in the usual fashion. Here is a hint to the makers of both rifles and cartridges. The question of the cleaning of the barrel or at least the leaving of it with exactly similar conditions after each shot is another point of practical gunnery which these men are working up and have about settled.

The long-range military rifle, which is a very recent product, was made possible because of the small-bore enthusists who fought out the Elcho Shield competitions each year with improving weapons until the international matches came on to give this branch of marksmanship a grand lift. The off hand military weapon of to-day is not entirely satisfactory. Its improvement is to come from the data which Farrow and the scores of men who shot from the same shed with him at Newark are so earnestly heaping up. To the rifle maker the fest can be studied with profit, but it must not be taken as an exhibition of off-hand shooting as our soldier and hunter readers would understand the term.

DEATH OF CAPTAIN COFFIN.

CAPT. ROLAND FOLGER COFFIN, for many years yachting editor of the New York *World* and the *Spirit of the Times*, died of heart disease, last Tuesday. He was with the Atlantic Yacht Club at Shelter Island, and was engaged in writing a report of the cruise for the *World* when he fell back in his chair dead. Capt. Coffin entered the merchant marine at an early age, was for years a master of sailing vessels, served in the navy during the war, and in 1869, giving up sea life, entered upon newspaper work. In the intervals of leisure on long voyages he had mastered the art of short-hand writing, and in the odd change from sea captain to reporter he soon demonstrated his versatility. The wide and varied experience and information in nautical affairs gave him peculiar fitness for reporting such matters, and his worth found prompt recognition. He had stored up a vast fund of sea lore and sea stories, which he turned to good account; his "Sea Yarns" contributed to the *World* and to various magazines were republished in book form and have had wide popularity. He was also the author of a history of the America's Cup, published by the Scribners.

Capt. Coffin was a charming conversationalist; his cheerful disposition and good fellowship always won friends; and he enjoyed the esteem of a host of acquaintances.

THE LARGEST ADIRONDACK TROUT.

WE have received from Mr. A. Ames Howlett of Syracuse, N. Y., who is now at Cranberry Lake in the Adirondacks, a portion of a window shade, on which is drawn the outline of the largest recorded brook trout caught by an angler in Adirondack waters. The fish was taken by Mr. Howlett on the inlet of the lake, on July 10. It was weighed and measured in the presence of Mr. Chester S. Lord, managing editor of the New York *Sun*, Mr. J. Earl Knox, of New York, and guides A. C. Thompson and Geo. Bancroft; and the signatures of all these persons are added to Mr. Howlett's to attest the correctness of the data given. The fish weighed, when taken from the water, and weighed on three different scales, 5lbs. 14oz. Five hours after it weighed 5lbs. 8½oz. Its length was 21⅝in.; depth, 6in.; thickness, 3½in.

In the FOREST AND STREAM of June 23, 1887, Mr. A. N. Cheney reported a trout of 6½lbs. which had been picked up dead on Loon Lake; and reference was made to two other large fish, one 5½lbs. and the other 5¼lbs., caught in St. Regis Lake. In our issue of July 7, 1887, Mr. Howlett recorded the taking of a 5lbs. 13oz. trout in the Oswegatchie River, by Mr. Mills, keeper of the State dam at Cranberry Lake. According to the record, then, Mr. Howlett with his 5lbs. 14oz. fish is ahead. He has promised to send us a detailed account of his experience with the Cranberry giant.

ELWOOD R. NARNY, Fish Commissioner for Delaware, died at his farm near Odessa, Monday, July 9, of paralysis. He was one of the most active members of the Legislature in 1867 and 1 the father of the "Bona Fide Citizen" bill, designed to protect Delaware oyster beds against Jeseymen, who claimed citizenship there for revenue only.

The Sportsman Tourist.

IN THE VALLEY OF THE SERPENTINE.

NEW WESTMINSTER, B. C.—Some communication from this far distant sporting ground may be interesting to readers of the FOREST AND STREAM. Both forest and streams are plentiful here, extending to and even within the civic limits. Finest stream of all, the Fraser River, half a mile broad, flows deep and swift, laden with gold dust, past the wharves, where the C. P. N. steamships and smaller craft are moored, down to the Gulf of Georgia. But more gold might lie upon its surface than in suspension did our citizens but know it and the Dominion Government were patriotic enough to do their duty; for if the channels were surveyed and a chart properly drawn out, it would be seen that in New Westminster Canada possesses the finest river port on the Pacific coast. But the inhabitants lack sufficient enterprise; Ottawa is too far away, and the interests of the C. P. R. just now are centered in booming Vancouver, their other terminus, in whose salt waters the barnacles cling yet more tenaciously to the ships' bottoms and the *torredo* worm dieth not.

And it is left to a greenhorn (in local parlance tenderfoot) to relate experience in this royal city. No phenomenal bags can he record, no harrowing accounts of narrow escapes nor thrilling adventures. His sport has hitherto consisted of little else than the fun of the thing. A few years ago his sole knowledge of a gun was that of a Rifle Volunteer at target practice in Yorkshire, extending from the dark ages of the muzzleloading Enfield, not a very long time ago, through the partially civilized Snider period, up to the enlightened days of the Martini-Henry. Not a very good training for snap shots with a shotgun, as many a duck or grouse has since proved to its entire satisfaction. Whirry much so to the latter, and the former have quacked more than ever they had need to quake.

One afternoon a party of four were observed by the curious Celestials, who lined the river bank, grouped upon the deck of the gallant steamship K. de K., waiting to be ferried from the salubrious precincts of Chinatown, across the Fraser to Brownsville, on the Surrey side. In English sporting papers it would be counted three guns; for one of the party was minus that instrument of pastime. But this inequality was more than counterbalanced by the possession of a tail, which certainly did more execution and was less dangerous to its possessor. He was a dog. For the matter o' that, more by his own good luck than the good shooting of his master, he is a dog yet.

The K. de K. is the idol of New Westminster, and is unique of its class. The boys say it can be worshipped without fear of sinning, for it is not made in the likeness of anything that is in heaven above or in the earth beneath, or in the waters under the earth. We might have been worse supplied, however, for it landed us safely at Brownsville, and we soon commenced our eight-mile trip to Holmroyd, in the valley of the Serpentine River.

Soon after leaving the landing the Scott road turns off at right angles, down the Fraser valley to the Delta flats. It was here that a settler, not one of the flats, returning home one night with his Winchester over his shoulder, saw a bear's head pop up over a log. He fired and down it went. Immediately it popped up again, and another shot settled it. Eight times in all did that blessed bear stick up its cocoanut, like an animated jack-in-the-box, and every time it was shot down, until the magazine was empty. Then it rose up no more, and the settler climbed the log to count the bullet holes. There he found eight bears, all stone dead. He was so scared that he banged down his rifle, and cut full speed to the hotel. You needn't believe this tale unless you like. But if not the naked truth, it's a bear story. It's a pity, however, the Winchester magazine not was full, for then we might have made it sixteen bears. We are not particular to a bear or two in British Columbia.

The Yale road climbs obliquely up the gravel ridge in a northeast direction, and probably at a lower level the projected Westminster Southern Railway, to connect the C. P. R. R. with the American lines, will run in the same direction, but taking a wider sweep at a considerably lower gradient, round the spur of the hill. Land is booming on the chances of it. The summit once gained, about two miles from the city, the road runs pretty level until it begins to dip into the Serpentine valley. There are chances in plenty of a shot at rabbits (small hares) along the road, and the dogs will be sure to put up several grouse or wood-partridges in the bush. In the green timber, through which the road runs for two miles, there is a noted spot where a blue grouse may generally be seen; and in summer look out for bears among the berry bushes. There is always a chance, too, of coming across a cougar, panther or mountain lion, all terms used here for the same animals, and even a wildcat's skin is not to be despised. Our party had several shots along the road, but were too noisy for better sport. Just before the eight-mile post, the Coast Meridian road turns off from the wagon road, due south, to the American border, striking the 49th parallel at the coast, at Blaine, W. T. Hence the name.

About 500yds. down the Coast Meridian stands Holmroyd, the present destination of our party. I am very fond of Holmroyd. It exists chiefly as a memorial of heavy pecuniary losses, and of failures and follies in management; but somehow the biggest fool in a family is generally most loved. (Please note that I was not a particular favorite at home.) The bears took twelve hogs one season, always the best bred and fattest, thereby showing their appreciation of points in stock. The panthers took a whole cow, and one persevering individual got away with thirty-six chickens and turkeys before he was shot. As for wildcats, their musical cultivation of the muses was as little amusing as their nocturnal concerts within the mews of crowded cities. So farming didn't pay at Holmroyd. At least not to its two-legged occupiers.

The ladies had preceded us two or three days, and as we crossed the orchard, our olfactory nerves were tickled and by no means displeased at the preparations for a welcome meal. After dinner we went down to the bridge, the tide being propitious to fish for trout. I am no angler, and if any such expects to read of wading among boulders, whipping the stream and gallant execution with the landing net, he will get left. We have nothing of that sort on the Serpentine. You cut a long willow switch, tie some small cord at the end, fasten on your hook, look around for a grasshopper, fix him as naturally as possible, let him feel the water, and he does all the rest for you. You haul out your fish, and when you have got enough, put it in your potatoe sack, or whatever else you have handy, and go home and cook it. That is all. The eating of it follows, as a natural conclusion. Not much romance about that. Please don't be disgusted. The fish eat, or rather get eaten, just as enjoyably as if caught in any other way.

My first throw was a failure. The fish also are epicures, and my first grasshopper was not dipped to suit them. He was an old stager, a regular hardshell, and they prefer them green. So I changed my convictions, collared a nice juicy young jumper, and watched with great interest his antics on the water. I remembered Dr. Johnson's definition of an angler—"A worm at one end of a line and a fool at the other." But my line was green at both ends. I lit my pipe and meditated on the capital and labor question. Here was I, after a good dinner, enjoying life and a smoke at my pleasure, which was capital. Here was a green hopper, struggling hard for his life to keep his head above water; that was hard labor. It needed no prophet to differentiate. Somebody under the bridge was studying with interest the labor question. Coming to a conclusion sooner than me, he made the first grab. I nearly lost my line; and that represented risk. But, like a bloated capitalist (I certainly had enjoyed a good dinner), I landed my profit. It was "fishy" certainly; but is it not often so? As for the poor grasshopper; why the labor market is always overstocked, so I hooked on another. "Hop on, hop ever," is labor's maxim, and the capitalist's hopper soon gets filled. Did you ever eat trout boiled with parsley in a frying-pan? No! Well, just try it, that's all. Only first catch your trout, and then cook it.

As it was dark, a heavy splash or two startled us, as a muskrat crossed the stream; a few distinct quacks, not New Westminster medical men, but Mr. Drake evidently talking in his sleep, held out hopes of better acquaintance on the morrow; a heavy crane winged his way up the river; and as the twilight is very short here, of no account whatever, we wended our way back to the farm, half a mile away, to roost. Blessed nights of British Columbia! However warm the day, every evening the wind blows cool from the snow-tipped mountains; we are soon embraced in the folds of our welcome blankets; the 'squitoes cease from troubling and the weary are at rest.

A YORKSHIRE HALIGONIAN.

[TO BE CONTINUED.]

RUNNING THE BRULE.

IT had been raining for a week, more or less, as it is liable to do in this region in the spring months, and all this time I had pulled out my pocket aneroid a dozen times a day to discover the minutest signs of a let-up, for since this trip down the Brule had been planned, Ed, the leader of the expedition, the commodore, and I, continued to wax impatient to a degree that need not be enlarged upon. So while the barometric pressure seemed to be glued to a certain point we smiled—perhaps gloomily—but smiled nevertheless, and the while bethought ourselves of some little necessity that had not occurred to us before, calculated to make the intended trip more safe and comfortable. A stout boat, built for the purpose of floating down the stream or running its rapids, as the case might be, and kindly lent us for the occasion, had been shipped to the care of Charles Lord, at White Birch, days before, and awaited our arrival there; so that when the tired rain ceased to trickle or drizzle, all we had to do was to dump our packs into a wagon and drive down to the depot of the C., St. P. M. & Omaha and be off.

The Brule River flows into Lake Superior, through Douglas county, Wisconsin, and takes its rise within a gunshot of one of the feeders of St. Croix Lake—a contributor to the Mississippi system. It is one of the finest trout streams in the Northwest, indeed its adaptability for the breeding and conservation of trout, owing to the remarkable springs of cold, pure, sand-filtered water which continually bubble up from subterraneous depths and feed it from its source to the rapids, is phenomenal; and not only Wisconsin sportsmen, but sportsmen of national reputation—Secretary Vilas for instance—have known and fished it for years. Though not now what it once was when in an inaccessible wilderness, it is still prolific, so that any one willing to submit to the inconvenience of fishing beyond the steps of a comfortable club house can yet get literally his fill of trout.

Arriving at White Birch we found the captain's boat all right, but an unexpected impediment to our progress presented itself, for the ferry we expected to find here to enable us to cross the lake was on the other side, and some little difficulty was experienced in convincing Mr Lord that it was the proper thing to do to let us go any way. Our credentials, however, from one of the members of the Eau Claire Club, and a reasonable fee decided the matter, and a stout sailor with one of Lord's sons were dispatched for it in a small boat. Pending its arrival we amused ourselves observing the great number of suckers with which a little creek flowing into the lake close by was alive, on the way up to spawn. We captured some of them with our hands, only to let them go again, however, as this was not the kind of fish we were after. On the other side of the lake Lord's son showed us a young fawn that had been captured and corralled. She was intensely alive as she turned her startled eyes upon her visitors, but her confinement had told sadly upon her, for though beautiful she was exceedingly thin.

Our nine mile drive over the sandy barrens of this region was strange but not interesting. A falling barometer indicated wind or rain, or both, and the subject of the greatest interest to us was whether we should be able to reach the river and make camp before the promised bad weather set in. This problem was solved, however, in a very pleasant manner by the courtesy of some Eau Claire gentlemen—one of them, a Mr. H. H. Davis—who had lately established a club camp at the point we were to put our boat in, and whom we so opportunely happened to meet here. They kindly permitted us to use their camp that night and saved us the necessity of making one of our own, which gave us plenty of time to put our boat in the river, no slight task, as it had to be hauled some eighty rods through a swamp impassable for teams, and also time to catch a good mess of trout for supper—about thirty, averaging six inches—and I will say that I have seldom enjoyed a meal more or spent a pleasanter night in camp. The threatened bad weather passed us by and the morning dawned beautifully amid the cheerful songs and chatter of innumerable birds, furnishing an accompaniment to a breakfast (also of trout) than which I know of none more pleasant or recreating.

The trail from the camp to the landing, from where our voyage commenced, opens out upon one of the spring-fed bayous or lakes peculiar to this stream, and which makes it such a remarkable winter resort for the *Salmo fontinalis* (indeed this seems to be one of the very fountains from which the little salmon takes its classic name); and one of the springs that feed it was detected quite near the landing, bubbling up from below. Nothing can equal the beauty and transparency of the water in these lakes or bays; more lucid than glass, it leaves the minutest part of the bottom exposed to view, so that objects can be distinguished under the surface at just as great a distance as on land, and but for the familiar phenomenon of refraction just as distinctly. The next day we literally chased a school of trout in one of these spring lakes, driving them here and there as one would a flock of geese; but when we tried to head them off and drive them into the river, they gave us the slip quite easily and compelled us to give up the sport. While on the subject of these spring lakes, I must record our great regret that we missed one of the most important ones entirely, one called Pequearise, in which, we were told, there were much greater springs than any that we saw. The entrance to it, however, had been artificially concealed by interested parties, though why it is hard to imagine, as there can be no harm in seeing things that one passes by.

We commenced to fish the stream pretty thoroughly, that is as one fishes other streams, in one place until there is no trout left that care to rise to bait or fly. This, by degrees, we found to be impracticable here, for were we to catch all we could in some one spot we would have too many fish in the first place, and in the next we could not move as fast as was thought necessary; hence we gradually adopted the plan of drifting down with the current, one or two only fishing here and there until we came to a place where they were very plenty, when we would tie up to bush or tree and all fish until some one cried enough. In this leisurely way we had made ten or twelve miles of river, when it was four by the watch, and we were waxing hungry, and it commenced to rain. It was either that this location was particularly favorable, or, on account of the rain, that the fishing was unusually good here, so that although the conditions were not altogether what could be wished, owing to the swampy nature of the banks, we concluded to camp here in order to keep our traps, or what our Eastern brethern like to call "duffle," from being thoroughly soaked. This point was soon secured by pitching our tent and getting a fire blazing comfortably in front of it, after which we made quick work of getting a plentiful supply of spruce boughs and arranging them into the most approved feather bedding imaginable. The trout for supper fried in pork fat with onions and potatoes, proved even more relishable than in the morning (we had abstained from the noonday meal and were hungry), and supper being dispatched we took the rest of the time to counting, cleaning and preserving our catch. Net result after eating was about 250 trout, and then we had not half fished, and had made it a point to put back all the uninjured fingerlings. The night turned cold instead of rainy, much to our gratification, as we were anxious to preserve all our trout for friends at home, and this result was secured by leaving them packed in the moss of the swamp during the night, removing them carefully with as little handling as possible to the fish-box of the boat next morning.

The day, as before, dawned beautifully, giving every indication of the pleasant weather which continued during the day. The fishing in the morning proved just as good as the day before and by noon I had put up my rod with the satisfied feeling that I had never enjoyed before, viz.: that for once in my life I had my fill of trout. We were, in fact, in what has, in our little circle, been often called "Captain McDougall's paradise." Seventeen years ago, while master of one of the Transit Line steamers—the China—(if I remember right) he discovered this place, and wintered in Duluth the next season as much as anything for the purpose of fishing the Brule. Not without great hardship he packed himself in here and is now able to tell the biggest veritable fish story that probably can be told by living man on Lake Superior waters. How he got to Lake Pequearise (Captain Angus of old Lake Superior lore the most proficient says the name is a combination of Indian and French: peque for reed and arise for lake, hence Reed Lake or Reed-covered Lake, perhaps this is the reason we did not see it) I do not know, but here is where Captain McDougall cut his biggest figure. The subterraneous springs here are unusually large and preserve a temperature so even annually that like Lake Superior itself to which it contributes, it never freezes, and hence furnishes an unrivaled winter resort for the little fountain salmon. Bait such as eyes, fins and pork soon became superfluous where hungry trout by the dozen would jump at every cast, a shred of red flannel was more than sufficient; the barb on the hook soon became a useless nuisance and was filed off, and by practice the fisherman got so expert that the catching of a trout came to be a single maneuver in three simple motions—the cast, the strike and the disengaging, which without the barb left the rod going like a mill wheel all the time the owner was willing or able to turn the crank. Perhaps sportsmen will say what a useless murder of game fish; but it must be remembered that the Brule then was far beyond the borders of civilization, and to the victor over such obstacles I voluntarily concede the spoil, besides let me say what a mercy to the survival of the fittest trout where they were all so crowded and hungry, and they were not wasted, for the captain brought his entire catch, something over 8,000 trout and in weight over a ton (to be exact, 2,230lbs.), to Duluth that winter on sledges and disposed of them all, most of them expressed away to friends here and there. This result was accomplished in about a week of fishing and about three weeks going in and out, and perhaps considering the hardships necessarily connected with it at that time was a feat as yet unequalled by any sportsman on the Chain of Lakes. But that this "fish story" may seem incredible to many I do not doubt. That a man should be able to bear the fatigue, to say nothing more of catching over a thousand trout a day for six consecutive days, does seem, I admit, more than one could be expected to believe from ordinary hearsay. But then it would not be

mentioned here unless it was phenomenal, and from my knowledge of the captain's indomitable energy and from my examination of the nature and condition of the stream in which the feat was performed, I unhesitatingly assert that it was not only possible but probable, and as for that, the facts are a matter of record and can be verified to the letter.

We lunched at noon on a beautiful island upon which was an unique and tastefully arranged summer camp or club house, built in the shape of an octagon with four wings extending from the main parallels, with doors and porches between. It was covered entirely with cedar bark, but in so neat and workmanlike a fashion that it had an exceedingly comfortable as well as picturesque appearance. The owner, however, certainly possessed more of taste than of that spirit of hospitality which it is natural to expect in out-of-the-way places like this, for on one of the doors to this aristocratic dwelling in the wilderness was printed in stenciled letters a warning to trespassers in this wise:

THESE ARE PRIVATE PREMISES.

DO NOT LAND HERE.

Now, seeing that we could not possibly have known that we were not to land here without first landing, and hence were beforehand convicted trespassers on the premises, we could not restrain some little disgust at the snobbishness of the unknown private party and proceeded to express our dissatisfaction at being thus entrapped, as it were, for an insult, which we had no disposition to occasion or receive, by arranging to stay as long as we wanted to "in spite of my Lord Cardinal." But if the human aristocrats who owned the premises were unfriendly to the wayfarer, the non-human creatures who actually had possession—the moose birds—were very friendly indeed. One of the little rascals actually took the butter from my bread, which I had laid on a stump not two feet from me while I was pre-occupied by endeavors to sketch the house from one of its many angles. I left the bread also for him to take if he so minded, which he did indeed, but I regret to record the jealousy of his tribe, for he was scolded right soundly by an envious crowd of its members both for his good fortune and his selfishness, I take it, in not wishing to share it with them all. How they settled it I don't know, for we came away while the matter was still in hot dispute.

Below this island the Brule widens at intervals into lakes with narrows, and consequently rapids, between, and here is where the fun commenced. When it is stated that none of our party had had any actual experience in running rapids, that the river was high and in places reported as running a mill race, that we had been warned that we never would get through without getting wet (that is, capsized) if we got through at all; I say when all this is stated it is a sufficient excuse for the manifestation of a feeling of curiosity, to say the least, as to how we would get through, and as we approached the big falls, which was certainly as much of a mill race as had been represented, I must confess to some excitement, which I think was shared to some degree by the other members of the party. Had any one of us had any experience I think we would have attempted this fall and would probably have got through all right. As it was, we concluded to make a short portage and pull the boat around the roughest water, for we felt it better to take our first lesson in rapids running from something a little less savage. And we were not long in coming to the experience, for the swift water soon sent us dancing merrily down the river; no sooner out of one series than we shot into another. In one of the first we ran into I broke my paddle in trying to make a sharp turn, but fortunately had an extra one, which served me in good stead for the balance of the trip. Once we hung up on a large boulder, and it took our united efforts to keep the boat from filling. Fortunately we were so near one of the banks that Ed could jump it, and he pulled us off easily, sending the commodore and I waltzing down the stream at a great rate, pulling up at the first opportunity to take him aboard again. This first experience was very exciting, and I could not refrain from giving a lusty war-whoop at our first mishap and lucky escape.

Again the river widened into a fine lake about half a mile wide and perhaps two miles long, along the banks of which we could not but notice with longing eyes the numberless beautiful, moss-carpeted camping grounds, which thick canopies of over-hanging cedars made so very inviting; and had it not been that further prospective adventures in rapids running, and the desire to reach the Northern Pacific Bridge that night, in order to preserve our trout catch, I should have insisted on spending a night here at one of these lovely spots. At the foot of the lake another series of heavy rapids through the narrows, which we probably would have run entire (for our experience had by this time accumulated so as to give us confidence enough for anything) but for a great tree which had either fallen or been felled here across the only possible channel. After dragging our heavy boat around this obstruction, the rapids immediately below looked so inviting and suggestive of trout that we tied up to one of the branches of the obstruction for a fish. Ed had a couple of fine ruddy-colored half-pounders, and the commodore one of three-quarter pounds before I could get my line out, but to compensate for the delay I was not long in reeling in a one-pounder which was the king fish of the party so far. Nothing else of any size heeding our enticements we put up our rods again, made ready and let go for another douse between boulders and over rocks innumerable, which we scraped or thumped in our rapid course down the foamy current. By this time we had grown quite experts in avoiding boulders and equally confident. Ed, on the lookout in the bow with his stout pole, would sing out to the right or left, as the case might be, and I, in the stern, with an equally stout paddle, would if possible head her for a straight shoot into the right course, while the commodore amidships would pole or paddle as the emergency might suggest and tell us how it should be done. That this was an excellent programme no one will gainsay, but that there must be no mistake about it is very certain, for of this we soon had an experience which was quite convincing. For whether Ed had sung out to the right or to the left I am now uncertain, or whether I labored to the left or right I am equally uncertain, or whether the commodore had sung out in either way we were both just as uncertain. But certain it is that Ed and I worked at cross purposes, and before we knew it the stout boat was on a boulder amidships. As she struck, her bow naturally climbed into the air and the commodore suddenly for a moment or so appeared far above me against the sky. This fact struck my sense of sight and of humor at the same time with such comical effect that I cannot help breaking into the gravity of my narrative with an allusion to it. It seemed to me that as we struck the boulder I saw the commodore's hat raised bodily from his head by the sudden uprising of his short stubby hair, that the sudden appearance of his whole body so far above the horizon only produced this effect for a moment I am perfectly well aware but had it been ever so much more than an optical illusion I would have had no time to investigate the phenomenon, for, thanks to my avoirdupois the stern of the boat was held down until caught by the current which swung us around like a top until stern foremost, when she easily slid off the pivot. Now, although we had, in more senses than one, been turned completely around by this rapid mancuver, we had still sense enough left to know she must neither be left to go down stern foremost nor sideways, so we exerted all our strength at once to get her righted, and when faced bow on we let her skip again and another shout went up above the war of the rapids for the second lucky termination of an adventure.

From this on, although there are more or less rapids all the way to the Northern Pacific crossing, we had no mishap worth recording and reached the bridge just as dry (if not drier) than when we started, and with an appetite that must have astonished mine host Angus at the Brule Hotel. Here we fell in with a number of genial spirits, among them old Captain Angus of Lake Superior pioneer fame, with whom we spent a very pleasant evening recounting our adventures and listening to theirs, from which we gathered that the running of the Brule by greenies like ourselves without accident was yet considered quite a feat, and we felt quite flattered of course.

We took the train the next morning for Duluth, more than satisfied with our trip and promising ourselves the continuation of it at some future day from the Northern Pacific to the lake. This is a field for trout and adventures even more promising than the one just made, and if the readers of the FOREST AND STREAM should see fit to want more of the same I may be prevailed upon to give them another chapter. BERLIN.

Natural History.

EXPERIENCE WITH RATTLESNAKES.

Editor Forest and Stream:

Being a lover all my life of the dog and gun, and having lately spent my winters in St. Augustine, Fla., I have been deeply interested in the experiments reported in your journal by Dr. H. C. Yarrow, in the treatment of snake poisoning, and having had some practical acquaintance with the subject, I have been urged by friends to send some lines to the FOREST AND STREAM with the assurance that they would not be annoying. Some years ago I had a foreman in charge of one of the well known and beautiful places near Tarrytown, N. Y., brought to my office suffering from the bite of a bastard rattler. He had been an old patient, and when he entered his appearance presented the most abject and mental suffering, and his first inquiry was, "Dootor, what are the chances for life?" I told him there was no time to lose in speculating, but to lie right down on the floor, for he could barely stand, was trembling in every part, and great drops stood like beads on his face. I laid open the part bitten, which was the thick part of the thumb on the right hand. I gave him a few drops of ammonia, whisky and sweet oil, and after applying a cupping glass, saturated a cloth with ammonia and placed it on the wound, and sent him home, promising to follow in a few moments, as soon as I could gather a few needful articles. This man was an oracle among the Irish in our village, was superior to his class, and of course his accident made a great stir in the wigwam. His friends in a few moments after the accident had given him some whisky and tied a ligature around the wrist, and then drove in haste to my office, the time since bitten being about three-quarters of an hour. I had some hope, for Mr. M. was well preserved and abstemious, though an old man. His heart acted feebly and his nervous symptoms were terrible. Still I recalled two successful cases of rattlesnake bites that recovered in my father's hand when a student in his office in Savannah, Ga., and I determined that I would make a hard fight for this life.

I watched the old man, using every known antidote externally, even to the warm chickens, making a broad line around the arm with caustic, and from time to time using the cupping glass and ammonia. During the latter part of the day his admirers all tried the whisky treatment too, and with more decided results than I could get, for they all got drunk, and raised Ned, and ply the article as I dare, my patient barely felt it. It was difficult to produce anything more than a partial rally from the shock. But I felt I held my own with the whisky, ammonia and sweet oil. The drunken rabble around the house became ugly after a time, and wanted to eject me, *nolens volens*, insisting on having an Indian doctor apply his remedies, to which I objected, declining all responsibility if interfered with. These wild Arabs next insisted on calling other doctors, to which I agreed at once, told them they could call all the legitimate aid we could get, that I should be glad to have all the profession see the case. They brought a Scotchman, Dr. L., a man of some prominence among these people. He recommended a remedy which I at once protested against, stating plainly if he used it he would kill my patient. He insisted, and I made him stay and give it. He gave one teaspoonful and in about five minutes it caused nausea, and shortly after vomiting, producing the very effects I had struggled for hours to avoid; great depression followed and we lost much we had gained. The old man, still conscious, though weakened, called to me and said, "Throw that cup, spoon and stuff, out the window, and give me no more of it," and reproached me for failing him. I felt it, and after obeying his directions I determined to allow no other interference. The doctor left in disgust. I watched him all night with varying hope, and in the morning found him with a fair pulse, no more nausea, and able to bear his dram, and some beef tea. The wounds at this time did not look encouraging, the glands in the axilla became swollen and painful, he was a little off at times, still I had greater hope than the day before. I called in several of our local physicians to see the case, and none seemed to express much encouragement. The second day the wounds looked a little better, gave off a little suppuration, but the glands under the arm were so enlarged that I poulticed them, and soon opened one. My patient on the third day was evidently improving, and from that day on continued to progress favorably, and finally recovered with a shriveled thumb, withered and contracted like a dry branch.

Some winters ago I was compelled to seek a change of climate. A long and laborious life in my profession, amid the snows and winds of New York, had broken up a once splendid constitution. I visited St. Angustine, Fla. There I renewed at intervals my old love of younger days, and with a grand old dog, Don, spent many a life-giving hour near the ancient city, but always with some apprehension of the great danger to man and dog, from the numerous venomous snakes in the swamps and woods. I always carried in my hunting coat my hypodermic instrument with ammonia and permanganate of potash, ready for use, and I volunteered to take charge of any of my friends' dogs if they met with an accident. About three winters ago our vice-commodore was so unfortunate as to have a favorite dog struck by a snake of large size, which he thinks was a rattlesnake. The beast struck the dog in the point of the nose, and as the dog started backward, throwing up his head, he carried the horrid thing, still clinging to him, into view for a moment. The commodore started immediately for the city, after giving the dog some whisky. On arriving he entered the Plaza drug store, sending for me; I being out at the time he requested one of the local physicians to use the remedy I had advised; and Dr. A., who declared he knew little about the matter, still willingly tried his skill. He introduced the dilute ammonia into the shoulder on the right side; and in a few moments I arrived and took charge of the sufferer. It had been over an hour since the dog had received the poison, and a more pathetic-looking object has seldom been seen. His head was enormously enlarged, and looked more like a great puff bag than anything else; he had barely life enough to wag his tail, and lay in a hopeless mass. In a few hours I repeated the remedy, and watched anxiously for every change, and by nine o'clock at night I felt the old fellow would recover. He gave a faint wag of welcome and gratitude to his friends, and tried to take through his swollen lips some beef tea and milk, which was finally introduced on a rag. In the morning a more disreputable object could scarcely be imagined. He was literally bunged up, but in better spirits, evidently making the best of a bad job. He recovered with two small sloughs in his shoulders and hips where the needles entered. His owner hunted him the rest of the season without discovering that he had been injured in any way. Poor Bran was reserved for a violent death after all, for he was on the chain in an outhouse of the St. Augustine Hotel, when it was destroyed by fire the following winter, and was lost.

That year of the great fire a friend of mine hunted a handsome red setter, Duke, who was unfortunately struck by a rattler in the neck. His master started with him for home, being some miles from town, and on foot. He gave poor Duke whisky from time to time as his powers flagged, and literally dragged him along, encouraging the plucky fellow, who did his best. When he reached town about 2 o'clock I was summoned, and gave him injections of ammonia, alternating with the permanganate, all the afternoon. The heart failure was excessive, and it was evident that I failed to make any impression on the poison. There was not the great suffering noticed in the first case, but the poor fellow was awfully sick. He lay like a wet rag, not a spark of energy left in him, with his great eyes enlarged to twice their size and the most appealing look for help I ever saw. I am convinced I did this dog service; he did not have a spasm, and nothing through all his suffering like a convulsion; he simply wilted and sunk away, and died so quietly at 9 that night that those around him hardly knew when he passed away. I regret now I did not push the remedies a little more persistently in this case.

Last winter there were several dogs struck by rattlesnakes, and our good commodore was again unfortunate in having another favorite struck by a great monster, and this time he was fortunate enough to see and put his mark on the beast. He immediately used the whisky, and having long since armed himself with a hypodermic and the permanganate, he used it on the spot; but the remedy made no impression, and the dog had repeated spasms and convulsions. He repeated the dose and started for town, but the convulsions became so terrible that the poor thing at last threw himself out of the wagon and the commodore ordered him shot.

When I saw my friend he looked about ten years older, and certainly seemed as if he had lost a friend. He told me he saw the beast, and as he was escaping into a gopher's hole he shot at him, not feeling absolutely certain whether he had hit him or not. I told him it would never do to leave the matter in doubt, and proposed to go out on the next day and unearth the wretch. The commodore did not seem over-anxious, but finally concluded to go. We found the monster sunning himself near his den, and a forbidding object he was. I had my gun in my hand and felt like drawing on him at once, but a hunter who went out with us insisted on being allowed to take him alive and take him to town on exhibition. He caught the uncanny thing and put him in a box, and we found the commodore had filled the lower part of his body with No. 9 shot.

My old dog Don and I have tramped about Florida for over eight years and never encountered a rattlesnake, but I have shot three horrid water moccasins right under the old fellow's nose. He points them as warily as if he were perfectly aware of their dangerous nature. He will indicate the proximity of danger as plainly as if he could speak by working around in front of me, between the beast and myself, keeping himself well out of danger. Let no one tell me there is no power of reasoning in dogs.

That the antidote to serpent venom exists I have never for a moment doubted; and that it is found in our land I am convinced. A few winters ago I thought I was in a fair way to discover the secret, at any rate I made a persistent effort to do so. The first Indian prisoners at the old Fort San Marco, at St. Augustine, told me that the medicine men on the plains knew and applied the antidote to snake poison. I could hardly believe the story,

but on afterthought I came to the conclusion that if any people need to know, and ought to know for their self-protection, these wild men, exposed to every outdoor danger, would be most likely to. Later I took one of these Indian boys to my home to educate him and fit him for the changes fast overwhelming their tribes. He often mentioned the fact that Indians did not fear snake bite, and that the medicine men cured it. The persistency of these statements caused me to believe that there must be something in them. A few summers ago I had occasion to cross the Indian Territory, after children for the training school at Carlisle, Pa., and I determined to investigate the matter, and, if possible, possess the remedy. I traveled 300 miles toward the setting sun, and became well acquainted with thousands of Indians of many tribes, and entered their lordly dwellings, where I was received with the pride and dignity of crowned heads. They treated me as an old friend, for many remembered my interest in them during their exile and imprisonment. They knew I came to befriend them and if possible aid their children to gain an education which would fit them to meet the changes inevitable in their future lives. I saw some of their noted medicine men, and in cultivating their friendship I felt sure of gaining the information I wanted. Everywhere I heard the same story, that Indians do not mind snake bite, that an Indian poisoned by a snake does not die, the medicine man cures him. I told my boy who had lived in my house four years, and recently returned to his home among the Kiowas, that I wanted to get the cure for the poison of snakes. He said he did not know it, that only the medicine man knew, and it would be certain death to any one to reveal the secret, that it was one of their greatest secrets and was guarded in the most sacred manner by those in possession of it.

I saw these disgusting snakes living in harmony among the prairie dog villages with the owl and the rabbit: dispelling the myths long current on this question. The dwellings of the Indians are among these villages, and I was told that very often the snakes would be found in their blankets and sleeping robes, and that the Indians were sometimes bitten, but they were not alarmed and only sought the medicine man as if for a cut finger. Our boy told me that one night when the nights were beginning to get chilly, he wrapped himsel up in his buffalo robe and soon he felt something move under him, and when he looked he found a great rattlesnake, but he was too cold to bite, and he threw him in the fire in the tent.

Their secret was so guarded that I began to lose hope, and became desperate and used every honest device to gain the information. I could not gain the secret for friendship; money would not buy it, and I tried to win over the most prominent medicine man, Black Kettle, but found him as dumb as a stone. My Kiowa boy said he would try to find out, knowing the secret would be sacred, but to no purpose. I finally gave up my efforts with great reluctance and extreme chagrin, hoping eventually that some more fortunate mortal would yet discover the secret. That the Indians know the antidote to the poison of any serpent I do not now doubt for a moment, and I am confirmed in my belief by the reports of the many agents and government employees who told me that snake bites do not kill the Indian. And last winter I learned from the Apaches confined in the same old fort in St. Augustine that they had a remedy in Arizona that cured snake bites, known only to their medicine men; it was a secret guarded by death, and that Indians, horses or dogs do not die from snake bite. So thoroughly do I believe these stories that if I had means to allow me the leisure I would go to the Indian Territory this summer and spend some time among these people and pursue the search for that secret remedy, which, if discovered, would be a blessing to all who are ever likely to be in danger from the venomous creatures that lurk in our paths and fill the hunter with constant apprehension for himself and his faithful dog. HORACE CARUTHERS, M.D.

TARRYTOWN, N. Y.

BULLS ON THE TEXAS RANGE.

Editor Forest and Stream:

In riding, some six weeks ago, from my sylvan shelter to Ranger, on the T. & P. Railroad, distant about forty-five miles, I frequently noticed companies of bulls herding together, with no females of their kind near them. One of these companies numbered fourteen great bulls, prodigious creatures, most of whom were lying by the roadside chewing the cud in a contented, dreamy sort of way; and though we passed within a few feet of them in rather a gay equipage, not one even deigned so much as to raise his head to look at us. This reminded me of a friend of mine who had a soft spot in his head. He became ambitious to own a fine rig with which to cut a swell and draw attention on the fashionable drives. To this end he saved his money so closely that he well-nigh starved; but in a few months he appeared on the drive in a most beautiful rig, drawn by a noble black steed whose hide glittered like polished silver. The sidewalks were thronged with richly dressed promenaders, and Tom was constantly turning his head this side and that to see who looked. But, by common consent, as it seemed, nobody looked at all, and both he and his rig were totally disregarded. The experiment was repeated several following days with a like result. It broke his heart and he soon sold out, but has since made a fortune by selling coals.

However, to be so disregarded by these great bulls, had no other effect upon me and my companion than to raise in us a good-natured smile. One or two couples of the bulls were standing up facing each other, playing boxing and fencing with their horns in a very friendly way. My companion, who is a cowman, remarked that these bulls are very friendly now, but in two or three weeks they will part company, make the woods roar with their bellowing, and when they meet again it will be as enemies.

Such is the way of bulls in the great Texas herds. When winter comes on, cooling their blood and shortening the crops of herbs, so that they must rustle for a living, they withdraw from the cows, collect in companies and go away, secreting themselves in solitudes. They forget the battles they have fought with one another in the lusty days and become very near and dear friends. At such times they seem truly to hate a cow, or at least to consider her presence as very undesirable. Should one cow come among them, like a hoyden or a tomboy, they will not drive her off, but will themselves quietly leave in a dignified manner, but at the same time clearly indicating to the cow that she must not follow. And to the credit of the cow be it said, very few attempt to force their company on their bellowing lords when in the quiescent state, needful of rest. On the contrary, the great mass of them seem truly to have a delicate sense of propriety, and cannot be induced to intrude. I was a witness to this. When my friend and I stopped in the afternoon to camp there was a company of bulls near, and about half a mile off there was a company of cows on a hill. I persuaded my friend, an expert cowman, to drive the cows upon the bulls, so that we might see what capers would ensue. In a few minutes he had the cows approaching, but when they presently saw the bulls very near them they raised their heads with what looked like amazement, as if shocked with their own immodesty or rudeness, and after apparently considering a moment what to do, they suddenly broke and ran off as fast as they could scamper.

The stockmen tell me it is only thus with graded bulls; that is to say, with such as have a cross of imported blood in them; that the native Texas bull of the full stock is ready to roar at all seasons and never withdraws from the society of cows. I, too, was a cowman years ago and did not notice such behavior among my bulls, all pure natives. The cattle of Texas are now much graded up with Durhams, Devons, etc.

I was led to these remarks by what occurred near my shelter this morning. While casting up the figures of some angles I heard an exceeding great roar of bulls, so great that the woods seemed to shake with it. Going to the door I saw the cattle collecting in an opening in the woods of about twenty acres, on the west edge of which my shelter stands. These cattle seemed as if they were greatly impressed with something or other. They were eager in their movements, and their eyes showed intense interest. They came running in all directions to the opening. I soon saw what excited them. On the south side of the opening, advanced a little into it, stood a gigantic dark red bull, pawing the earth, his tail erect, his eyes flaming, uttering a deep-toned roar, expressive of enormous strength. On the north side, also advanced a few yards into the opening, stood a black "peided" bull, equally gigantic, equally roaring, and equally terrible in aspect. I now saw that a great duel was on hand between two mighty champions, and it was clear that the cattle understood it as well as I did, and were greatly excited with interest in it. They did actually seem to divide themselves into two parties, as their sympathies reached out to one or the other of the great bulls, as to which should vanquish in the struggle. The younger bulls, yet mere youths, roared and pawed with excitement as if they would push on the fight. For all the world I was reminded of a Roman populace gathered to witness a fight of gladiators. I walked among them, and though a portly figure, they no more regarded me than if I had been a mouse, their eyes being intently fixed on the two great champions.

The bulls in the meantime had advanced within twenty steps of each other, not at any time by a quick movement, but slowly, cautiously, never for a moment taking their eyes off each other. What seemed a little strange, they did not move upon one another in a direct line, but each by an oblique line, which if continued would meet at the apex of an angle of about 45°. I therefore marked the spot at which the battle would probably take place, and took my stand at the most favorable point for observation. This method of advance compelled them to watch each other out of the corners of their eyes, or with "wall eyes," showing all the white of them, and this caused them to appear all the more terrible and hideous. Now they were within ten steps of each other, roaring like a continuous roll of thunder, and pawing so greatly that the dirt flew high over their backs and fell several yards away. In this position they had stood perhaps ten minutes, when suddenly a cowboy riding a skewbald Mexican horse appeared on the scene. Said he, "Would you like to see these bulls fight?" "No," said I, "let us see them quarrel, but prevent a fight." "I want to see them fight," said he. Saying this he threw his big flap hat into the air so that it fell within a few feet of the red bull's head. This caused him for a moment to avert his eyes from the other, and quick as a flash the peided bull darted upon him. But the other detected the movement in time to square himself. They came together, front to front, like two thunderbolts, with a shock that seemed veritably to shake the plain. There was no pawing or roaring now. There was no noise but the clashing of their horns and the deep breathing of the huge combatants, eyes to eyes and nose to nose. Their horns were locked together, and each was straining every nerve to break the other's neck, or push him back upon his haunches and roll him over and plunge his swords into him to the hilt. They were so equally matched that neither could budge the other an inch. As they strained and pushed the muscles of their necks and all over their bodies stood out like great cables under their skins. In the meantime the cattle around seemed to have become crazed with excitement, so that I stood as near the cowboy on his horse as possible to prevent them from trampling over me.

I now suggested to my cowboy that we had seen enough of it and tried to persuade him to ride between the bulls and separate them. "No, sir," said he; "I would not ride between them bulls for all the bulls and cows in Texas. They would make a lunge at one another under the belly of my horse, and both me and horse would be killed. I haven't seen enough of it yet." So saying, he rapped upon the horn of his saddle with the wooden handle of his whip. Immediately the bulls dashed upon each other again, coming together with such force that both staggered and reeled. For a few moments the struggle was the most terrible and desperate they had yet had, but resulted soon in the same deadlock as before. In their panting their bodies swayed all over. Their eyes were bloodshot and great drops of blood fell from their sides. I was most anxious to put an end to the furious fight, but what could I do?

At this juncture another horseman rode up, a man of sober years and a good man, not loaded down with the curiosity of science. He, too, was a cowman, bearing the common badge of that calling, a bulldozer. Said he: "Men, why do you let these bulls fight in that way for? It is a shame. They are the most valuable bulls in the country." I responded that I was most anxious to separate them, but knew not how; that I would not venture to take one by the horns for all the world, and that should I take one by the tail while my companion so took the other, it would be of no use, pull all we could.

In a few minutes the great bulls were panting fearfully, so that it seemed one or the other must soon succumb to the pressure. Then came a mighty struggle in which each put forth his mighty utmost to crush his adversary to the ground. The ground flew from under their feet, as if unable to bear up under such warfare. But neither yielded the eighth of an inch. It was terror meet terror: Two irresistible bodies in collision, with apparently no result possible but mutual annihilation. Presently they came to a dead halt in a deadlock, the panting being painful to witness. Presently, as if by mutual consent, they drew apart, stepping backward slowly and cautiously until separated about ten feet; their heads still lowered and their eyes still watching one another narrowly. In a moment the deep-toned roars began again.

Fortunately at this moment the huge creatures let go of one another, stepping backward a few paces, panting as if half dead, but with the fires of unsatisfied battle still flaming in their blood-shot eyes. They pawed and roared as before, but the pawing was not so strong nor the roaring so deep-toned and thunderous. The spirit was still proud and eager; the flesh only was weak. "Now, men," said he of the sober years, not burnt with the love of science, "let us stop this, every man, you take that peided bull, and I'll take this one." With that the two on horseback rode between the bulls and poured upon their fronts lash after lash with their long whips, which gave forth reports like the popping of Shrapnell shells in action. Under this the bulls quailed gradually and finally turned tail. Then the fire opened on their rear, and they fled, one one way and the other the opposite way. I never saw a more disgusted crowd of spectators in my life than were the young bulls and heifers when they witnessed this unexpected termination of the great duel. Even the sober, motherly old cows evinced much disgust. For a long time I heard the great bulls bellowing defiance at one another at a distance, but neither ventured again toward the other.

There is a creek near my cabin, and the two bulls leading their respective herds came to drink water at the same time from opposite directions, and no doubt this was the cause of the fight. Henceforth I imagine they will lead their herds to water at different hours, or one will seek a point higher up or lower down on the creek.

N. A. T.

YOUNG COUNTY, Texas.

PANTHERS.—New Westminster, B. C.—Can a panther climb a tree? Yes. He goes up a tree with short convulsive jumps, as a house cat does. He descends a tree headforemost, as John says; that depends. If the body of the tree is tall, without limbs, the great sneak cat backs down until near the ground, then turns sideways and jumps. Does a panther scream? If so will some one describe the sound. One farmer within a few miles of the town has recently had some thirty sheep killed by panthers. Wolves are also on the increase here.—STANSTEAD.

THE BIRD HOSTS.—A friend of mine who lives twenty miles from Washington, on the road to Harper's Ferry, says there are more birds in the country this season than he has noticed before in twenty years. Among them are some that he has never seen before. My friend is not versed in bird knowledge, and is not able to testify except as to numbers. It is a common remark here that birds are more numerous than usual, and the fact is one to elicit universal thanksgiving.—JEROME BURNETT.

ROBIN'S NEST ON THE GROUND.—High Bridge, N. J., May 27.—Recently while walking through a railroad cut I saw a robin fly from a little recess in the rocks. Looking closely I saw a nest snugly stowed away and in it were four eggs. It occurred to me that it was an unusual place for a robin's nest, although a very safe one.—PERCIVAL CHRYSTIE.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two brown hyenas (Hyæna brunnea), two young rhesus monkeys (Macacus erythræus), one Burchell's zebra (Equus burchelli), one Brazilian tree porcupine (Synthores prehensilis), two pluche monkeys (Midas œdipus), one mona monkey (Cercopithecus mona), one opossum (Didelphys virginiana), two kit foxes (Vulpes velox), three flamingoes (Phœnicopherus ruber), one brown-fronted macaw (Ara severa), one St. Thomas conure (Conurus xanthocœmus), two rosy-faced love birds (Agaporius roseicollis), and one glass snake (Opheosaurus ventralis). Presented—One least weasel (Putorius vulgaris), one woodchuck (Arctomys monax), one raccoon (Procyon lotor) two Virginia deer, ♂ and ♀, (Cervus virginianus), two minx (Putorius vison), one red-shouldered buzzard (Buteo lineatus), one screech owl (Scops asio), two alligators (Alligator mississippiensis), three horned lizards (Phrynosoma cornuta), six speckled terrapin (Chelopus muhlenbergii), and one diamond-backed terrapin (Malaeoclemmys palustris). Born in garden—Two fallow deer (Cervus dama), six prairie dogs (Cynomes ludovicianus), one muskrat (Fiber zibethicus), one Japanese deer, ♂, (Cervus sika), one mule deer (Cervus macrotis), and seven Egyptian geese (Chelanopex ægyptiaca).

Camp-Fire Flickerings.

"That reminds me."

237.

STEPPING off the train the other day on my return from a trip to the trout I met a commercial traveler, who, like all his class, is a pleasant fellow and anxious to make himself agreeable. The following is the conversation verbatim:

Com. Trav. "Hallo, been fishing?"

Angler. "Hallo, yes; just back from Moose River."

Trav. "That so? Wish I could get off. What did you catch?"

Angler. (Thinking traveler an angler and brother.) "Trout! what do you suppose? The finest you ever saw. Had a splendid trip; fine scenery, pleasant party, good camping grounds and no mosquitoes. I wish we could have staid longer."

Trav. "What bait did you use?"

Angler. "Bait! Flies."

Trav. "Oh. Common house flies?"

Angler. (With disgust.) "No. Artificial."

Trav. "Oh. They say bread is very good." W.

SHERBROOKE, Quebec.

238.

Hello! Fitzwater, just back from sea-shore, eh?"

"Yes, George, had a splendid time, too; but how did you know I'd been to the sea-shore?"

"Because you look so well fattened up, and have such a healthy, bronzed sort of a look. Can't mistake it."

"Now, George, let me tell you something, my boy. People 'go down to the sea' and come back looking just as I do; their friends meet them and tell them how they have improved; how fat they are, and go wild over their complexion; but the truth is, George, it's nothing but sunburn and whisky." WHACK.

DEER HUNTING AT MURRELL'S POINT.

(Concluded from Page 475.)

ON Wednesday John and myself went driving, Mr. Murrell was detained by business, but he sent Andrew and the freedman to drive for us. The first drive we made in an opposite direction from those on Tuesday. We had the melancholy reflection to know we were too late in getting to our stands, as we saw two fine deer passing out, just where we designed stopping. The next was one into which the deer had gone. John and I went to a stand which he wanted me to take, but I preferred going to another, of which he gave me such directions I could not fail to find it.

Shortly after taking it I heard the hounds running the deer we had seen, seemingly straight to me. But when almost in shooting distance they turned to go beyond me, but I discovered a huge gobbler creeping along the edge of Grassy Lake. I ran to head him, and after getting to the lake could see him nowhere. Concluding he had hid among the palmettoes, I hunted faithfully for him. Finally, as I was passing a big cypress tree he jumped up almost at my feet, and before I could get ready to shoot, he was out of sight, and I saw him no more. How he escaped I could not tell. He did not fly, and there was no brush to conceal him. The driver came to me and blew the dogs back. We had been waiting there some time before their return, and when we started to John Warren the dogs jumped several deer that had been lying in gunshot of us all that time. We failed to get a shot, but the deer ran by where John ought to have been, but unfortunately he had left his stand to head the dogs when they first ran out, thus missing a splendid opportunity of killing one or more. The stand was on a very deep bayou that ran out of Bayou Pierre into Red River, the banks very steep, yet we managed to cross and again get the dogs, that had gone into a very large scope of country.

We drove this drive, starting several, that ran across Bayou Pierre. I was assigned one of the most noted stands in that whole country, one where Mr. Murrell told me several hundred deer had been killed during the last fifty years. It was known as the Persimmon Tree Stand. Here was a large persimmon tree bending over a path that lead to Pierre, being on a narrow ridge between two wide cypress brakes. There were but two stands to this drive, the deer nearly always going through them, or coming back the same way, unless frightened. This ended the hunt for the day. John and Andrew shot several squirrels as we returned home.

Thursday, Mr. Crichton came over and all of us again went to drive the same Big Bend in which we had killed the deer on Tuesday. We started a number of deer, that avoided our stand. The last drive we made on the opposite side of the deep bayou, where we bagged our deer, as stated. Mr. Crichton drove, accompanied by the little negro boy. They started two wolves, that crossed the bayou, just where Mr. Murrell was about to put me to stand. We got there in time to see the dogs on the opposite bank, and I suppose the wolves a long way ahead of them. That hunt was over, and we started for home. Crichton and Murrell killed several squirrels, I did not shoot.

The next day, Friday, I had no one to hunt with me except Andrew and the little negro boy, Murrell being detained at home. Early we started with only two hounds, Music and one of her puppies. About a mile from the house is a famous palmetto ridge, on which the big deer go to lie. They are so wary that great caution must be observed, or the deer hear one going to his stand and run out before he can get to it. On this occasion I gave strict orders to the little negro, who was to drive, while Andrew and I stood, not to blow his horn, hollow or make the least noise; but to drive silently down the fence, until he got to the extremity of the ridge, and there begin his drive. He disobeyed my injunctions, resulting in the deer getting up and going out before we reached our stands. Andrew blew the dogs back, and advised going up to the deep bayou running from Bayou Pierre, crossing and making the persimmon tree drive, since the deer had gone into that, and it was very likely he would return by the persimmon stand. I agreed, and accordingly we made our respective stands. The little negro was placed near where we expected the deer had gone into the drive from the palmetto ridge, and he was ordered not to move for at least half an hour, so as to give us ample time to take our stand. A promise of half a dollar if he should run me a deer was a further stimulus.

When I arrived at the persimmon tree I tied my horse in the brake behind me, sufficiently for to prevent the deer from either seeing or winding him. Then I walked in the opposite brake and took my stand, some 150yds. from the tree, and rather above it, being near the middle of the brake. I conjectured a cautious old buck would run up near the stand where Andrew stood, and as the wind was blowing from him toward the deer he would turn and feel his way down the middle of the brake to some point opposite the persimmon stand, and there stop to listen and wind for a stander. My conjectures proved correct. It was not five minutes after I stopped before I saw the monster horns of a buck cautiously and slowly making his way straight to me. In an instant the gun was raised, with heel on my hip, finger on trigger, ready to come to the shoulder at the proper moment. Up to this time I had not heard a cry from the hounds. The buck slowly loped along, turning his head first one way and then another, intently listening and snuffing the wind, that was then blowing sideways to him. The undergrowth prevented my seeing his body. He was coming direct down the middle of the brake from Andrew's stand. It seemed to me he would never come in shooting distance, though he was not over 200yds. when I first saw his horns. Suddenly the cry of the hounds was heard, and instantly he stopped, took in the direction, and then accelerated his gait. Some thorn bushes caused him to turn from the direct line, and made him pass some 40 or 50yds. broadside to me. Instantly the gun came to the shoulder, and as my eye glanced along the glistening barrels I noticed a sapling, not as large as the small part of my arm, covering his vital parts. What a superb-looking animal he was, his huge horns lying back on his neck and shoulders, his head slightly turned in the direction of the hounds, that were at least a mile off on an air line, his long ears thrown forward to catch the least noise, his hair blue and silky, and his mouth almost white from old age! As the barrrel leveled against the sapling my finger madly pressed the fore trigger, a ringing report followed. I saw the buck reel as he sprang to the right, and in an instant more the left barrel roared to a quartering shot. And then!—what then? The smoke cleared away and I saw that huge buck reeling and plunging over brush square across the brake. He disappeared from my sight and I never saw him again. It was nearly half an hour before the two hounds came to me in full cry on his track. I whooped to them with all the power of lungs I had, and there is where I made a sad and fatal mistake. Had I stopped them and waited until Andrew, who was a fearless rider, came up, that great deer would have been mine in less than fifteen minutes. But I was so sanguine he was shot so badly that he could not go far before he would fall that I urged on the hounds. When they smelt the blood they ran as if perfectly wild. I listened intently for some ten or fifteen minutes, and then the cry suddenly ceased. The wind was blowing from me to the dogs, and I could not exactly locate the spot where I last heard them.

Andrew came to me, bringing my pony, and we rode where I thought I heard the dogs stop. But no deer, no sound of a dog. In twenty-five minutes the dogs came back on our track. We took them to the place where I shot the deer, looked for blood, could find none, nor would the hounds run the track again. So, spiritless, mortified with myself because I had not stopped the dogs and waited for Andrew, I rode back home with the cerulean vapors around me thicker than I ever had them before. Andrew tried to comfort me by saying, "he knew the hounds had come up with the deer, that no doubt fell dead, and as they never staid by a dead deer, that was the cause of their coming back so soon. And that old Music would not leave the track of a wounded deer until it was caught or had gotten into swimming water." This was no comfort to my wounded pride. I was like "Rachel mourning for her children because they were not." With such feelings I arrived at Mr. Murrell's to tell the bitter tale. John expressed the same opinion that Andrew did, and comforting me by assuring me he would go the next day, and he did not doubt he could find the deer.

Nothing could assuage my grief, only that the deer was so extraordinarily large that the small size shot, what we call swan shot or BB, were too small to produce instant death. I shot 21 in each shell. In the little sapling I found 9, so I suppose only 12 of them went in his side, and how they ranged with the other barrel I could not tell, as I discovered no shot on any brush or saplings in the direction I shot. Mrs. Murrell tried to comfort my wounded spirits by talking of college days, and then preparing me a supper of broiled venison, the nicest I ever eat. All that night I could imagine I could see those great horns above the bushes. It rained that night and all the next day, so we could not get out to look for the deer. On Sunday I returned home, having had a most enjoyable week's visit, marred only by my failure to bag the biggest deer in Red River Parish. But John promised to send some one to look for the deer, and if found, to save me the horns, as I never expected to see another such pair on a deer that I might slay.

A week after I got home I received the cheering news from Mr. Murrell in a letter, in which he said, "Tom Elizur, a freedman on the Watson plantation below mine, found your big buck just where you said you last heard the hounds. He was riddled with shot. I have his big horns saving for you. They are larger than those on the top of my store. Don't shoot such small shot again at such large deer. I killed a buck at the cypress tree crossing on Deep Bayou, and John Warren, who had stopped over to collect for Capt. Marston, shot at five deer where you killed the yearling, but did not kill one. Had you been there I am sure you would have got at least two of them. John killed a turkey that day. Come down and visit us again. It is now better hunting than when you were here, since the high waters keep the deer on the ridges. Ella and I will be glad to see you, and I am never too busy to hunt with you."

This palliated the mortification of not killing the deer dead in his tracks. I doubt not, had no shot gone in the sapling, those nine would have penetrated to the heart and lungs, as they struck at the right height to have done so. I vow that the next time a deer gets in a killing distance of me I will give it a shrill call from my dog whistle, and if that does not stop it then I will give it a regular old fawn bleat, with a whoop "to stop." If all fail, then, as a final resort, I will try the effect of the blue pills. No more swan pellets go into my shells for deer, the blue pills for the future, and I guess I will lower the white flag just then and there.

As soon as possible I shall renew my visit to friends John Murrell and Jack Crichton, and if we have any luck my readers shall hear the result.

I must not close without stating I gave the little negro his promised reward if he ran a deer by me. It was really cheering to see his broad grin of satisfaction when he searched for a small greasy purse and dropped his coin in it. "How much money have you now?" asked James Harper, a son of one of my old pupils, and now a clerk in Murrell's store. The little fellow emptied his purse on the counter, counted his dimes and nickels, and said he had $3 before, and now he was the happy owner of $3.50. Mr. Murrell told me this little negro, the winter before, during a long raing season, had run down on horseback a large deer until it was too tired to run, and with the aid of another negro had succeeded in killing it.

Nowhere on Red River below Shreveport are more deer to be found than back of Murrell's Point, and no surer stands for the sportsman to get shots. This was my first visit there, and being unacquainted with the woods and the runs of the deer, I did not have opportunities of heading them, as I expect to have on my next visit.

KNOX POINT, La. GAD.

ADIRONDACK ABOMINATIONS.

Editor Forest and Stream:

The editorial in this week's FOREST AND STREAM on the destruction of the Adirondack region as a sportsman's resort, is to the point, and every sportsman will thank you for it. The trouble lies just where you put it—with the so-called city sportsman tourist and with the railroads. After living here a little over a year, I have made the acquaintance of a good many native woodsmen and have gained their confidence. I believe that the amount of poaching done by them is insignificant, for it is always done for food, which, as you say, is not such a grievous sin. But when the city tourist, who is ambitious to kill, comes along and offers the woodsman $2.50 a day or more to go into the woods as a guide and a liberal bonus, say $20 or even $50, in case a deer is killed, it is too much to expect the woodsman to refuse. The woodsman can make more in the woods in a week with such a city tourist than he can in three months of hard labor at home.

Besides this, there are not a few boarding houses on the west side of the mountains who depend on just such a class of sportsmen for their existence. No deer killed out of season, no boarders. On last Friday night I went up Little Black Creek, about thirteen miles from this post office, fishing. After sundown and also the next morning before sunrise I heard the boom of the shotgun on Little Black Creek Lake, about two miles above me. Some one was floating for deer. My first thought was that some bark peelers were doing it, but on inquiry after coming out I found that a city party had gone in from a boarding house up the West Canada for the purpose of floating. While the bark peelers up there would be excusable, as I believe, for varying their coarse fare with a bit of venison, I am convinced that they have not done so.

I do not think we can stop the destruction wrought by the railroads unless the sportsmen interested in the Adirondacks can influence the Legislature to make the region a State park, from which boarding-house keepers are to be excluded, but if the new game wardens can be sent to parts of the State where they are not known to the natives, and will there represent themselves as tourists and hire native guides, they can learn where the poaching is done and what boarding-house keepers make a business of it. Then it will be the simplest matter in the world to get evidence that will convict the city chaps and make life a burden for the boarding-house keepers.

So far as my experience in the matter goes the attempts to catch and convict guides other than boarding-house keepers are about all that have been made. It is like trying to stalk a scared bear to make such efforts. As I have already intimated these are not the men to look for. Go for the man with the helmet hat, the patent leather shoes and the double-barreled shotgun (I saw just such a rig go up the road the other day).

Dynamiting the ponds and still-waters is of course done to get fish for market, but I have never heard of a native woodsman being engaged in it; indeed they would be glad to aid a game warden in catching the scoundrels. It is the man who comes from Utica and other like places who understands the use of dynamite and who is simply supplying some fish market. Shift around the game wardens and set them to watching the houses where city boarders are kept, and to following the parties that leave them going fishing with ten-gauge shotguns over their pack baskets. JOHN R. SPEARS.

NORTHWOOD, N. Y., July 13.

HOT WEATHER STORIES.

From the Lewiston (Me.) Journal.

AN Augusta boy who went regularly to the Young Men's Christian Association gymnasium last winter became much interested in developing his muscles. He had been told the best way to do this was to swing Indian clubs, beginning with a light pair and gradually increasing the weight as he became stronger. As this would necessitate the purchase of several pairs of clubs, which he could ill afford, he hit upon the following scheme. He was the owner of two pups, which, though small in size, possessed to a remarkable degree that tenacity of grip for which the bulldog is so justly celebrated. He easily taught each of these to fix his teeth in the end of a short stick, and then taking one of the sticks in each hand he waved them about his head in some of the simple movements. As the dogs grew his strength increased, and now he may be seen in easy posture performing all the graceful gyrations of an expert club swinger with two wooden handles, to the ends of which a couple of 15-lb. bulldogs hang by their teeth with a deathlike grip.

From the Talbotton (Ga.) New Era.

Reading your pigeon story reminded me of a pigeon story I have heard my friend, Mr. John O. Holmes, tell. It ran thus: "One morning before it was light I went up on Pigeon Creek to shoot pigeons. I tied my horse to a swinging limb and waited for it to become light enough for me to see how to shoot. When it was light enough I shot at some pigeons near by, and when the smoke cleared away I noticed that my horse was gone. I looked all around for him, but could see him nowhere, until hearing a groan I looked up and saw him hanging in the air. I had tied him to the top of a tree on which the pigeons were roosting, and when I fired the gun the pigeons flew, the tree straightened up and carried my horse with it." Friend John is a strict member of the church.

LET HER GO, GALLAGHER!—In his account of buffalo hunting, recently referred to by me, Orin Belknap speaks of using a carbine made by Gallagher. I didn't know before that Gallagher had ever made a carbine. Probably when he got the first one finished he got some friend to go out with him and test it, and when the marker got the target all ready he yelled out to the shooter, "Let her go, Gallagher!" and that's probably why the boys say it so much.—G. O. S.

CONVERTED TO A WING SHOT.

IN the afternoon of the 24th of last November the rain fell and froze as it came, covering the trees with a light coat of ice. In the evening and during the night there fell about six inches of snow. On the morning of the 26th the sun rose with all his brightness, with a few scattering clouds of pure white floating here and there, and a light breeze which could hardly be called a breath came gently from the south. Eight o'clock found Mr. Chas. H. Pike, myself and my Gordon setter Trim on our way to Grousedale. The scenery to the right of us, to the left of us and in front of us was beautiful in the extreme. The forest, in crystals of ice, gave to our view all the beautiful colors of the rainbow in ever changing motion. The dark green of the hemlock, pine, balsam and spruce, interspersed everywhere through the forest, together with the sparkling snow, covering hills, valleys and lake, added a certain purity to the scene not to be forgotten. The surroundings had so enraptured us that we hardly realized the distance which had been covered, a mile and a half from my house.

Grousedale lies on the west side of Torsey Pond. At the extreme south side of Grousedale there is a small brook known as Birch Run, which empties into Bear Pond. To the left of Birch Run is a white birch grove interspersed with hemlock and pine; this grove is skirted on the south with a heavy growth of briers. On the north are about two acres of low pine growth, with many mounds of wintergreen or checkerberries. To the north of Birch Run is a heavy growth of timber, mostly hemlock, pine, birch and maple, which extends the entire length of Torsey Pond, a distance of three miles. Half way through this heavy timber is an old slashing where the timber has been removed, perhaps twenty years ago. This covers forty acres or more and is overgrown with briers, small birch and hemlock. The entire place is the home of the grandest of game birds, the lordly ruffed grouse, and they are found in fair numbers.

We started in at the grove to the left of Birch Run, Charles taking the right side following up the shore of Bear Pond. I struck out to the left and had not gone far when Trim struck scent and roaded fifty or sixty yards. Thirty yards away an old cock grouse flushed wild, with a roar of wings that nearly took me off my feet. This spook of a bird, true to its instinct, made for the thickest cover. The impulse born of snap-shooting at grouse in thick cover took possession of me and I cut loose and saw the small twigs of a hemlock, behind which the bird had flown, scatter to the ground, and fifty yards beyond I could see this wily old grouse going into the thick hemlock timber. I called to Charlie who came up soon. We held a council of war, then started across Birch Run, and were just entering the heavy timber, when forty or fifty yards ahead of us from the top of a large hemlock the bird shot toward the ground and made up a deep gully; we marked him down in the edge of the brier patch. Charlie took the right and I the left of the gully and Trim worked in ahead of me. He had not gone far when he froze in his tracks, and before I could get to him another grouse flushed a few yards ahead. The cover was so thick that only a streak of a bird could be seen until he came to the brier patch, where he settled near where the first one was last seen. In a short time Charlie had stationed himself in the brier patch, when to his left and behind him our old cock grouse arose with a deafening roar and made down and across the gully. Charlie delivered fire but scored a miss, this being the first time he had ever fired at a bird on the wing.

Upon hearing the report of his gun I turned in his direction, just in time to see the bird, which looked as large as a turkey, coming directly by me to the left. Instantly my gun came to my shoulder, and cutting loose, I was rewarded by hearing that heavy thud, which is so satisfactory, and yet causes just a little tinge of sadness in the heart of every true sportsman. At command and like a flash Trim was in search of the dead bird, which he retrieved in grand style. At the word "drop" he reluctantly delivered his prize into my hand, and as I smoothed down its beautiful plumage, talking to him of its beauty and the care with which he must handle them, he looked up into my face with his great brown eyes and gave a short, soft "woof," which is his way of assenting to whatever I may talk to him about. During this little episode Charlie had flushed two more grouse, both of them took a course due east through the heavy growth of hemlock, and alighted in trees near the shore of Torsey Pond. As usual, Charlie took the right, the writer to the left, with Trim working well in front and between us. When Charlie arrived close to the bank of the pond, one grouse shot down from a tree 30yds. in front of him and flew about 100yds. over the pond to a small island. We let her go for the present, intending to drive out the other bird and then attend to the one on the island, when, to my surprise, I discovered the grouse we were looking for in a tree about 40ft. from the ground and directly over Charlie, who was looking toward the island and away from me. The temptation was so strong for me to pay him off for shooting a grouse in a tree over my head a few weeks before, that although it was not altogether sportsmanlike I cut loose and brought this poor helpless bird down slap upon Charlie's head, which frightened him so he turned white, and with quivering lips and tremulous voice he blubbered out, "My goodness, I never was more frightened in my life; I thought I was shot." "Served you right," said I, "and paid you off in your own coin." Charlie owns a treeing spaniel and prefers to shoot grouse sitting on a tree, and has always declared that he never thinks to shoot until the bird has gone out of shooting distance. This circumstance was the means of converting him from the error of his ways, and he now says he will learn to shoot on the wing, "if it takes all summer."

After Charlie had fully recovered from his fright, we started for the island, Charlie making a detour to the right on the pond, which was frozen over, with full intention of outflanking the grouse that had fifteen minutes before left the mainland. I swung to the left with Trim in advance. We were obliged to cross a wide marsh, which in high water overflows. Near the island the ice began to crack and being covered with about six inches of snow prevented me from judging of the firmness of my footing; however I hastened toward the shore of the island, when the ice gave way at each step and finally both feet went through into the mud, water and snow. I mention mud first for it was there I stuck. At this moment I heard the roar of wings, and 75yds. to my left the bird was making for the mainland. They fly fast, don't they! Being completely stuck in the mud and wedged in by ice it was impossible for me to wheel and deliver fire. Finally I succeeded in extricating myself and was nearing the shore when I heard Charlie exclaim, "What on earth?" Shortly he came up and we started for the mainland in search of this wily bird, with full intent to capture him if it took us until dark. It was now about 2 o'clock. We sat down upon a log by the shore of the pond and ate our lunch, then struck into the heavy timber and when about 200yds. from the brier patch Trim struck scent and shortly two grouse flushed wild and made for the briers. The next instant our friend the grouse from the island pitched down from a hemlock in front and to the right. The cover being too thick for a shot we hurried along to the briers, with Trim ahead working the ground with great care. Presently we were surprised to see our two grouse flounder out of the snow 60 or 70yds. ahead of us and take a straight course for Birch Run. On we went with faith that we would capture the three birds before dark. We had gone perhaps 50yds. when we flushed three more grouse, which took the same direction high over the small growth and swung to the right of the patch of small pines and wintergreen mounds. We had gone but a short distance when to our discomfort we were confronted by a small stream eight feet wide which was only partly frozen over. The writer attempted to cross, broke through the ice, filled his boots with water and finally succeeded in reaching the opposite bank with the fisherman's luck. During this time Charlie went below a few yards and by the aid of a long pole succeeded in gaining the opposite bank with one boot full of water.

The sun was now sinking, and we hastened toward Birch Run. During our splashing in the brook we started our wily old cock grouse, who made a rapid transit for the run and grove of birch. On we went with fire in our eyes and water in our boots. Presently, when within 40yds. of Birch Run, we espied our cunning friend in a yellow birch budding. We advanced slowly behind the small pines and when within 20yds. of the tree he caught sight of us, and, with his peculiar cackle, shot out to the left behind a low pine. I delivered fire as he came by the pine and was overjoyed to see him tumble into the soft snow. Trim was off in quick time and returned with this wildest of wild grouse.

It was now nearly sundown. Charlie struck into the birch grove with his lips closed, blood in his eyes and firmness in his tread, that meant business. Presently I heard the report of his gun and the exclamation, "I got him this time!" The fact was that he had caught a grouse budding in a birch tree, crept softly up and delivered fire, which resulted in splitting the bird into two parts, with one wing on each part. Charlie declares that he shot it on the wing, or that it ought to have been on the wing. I worked around to the left perhaps 50yds. and bagged another grouse.

The sun had disappeared behind the mountains and we turned our steps homeward, with not a large bag, but a day's magnificent sport and Charlie completely converted to a wing-shot.

Kent's Hill, Maine.

GAME PROSPECTS.

IRONTON, Ohio.—There will be any amount of quail for this fall's shooting; in my travels I see and hear lots of them.—J. D.

Beaver, Pa.—The prospect for quail shooting this fall is the most promising for years. Thanks to Dr. Yarrow for his able article.—G. A. S.

New Westminter, B. C.—The general game crop now looks favorable toward furnishing good sport the coming autumn.—Stanstead.

Salem, Mass., July 16.—Recent looking at old resorts about Ipswich, has shown the arrival of pups, sanderling, and scattering robin snipe (*M. griseus*), and summers (*T. flavipes*). Saw 3 black ducks (*Anas obscura*) last night.—X. Y. Z.

Eustis, Fla., July 11.—The enthusiastic bird hunters of this section are looking forward to fine sport with quail in the fall, as there is every indication of a full crop this season. On a recent trip a few miles out of town I saw a great many. Pair after pair were seen along the road, and in some cases I could have touched them with the whip. How well the little fellows know that they can show themselves with impunity during the breeding season, and how well they will show us the strength of their wings this fall. There is a lack of good dogs here and it is hard to get the birds up without them, as the cover in most cases is very dense. Let those of our visitors who want to enjoy some fine sport with them this winter when the North is bound in the icy clasp of old Boreas report with dog and gun to—Perito.

Commissioner J. H. Law of Ohio.—One of the insurance journals has this to say of Mr. John H. Law, of Cincinnati, who has been active in enforcing the game and fish laws in his State: "His ideas of professional duties and responsibilities are high, and his every-day career is in keeping therewith. The line between right and wrong is sharply drawn, and there is no deviation. A man of fine physique, quick and positive in every action, and knowing no fear; he is a terror to fire fiends everywhere, and incendiaries who fall under his notice fare ill indeed. In private and public life also he is not less active. Everything looking to the betterment of this city and State has his hearty support, while everything tending to their injury has his unalterable opposition. His regard for the law and his zeal in dealing with offenders were illustrated while he was mayor of Loveland, one of the suburbs of Cincinnati, in which he resided for a number of years. His fearless handling of offenders was a matter of public comment throughout the community. Another illustration was in his individual prosecutions of violators of the fish and game statutes of Ohio, which at the time attracted general attention. He is a thorough, practical field sportsman (one of the first in Ohio), and was last year appointed by Governor Foraker Fish and Game Commissioner of the State. This appointment was made regardless of politics, the appointee and Governor Foraker being of different political faith."

A Pennsylvania Shooting Ground.—Bedford is a beautiful summer resort in the mountains of western Pennsylvania. In a walk of a mile from my mother's house last season, without dog or gun, I put up four coveys of quail. Two gentlemen from Bedford, Mr. Alex. King and his brother Ned, came out the following day with two dogs. I think a little bird told me, however, that one of the gentlemen could not kill very well on the wing, so when they returned in the evening with thirteen quail, three grouse and one woodcock, I remember thinking that they would have had twice as many if both had shot equally well, and five times as many if both had killed one-half they shot at. But this is no reflection, for the man who kills all the quail that get up before him in that country is doing more than any one I have ever seen. I should think this a capital place for sportsmen. There have been enough birds there for years to make it a good hunting ground. If any gentleman were to address Alex. King, Esq., he would get an answer that would satisfy him. The ridges, as called there, upland timbered country, are full of grouse, peasants so-called in that country.—W.

Deer Killed with No. 7 Shot.—In the smoking room of the Ponce de Leon Hotel, in St. Augustine, Fla., may be seen a set of deer antlers, which were once borne through the Adirondack forests by a magnificent buck. This deer fell to the gun of Dr. Horace Caruthers, who contributes to our columns this week an account of some of his experiences with dogs bitten by rattlesnakes. The buck was shot with a charge of 3½drs. powder and 1½oz. No. 7 shot, delivered from a Daly three-barreled 12-bore, at 20 paces. This barrel had been loaded for grouse; there were heavier charges for deer in the other barrels; the Doctor's companions rallied him on having pulled the wrong trigger by mistake, but he claims to this day that he shot the grouse charge at the deer as an experiment; and the best of it all is that the experiment was successful. With true physician's instinct the lucky hunter proceeded to dissect the game, and it was found that a number of shot had passed through the heart. The party, of which Mr. A. Weed, of Tarrytown, was a member, found all the deer they wanted; and they shot only bucks, letting the does go.

July Woodcock Shooters Come to Grief.—Meriden, Conn., July 16.—In the statement of the following facts regarding the illegal shooting of woodcock, I hope to see in the next issue of your paper a warning to others that are engaged in the same traffic. Through the untiring efforts of Mr. Nelson Taylor of this town, Dennis Miller of New Britain, and Asa Richardson of Kensington, were arrested and fined for shooting woodcock on July 4. Much credit is due Mr. Taylor, who for years has been trying to make an example of some of these men, unworthy the name of sportsmen, who hunt Sundays and out of season. Our club here, the Parker Gun Club, of which Mr. Taylor is a member, take pleasure in paying him the $25 reward offered for the conviction of any person violating our game laws; and I would urge other clubs to do likewise, as the most effectual way to stop this thieving.—J. F. Ives.

To Drive Out Mosquitoes.—In the day time we could fight the mosquitoes, bad as they were; but at night we could not sleep for their tormenting us, notwithstanding the precautions we took against their getting into the cabin. When we were about to turn in for the night we put up mosquitoe bars over the stern opening of the cabin to keep them out; then we took about a table-spoonful of Persian insect powder and burnt it on a small cotton rag; in ten minutes not a mosquito appeared in the cabin. It appeared to us incredible that the burning of the powder would so completely destroy them; but every time we repeated this the mosquitoes were destroyed, and with no disagreeable smell or effect on us. Perhaps this is nothing new, but it may be useful information to relieve others from the mosquitoe torment.—Purves.

The New York Deer Park is to be in Ulster county. The lot selected, 193 acres, is on the banks of the mountain stream, Neversink River, one and a quarter miles from Big Indian station on the Ulster and Delaware Railroad, a few miles from Kingston. On this lot—No. 67—the Commissioner has provided for fencing in fifty or a hundred acres, with a lodge of logs for the necessary keepers and breeders, and with sheds for protection of the deer in rough weather. And here the Commission will begin early next fall the project of propagating the deer which have already felt the depleting process of the hunters and sportsmen's rifles. It is probable as the one park or farm proves a success, more will be established, and two more are indeed to be at once planned.

Hunting Hatchet.—I do not like the idea of double blade—nothing to drive nails with—or to dig, for that matter. I am getting up a hatchet; as soon as complete will send you outline sketch with dimensions for publication if you deem it worthy.—G. A. S.

THE YELLOWSTONE PARK PETITION.

ADDITIONAL lists of signatures to the Yellowstone Park petitions are as follows:

NEW YORK.

W. W. Cone, W. S. Pearsall, Isaac Gardner, H. H. Crooker, H. C. Bourne, E. J. Wilsey, W. E. Butts, W. L. Elmer, P. W. Freeman, Frank H. McKinnon, Henry R. Bennett, Geo. Knapp, A. F. Getter, John A. Crawford, George Burch, H. S. Willis, John C. Willis, Geo. Littlerent, R. McKinnon, L. L. Soonberger, J. K. McKinnon, Fred Smith, Carl A. Gustafron, W. P. Bennett, Wm. Fuller, Nathan Baxter, Ethel Burch, John G. Barnaby, A Gardiner, Arrin A. Priest.

Theo. L. Cuyler, H. A. Tucker. A. J. F. Behrends, J. Winthrop Hageman, Chas. H. Hall, Geo. E. Reynolds, R. S. Storrs, T. De Witt Talmage, Seth Low.

The following letter received by the United States Cartridge Co., Lowell, Mass., from Mr. F. S. Lindsley, Supt. American Wood Powder Co., West Hobokan, N. J., speaks for itself: "I am perfectly willing that you should use my name to indorse your shells, and especially your new primer for American wood powder, and I heartily recommend your shells to wood powder shooters. As a matter of fact I have recommended your paper shells for the last eighteen months, and have in that time shot thousands of them and given away thousands of them loaded with wood powder."

WORDS ABOUT "FOREST AND STREAM" WORK.

Editor Forest and Stream:

The splendid fight that the FOREST AND STREAM has made for our National Park entitles your paper to the commendation of all lovers of the bold, the beautiful and grand in nature. I have twice visited the Park, and from my own observations know the necessity of the Congressional action that you through your journal are insisting upon. It is not a personal matter that our Park shall have the protection suggested by you, but one of great and vital importance to the millions of Americans who will people our country when the last of this generation shall be slumbering in death. Then go on with the good work, and the people of this great country will rise up and shower blessings upon you for your beneficent labors on their behalf. C. A. WALKER.

CARLINVILLE, Illinois.

Editor Forest and Stream:

Having bought your paper for over five years, I find I like it more all the time. The manful fight you make upon the silly game laws enacted by some States must meet with hearty approval from all true lovers of the dog and gun, sportsmen who welcome a good law and keep it. JOHN C. SHALLCROSS.

FRANKFORD, Pennsylvania.

Editor Forest and Stream:

I wish I could write more fully in regard to the increased number of birds this season. That it is a fact there can be no doubt, and if any one human agency is to be credited it is FORTEST AND STREAM. JEROME BURNETT.

WASHINGTON, D. C.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

MORE ABOUT LAKE EDWARD.

Editor Forest and Stream:

An article in your number for June 28, entitled "A Sportsman's Paradise," is a very seductive and taking lure for the angler whose largest trout has hitherto come from some small stream. The first cast of that Lake Edward fly hooked two, and the writer who was one of them would like to say a word on the subject for the benefit of anglers. Perhaps the better as well as the shorter way will be to refer the reader to the article in question and then modify some of the statements therein.

In the first place, there is but one daily train each way between Quebec and Lake Edward. This train leaves Quebec at 8 A. M., and arrives at Lake Edward at 1:50 P. M. Returning, the train leaves Lake Edward at 12:15 A. M. (midnight) and arrives at Quebec at 6 A. M. This is all right if one knows it, but it gives no time for breakfast on arriving at Quebec en route for the lake; and if the angler stops to get that or anything else he will be liable to a delay of 24 hours.

Again, the trout in that lake will not rise to the fly at this season of the year, and my boatman told me that they cannot be thus taken at any season. The black flies are a perfect terror, and they flourish from May to the last of August. We were told that this is the "cold fact" by every resident of whom we inquired.

In the third place, the deep water is at and near the lower half of the lake—from seven to thirteen miles from the settlement. Consequently one must row this distance daily, and return; or else he must camp near the lower end of the lake—at this season of the year—in order to catch any trout. Early and late in the season large trout are taken in the upper portions of the lake, but while the weather is warm the trout retire to the deeper waters. Camping on those beautiful shores—for they are exquisite—would be purgatory on account of the flies and mosquitoes. The latter were not at all troublesome at the settlements while we were there—and we were told that they are never very numerous. There are no worms there nor can they be obtained nearer than Quebec, and the natives do not even catch minnows for sale to the fishermen. One must catch his own bait.

These are reasons why this lake is not and never will be a "sportsman's paradise."

The ride from Quebec is pleasant, the scenery for about one-third of the 113 miles being really grand. I have already alluded to the beauties of the lake. It is a gem; and were it not for the flies it would be the fisherman's paradise still minus one important requisite. It is one thing to take a large trout with an 8oz. bamboo rod with bait and a sinker at the end of your line; and quite another thing to entice the dark speckled beauty with the stretcher and drop flies.

There are plenty of trout there and large ones. We took 21 in six hours, including the time wasted in catching minnows for bait. Of these the largest weighed 1¾ lbs. The 21 averaged a little over 1lb.; 14 averaged 1¼ lbs. We also caught some between ½ and ¾lb, that were returned to the water, and four much larger ones were hooked and lost. Two of these were seen. A No. 5 N. Y. trout hook is not strong enough for the large trout in this lake. They have a way of carrying away tackle and especially breaking hooks without making any undue strain upon the line that I have never encountered before, and I suspect that extra strong snells and hooks are absolutely necessary to hold the larger ones.

We did not go far enough down the lake to get to the deeper water, as we planned to get an earlier start on the second full day (we vainly spent a half day in trying to induce some of them to rise to the fly), but the black flies were so numerous and relentless that my friend positively refused to remain a day longer, although he is one of the most ardent trout fishermen I know. We were prepared with "repellants" of two kinds and with tarleton head nets, but the fly "got there all the same."

SALMO FONTINALIS.

Editor Forest and Stream:

Since the publication of my article regarding Lake Edward in FOREST AND STREAM, dated June 28, I have received a number of letters convincing me that I overlooked two important items, and now, as a courteous reply to several inquirers, I beg to say that there are no professional guides at Lake Edward. Save at the little clearing surrounding the railway station, the entire country is an unbroken wilderness, and has not yet felt the tramp or need of the tutored guide. Depleted waters like the Rangeley Lakes require capable and careful guides to discover the few fish still supposed to be secreted in those once splendid waters. Boats can be secured at Lake Edward from Mr. Hoolihan, superintendent of the construction company's store, for which a charge of $1.50 per day is made, and after half an hour's pull the angler drops anchor and goes to work. Favorite spots in Lake Edward have not yet been discovered, as one place is as good as another, and all rank A No. 1. The building at the station which I have dignified by the title of hotel, is merely a little two-story log house, crude and primitive in the extreme, but half a dozen good beds and three plain but substantial meals daily will be at the disposal of visitors.

Mosquitoes and black flies are plentiful there "allee samee," as at other similar resorts, but disappear after the middle of July. Ruffed grouse are found in the adjacent forests, and occasionally a caribou is met. Grouse are in season after September 1, and caribou after October 1. Trout can be taken until October 1, but I do not know if they take the fly freely. All my fish were taken with minnows in June, and I think this bait will prove successful at any time. New Yorkers can reach Lake Edward, and avoid Montreal, by way of New Haven, Springfield, Newport, Vt., and Quebec. Leaving New York at 9:15 A. M. (Grand Central Depot) the train reaches Quebec at 6:45 on the following morning. A transfer of one mile is requisite, and the 8 A. M. train on the Quebec and Lake St. John Railway reaches Lake Edward at noon. The fare is about $14 from New York to the lake. Anglers will have no trouble in passing the customs, as there is no duty on tackle carried for personal use.

I have read the letters in FOREST AND STREAM written by Messrs. F. C. Barker and Chas. A. J. Farrar. Readers of the paper should understand that the first named is Captain Barker, who owns and runs the steamer on Mooselucmaguntic Lake, and Farrar runs the steamer on the Richardson Lakes, and hence they should be expected to come out in print in defense of their native heath. I know Captain Barker quite well, although he would not recognize me were we to meet, and I have always heard him spoken of as a courteous and obliging gentleman. When I said that "good fishing at the Rangeley Lakes was a thing of the past" I told the plain unpainted truth, which has long ago become clearly evident, and no reputable angler will deny it. Farrar's insolent abuse proves only the material of his own composition and is a fair example of the conduct he has displayed about the lakes for the sixteen unfortunate years he claims to have been visiting them.

The question arises, why did I say "good fishing at the Rangeley Lakes is a thing of the past"? Let us see. It is absolutely safe to estimate that twenty persons fish the various waters of the Rangeley Lakes each day during the season. This includes guides, visitors, loggers, campers and residents, and is a low figure. One hundred would be a fairer figure. From June 1 until Oct. 1 there are 120 days, and this would give a total of 2,400 persons who fish during the season. Out of this large number we hear of forty or fifty individuals who are lucky and catch a good string of trout. More than 2,000 are disappointed. That is one reason why I say "good fishing at the Rangeley Lakes is a thing of the past." Another reason is that I am personally acquainted with a most enthusiastic angler, who during the month of September cast flies almost continually for thirteen days below the Upper Dam and never saw a solitary rise. This, too, is alleged to be one of the "best places" in all that region. I do not believe this feat could be successfully repeated on any other trout water in the world, and it is another reason why I say "good fishing at the Rangeley Lakes is really a thing of the past."

Your correspondent "Special" says "it is true that the fishing is not what it should be," and even Farrar howls for the State of Maine to stock the waters with "large numbers of small trout." What for? Why stock waters which, as he alleges, are already crowded with fish? Well, that is an easy one.

Two years ago, when my letters about the Rangeley Lakes were printed in the New York daily papers this same "disinterested" crowd wrote weeping denials of my statements, but their epistles, after being sent me for perusal and amusement, found their final rest in the waste basket, but not a line came from a reputable angler.

When I wrote to FOREST AND STREAM describing Lake Gogebic I did it to direct a few of New York's twenty thousand anglers to an unsurpassed ground for black bass, and I know of dozens who went there and found splendid sport. Now I have again taken the readers of this journal into my confidence, described Lake Edward, and guided them to the best waters for trout I have ever seen, and I have already received letters from a number of sportsmen who will go there and enjoy sport with trout that will be a source of considerable surprise.

I am pretty well known among the sportsmen of New York, and they are quite well aware that when my name is attached to an article it contains only the plain truth. I am not "working up" any railroad or hotel, and have never yet accepted any favors, although offered to me times beyond compute. My reward is greatest in the knowledge that brother sportsmen will, in following my directions, be guided aright, and meet ample compensation for their trouble and travel. I shall continue to do this in spite of the fact that an abusive and interested individual takes a questionable exception to my opinion of his own depleted waters. It is a good thing for me that this writer did not read my letters to the New York papers this spring—notably that printed in the *Sun* of June 24—else I might have been openly accused of something real horrible, even worse than proclaiming the acknowledged truth that "good fishing at Rangeley Lakes is a thing of the past." KIT CLARKE.

ST. ALBANS BAY, Vt., July 10.—Season has opened well at Samson's Lake View House. Messrs. J. W. Brown, J. Bulkley and Timothy L. Woodruff, of New York city, caught here in three days 150 bass, wall-eyed pike and northern pike; 127 of the number were bass, 74 of the 127 caught in one day's fishing, weight 142lbs. Fly-fishing is good at present writing, water clear. We commence a trial to-day with hoppers, while some of the guests fish only with the fly. Daily average has been good, weather cool, 74 degrees to-day.—H. L. SAMSON.

SEA BASS OFF BRIGANTINE.

Editor Forest and Stream:

One fine morning about a month ago my friend, W. C., of Philadelphia, and I sailed out through the inlet at Atlantic City, N. J., in the yacht Sinbad, towing two skiffs behind, and accompanied by two veteran fishermen besides an experienced captain. Our destination was the ten fathom whistling buoy off Brigantine Shoals, near which there lay a wreck where sea bass were caught in great numbers during last summer. This buoy lies due east from Absecom Light some ten miles, and about seven miles off Brigantine Beach. The wreck had not been found this year owing to some changes in the location of the buoy, and aside from the honor of locating it anew, the sea captains and anglers thought longingly of the rich harvest that would reward the first day spent over its rotting timbers. One thing after another had prevented their going in quest of the spot—either unfavorable weather, dread of failure, and loss of prestige or dislike of wasting a day in a search that might be fruitless.

With a light southerly wind but calm sea we made the buoy about 12 o'clock, and immediately set our fishermen at work in their skiffs "sweeping" the bottom with a 200 fathom weighted line. Within a half hour they struck something, and we were kindled into excitement as they hauled in the slack and came nearer and nearer to the point where they were fast. Disappointment followed rapidly, as the line suddenly came away and they drifted back with the strong tide running up the beach. After several more attempts we took them aboard for dinner, and at 2 o'clock cast them off again for a last trial, but with little hope that they would find the wreck.

Up and down, in widening circles they pulled, now high on some wave and then lost to sight for a second in its wake. Finally at three o'clock they shouted that they were fast, and we sailed to windward of them, anchored, and dropped down to the place where the skiffs came together, anchored to something right beneath them in ten fathoms of water.

It might not be the wreck after all, but eager fingers placed a portly clam to hook in a trice, and down went the heavy dipsey for a trial. It may be inferred that a calm joy filled all our hearts when the fortunate angler was seen to haul in rapidly, followed by something like excitement when a five-pound sea bass, black as one's hat, was landed in the boat. We had struck the wreck! Then followed a brief ninety minutes of fishing whose net result was 109 sea bass weighing nearly 400lbs. How they did bit, two at a time, frequently, they came panting up through the clear water, and all large fish, the cream of the wreck.

At half-past four o'clock the inexorable captain assured us that we would have to leave, as the tide was against us and the wind falling light. Reluctantly therefore we took in our lines—for the fish were still biting savagely—weighed anchor, and set off for Atlantic City, lying low and misty in the distance, while the buoy gave us a parting grunt of congratulations. After a most pleasant run in, we reached the Pavillion at half-past six, and if we made a somewhat ostentatious spread of the fish, upon landing, before the eyes of the envious skippers, I think no amateur fisherman will say that we did wrong.

E. H. J.

SALMON IN MAINE.

THE spring campaign with rod and line is over, and the real sportsmen are generally at home. The vacationist is getting his meagre tackle ready. As a rule the sportsmen are generally fairly satisfied, and the feeling that they must be satisfied with fewer trout each year, is growing. True sportsmen are satisfied under it, and they are making no complaint, but rather they are casting about to see what may be done in the way of improving the fishing in their favorite waters. The tendency is toward clubs and organizations that can completely control certain waters, and the proposition is to raise money and expend it in the propagation of trout and landlocked salmon. The Megantic Club, the principal membership of which is in Boston, is to take important steps in this direction. Already they are opening the only dams that shut up the outlet of their lake from the sea, and they fondly hope that the old run of sea salmon will be established. Fish hatching of both trout and landlocked salmon will be taken hold of in good earnest, as soon as the club gets into working order.

I met Fish Commissioner E. M. Stilwell the other day. He is greatly encouraged concerning the salmon prospects in Maine. The increase and the growth of the landlocked salmon have been shown this year in particular, beyond the hopes of the Commission. The run of sea salmon in the Penobscot has been the largest ever dreamed of. At Bangor is the salmon pool of the people—the pool where everybody can fish and where everybody does fish. The rabble fishes there. Perhaps to the disgust of the nobby fisherman, with his pockets well lined with the dollars his father earned, but all the same the pool is the poor man's pool, and he fishes there, and he catches salmon—great salmon—and the fish do the poor man more good than they do the owner of the hundred dollar tackle. The number of tons of salmon taken from the Penobscot River this season is enormous; some of them—indeed a great quantity—with hook and line at Bangor, but far more with nets down river. The sportsman sighs that this netting of salmon might be stopped, and it is a pity that it cannot be stopped—better by some reasonable buying out of the interests of the netters in the towns along the river. Then what a salmon river it would be for rod and line! Why, already the Boston market has been glutted with salmon this year, and the price is down to 15 to 18 cents per pound; and a great many of these fish are taken in nets along the Penobscot. Think of it! A great market glutted with the king of game fish! Does one argue that the masses get cheap salmon in this way? Not much. The profit is kept in the hands of the retail trade. The very day that salmon fell to 15 cents in the wholesale trade the retailers were charging 35 cents. They had not found that salmon were off several days after. Commissioner Stilwell says that the Maine Commissioners are busy putting in fishways, and seeing to their alteration, so as to increase and foster the migration of the salmon. He remarks that they are taking salmon at Bangor even now, though it is later than the run generally holds out.

SPECIAL.

THE MISSISSIPPI GULF COAST.

BILOXI, Miss., July 8.—*Editor Forest and Stream:* The Gulf coast of Mississippi has developed into one of the finest fishing grounds in this country. All known game fish inhabiting the Gulf of Mexico abound, and among the various species is that locomotive of the sea, the tarpon, or as known hereabouts, the silver fish. One was caught right off the wharf of the Montross Hotel weighing 208lbs. not long since. Mr. P. J. Montross, proprietor of the hotel, has preserved a number of scales of this monster, which are larger than a silver dollar. Inclosed are specimens. No doubt fine sport could be had along this coast by all who glory in finished fishing. Plenty of pompano, sheepshead, moonfish, bluefish, redfish, red snapper, green trout, speckled (sea) trout, white trout, Spanish mackerel, drum, grouper, mullet, flounders, bream, croakers, crabs, prawns, shrimp, oysters, etc., abound. Ship Island is only a few miles from Biloxi and is the principal ground, while the numerous passes are also fine waters for sport. The accommodations at the Montross Hotel are excellent. Biloxi is on the Mobile & New Orleans division of the Louisville & Nashville Railroad and only eighty miles from New Orleans and easily reached from almost any point, has a population of 4,000. As a lover of sport my object is simply to let the world know through your columns what can be found at these unlimited fishing grounds. Those who indulged are reaping good results, but there is a lack of enthusiastic anglers. G.

BLUEFISHING ABOUT LONG ISLAND.

THE bluefish have been plenty during the past week in those waters of Long Island which they usually frequent. Along the south side, from Sheepshead Bay to Shinnecock Bay, good catches have been the rule, while in Great South Bay and off Fire Island they have fairly swarmed. On Saturday last a party of four from Sayville took 119 bluefish in one hour, and then quit, the fish ranging from 1 to 2lbs. Another party took twenty-two fish which weighed 68lbs. Off Shinnecock Light a party of three New Yorkers took twenty-seven fish which averaged nearly 4lbs. each.

At the eastern end of the island some larger fish have been taken, and the catches in Peconic and Gardiner's Bay included some fish which would run about 4lbs. This is a good average for this time of year, the larger fellows of 6 and 8lbs. seldom coming to these waters until autumn. Trolling in Plum Gut is fair now, but will be better a month later.

On the north shore of the island the fish have come into bays where they have been strangers for years, and fish weighing from 1 to 1½lbs. have been taken as far west as Oyster Bay. Taking the waters of Long Island as a sample would indicate a good season for bluefish along the coast.

LARGE BROWN TROUT.

WE record elsewhere the capture of a 5lbs. 14oz. brook trout in the Adirondacks.

The capture of the Adirondack giant on the 10th by a Syracuse angler was followed the next day by the feat of an emulous Rochester fisherman who took in a brown trout of unusual proportion. The fish has been exhibited at Mr. Blackford's, in Fulton Market, this city. Its capture is related by a Rochester correspondent, who writes under date of July 12:

"The numerous members of the angling fraternity in this city have seen nothing recently that awakened their admiration so much as did a trout caught last night by Frank J. Amsden in his preserve on Spring Creek, below the State hatchery at Mumford, eighteen miles from town. The fish was caught on a white-miller and killed on an 8oz. rod, with the fine tackle essential to success on that stream. It took the fly between 11 and 12 o'clock at night, and when landed marked 5lbs. 4oz. on the spring balance. It was in prime condition and measured 24in. in length. It was of the German or brown trout variety, and is one of a consignment of fry placed in the stream in 1884. It is not so stout nor beautiful a fish as the native brook trout, but is equally as game.—E. R."

CAMPING IN COLORADO.

CAMP ON THE MUDDY RIVER, Middle Park, Col., July 1.—Two of us have traveled sixty miles on horse back and are now encamped on the Muddy River, one of the tributaries of the Grand. We have come from North Park to try the trout fishing. As is well-known in the West, streams that flow northward contain no trout. Hence we North Parkers have to cross the range into Middle Park for trout rivers that flow southward. For all the rivers in North Park flow north into the Platte.

We made the trip in a day and a half. The second day we crossed the Arapahoe Pass where just six years ago the famous battle between the Utes and the Arapahoes was fought. Our road lay right over the battle field. On either side are large heaps of rocks which the Arapahoes made for the defenses. Tradition has it that while the Utes had left North Park for several days to sign a treaty, the Arapahoes came in to capture it. When the former returned over the Muddy Pass from Middle Park, they were confronted by the latter behind these huge piles of stone. However, the Utes had their country to fight for and after a three days' battle were victorious. They kept North Park thereafter until they were removed to the White River Agency.

Once in Middle Park, you notice the southward flow of the streams. The first cast of your lines brings out a brook trout. In a few minutes we caught enough for dinner. About 3 in the afternoon we reached The Muddy. Why called "The Muddy" I can't say, for a clearer stream I never saw. Following the stream up to within five miles of its source we pitched camp, where we now are. We are surrounded by small clumps of willows. The stream is but 10ft. from us. At our back is a steep hill covered with timber. We are just one mile below the celebrated cañon, between which and our camp the best fishing is supposed to be. Our lines are soon rigged. In half an hour we have enough trout for supper and breakfast. And such beauties! One weighed 2lbs.

All went smoothly in camp until one day our horses got away. We had been fishing about a mile above camp, supposing our horses to be securely picketed. On our return, to our horror all the horses but one had escaped. The one left was terribly excited. Judging from tracks near by we concluded a mountain lion had paid the camp a visit. He evidently had so frightened the horses that they broke their picket ropes. Then the grand horse hunt began. And it was a serious matter, too, for what if the horses were tied up in the timber and should starve to death.

My companion quickly saddled the remaining horse. He rode from 5 until 9 that evening, but with no success. Next morning he started out at 6. After riding until 2 in the afternoon he found them tied up in thick bushes and so hungry that they were glad to eat even quaking asp.

We think we shall break camp on the 4th and try some antelope shooting on the way back. F. B. W.

BLACK BASS AT PLYMOUTH.—Boston, Mass., July 13.—On July 4 we went to Chiltonville, Plymouth, Mass., to try the black bass, and had a very good time indeed, and very fair fishing. There were six of us on the glorious Fourth, and altogether we caught eighty-five bass, the best being one of 3½lbs. strong, and better still it came to me, the best bass (small-mouth, as are all in this State) I have yet caught. The next best was a 2¼lbs., 1½lbs., and a number of good ones of about 1¼lbs. Thursday there were only five of us, and we had much poorer luck, taking in all forty-five bass, the best two weighing 1¾lbs. each. We used all the kinds of bait we could find, and in the two days I took bass on dobson, frogs, crickets, minnows, live dragon flies and a brown hackle with worm attached. The fellow who wrote in your journal that a snake was sure, I don't think much of, for I tried a green grass snake three separate times on the Fourth without a bite, till the other fellow vowed he would go ashore if I did not throw him away, which I did, finally, and saw him swim across the pond as prettily as you would wish, notwithstanding his hard usage.—F. J. T.

THE ENTERPRISE MANUFACTURING CO., of Akron, O., have just completed a new addition, 30x60, two-story brick building. This, with their present large plant, gives them a floor space of over two acres, occupied exclusively in the manufacturing of all kinds of fishing tackle and specialties. This is without doubt the largest manufactory of these goods in America. They are fully equipped with the latest automatic machinery, good and central shipping facilities, cheap fuel, and many other advantages, which, to a certain extent, accounts for their building such desirable goods at popular prices. Through the energy of Mr. E. F. Pflueger, president and manager of the company, it has steadily grown until it has reached the present mammoth size, as it seems "onward and upward" is his motto.

THE SCARLET-IBIS.—This fly was quite a favorite with trout anglers twenty years ago but seems to have gone out of fashion. It has been decried by those who hold that the artificial fly should resemble some living thing, which the one in question does not. In our own fly book it has had a long rest, perhaps for three or four years, until last week when fishing a small pool we tried it as a last resort, after a dozen or more favorites had failed to provoke a rise, and took three fine trout on it. It is possible that if we had fished the next day in the same place the trout would have preferred something else, but, under the circumstances, we feel like giving credit to the old-time favorite, now almost in retirement, for what it did in saving the day.

THE SAGUINAY CLUB, of Rochester, N. Y., returned this week from its preserve on the river after which the club is named. Six members during their three weeks' visit caught 416 landlocked salmon or "wininish," and report that the fishing was better than last year.—E. R.

BASS FOR ROCHESTER ANGLERS.—There is excellent black bass fishing in Lake Ontario, at Nine-mile Point, a resort within two hours' drive or rail of the city, and there has also been some rare sport with the bass, pike and pickerel in the river above the city.—E. R.

Fisheculture.

THE DISTRIBUTION OF FRESH-WATER FISHES

BY PROF. DAVID STARR JORDAN.

[Read before the American Fisheries Society.]

WHEN I was a boy and went fishing in the brooks of western New York, I noticed that the different streams did not always have the same kind of fishes in them. Two streams in particular in Wyoming county, not far from my father's farm, engaged in this respect my special attention. Their sources are not far apart, and they flow in opposite directions, on opposite sides of a low ridge—an old glacial moraine, something more than a mile across. The Oatka Creek flows northward from this ridge, while the East Coy runs toward the southeast on the other side of it, both flowing ultimately into the same river, the Genesee.

It does not require a very careful observer to see that in these two streams the fishes are not quite the same. The streams themselves are similar enough. In each the waters are clear and fed by springs. Each flows over gravel and clay, through alluvial meadows, in many windings, and with elms and alders "in all its elbows." In both streams we were sure of finding trout (*Salvelinus fontinalis* Mitchill), and in one of them the trout are still abundant. In both we used to catch the brook chub (*Semotilus atromaculatus* Mitchill), or, as we called it, the "horned dace;" and in both were large schools of shiners (*Notropis megalops* Rafinesque) and of suckers (*Catostomus teres* Mitchill). But in every deep hole, and especially in the mill ponds along the East Coy Creek, the horned pout (*Ameiurus melas* Rafinesque) swarmed on the mucky bottoms. In every eddy, or in the deep holes worn out at the root of the elm trees, could be seen the sunfish (*Lepomis gibbosus* Linnæus), strutting in green and scarlet, with spread fins keeping intruders away from its nest. But in the Oatka Creek were found neither horned pout nor sunfish, nor have I ever heard that either has been taken there. Then besides these noble fishes, worthy of a place on every school boy's string, we knew by sight, if not by name, numerous smaller fishes, darters (*Etheostoma jiabellare* Rafinesque) and minnows (*Rhinichthys atronasus* Mitchill), which crept about in the gravel on the bottom of the East Coy, but which we never recognized in the Oatka.

There must be a reason for differences like these, in the streams themselves or in the nature of the fishes. The sunfish and the horned pout are home-loving fishes to a greater extent than the others which I have mentioned; still where no obstacles prevent they are sure to move about. There must be, then, in the Oatka some sort of barrier or strainer, which keeping these species back permits others more adventurous to pass; and a wider knowledge of the geography of the region showed that such is the case. Further down in its course the Oatka falls over a ledge of rock, forming a considerable waterfall at Rock Glen. Still lower down its waters disappear in the ground, sinking into some limestone cavern or gravel bed, from which they reappear after some six miles in the large springs at Caledonia. Either of these barriers might well discourage a quiet-loving fish; while the trout and its active associates have sometimes passed them, else we should not find them in the upper waters in which they alone form the fish fauna. This problem is a simple one, a boy could work it out, and the obvious solution seems to be satisfactory.

Since those days I have been a fisherman in many waters—not an angler exactly, but one who fishes for fish and to whose net nothing large or small ever comes amiss, and wherever I go I find cases like this.

We do not know all the fishes of America yet, nor all those well that we know by sight; still this knowledge will come with time and patience, and to procure it is a comparatively easy task. It is also easy to ascertain the more common inhabitants of any given stream. It is difficult, however, to obtain negative results which are really results. You cannot often say that a species does not live in a certain stream. You can only affirm that you have not yet found it there, and you can rarely fish in any stream so long that you can find nothing that you have not taken before. Still more difficult is it to gather the results of scattered observations into general statements regarding the distribution of fishes. The facts may be so few as to be misleading, or so numerous as to be confusing; and the few writers who have taken up this subject in detail have found both these difficulties to be serious. Whatever general propositions we may maintain must be stated with the modifying clause of "other things being equal;" and other things are never quite equal.

Still less satisfactory is our attempt to investigate the causes on which our partial generalizations depend—to attempt to break to pieces the "other things being equal" which baffle us in our search for general laws.

We now recognize about six hundred species of fishes as found in the fresh waters of North America, north of the Tropic of Cancer, these representing thirty-four of the natural families. As to their habits, we can divide these species rather roughly into the four categories proposed by Professor Cope, or, as we may call them—

(1) Lowland fishes; as the bow-fin, pirate perch, large-mouthed black bass, sunfishes and some catfishes.

(2) Channel fishes; as the channel catfish, the moon-eye, gar-pike, buffalo fishes and drum.

(3) Upland fishes; as many of the darters, shiners and suckers, and the small-mouthed black bass.

(4) Mountain fishes; as the brook trout and many of the darters and minnows.

To these we may add the more or less distinct classes of (5) lake fishes, inhabiting only waters which are deep, clear and cold, as the various species of whitefish and the great lake trout; (6) anadromous fishes, or those which run up from the sea to spawn in fresh waters, as the salmon, sturgeon, shad and striped bass; (7) catadromous fishes, like the eel, which pass down to spawn in the sea; and (8) brackish-water fishes, which thrive best in the debatable waters of the river mouths, as most of the sticklebacks and the killifishes.

As regards the range of species, we have every possible graduation from those which seem to be confined to a single river, and are rare even in their restricted habitat, to those which are in a measure cosmopolitan,* ranging everywhere in suitable waters.

Still, again, we have all degrees of constancy and inconstancy in what we regard as the characters of a species. Those found only in a single river basin are usually uniform enough; but the species having a wide range usually vary much in different localities. Continued explorations bring to light, from year to year, new species; but the number of new forms now discovered each year is usually less than the number of recognized species which are yearly proved to be untenable. Three complete lists of the fresh-water fishes of the United States have been published by the present writer, That of Jordan and Copeland†, published in 1876, enumerates 670 species. That of Jordan‡ in 1878 contains 665 species, and that of Jordan‖ in 1885, 587 species, although upward of 75 new species were detected in the nine years which elapsed between the first and the last list. Additional specimens from intervening localities are often found to form connecting links among the nominal species, and thus several supposed species become in time merged in one. Thus the common channel catfish (*Ictalurus punctatus* Rafinesque) of our rivers has been described as a new species not less than twenty-five times, on account of differences, real or imaginary, but comparatively trifling in value.

Where species can readily migrate, their uniformity is preserved; but whenever a form becomes localized its representatives assume some characters not shared by the species as a whole.

Comparing a dozen fresh specimens of almost any kind of fish from any body of water with an equal number from somewhere else, one will rarely fail to find some sort of differences—in size, in form, in color. These differences are obviously the reflex of differences in the environment, and the collector of fish seldom fails to recognize them as such; often it is not difficult to refer the effect to the conditions. Thus, fishes from grassy bottoms are darker than those taken from over sand, and those from a bottom of muck are darker still, the shade of color being in some way not well understood, dependent on the color of the surroundings. Fishes in large bodies of water reach a larger size than the same species in smaller streams or ponds. Fishes from foul or sediment-laden waters are paler in color and slenderer in form than those from waters which are clear and pure. Again, it is often true that specimens from northern waters are less slender in body than those from far south; and so on. Other things being equal, the more remote the localties from each other, the greater are these differences.

It is evident, from these and other facts, that the idea of a separate creation for each species of fisb in each river basin, as entertained by Agassiz, is wholly incompatible with our present knowledge of the specific distinction or of the geographical distribution of fishes. This is an unbroken gradation in the variations from the least to the greatest—from the peculiaraties of the individual, through local varieties, geographical sub-species, species, sub-genera, genera, superfamilies, and so on, until all fish-like vertebrates are included in a single bond of union.

It is, however, evident that not all American types of fishes had their origin in America, or even first assumed in America their present forms. Some of these are perhaps immigrants from Northern Asia, where they still have their nearest relatives. Still others are evidently modified im-

*Thus the chub-sucker (*Erimyzon sucetta*) in some of its varieties ranges everywhere from Maine to Dakota, Florida and Texas; while a number of other species are scarcely less widely distributed.

†Check List of the Fishes of the Fresh Waters of North America, by David S. Jordan and Herbert E. Copeland. Bulletin of the Buffalo Society of Natural History, 1876, pp. 133-164.

‡A Catalogue of the Fishes of the Fresh Waters of North America. Bulletin of the United States Geological Survey, 1878, pp. 407-442.

‖A Catalogue of the Fishes known to inhabit the Waters of North America North of the Tropic of Cancer. Annual Report of the Commissioners of Fish and Fisheries of 1884 and 1885.

portations from the sea; and of these some are very recent immigrants, landlocked species which have changed very little from the parent stock.

We can say in general that in all waters not absolutely uninhabitable there are fishes. The processes of natural selection have given to each kind of river or lake species of fishes adapted to the conditions of life which obtain there. There is no condition of water, of bottom, of depth, of speed of current, but finds some species with characters adjusted to it. These adjustments are for the most part of long standing, and the fauna of any single stream has, as a rule, been produced by immigration from other regions or from other streams. Each species has an ascertainable range of distribution, and within this range we may be reasonably certain to find it in any suitable waters.

But every species has beyond question some sort of barrier which it has never passed in all the years of its existence. That this is true becomes evident when we compare the fish fauna of widely separated rivers. Thus the Sacramento, Connecticut, Rio Grande and St. John's rivers have not a single species in common; and with one or two exceptions not a species is common to any two of them. None of these has any species peculiar to itself, and each shares a large part of its fish fauna with the water basin next to it. It is probably true that the fauna of no two distinct hydrographic basins are wholly identical, while on the other hand there are very few species confined to a single one. The supposed cases of this character, some twenty in number, occur chiefly in the streams of the South Atlantic States and of Arizona. All of these need, however, the confirmation of further exploration. It is certain that in no case has an entire river fauna originated independently from the divergence into separate species of the descendants of a single type.

The existence of boundaries to the range of species implies, therefore, the existence of barriers to their diffusion. We may now consider these barriers, and, in the same connection, the degree to which they may be overcome.

Least important of these are the barriers which may exist within the limits of any single basin, and which tend to prevent a free diffusion through its waters of species inhabiting any portion of it. In streams flowing southward, or across different parallels of latitude, the difference in climate becomes a matter of importance. The distribution of species is governed very largely by the temperature of the water. Each species has its range in this respect—the free-swimming fishes, notably the trout, being most affected by it; the mud-loving or bottom fishes, like the catfishes, least. The latter can reach the cool bottoms in hot weather, or the warm bottoms in cold weather, thus keeping their own temperature more even than that of the surface of the water. Although water communication is perfectly free for most of the length of the Mississippi, there is a considerable difference between the faunæ of the stream in Minnesota and in Louisiana. This difference is caused chiefly by the difference in temperature occupying the difference in latitude. That similar difference in longitude, with free water communication, has no appreciable importance, is shown by the almost absolute identity of the fish faunæ of Lake Winnebago and Lake Champlain. While many large fishes range freely up and down the Mississippi, a majority of the species do not do so, and the fauna of the Mississippi has more in common with that of the tributaries of Lake Michigan than it has with that of the Red River or the Arkansas.

The influence of climate is again shown in the paucity of the fauna of the cold waters of Lake Superior, as compared with that of Lake Michigan. The majority of our species cannot endure the cold. In general, therefore, cold or northern waters contain fewer species than southern waters do, though the number of individuals of any one kind may be greater. This is shown in all waters, fresh or salt. The fisheries of the northern seas are more extensive than those of the tropics. There are more fishes there, but they are far less varied in kind. The writer once caught seventy-five species of fishes in a single haul of the seine at Key West, while on Cape Cod he obtained with the same net but forty-five species in the course of a week's work. Thus it comes that the angler, contented with many fishes of few kinds, goes to Northern streams to fish, while the naturalist goes to the South.

But in most streams the difference in latitude is insignificant, and the chief difference in temperature comes from differences in elevation, or from the distance of the waters from the colder source. Often the lowland waters are so different in character as to produce a marked change in the quality of their fauna. These lowland waters may form a barrier to the free movements of upland fishes; but that this barrier is not impassable is shown by the identity of the fishes in the streams (for example, Elk River, Duck River, etc.) of the uplands of middle Tennessee with those of the Holston and French Broad. Again, streams of the Ozark Mountains, similar in character to the rivers of East Tennessee, have an essentially similar fish-fauna, although between the Ozarks and the Cumberland range lies an area of lowland bayous, into which such fishes are never known to penetrate. We can, however, imagine that these upland fishes may be sometimes swept down from one side or the other into the Mississippi, from which they might ascend on the other side. But such transfers certainly do not often happen. This is apparent from the fact that the two faunæ* are not quite identical, and in some cases the same species are represented by perceptibly different varieties on one side and the other. The time of the commingling of these faunæ is perhaps now past, and it may have occurred only when the climate of the intervening regions was colder than at present.

The effect of waterfalls and cascades as a barrier to the diffusion of most species is self-evident; but the importance of such obstacles is less, in the course of time, than might be expected. In one way or another very many species have passed these barriers. The falls of the Cumberland limit the range of most of the larger fishes of the river, but the streams above it have their quota of darters and minnows. It is evident that the past history of the stream must enter as a factor into this discussion, but this past history it is not always possible to trace. Dams or artificial waterfalls now check the free movement of many species, especially those of migratary habits; while, conversely, numerous other species have extended their range through the agency of canals (thus, *Dorosoma cepedianum* Le Sueur, and *Clupea chrysochloris* Rafinesque, have found their way into Lake Michigan through canals).

Every year fishes are swept down the rivers by the winter's floods; and in the spring, as the spawning season approaches, almost every species is found working its way up the stream. In some cases, notably the Quinnat salmon (*Oncorhynchus tschawytscha* Walbaum) and the blueback salmon (*Oncorhynchus chus nerka* Walbaum), the length of these migrations are surprisingly great. To some species rapids and shallows have proved a sufficient barrier, and other kinds have been kept back by unfavorable conditions of various sorts. Streams whose waters are always charged with silt or sediment, as the Missouri, Arkansas or Brazos, do not invite fishes; and even the occasional floods of red mud, such as disfigure otherwise clear streams, like the Red River, or the Colorado (of Texas), are unfavorable. Extremely unfavorable also is the condition which obtains in many rivers of the southwest; as for example, the Red River, the Sabine, and the Trinity, which are full from bank to bank in winter and spring, and which dwindle to mere rivulets in the autumn droughts.

In general, those streams which have conditions most favorable to fish life will be found to contain the greatest number of species. Such streams invite immigration: and in them the struggle for existence is individual against individual, species against species, and not a mere struggle with hard conditions of life. Some of the conditions most favorable to the existence in any stream of a large number of species of fishes are the following, the most important of which is the one mentioned first: Connection with a large hydrographic basin; a warm climate; clear water; a moderate current; a bottom of gravel (preferably covered by a growth of weeds); little fluctuation during the year in the volume of the stream or in the character of the water.

Limestone streams usually yield more species than streams flowing over sandstone, and either more than the streams of regions having metamorphic rocks. Sandy bottoms usually are not favorable to fishes. In general, glacial drift makes a suitable river bottom, but the higher temperature usual in regions beyond the limits of the drift gives to certain Southern streams conditions still more favorable. These conditions are all well realized in the Washita River in Arkansas, and in various tributaries of the Tennessee, Cumberland and Ohio; and in these, among American streams, the greatest number of species has been recorded.

The isolation and the low temperature of the rivers of New England have given to them a very scanty fish-fauna as compared with the rivers of the South and West. This fact has been noticed by Professor Agassiz, who has called New England a "zoölogical island." *

In spite of the fact that barriers of every sort are sometimes crossed by fresh-water fishes, we must still regard the matter of freedom of water communication as the essential one in determining the range of most species. The larger the river basin, the greater the variety of conditions likely to be offered in it, and the greater the number of its species. In case of the divergence of new forms by the process called "natural selection," the greater the number of such forms which may have spread through its waters; the more extended any river basin, the greater are the chances that any given species may sometimes find its way into it; hence the greater the number of species that actually occur in it, and, freedom of movement being assumed, the greater the number of species to be found in any one of its affluents.

Of the 600 species found in the rivers of the United States, about 200 have been recorded from the basin of the Mississippi. From 50 to 100 of these species can be found in any one of the tributary streams of the size, say of the Housatonic River or the Charles. In the Conneticut River there are about 18 species permanently resident; and the number found in the streams of Texas is not much larger, the best known of these, the Rio Colorado, having yielded but 24 species.

*"In this isolated region of North America, in this zoölogical island of New England, as we may call it, we find neither Lepidosteus, nor Polyodon, nor Amblodon (*Aplodinotus*), nor Grystes (*Micropterus*), nor Centrarchus, nor Pomoxis, nor Amblopiites, nor Calliurus (*Ceanobrythus*), nor Carpiodes, nor Hyodon, nor indeed any of the characteristic forms of North American fishes so common everywhere else, with the exception of two (*Lepomis*), one Boleosoma, and a few Catostomus."—AGASSIZ, *Amer. Journ. Sci. Arts*, 1854.

[TO BE CONTINUED.]

*Tetrodon and Diodon are found in the Mississippi basin, but are not common.

NEW YORK OYSTER LAW.

AN amendment to the oyster law of New York was approved by the Governor on June 4, and is as follows:

SECTION 1. Subdivision eight of section six hundred and forty of the Penal Code is hereby amended so as to read as follows:

8. Unlawfully takes or carries away, or interferes with, or disturbs by any means the oysters or other shellfish of another legally planted upon the bed of any river, bay, sound or water; or removes, pulls up or destroys any stake designating or marking out the legally planted oyster bed of another; or,

SEC. 2. This act shall take effect immediately.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Aug. 22 to 24.—Third Annual Show of the American Fox-Terrier Club, at Saratoga Springs, N. Y. (Including all terriers.) Entries close Aug. 22. H. P. Frothingham, Secretary, 2 Wall street, New York.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. H. E. Cook, Superintendent.

Sept. 4 to 7.—Second Annual Dog Show of the Michigan Kennel Club, Detroit, Mich. H. E. Cook, Superintendent.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. C. W. Robinson, Secretary.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6362**.

AMERICAN FIELD TRIAL CLUB DERBY.

CINCINNATI, O., July 12.—*Editor Forest and Stream:* Inclosed please find lists of entries to American Field Trial Club Derby. Entries closed July 1, with 35 setters and 15 pointers. All were whelped in the year 1887.

ENGLISH SETTERS.

RAYMOND (J. Treadwell Richards, New York, N. Y.), white cross-bred dog, whelped June 20 (Dan—Nell).

FLOSSIE NOBLE (J. H. Peebles, Birmingham, Ala.), lemon belton bitch, whelped September (King Noble—Elsie Belton).

HOPE LASS (J. O. H. Denny, Ligonier, Pa.), black, white and tan bitch, whelped July 1 (Gath's Hope—Lady May).

GUY NOBLE (J. I. Case, Jr., Racine, Wis.), black, white and tan dog, whelped Jan. 15 (King Noble—Queen Vashti).

RESOLUTE (J. I. Case, Jr.,), blue belton dog, whelped Jan. 15 (King Noble—Queen Vashti).

LOTTA C. (J. I. Case, Jr.,), orange and white bitch, whelped Jan. 15 (King Noble—Queen Vashti).

NETA NOBLE (J. I. Case, Jr.,), blue belton bitch, whelped July 19 (King Noble—Nellie Belton).

FLORENCE GLADSTONE (J. I. Case, Jr.,), black, white and tan bitch, whelped Jan. 2 (Gladstone—Flounce).

DASH (W. H. Wallingford, Newport, Ky.), black, white and tan dog, whelped Jan. 27 (Mingo—Zoe W.).

DAISY FISHER (H. S. Bevan, Lamar, Miss.), orange and white bitch, whelped April 9 (Gath's Hope—Daisy F.).

DIMPLE (F. F. Myles, Memphis, Tenn.), black, white and tan bitch, Jan. 26 (McFarland's Gordon—Blanch).

CALIPH (F. G. Winchell, Redfield, Dak.), black, white and tan dog, Aug. 9 (Kota—Topsy).

BOI GLADSTONE (Geo. T. Hodgson, Athens, Ga.), black, white and tan dog, April 22 (Gladstone—Ruby II.).

MARKER (Geo. T. Hodgson, Athens, Ga.), black, white and tan dog, May 23 (Gath's Mark—Lufra).

LADY PIEDMONT (Geo. T. Hodgson, Athens, Ga.), black, white and tan bitch, March 19 (Dashing Rover—Ranee).

VIC (Geo. T. Hodgson, Athens, Ga.), red bitch, March 23 (Dan—Nora).

LINDE (Mt. Washington Kennels, Pittsburgh, Pa.), black, white and tan dog, Jan. 2 (Gladstone—Flounce).

ZACH (I. Yeasley, Jr., Coatesville, Pa.), black, white and tan dog, March 16 (Roybel III.—Fraud).

LUCY II. (I. Yeasley, Jr., Coatesville, Pa.), black, white and tan bitch, March 16 (Roybel III.—Fraud).

DAISY'S HOPE (R. M. Dudley, Nashville, Tenn.), liver and white dog, April 9 (Gath's Hope—Daisy F.).

FELIX M. (D. E. Rose, Lawrenceburg, Tenn.), liver and white dog, April 9 (Gath's Hope—Daisy F.).

HOPE'S DAISY (A. M. Young, Nashville, Tenn.), liver and white bitch, April 9 (Gath's Hope—Daisy F.).

FIVE UNNAMED (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan, three dogs and two bitches, June (Roderigo—Bo Peep).

MILDRED (C. E. McMurdo, Charlottesville, Va.), liver and white bitch, Feb. 25 (Dashing Rover—Muriel).

COUNT PIEDMONT (C. E. McMurdo), black, white and tan dog, Aug. 9 (Count Noble—Belle of Piedmont).

GLEN PIEDMONT (C. E. McMurdo), blue belton and tan dog, Aug. 9 (Count Noble—Belle of Piedmont).

KITTY N. (Howard Hartley, Pittsburgh, Pa.), black, white and tan bitch, Feb. 9 (Count Noble—Kit Kilbird).

WEE DAISY (W. A. Wheatley, Memphis, Tenn.), white, blue and ticked bitch, Aug. 8 (Gath's Mark—Daisey).

MARY MEADE (W. A. Wheatley), white and orange bitch, May 16 (Bunroy—Florence).

IRISH SETTERS.

DON (C. P. Hunt, Memphis, Tenn.), red dog, Aug. 1 (Bismarck—Prent).

SHOT (C. P. Hunt, Memphis, Tenn.), red dog, Aug. 1 (Bismarck—Prent).

POINTERS.

NOBLE BANG (Chas. Wheaten, Dayton, O.), liver and white dog, whelped Aug. 14 (Bang Bang—champion Vanity).

VAN BANG (Chas. G. Stoddard, Dayton, O.), liver and white bitch, whelped Aug. 14 (Bang Bang—champion Vanity).

GLAMORIGAN (Louis A. Biddle, Philadelphia, Pa.), liver and white dog, whelped June (Robert le Diable—Tuck).

DUKE OF MAINE (H. F. Farnham, Portland, Maine), liver and white dog, whelped June 1 (Beppo III.—May F.).

SANCH (John A. Greenleaf, Auburn, Maine), liver and white dog, whelped June 1 (Beppo III.—May F).

STELLA (F. R. Hitchcock, New York, N. Y.), liver and white bitch, whelped Jan. 22 (Naso of Kippen—Boski).

NANTURA (Fred. F. Harris, Portland, Me.), liver and white bitch, whelped August (champion Nick of Naso—Portland Lily).

NUTWOOD (Fred. F. Harris), liver and white dog, whelped August (champion Nick of Naso—Portland Lily).

SONNY (Castleman Kennels, Trenton, Tenn.), liver and white dog, August (Rod—Belle).

GAL (Castleman Kennels), liver and white bitch, whelped February (Rod—Juno).

TENNIE (Castleman Kennels), liver and white bitch, whelped August (Rod—Nell).

PETRARCH (Highland Kennels, Red Bank, N. J.), liver and white dog, whelped June 24 (Robert le Diable—Malite).

JOYCE OF HALL'S ISLAND (O. W. Donner, Coosaw, S. C.), liver and white bitch, whelped March 24 (Lad of Bow—Bloomo).

ORANGE GIRL (Howard Hartley, Pittsburgh, Pa.), lemon bitch, whelped Feb. 23 (Sweep—Flotsam).

ROSWELL (John S. Wise, Richmond, Va.), liver and white dog, whelped March 5 (Robert le Diable—Young Beulah).

C. W. PARIS, Sec'y-Treas.

THAT PRONUNCIAMENTO.—*Editor Forest and Stream:* "Better late than never," but it would have been still better if Mr. Belmont had thought the public of sufficient importance to inform them when he fulminated a pronunciamento, that although there had been no meeting of the executive committee of the A. K. C., he had secured practical indorsement of his course. The previous history of the A. K. C. has been exactly the thing to prepare the public for any act of executive arrogance, and any amount of self-nullification of its own rules. I am pleased to hear that this is to be changed, and when it is done I will believe it. A reading of my original article should show that I struck at the A. K. C. way of doing things, not at Mr. Vredenburg personally.—W. WADE (Hulton, Pa., July 6).

*There are three species of darters (*Etheostoma copelandi* Jordan; *Etheostoma evides* Jordan and Copeland; *Etheostoma scierum* Swain) which are now known only from the Ozark region or beyond and from the uplands of Indiana, not yet having been found at any point between Indiana and Missouri. These constitute perhaps isolated colonies, now separated from the parent stock in Arkansas by the prairie districts of Illinois, a region at present uninhabitable for these fishes. But the non-occurrence of these species over the intervening areas needs confirmation, as do most similar cases of anomalous distribution.

MANITOBA FIELD TRIALS.

Editor Forest and Stream:

I inclose list of entries for our annual Derby. Mr. W. B. Wells, of Chatham, Ont., has at the unanimous wish of the club again kindly consented to judge our trials.

DERBY.

FRANK SIMPSON (Thos. Johnson), blue belton English setter dog (Mark J.—Cambria).

MAC (E. E. Adams), liver and white pointer dog.

MANITOBA DAISY (Manitoba Kennels), liver and white pointer bitch (Birtle—Poison).

MANITOBA GLADSTONE (George Tempest), black and blue belton English setter dog (Mark J.—Cambria).

MONTANA (Hubert Galt), black, white and tan English setter dog (Mark J.—Cambria).

PETE (Frank Morrice), orange and white English setter dog (Dash B.—Qu'Appelle Belle).

PIQUE (C. A. Boxer), black, white and tan English setter dog (Dash B.—Qu'Appelle Belle).

PRAIRIE (D. Smith) orange and white English setter dog (Dash B.—Qu'Appelle Belle).

ROYAL PRINCE III. (Thos. Johnson), blue belton English setter dog (Royal Prince II.—Manitoba Belle).

SPOTTY (W. F. Henderson), blue belton English setter dog (Cable—Belle).

TOM J. (M. Putnam), lemon and white English setter dog (Dash B.—Qu'Appelle Belle).

UNNAMED (John Baird), liver and white pointer dog.

THOS. JOHNSON, Sec'y.

No. 27 JEMIMA STREET, WINNEPEG, Manitoba.

THE NATIONAL DOG CLUB OF AMERICA.

Editor Forest and Stream:

The National Dog Club has recently been brought into prominence by the publication of a certain communication received by the management of the International Fair Association, Buffalo, N. Y. A reprint of it was sent, under the seal confidential, to some, if not all, of the members of the National Dog Club, by the secretary of the association, together with an explanatory letter in which he states "You will see that the fight has begun." No one can mistake the meaning of these words. The writer, of course, assumed that war—which some had prophesied—had been inaugurated between the National Dog Club and the American Kennel Club. From certain facts, to state which is the purpose of this communication, it is safe to infer that the secretary considered that the American Kennel Club had taken the aggressive. Whether or not that conclusion was justified he alone can say. That he did not, and could not rightly assume that the National Dog Club had declared war upon the American Kennel Club, will appear from the following statements.

Shortly after the first meeting of the National Dog Club, and long ere the nominating committee had made their report, the secretary of the Buffalo Fair Association in a communication informed me that a bench show was to be held in September. He also stated that he was not very well informed on bench show matters and did me the honor to ask my advice as to whether or not it would be the wisest course for his association to identify itself with the American Kennel Club and hold the contemplated bench show under its rules. At the same time he stated that he had become somewhat interested in the movement toward forming the National Dog Club and desired to learn more concerning its future policy, etc. In my reply to the secretary I favored his identifying his association with the American Kennel Club. I did not retain a copy of my letter, but I feel certain that I plainly advised his doing that as the wisest course. As further evidence I quote from a recent letter of his in which he says, "You are right, when you say that you have not even invited us to hold under your rules. It was purely our own choosing." Some weeks later the secretary wrote me for a copy of the rules of the National Dog Club, intimating that he might hold his show under them. At that time they had not been framed and so I informed him. Some two weeks after that, if I remember rightly, a printer's proof was sent him. In good time I was informed by him that his association had decided to recognize the National Dog Club. I thanked him for the honor and assured him that the club would endeavor to make his bench show a success.

The secretary, whom all who know him hold in high esteem, will I am sure pardon me for thus relating in substance our correspondence. I have felt it my duty to make this public explanation in proof that we have acted consistently, and if war between the National Dog Club and American Kennel Club has been inaugurated, the former is not the aggressor. But has war been declared? The National Dog Club and those friendly to it are meeting with some opposition, which can scarcely be dignified by the term war. From its very inception it has struggled against prejudice. Why the breeders of this country have not, with every other class of individuals whose interests meet, the right of organization, yet remains to be explained. As a club, beyond ratifying their constitution and by-laws they have as yet done absolutely nothing. Would it not be well for those who are so ready to take up arms against it to wait until it has shown the first sign of hostility or taken a single step which merits condemnation?

J. FRANK PERRY.

BOSTON, Mass., July 14.

[The letter to which Dr. Perry refers is one written by Mr. Hamilton Busbey, and reads as follows: "Office *Turf, Field and Farm*, New York, June 29, 1888.—Dear Mr. Hamlin: You want to advise Mr. Robinson to look before he leaps in his bench show. If you do not show under American Kennel Association rules you will not get the best dogs, such as those owned by Mr. Belmont, Mr. Peshall, the Coptic Kennels, etc. This I know. It will be a mistake to enter into an arrangement with the National. Hope your horses are doing well. Yours truly, HAMILTON BUSBEY."]

Editor Forest and Stream:

I observe that on the strength of a letter which he has received from Mr. Hamilton Busbey, Mr. C. W. Robinson, secretary of the Buffalo dog show, proclaims that "the fight is on." I presume that Mr. Robinson thinks that he has sufficient ground for such a statement; very likely he imagines that in the person of Mr. Busbey he sees certain hostile factions drawn up in battle array to confront the Buffalo show managers. He may be quite right, but it is worth while for him and for those of us who care to maintain our independence of action in showing our dogs to understand precisely the value of Mr. Hamilton Busbey's intervention in this affair.

For Mr. Busbey, as a luminous writer on the horse and an authority of conceded eminence in turf affairs, I have due respect; but Mr. Busbey in connection with kennel concerns I do not know. Who does? While, therefore, I might value Mr. Busbey's prognostications in respect of a running meeting I cannot bring myself to attach any importance to his Cassandra utterances regarding a bench show. Who does?

But even granting that some weight might fairly be given to an expression of Mr. Busbey's deliberately formed opinion in this affair, I do not accept his letter to Mr. Robinson as such an expression of any personal conviction on his part. Who does? The letter contains abundant internal evidence of having been written by him at the instance or request of some one else, and written in a hurry by a good-natured writer, willing to oblige, but who did not fully comprehend the details of what he was asked to do. On what other theory can you explain the use of the name "American Kennel Association?" or the "Coptic" Kennels? or the inclusion of poor old Jimmie among the entries, which it was indespensable to secure? Would any man, possessing information accurate enough to base an opinion on, have made so extraordinary a mess of it in writing his deliberate convictions? I don't believe it. Who does?

But you may say that Mr. Busbey wrote it in his editorial capacity. This cannot be. I am informed on the best possible authority that one of Mr. Busbey's editorial associates pledged to the promoters of the National Dog Club the "cordial support" of his journal. He did this explicitly and repeatedly, both before the Busbey letter was written and again after it was known to have been printed and sent out by Mr. Robinson. And the support promised to the club was not alone for what had already been done, but for other suggested measures beyond the declared plan and scope of the club. Under these circumstances I do not believe that Mr. Busbey's letter is to be accepted as representing the attitude of himself and his associates.

Now, if the letter did not truly represent Mr. Busbey personally nor professionally, whom did it represent? In other words, who went to Mr. Busbey and asked him to write that letter to Mr. Hamlin? Who was it that saw in this new club of dog breeders something on which they must declare war in this roundabout way? Who was it that, after the craft of Hannibal of old, ploughed up the turf, the field and the farm, that the dust might fly into our faces and so blind us that we should not discern the enemy in this "war"—if there indeed be war? I shall not endeavor to explain; my duty is done if I have shown you that the letter sent to the Buffalo people and ostensibly emanating from a newspaper office did not originate there, and that its writer cannot speak for the dog breeders and exhibitors of this country. At all events, he cannot speak for

ONE WHO WILL SHOW AT BUFFALO.

NEW YORK, July 16.

LONDON DOG SHOW.

LONDON, Ont., July 11.—*Editor Forest and Stream:* The stock of the London Kennel Club having been all taken by the most influential men of this city, they are determined to leave nothing undone to make the coming bench show, which is to be held on the grounds of the Western Fair Association, London, Ont., on Sept. 24, 25, 26, 27 next, a great success.

At a meeting of the stockholders, held last Monday evening, the following gentlemen were elected officers of the club for the ensuing year: Col. Walker, President; T. Herbert Marsh, Vice-President; F. C. Wheeler, Secretary and Treasurer; C. A. Stone, Manager; Dr. J. S. Niven, T. G. Davey, R. McElroen, A. G. Chisholm and L. Meredith, Directors.

It was decided to offer $1,000 in cash prizes, besides diplomas and a large number of specials. The entries will close on Sept. 15; and dogs will be received on Saturday, Sept. 22.

Arrangements are being made with the different railways and express companies for the transportation of dogs to and from London, and with the customs authorities, so that American exhibitors will have no trouble at the lines.

The London Kennel Club give a most cordial invitation to all kennels and fanciers of dogs, both in the United States and Canada, to attend the show.

The premium lists are now ready and can be had by addressing F. C. Wheeler, Secretary, 157 Dundas street, London, Ont. C. A. STONE, Manager.

DOG TALK.

THE Wacouta Kennels, of St. Paul, Minn., write us that their mastiff bitch, Vistala, has been bred to champion Beaufort, and that she is now on her way over from England. Vistala is the bitch referred to recently as being a valuable acquisition to the mastiff interests of America.

A correspondent writes: The best thing heard lately is where an English setter fancier being anxious to obtain blue beltons, placed his bitch, after service, in confinement along with a Plymouth Rock chicken, in order that the markings of the chicken might influence the markings of the puppies.

A correspondent calls attention to the entry in the catalogue of the recent Cincinnati dog show of the English setters Dad Wilson and Di, of the same litter, but which were stated to have been bred by different individuals, and he wishes to know if Rule 4 should not be enforced in this case.

Mr. E. H. Moore was at the Kennel Club show at Barn Elms the first week in July, where he purchased the mastiff dog Alonso, winner of second in the novice class. He is two years old and is by the well known Orlando and out of Lady Canute.

Mr. E. B. Sears, of the Wyoming Kennel, Melrose, Mass., is in England and has purchased of Mr. S. W. Smith the St. Bernard bitch Lady Wellington. She will be bred to Plinlimmon before her departure for this country.

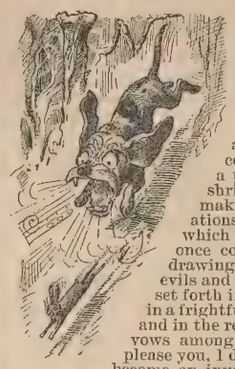
At the recommendation of the American Mastiff Club, the A. K. C. have cancelled the entries of the mastiffs Lord Brougham and Lottie, to which attention was called by Mr. Wade in FOREST AND STREAM of May 31.

The Chestnut Hill Kennel has purchased from McEwen & Gibson the collie bitch Bonnie Knowe, a litter sister to their well known Bonnie Brae. She is in whelp to Bonnie Dunkeld.

In recording the deaths of the mastiffs Minnehaha Turk and Lion IV., the other day, we gave the residence of their owner, Mr. Otto Schultz, as Minneapolis; it is Gretna, Manitoba.

The English Spaniel Club at a meeting held July 3, voted to reduce the standard for the weight of cocker spaniels to 25lbs. Also to abolish the class for small field spaniels.

New Bedford, Mass., has 5,721 militia to guard the city in times of war, and 1,099 dogs to take care of her in peace.



There will be a meeting of the Board of Governors of the St. Bernard Club on Sept. 3.

BUYING MASTIFFS—*Editor Forest and Stream:* Why will people keep on being swindled in buying mastiffs? Or what is the same thing, why do they not read the papers, or consult with those who do, before they send their money to an unknown party for a mastiff? I know more or less of all the mastiff breeders in the country, and among the whole lot there is but one unmitigated, unadultered—hold up! "The greater the truth the greater the libel." May I suggest to anybody entering into mastiffs that he first require the vendor to obtain the indorsement of some kennel paper or reference to some known party? This may at first sight seem hard on such breeders as Messrs. Moore, Craig, Sears Gram, Hull, etc., but they should remember that they are thereby helping to extinguish the one black sheep who would convert Lake Superior to good ink should he fall therein. There are varieties among mastiff breeders; some are satisfied if they keep well within the truth, while some go further and strive to give satisfaction; but, as I said before, there is but one who is utterly utter.—W. WADE.

AMERICAN FOX-TERRIER CLUB'S SHOW.—New York, July 16.—*Editor Forest and Stream:* Owing to the fact that the Republican State Committee require the Spring Casino for Aug. 28 and 29 for the State Convention, the American Fox-Terrier Club concluded to change its date of holding its specialty show at Saratoga Springs to Aug. 22, 23 and 24. Entry blanks and premium lists can be had from H. P. FROTHINGHAM, Sec. (No. 2 Wall st., New York).

NIGHTS WITH THE COONS.

VIII.—COON HUNTING IN ONTARIO.

ACCORDANCE with a custom that has gradually become established among the devotees of St. Hubert, I proceed at this time, midway of the shooting seasons, to put in an appearance at the Broadway shrine of our blesssed patron, and give an account of myself. Of course confession is the first business of a pilgrim when he arrives at a shrine, therefore I will begin by making a clean breast of all deviations from avowed principles, of which I may have been guilty. I was once concerned in the making of a drawing for this paper, in which the evils and cruelties of deer hounding were set forth in a manner calculated to result in a frightful mortality among deerhounds, and in the registration of a vast number of vows among their owners. Now, may it please you, I do not mean to say that I have become an inveterate deer hounder and water killer, or, indeed, that I have to any serious extent retracted the opinions of the subject which I formed largely through the influence of that drawing, but I must say that I have since materially modified my views relative to the advisability of totally exterpating the hound as an auxiliary of the chase, and the manner of my conversion was in this wise:

The fall of 1887 found me prosecuting a business project in a country place fifteen miles west of Toronto, on the shore of Lake Ontario. During the daytime, my occupations were numerous and various but not too tiring, and I had my nights to myself. The country about, though long settled, is so cut up with ravines and cedar swamps that small game of various kinds is fairly common, and in consequence many of the farmers' sons keep hounds. One of my own employees I found had a good hound "the best in Canada," and my proposal to accompany him on a night hunt that very evening was readily acceded to. Accordingly after supper I made for Dod's shanty in the bush, and very soon afterward, he and his brother Babe and myself were making our way through the woods, pausing about every hundred yards or so to listen for the hound, who was careering about where he listed, for from the start he gave us to understand that he was running this entertainment and long experience had taught his master that it was useless to interfere with him, and that the best course was just to wait and listen till he received official notification that game was afoot. I shall not soon forget the sensation of that night: We three were standing in a black cedar swamp into which we had groped our way, for we had brought no torch and there was no moon, everything was silent as the grave, but once or twice we heard the leaves rustling near us and knew thereby that the hound was passing close at hand. Suddenly the solemn stillness of the night was shocked by a terrific and blood-curdling roar, which set our hair on end with sickening horror and froze the blood. No, no, I've got on to a book I used to like reading in school hours, but still the first sensations were similar. It was the opening note of the hound, reverberating through the swamp. Coming as it did on the perfect stillness, the effect was startling, especially as I was not familiar with the baying of a hound on scent. But what a feeling of exultation followed, now there was game afoot surely, for the baying continued. What glorious music it seemed, how my enthusiasm mounted up and up, till it seemed to me that the chief and noblest feature of the chase was that rolling voice that so loudly directed our course through the murky woods. O thrice sacred institution! O blessed adjunct of the chase, what joy to follow that frenzying din through all the gloomy woods, what cared I about the game, be it deer or bear, be it but a skunk, a ground hog or a rat, kill we it or no, I care not one straw, enough for me to follow for a while the maddening strain of canine music—music all hallowed by the memories of ten thousand huntings, and the doings of long lines of hunter forefathers way back to the very beginning of all things. Lives there a man with soul so dead, that would forever silence this most ancient, grand and sacred strain? Beware of him; that man is fit for treason, stratagem and spoils, he would make a poacher, a trout-jigger and a crust-hunter. He would shoot the partridge that is shamming lame to save her brood, and there is no evil that would not be found in him. Selah!

That five minutes and that few yells from the old hound exploded my prejudices more effectually than could have been done by ten years of solid argument, and the final result of the train of feelings it set agoing is that now I myself am the owner of a hound, "the best in Canada," but I anticipate.

The first business of the hunter-in-chief was to diagnose the case, from the official notification just received. It was not a fox, for the chase then would have been straightaway; it was not a rabbit, because the baying would have been interrupted while old Range was unraveling the doublings; nor was it a skunk, for it was through the swamp and had already lasted too long for the tardigrade Sir Mephitica; therefore we were left with the pleasant conclusion that the cause of all the racket was a coon, and away we went, as fast as might be, stumbling marvelously little, considering, until at length we came to an opening, on the far side of which was a tall pine, and near by the hound was heard giving a few finishing yelps.

"The coon's up that tree," said the commander-in-chief, "they always climb the biggest tree in the bush."

"It's instinct," said the rear-admiral, "same as when a tree falls near a road, it always crosses the road so as to smash both fences and stop the way."

Now old Range had an unfortunate habit of shutting up as soon as his game was treed and also of declining to indicate the tree; but his master was satisfied that the largest was the likeliest tree, and proceeded to disappear up the great column into the gloom of the night. After a long wait his voice was heard from away up, announcing that the coon was in a hollow limb and quite beyond reach. Accordingly he came down, and as it was late we were obliged to start for our respective and distant homes. So ended hunt No. 1. Just my luck. But my experience has always been that nothing worth much is obtained on the first try, and, as I have hitherto observed, "the beauty of hunting is its uncertainty." However, I am moralizing in proverbs now, and this, I maintain, is a bad, not to say criminal, propensity; for I find it productive of numerous errors and much confusion, as, for instance, when in a former writing I referred to the devil's pig-shearing. I have learned recently that this allusion is not generally understood. It has nothing to do with the head of swine that were drowned in the Sea of Galilee, but refers to a little-known tradition of Beelzebub, which I may be allowed to repeat. The devil was informed that an honest farmer had been found on earth; discrediting this improbable story, he came and found it so. He was so pleased that he resolved to take him into a business partnership, the evil one to find the capital, the rustic the labor, the profits to be evenly divided. At the farmer's suggestion, the first crop was to be divided in the middle, the devil to take the bottom and the farmer the top half. Accordingly the farmer sowed wheat. When his majesty got

his share, the stubble, he merely remarked, "Every dog has his day. I'll take the top next time." So the farmer sowed potatoes. Then the devil got vexed, and said, "Now, no more humbugging; next time I'll take the top and the bottom quarters, the middle half is to be yours. Then the farmer sowed all the land with Indian corn. In a rage, then, Satan insisted on giving up agriculture and going in for a sheep ranch, the wool to be his share and the increase the farmer's. Then the simple countryman invested the unhallowed funds in a new breed of sheep called swine, and when the imps of Satan came to shear the wool, the mighty outcry and slight return revealed to the devil the fact that he had not got very far ahead of the ingenuous rustic. In a fury he then evaporated, leaving behind only a strong smell of sulphur and the more lasting record of the proverb, "Great cry and little wool, like the devil's pig-shearing."

The following seven hunts are really not worth narrating. We could not strike a good scent, or if we did it was lost. One night, indeed, we did strike a red hot trail, and the yelling of the old dog in full cry was like unto the blast of a fish-horn in the season of Lent. At one time his frantic outcries in the distant woods were very peculiar, and his master explained that such was his manner when he sighted the game he was trailing. Very soon it was treed and we made all haste toward the place, but arrived there we found that no coaxing or contriving could induce him to show us which was the tree. Various plans to meet the case were suggested, but did not develop much enthusiasm, until I proposed that we should shoot the dog. This met with all but unanimous approval, the one dissentent voice being that of the dog's

DIAGRAM No. 1.

owner, and he having in a most arbitrary and unconstitutional manner appointed himself chairman of the meeting, exercised his power of veto to the full and ruled the motion out. We lighted several fires and examined all the trees near, but were obliged to give up the hunt and go home, each and all of us convinced that the dog, like the horse, is the noblest of all animals.

So far we had been out eight nights and had absolutely nothing to show in the shape of either fur or feathers. I was more anxious to see a rabbit than any other game, for many of the farmers assured me that the rabbit common about here was actually the English rabbit, and that it has been introduced into this country within the last ten years. At length an acquaintance brought me one he had captured alive under a stump when he was logging, and I was much interested and indeed surprised to see by its shorter ears, gray upper tail surface and general appearance that it was no other than the cotton-tail or *Lepus sylvaticus*. There seems to be no doubt that species appeared in this neighborhood first within the last fifteen years and that it spread from the direction of Lake St. Clair. This individual in question had a short but interesting history subsequent to his entry into the summer fallow, after escaping dogs, hawks and owls to be captured by man. He was brought into the farmhouse where I was staying; two or the grown damsels of the house were fondling him, when suddenly he made a leap, reached the floor, and then rushed under the table. My legs were stretched out as I sat, and my pants, being wide, fell clear of my heels, so, seeing the gaping asylum offered by the slack of my right leg's covering, young bunny crawled in and continued to work his way until he got a considerable distance up, unknown to any but myself. Meantime the girls hunted far and near for him and wondered greatly at the mysterious disappearance of the new pet. I offered them to bet any amount of money they could not find the missing rabbit and fortunately for them they declined the wager, for they had to give up the search; they never seemed to think of looking in the right place, and when at length I put my hand apparently in my pocket and produced the little creature, I think I was credited with the successful performance of a good sleight-of-hand trick. But bunny's proud spirit rebelled against such treatment, and soon he died and was transferred to my collection, where now he is to be seen with a number of his relatives, concerning whose peculiarities I may have somewhat to say anon.

Now, another of my employes having heard of my numerous bootless quests, asked me one day if I wasn't sick of following that cussed old fool of a hound Range. "He was forever running his own track, and if he did tree even a chipmunk was scared to bark up for fear he'd have to fight it," he stated; moreover, that he himself was the proud possessor of the finest hound in the Dominion, and at once agreed to go when I suggested a night hunt, without delay. So after supper John, the new huntsman, appeared with a jaunty-looking hound, named Towel, and another he called Johnston, though the rest of us called him Bobtail, because he had on one occasion run a mile and three-quarters on the track before the locomotive, but was overtaken on a high trestle bridge and pitched into the river below, minus his tail.

We duly started and crossed the first swamp without results, but in the second Towel gave tongue, at first interruptedly, thereby showing that a rabbit was his quarry. Very soon, however, the two hounds got him "straightened out," and by their continuous tonguing and rapid coursing around the woods showed that the chase was warming up. At length we managed to get a glimpse of the affair in an open place, for it was moonlight and we could see poor bunny straightening out his supple back with tremendous energy, as he leaped along ahead of his yelling pursuers. But *Lepus sylvaticus* does not long keep above ground when so hard pressed, and very soon the continuous roaring at one place showed that bunny had "holed." Away we went to the spot, for we had come prepared for such a result. From a canvas bag on his back Dod drew forth a ferret. It was the first time I had ever seen a ferret used, and I watched the proceedings with no small interest. It was also the first time this particular ferret was so engaged, so that he too was somewhat curious about the aims and objects of the company. As I noted his little snakelike form, his flat venomous looking head and wicked baleful eyes I could not repress a sensation of horror at the idea of sending that villainous, bloodthirsty thing into the burrow after a poor defenseless rabbit, but usually sportsmen have but little time for compunction or sentiment, and I was glad to see the four-footed snake disappear in the hole. After all there is something admirable in the perfectly diabolical courage of this animal. Imagine one of us sent alone into a dark corner where we are to find and fight some strange beast much larger than one's self, and for aught we knew, able to destroy one in an instant. But the ferret never faltered, and before long there was a thumping sound in the hole, then a rush, a grab and bunny was a prisoner. I carried him carefully home and have since succeeded in taking several photographs of him in pleasing attitudes.

The ferret is an animal much in use about here now, too much so in fact, for the rabbits are disappearing before it. Our present ferreteer has an old male that he claims is able to put a fox out of his hole, while a skunk or a mink is simply beneath his notice; it is, I doubt not, the "best ferret in Canada." My own observations, so far, do not fully lead me to credit the above, and I may give the experience of a single day in proof. Two lads and I set out into the woods after a fall of soft snow, our minds filled with sanguinary intentions and our pockets with cartridges. We tramped about for a while, but found nothing to murder and no signs of anything but tracks. At length, wearied of our want of success, I proposed to my companions that each should take a track, stick to it, follow it through thick and thin until it is holed and then come back for the rest that we may prosecute the case vigorously and if necessary carry it on to a higher court. Here are two fresh skunk tracks and an equally fresh mink trail—we will each take one. The plan was readily agreed to and like the three young hopefuls in the story book each set out on the road of his choice. The mink trail was mine, I had followed it for some time when I crossed the skunk track of my youngest comrade, with his boot mark in close pursuit. Then after traversing ravines and going around hills, I met my friend pursuing skunk trail No. 2, but our paths diverged, and after tracking my game through numerous log heaps, brush piles and swamps and down a hill where, by the way, he had indulged in a slide of 6 or 8ft., after the manner of the otter, the trail finally came to an end in a perfect labyrinth of logs and brush.

Having holed my quarry my next duty was to holloa for my comrades. After a while he of skunk No. 2 responded and presently appeared. He was the bearer of the ferret and we at once unmuzzled that imp of murder incarnate, pushed him into the hole and awaited the result, rather anxiously, for it was a big mink and a small ferret. But it was all in vain, though we could not find any track away from the brush and made our snake-like colleague traverse the place in all directions, we found no sign of the mink and had to give him up.

We then set out for the spot where my companion had left the track representing skunk No. 2, and as we went we heard the shout of our friend, who had charge of the case of skunk No. 1. He had put in the last few hours in faithfully following his leader through forest, field and fen, and had finally lost it among a host of other skunk tracks a mile away. We now gave our undivided attention to skunk No. 2, and in very few minutes had traced him to a hole, into which there led a multitude of trails and from which there issued an odor whose evidence was beyond question. Again we submitted the case to our subterranean representative, and nothing loth he went down, but presently reappeared, much as he went, undisturbed and unodorized. Again and again he was sent down, but with the same result, and so at length we thrust him ignominiously into the bag, and having plugged up the hole we went to the house. Now the youngest brother of one of my supporters had a little dog, the darling of his heart, just such a dog as you read about, a most miserable, pampered, cross, ill-bred, useless and snarling little beast. Prin was his name, for Ab, his little master's bosom, by keeping the whole household awake all night, are of no interest to the general reader.

This last incident is parenthetical by the way, and is also, chronologically, out of order, for before it occurred I was at last rewarded by a share in a successful hunt.

The tenth evening of unsuccessful rumaging through plutonian darkness after invisible hounds, in quest of hypothetical game, was passed without result, but the eleventh

DIAGRAM No. 2.

found us again on the warpath. We had passed a couple of miles of country, one dog had beaten half a dozen swamps to no purpose. We then cut across to the lake shore and made our way toward an extensive swamp that marked the outlet of a creek. Our dogs were not lacking in spirit, and at once began splashing about, far and near, among the alders, and soon old Towel gave a loud bay, then another, and kept up the racket. In a few minutes his mate joined in the chorous, and then the yelling of the two must have been very annoying to the coon most interested, for such our leader announced the game to be, judging from the locality and the noise the dogs made. Presently the tonguing ceased altogether, but, after a few minutes silence, was re-

DIAGRAM No. 3.

master, never lost an opportunity of asserting that this was the prince of all dogs, and that his price was above rubies. Now Satan had entered into the heart of the hunter brother, and he influenced Prin to leave the house and seduced him with soft words so that he came with us to the skunk's den in the woods. It required but little encouragement then to make the doglet run into the hole and set about making himself disagreeable to its occupant, and presently we were entertained with a succession of growlets and barklets, then a volley of howlets, followed by a most unchristian smell. Soon afterward Prin reappeared howling. For some minhe did nothing but roll himself in the snow, rub his eyes and yell. I merely mention these facts to show that there really was a skunk in the hole and that the ferret was valorous, having discretion, which is the better part of valor. (The subsequent facts, that my colleagues ventured the surmise that there must be a skunk under the barn, to judge by poor Prin's condition, also that for a time he lost caste in the family circle and avenged his loss of his usual bed in his sumed. This break, we subsequently learned, had been caused by the coon crossing a small lake in the swamp, but the dogs knew enough to go around till they caught the scent again. Then for a time the pursuit was poor, for the coon had made along the pebbly shore of Lake Ontario, and the scent did not seem to lie, but when at length he again took to the woods business brightened up immediately, and coon stock, hitherto weak and panicky, loomed up at once, strong and rising, with a tendency to boom. It was not long before his coonship, wearying of the companionship of the noisy dogs, and doubtless becoming impressed with the idea that solitude is the parent of great thought, selected the highest tree on the highest knoll, and having ensconced himself in its highest crotch, he gave himself up to the solid intellectual enjoyment of glaring at his pursuers.

Now, Mr. Editor, being possessed of a chronic and constitutional predisposition to diagrammatic elucidation of my cosmically-induced cerebrations, I would have essayed ere now to enliven my page with an illustration or two, but it

was no use illustrating hunt No. 1, for any one can truthfully do that for himself by mapping out a square on paper, then pouring ink evenly all over it. The little rabbit incident was too difficult; besides, there are subjects whose æsthetic phases and subtle suggestiveness are rather dissipated than assisted by a too realistic pictorial representation. I could not illustrate the skunks in the hole because I did not see them; but I think a rough diagram of the coon up the tree in an irritable state of mind will be useful, as it will enable any one to identify the animal should they ever meet it under like circumstances (see Diagram No. 1). I don't mean to say that the dog on the left (Diagram No. 2) really did climb the tree, but he kept pretending he would do so, and the dramatic effect was really very fine, as he intended it should be, though I am certain I could not have vexed him more than by giving him a leg up. The dog on the right is more according to nature, and I know the upper part of the sketch is accurate, because you can count a dozen or more coons there, if you are clever enough.

I did not sketch this on the spot. I was too much engrossed watching the movements of my hunter friend Dod, who was shinning up the trunk of the tree. Presently he sang out "Look out below!" and then with a D. S. T. down came the coon! Ye gods and little fishes! no words of mine can adequately portray the scene that followed; it taxes my pencil to its uttermost powers to hint even at the main facts of the case, but I have suggested all I could of the matter in the accompanying sketch, and I trust I will be believed when I aver, that whenever two modes of presenting an occurrence have offered themselves, I have ever selected that which was furthest from even the appearance of exaggeration; and yet it may be well for me to state only one coon and two dogs were concerned in the scrimmage (see Diagram 3).

When at length it was over, I lifted the defunct coon by the leg saying, "Bets are now in order; what does he weigh?" and 30lbs., 28lbs., 25lbs., 22lbs., were offered; next day we ascertained the weight was just 18lbs.

At 12 midnight, the meeting was adjourned *sine die*.

ERNEST E. THOMPSON.

TORONTO.

THE AMERICAN GORDON SETTER CLUB.

Editor Forest and Stream:

The following gentlemen have been elected officers and committee for one year of the American Gordon Setter Club: Mr. Harry Malcolm, President, Baltimore, Md.; Dr. Jos. Whitaker, Vice-President, St. Louis, Mo.; Mr. Isaac Tyson Norris, Secretary, Baltimore, Md.; Mr. F. T. Washington, Treasurer, St. Louis, Mo. Committee—Mr. Fred. M. Bennett, New York; Mr. Robt. C. Parker, Dodgeville, Mass.; Mr. E. G. Asmus, Milwaukee, Wis.; Dr. Chas. P. Knapp, Wyoming, Pa.; Mr. J. W. Orear, Donieville, Cal.

Application for membership to the American Kennel Club has been made, and a favorable reply is expected at an early date. We inclose a copy of the constitution of the club for publication. Votes have been received from the following gentlemen: Messrs. Harry Malcolm, Fred. M. Bennett, Jos. Whitaker, Thos. F. Estice, Patrick Graham, Stephen Lyons, Robt. J. Bothwell, F.T. Washington, Bud Schmidt, Geo. W. Collins, E. G. Asmus, George Poppert, J. W. Clark, Frank Phillips, J. W. E. Clark, C. F. Keys, W. H. French, Chas. S. Fitch, Isaac T. Norris, Saml. B. Duryea, Richard Cromwell, Jr., J. W. Orear, Benj. O. Bush.

ISAAC T. NORRIS, Sec'y.

The constitution sets forth that the object of the club shall be to promote the breeding of Gordon setters, to develop and bring to perfection the natural high qualities of the same for field use, to define and publish a description of the true type on breeders, competitors at field trials and bench shows, as the standard by which such Gordons should judged, and to suggest to all field trial associations and shows where Gordon setters compete the names of qualified and proper judges.

The club shall consist of a president, vice-president, secretary, treasurer, and a committee of nine (including the before mentioned officers), and an unlimited number of members.

Two members of the committee shall be withdrawn by lot each year, * * * and two new members be elected to fill the vacancies, the retiring members to be eligible for re-election.

The entire control and management of the club shall be vested in the committee, who shall have power to make by-laws and decide upon all matters in dispute not provided for by the constitution of the club. Five shall constitute a quorum.

The election of the members shall be by ballot, and shall be vested solely in the committee under Section 2—two black balls to exclude.

The entrance fee for all members admitted on or before Sept. 1, 1888, shall be five dollars each, which shall also include the annual dues to Sept. 1, 1889. On and after Sept. 1, 1888, an admission fee of five dollars shall be charged, together with the sum of five dollars as annual dues for the year (current), both of which sums shall be payable at the time of election.

Subscriptions and donations, entrance fees and dues, shall after payment of all expenses be applied in such manner as the committee may determine in the purchase of cups or stud medals, or given in money prizes for competition by members of the club at a field trial or dog show to be held under the auspices of the club, or for general competition at any recognized field trials or bench shows at their option.

Judges at field trials and dog shows (where such judges have been recommeded by the club) shall be requested to send to the secretary the names of such dogs as may show excellency of merit in their field work, or as approaching perfection in the type fixed by the club as the true standard by which Gordons should be judged on the bench, and there shall be kept and printed a register of the names, breeding, color and markings of such dogs as shall be thus favorably mentioned, together with their special points of excellence as specified by the judges.

Committee meetings shall be held at least once every five months, and a general meeting of members at least once a year for the election of five members of the committee.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Allegheny Darling. By A. C. Krueger, Pittsburgh, Pa., for white, black and tan beagle bitch, whelped Feb. 20, 1888, by champion Bannerman (champion Marchboy—Dewdrop) out of Blossom (Blunder—Rue).

Racket's Ludaic. By A. C. Krueger, Pittsburgh, Pa., for white and tan beagle dog, whelped April 21, 1888, by Cameron's Racket (Rally—Louise) out of June (Victor II.—May).

Racket's Lassie. By A. C. Krueger, Pittsburgh, Pa., for white, black and tan beagle bitch, whelped March 18, 1888, by Cameron's Racket (Rowett's Rally—Cameron's Louise) out of Vickey (Racer—Vic).

Spider. By N. L. Hayes, Clinton, N. Y., for lemon and white pointer bitch (spayed), whelped March 26, 1888, by Doncaster (A. K.R. 563) out of Case's Jill (Planter—Nell).

Nicholas Nickelby. By John P. Gray, Utica, N. Y., liver and white pointer dog, whelped Dec. 16, 1887, by Sensation II. (champion Sensation—Wakley's Meg) out of Guenn (Beausire—Mag M.).

Hannah. By Warner & Hamilton, Canaan Four Corners, N. Y., for liver and white pointer bitch, whelped Feb. 13, 1888, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658).

Belle of Bang's. By L. Gardner, Mount Vernon, N. Y., for white and black pointer bitch, whelped Feb. 22, 1888, by Bang Bang (A. K.R. 394) out of Miss Merrimack (champion King Bow—Grace).

Chester and Taffy. By L. Gardner, Mt. Vernon, N. Y., for white and liver pointer dog and bitch, whelped July 4, 1888, by imported Pilate (Lord Sefton's Bang—Lord Sefton's Nora) out of Fairy II. (A.K.R. 4387).

Mona. By J. B. Ellison, Philadelphia, Pa., for lemon and white pointer bitch, whelped March 11, 1888, by Bang (Price's champion Bang—Salter's Luna) out of Vandalia (Bang Bang—Zanetta).

Rosalia Barlow and Charlotte Corday. By J. H. Winslow, Philadelphia, Pa., for lemon and white pointer dog and bitch, whelped March 11, 1888, by Bang (Price's champion Bang—Salter's Luna) out of Vandalia (Bang Bang—Zanetta).

Ben Harrison. By Otto W. Volger, Buffalo, N. Y., for orange, white markings, rough St. Bernard dog, whelped June 2, 1888, by champion Duke of Wellington (champion Barry—Formosa) out of Lady Valentine (champion Valentine—Bessie II.).

Odin, Blackstone and Kent. By Otto W. Volger, Buffalo, N. Y., for orange, perfectly marked, rough St. Bernard dogs, whelped June 2, 1888, by champion Duke of Wellington (champion Barry—Formosa) out of Lady Valentine (champion Valentine—Bessie II.).

Count S., Lad S. and Mena III. By C. A. Ives, Bridgeport, Conn., for blue belton English setters, two dogs and one bitch, whelped May 21, 1888, by Rock Belton (Yale Belton—Princess Lilly) out of Mena II. (Belthus—Daisy).

Dash S. and Kasandra S. By C. A. Ives, Bridgeport, Conn., for lemon and white English setter dog and liver and white bitch, whelped May 21, 1888, by Rock Belton (Yale Belton—Princess Lilly) out of Mena II. (Belthus—Daisy).

Chautauqua Prince. By Chautauqua Kennels, Sheridan, N. Y., for lemon and white English setter dog, whelped May 11, 1888, by King Fred (Ted Llewellin—Marcella) out of Lady Brighton (Prince Phœbus—Rosey).

Fanny Obo II. and Black Bess. By O. B. Gilman, Waltham, Mass., for black cocker spaniel bitches, whelped June 12, 1888, by Sancho (Obo II., A.K.R. 432—Dido W., A.K.R. 3074) out of Frantic (A.K.R. 6281).

G. Tolsy J., G. Tiney J. and G. Lula J. By E. A. Buck, Chattanooga, Tenn., for brindle Scotch terrier bitches, whelped Feb. 27, 1888, by Glencoe (Whinstone—Rosie) out of Jessie (imported Chorley—imported Pennie).

G. Peggy N. By Hill City Kennels, Chattanooga, Tenn., for blue Scotch terrier bitch, whelped Feb. 22, 1888, by Glencoe (Whinstone—Rosie) out of Nellie (Dennis—Jessie).

Mount Wright Kennels. By O. B. Gilman, Waltham, Mass., for his kennels of black cocker spaniels at Framingham, Mass.

The Prefix Allegheny. By A. C. Krueger, Oakland, Pittsburgh, Pa., for his sole use in connection with his dogs.

Royal Reba. Editor Forest and Stream: In your issue of July 5 the date of birth of Royal Reba is given as July 27; it should read July 20.—A. C. COLLINS (Hartford, Conn.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Chippy—Racket, Jr. C. H. Starks's (Chatham, N. Y.) beagle bitch Chippy (Elmore's Bob—Jenny) to his Racket, Jr. (Cameron's Racket—Nellie H.), May 30.

Roxana—Bannerman. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Roxana (imported Ringwood—champion Belle) to his champion Bannerman (champion Marchboy—Dewdrop), April 20.

Nellie II.—Bannerman. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Nellie II. (Victor—Pownall's Nellie) to his champion Bannerman (champion Marchboy—Dewdrop), April 22.

Queen II.—Rowdy. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Queen II. (Flute—Queen) to his Rowdy (champion Rattler III.—champion Myrtle), May 22.

Vida W.—Rowdy. Geo. Miller's (Ithaca, N. Y.) beagle bitch Vida W. (champion Bounce—Pussie) to A. C. Krueger's Rowdy (champion Rattler III.—champion Myrtle), June 3.

Blossom—Bannerman. H. S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (Blunder—Rue) to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), July 3.

Lady Lee—Bannerman. D. Saulter's (Bennet, Pa.) beagle bitch Lady Lee (Bugler—Belle II.) to A. C. Krueger's Bannerman (champion Marchboy—Dewdrop), April 17.

Wacouta Queen—Wacouta Baldur. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Wacouta Queen (Odin—Wacouta Nun) to their Wacouta Baldur (Beaufort—Gytha II.), July 9.

Ilford Comedy—Lord Raglan. Wacouta Kennels' (St. Paul Minn.) mastiff bitch Ilford Comedy (Orlando—Idalia) to their Lord Raglan (Crown Prince—The Lady Rowena), July 3.

Persephone—Lord Raglan. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Persephone (Debonair—Danaides) to their Lord Raglan (Crown Prince—The Lady Rowena), June 21.

Dolly Varden II.—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Dolly Varden II (Hero II.—Dolly Varden) to their Wacouta Nap (Lion—Bess), May 31.

Wacouta Rose—Lord Raglan. Wacouta Kennels'(St. Paul, Minn.) mastiff bitch Wacouta Rose (Montgomery—The Princess) to their Lord Raglan (Crown Prince—The Lady Rowena), June 11.

Vineyard Queen—Lion III. C. H. Babcock's (Cordova, Neb.) mastiff bitch Vineyard Queen (A.K.R. 5329) to his Lion III. (A.K.R. 6167), July 9.

Ashmont Lioness—Leo. A. Laidlaw's (Woodstock, Ont.) mastiff bitch Ashmont Lioness (champion Hero II.—Delph Viva) to his Leo (champion Nevison—McMurray's Bess), June 25.

Duchess of Bergen—Naso of Devonshire. Mr. Sherman's (Jersey City, N. J.) pointer bitch Duchess of Bergen (Duke of Bergen—Dora) to Floyd Vail's Naso of Devonshire (Nick of Naso—Devonshire Queen), June 12.

Tuihana—Bang. J. W. Winslow and C. H. Stouffer's (Philadelphia, Pa.) pointer bitch Tuihana (Guess—Viola) to J. H. Winslow's Bang (Price's champion Bang—Salter's Luna), June 25.

Vandalia—Bang. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Vandalia (Bang Bang—Zanetta) to his Bang (Price's champion Bang—Salter's Luna), July 6.

Sister II.—Bradford Bonnie. Jos. P. Davis's (Cincinnati, O.) pug bitch Sister II. (A.K.R. 4758) to his Bradford Bonnie (A.K.R. 5244), May 10.

Neva B.—Leigh Belton. Rural Kennels' (Wakefield, Mass.) English setter bitch Neva B. (Pride of Dixie—Fairy Belle) to Frank A. Patch's Leigh Belton (Yale Belton—Princess Lillie), July 7.

Countess Fern—Paxtang. Dr. J. R. Housel's (Watsontown, Pa.) English setter bitch Countess Fern (Tucker's Dash III.—Roberto Lavernck) to F. Seiler's Paxtang (Count Noble—Fate Gladstone), June 29.

Joan of Arc—Banjo. J. W. Winslow's (Philadelphia, Pa.) Blenheim spaniel bitch Joan of Arc (Short's Block— ——) to his Banjo, June 17.

Woodstock Nellie—Robin. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Woodstock Nellie (imported Obo. Jr.—Woodstock Belle) to A. Laidlaw's Robin (champion Obo II.—Woodstock Dinah), July 3.

Rejoice—Bacchanal. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Rejoice (Roysterer—Ransome) to their Bacchanal (The Belgravian—Bedlamite), July 3.

Fandango—Dusky Trap. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Fandango (Hampton Joe—Rose) to their Dusky Trap (Dusky Splinter—Spider), July 3.

Daze—Lucifer. Beaverwyck Kennels' (Albany, N.Y.) fox-terrier bitch Daze (Deacon Pinciher—Diamond Dust) to Blemton Kennels' Lucifer (Splinter—Kohinoor), July 11.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Roxana. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Roxana (imported Ringwood—champion Belle), June 21, two dogs, by his champion Bannerman (champion Marchboy—Dewdrop).

Nellie II. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Nellie II. (Victor—Pownall's Nellie), June 21, two bitches, by his champion Bannerman (champion Marchboy—Dewdrop).

Nellie McGregor. Warner & Hamilton's (Canaan Four Corners, N. Y.) collie bitch Nellie McGregor (champion Rex—Juno), July 13, nine (six dogs), by Jas. Watson's Clipper (A.K.R. 2529).

Nightthorpe. Palmetto Kennels' (Charleston, S. C.) collie bitch Nightthorpe (A.K.R. 4249), June 20, two (one dog), by Chestnut Hill Kennels' Strephon (champion Eclipse—champion Flurry); dog since dead.

Fairy II. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Fairy II. (A.K.R. 4387), July 4, twelve (four dogs) by Wm. Crawford's imported Pilate (Lord Sefton's Bang—Lord Sefton's Nora); one dog and four bitches since dead.

Sister II. Jos. P. Davis's (Cincinnati, O.) pug bitch Sister II. (A. K.R. 4758), July 6, six (four dogs), by his Bradford Bonnie (A.K.R. 5244); three dogs since dead.

Lady Valentine. Otto W. Volger's (Buffalo, N. Y.) rough St. Bernard bitch Lady Valentine (champion Valentine—Bessie II.), June 2, six (five dogs), by A. J. Gosling's champion Duke of Wellington (champion Barry—Formosa).

Donna Gladstone. D. A. Goodwin, Jr.'s (Newburyport, Mass.) English setter bitch Donna Gladstone (Gladstone—Donna J.), July 6, eight (six dogs), by A. M. Tucker's Gus Bondhu (Dashing Bondhu—Novel).

Queen R. and M. H. S. Reynolds and Chas. E. Merrill's (Clinton, Conn.) English setter bitch Queen R. and M. (Young Gath—Belle Starlight), July 7, six dogs, by E. C. Ross's Dick Belton (Yale Belton—Clara R.).

Dell. A. Smart's (New York) Irish setter bitch Dell (champion Elcho, Jr.—White's Maud), June 20, four (three dogs), by Jas. B. Blossom's Kelso (champion Glencho—Sweetheart).

Woodstock Ruby. J. A. Spracklin's (Woodstock, Ont.) cocker spaniel bitch Woodstock Ruby (champion Brahmin—Besu), June 24, eight (six dogs), by A. Laidlaw's Master Shina (Young Obo—champion Shina).

Woodstock Belle. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Woodstock Belle (champion Hornell Silk—Woodstock Flirt), July 4, seven (four dogs), by A. Laidlaw's Master Shina (Young Obo—champion Shina).

Blemish. Blemton Kennels' (Hempstead, N. Y.) fox-terrier bitch Blemish (Brockenhurst Spice II.—Hempstead Spot), June 25, two (one dog), by their Dusky Trap (Dusky Splinter—Spider); dog since dead.

Zip. E. A. Buck's (Chattanooga, Tenn.) Scotch terrier bitch Zip (A.K.R. 5853), June 26, three (one dog), by his Dennis (A.K.R. 5851).

Broxton Torment. R. W. Dean's (Oakville, Ont.) wire-haired fox-terrier bitch Broxton Torment (New Year's Day—champion Bristles), July 5, two (one dog), by Bell's Broxton Tantrum (Vakeel—Broxton Virago).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Racket, Jr., and Helen. White, black and tan ticked beagle dog and white and black bitch, whelped April 19, 1887, by Cameron's Racket out of Nellie II., by A. C. Krueger, Pittsburgh, Pa., to C. H. Starks, Chatham, N. Y.

Glen. White, black and tan ticked beagle dog, whelped Aug. 5, 1885, by Cornet out of Solo, by A. C. Krueger, Pittsburgh, Pa., to Chas. Klocke, same place.

King Dale. White, black and tan beagle dog, whelped Oct. 24, 1887, by Dale out of Lill II., by A. C. Krueger, Pittsburgh, Pa., to Edward Lauer, same place.

June II. White, black and tan ticked beagle bitch, 2½yrs, old, pedigree not given, by A. C. Krueger, Pittsburgh, Pa., to F. F. Davison, same place.

Nellie McGregor. Black, white and tan collie bitch, whelped November, 1885, by champion Rex out of Juno, by C. G. Hinckley, Lee, Mass., to Warner & Hamilton, Canaan Four Corners, N. Y.

Nicholas Nickelby. Liver and white pointer dog, whelped Dec. 16, 1887, by Sensation II. out of Guenn, by John P. Gray, Utica, N. Y., to N. L. Hayes, Clinton, N. Y.

Lady Brighton. Lemon and white English setter bitch, age not given, by Prince Phœbus out of Rosey, by Chautauqua Kennels, Sheridan, N. Y., to F. T. Weatherill, Jonesville, N. Y.

Chautauqua Prince. Lemon and white English setter dog, whelped May 11, 1888, by King Fred out of Lady Brighton, by Chautauqua Kennels, Sheridan, N. Y., to F. T. Weatherill, Jonesville, N. Y.

Rodreka. Black, white and tan English setter bitch, whelped October, 1875, by Roderigo out of Gem, by D. A. Goodwin, Jr., Newburyport, Mass., to F. G. Taylor, Philadelphia, Pa.

Killarney. Red Irish setter dog, whelped May 7, 1888, by Kennerson's Tim out of Noreen II., by John F. Dwight, Weymouth, Mass., to Gideon Haynes, Jr., Hingham, Mass.

Lilly. Red Irish setter bitch, whelped Jan. 10, 1888, by Tim out of Sally, by Geo. Langran, Yonkers, N. Y., to Walter Edwards, Burlington, Ill.

Tim—Sally whelp. Red Irish setter dog, whelped Jan. 10, 1888, by Geo. Langran, Yonkers, N. Y., to John Norman, Philadelphia, Pa.

Banjo. Ruby and white Blenheim spaniel dog, age and pedigree not given, by Jacob Brombach, Philadelphia, Pa., to J. H. Winslow, same place.

Glencoe—Nellie Scott whelp. Pepper and salt prick-eared Scotch terrier dog, whelped Feb. 22, 1888, by Hill City Kennels, Chattanooga, Tenn., to J. D. Bodman, Knoxville, Tenn.

Fitz-Monarch. Steel grey prick-eared Skye terrier dog, whelped September, 1886 (A.K.R. 6200), by Cornelius Stevenson, Philadelphia, Pa., to F. P. Kirby, same place.

PRESENTATIONS.

Bannerman—Blossom whelp. White, black and tan beagle dog, whelped Feb. 20, 1888, by A. C. Krueger, Pittsburgh, Pa., to J. G. Messner, same place.

Bang—Vandalia whelp. Liver and white pointer bitch, whelped March 11, 1888, by J. H. Winslow, Philadelphia, Pa., to Dr. Louis O. Lusson, same place.

Mona. Lemon and white pointer bitch, whelped March 11, 1888, by Bang out of Vandalia, by J. H. Winslow, Philadelphia, Pa., to J. B. Ellison, same place.

DEATHS.

Frost. Lemon and white English setter bitch, whelped March, 1876 (Leicester—Victress), owned by Dr. W. A. Strother, Lynchburg, Va., July 5.

Rifle and Tray Shooting.

RANGE AND GALLERY.

THE NEWARK TOURNAMENT.

DURING the past week the first meeting of the International Sharpshooters' Union has been held at Newark, N. J., and with a very high success. Some of the Volksfest features of the meeting, such as parades, balloon ascensions, etc., were not specially successful, nor were the wind and weather conditions such as would have been selected for high scoring.

The gathering of riflemen of the most expert class was a notable one, and the management was so excellent that no competitor can fairly say that he lost any advantage through neglect of those in charge. Those who made up the programme provided for special targets to be used under the N. R. A. rules. The standard target was placed at these ports, and it is significant that while over 5,000 tickets were sold for the regular point targets, but a little over 700 were sold for the distinctly Creedmoor style of shooting. Of course many shots were fired at the Point targets from rifles of 10lbs. or under and with 3lbs. trigger pull, but the difference was a marked one, and shows that the big gathering was a Schuetzen fest of the best type.

The Union has been carefully organized. It has elements of great strength in it, and its initial step has been so well taken that there is every chance that the second meeting in 1889 will see a still larger muster of sharpshooters, each provided with the best output of the gun-maker's art, and each primed with all the latest wrinkles about loading and aiming.

NEWARK, July 9.—The heavy rains of to-day did not prevent the German sharpshooters from opening their festival in fine style. The Academy of Music, where the marksmen make their headquarters, was crowded early in the morning, but the parade did not start until 10:30, being delayed in the hope that the weather would clear up. The most prominent man in the hall at that time was William Milton Farrow, of Holyoke, Mass., who had the rank of Shooting King. Another prominent man in the hall was Karl Klein, "King of the New York Schuetzen Corps," whose breast was decorated by a score of handsome gold medals. Geo. Schlicht, of Hoboken, was also conspicuous for the fine decorations he wore. P. Walther, of the New York Zettler Club, was an object of no little admiration with his coat front nearly obscured by badges and medals. Other prominent marksmen present were: Capt. Heinecke, Wm. Hayes, John Coppersmith, A. L. Seitz, W. A. Koehler, A. G. Gates, H. C. Blehn, Geo. C. Thaxton, F. Schinkert, W. D. Garber, C. Shotte, C. Van Leeran, Hy Hoehren, Geo. Spangler, Jacob Hefty, J. Lackert, G. M. Cook, M. Van Schreneret, Matt Gindele, Herman Hermans, P. Spoett, Louis Brehn, and among the recent arrivals of clubs were: The Albig Rifle Club, Zettler Rifle Club, New York Schuetzen Corps, Syracuse Rifle Club, Williamsburgh Rifle Club, of New York, and clubs from Pittston, Pa.; Norwalk, O.; Cincinnati, Pittsburgh, Meriden, Conn.; Carson, Nev.; Rochester, N. Y., and Princeton, Ill. Chicago sent a large delegation. Monroe, Wis. and Davenport, Ia., each sending several prize hunters.

At the park, which is a beautiful spot of thirteen acres, the property of Gottfried Krueger, the Newark brewer, and President of the International Sharp Shooters Union, there was speech making etc., with presentations of flags and cups before the President gave the signal for the boom of the opening cannon to start the fusillade.

W. Milton Farrow fired the first shot, using a point target, and scored one out of a possible three. The score was low on account of inaccuracy of the sighting scale. James Brooke of the Pittsburgh Rifle Club scored the first flag, and was warmly greeted by his fellow-marksmen for the achievement.

W. M. Farrow, the champion all-around shot, scored the first 150 points and thus became the possessor of the first prize gold medal given at a festival under the auspices of the International Union. C. F. Stewart captured the second gold medal a few moments later and D. Miller, C. Schotte and A. Hoffman followed later in the afternoon. Farrow also won the special premium of

$10 for making the most number of bullseye shots during the day, bringing the "red flag" up twenty-three times.

James Brooks, of the Pittsburgh Rifle Club, made the first bullseye and got as a prize $5. On the "Honor" target only four tickets were fired, C. W. Hainey being high man with 49 points out of a possible 50. On the "man" target the highest score made was 94 out of a possible 100.

C. F. Stewart, F. Mueller, C. Schotteheimer, A. Hoffmann were awarded silver medals. Other prize winners were: A. Kuhlner, A. H. Kohlwetz, F. Landold, H. Merriman, W. F. Morrill, Winsor Morrill, H. Nieman, W. S. Riggs, C. F. Stuart, J. Trickel, John Thulkn, J. J. Dobler, A. Wagner, J. D. Wingman, F. O. Young, T. Fitsimmons, T. C. Noon, J. Schwartz, J. Spangler, J. Saeding, A. Schotte, A. Strain, T. Spalf, J. Schlicht, J. Schalk, E. Berg, L. Burdan, J. Brecerniel, W. H. Bostalman, J. M. Cooke, J. D. Cooke, D. J. Dolan, J. L. Ellsworth, H. Kugel, W. M. Farrow, G. N. Frey, F. Freitag, A. C. Gates, M. Gindele, L. S. Hubbard, C. M. Hill, F. Hauser, W. Hosanzahl, A. Huffmann, G. Hemminghausen, C. W. Hornig, G. Heftly, H. Hahn, O. M. Jewell, C. Jeidson, G. Krans, H. Rothal, Dorner, H. B. Murphy. The best bullseye was made by James Brooks of Pittsburgh, and the next in rank Henry Hoegel.

It must be said that the first day was a discouraging one. The light was bad and with targets facing away to the north so that with the best of light the targets are not over-conspicuous through the slits from the shooting house.

July 10.—Shooting Park presented a gay and animated scene early this morning, and when the cannon's boom announced that the time had arrived for the second day's competitions to begin, numbers of marksmen could be seen grouped in small bodies over the green. The banners and flags that floated from every tent and house added to the animation and beauty of the scene. The attendance during the early hours was not large, although it exceeded that of the previous day, but as the hours wore on the crowds was greatly swelled.

C. F. Stewart, of Norwalk, O., made the first bullseye. George Joiner on the Stich target put in three 6in. bullseyes. The winner of the morning prize on the honor target was T. Fitzsimmons, of Hoboken, with 64 out of a possible 75 points. J. E. Barnett, of Washington, Pa., was rewarded with $2 for the last bullseye scored before the gun fire for the end of the morning competition. W. M. Farrow made the exceptional record of 24 bullseyes on the point target. A large number of marksmen received silver medals for 25 points on the same target. The gold medal winners for 125 points on the game targets were Mathew Gindele, of Cincinnati, O., G. M. Cook, of Davenport, Ia., and Henry Hoehn, of Monroe, Wis. One of the best shots on the ground was F. O. Young, of California, who has only one hand and one eye.

It was computed that during the day 360 men shot at the 49 targets on the ground. Every one speaks in the highest praise of the arrangements for shooting. Not a hitch has occurred of any description.

The first bullseye of the afternoon was obtained by Mr. Dornier, of Greenville. W. A. Koehiler, of Syracuse, made 103 on the American target, and C. Berris made 48. The last bullseye was made by L. Burton, of Norwalk, O. The following is a complete list of the medal winners of the day:

Winners of gold medals—M. Gindele, G. M. Cook, H Hoehn, H. Roeth, G. Zimmerman, E. Berg, E. Saeding, R. Roune, T. Barry, C. Reim, A. Engel, M. Dorhler, J. Trickle, G. Janvier, Z. Zettler, E. Beisler, J. B. Collins, W. M. Wagner, T. E. Beck, L. Flash, S. F. Mennier, G. Schalk, H. Neiman, G. D. Cook, W. Haszenzahl, L. Burton.

Silver medal—L. Eggleston, D. Eggleston, C. Beckman, C. Molter, G. Schilling, F. Brandt, G. Joiner, C. E. Gentsch, G. Fulton, J. B. Collins, L. Brehm, J. J. Mountjoy, H. Eilsen, G. L. Ellsworth, W. P. Uhler, G. Zimmerman, J. F. Schraeder, T. E. Beck, E. Travis, A. Hauck, L. P. Haisson, F. Walter, W. Weber, J. Brooke, W. Gelzer, A. C. White, P. Bernhardt, H. S. Seely, W. Cleveland, O. Jaeger, R. Rono, V. Lechre, V. Stahl, J. A. Boyker, C. H. Barber, H. Schutt, C. Rein, G. Fee, A. Engel, M. Dorrler, T. J. Dolan, R. Busse, F. Schmidt, Z. Zettler, A. Stahl, F. Sagner, J. Vescilus, J. F. Iller, E. F. Kolb, J. Schneider, H. Redloff, W. M. Wagner, W. Weiferlin, L. Flach, S. Menuica, F. Wiss, A. P. Hunt, M. B. Engel, J. E. Banett, G. A. Higgins, J. W. Rothwell, J. D. Sutch, F. Harrison, D. Recke, J. W. Plaisted.

The shooting at the targets open to all was interesting, the greatest interest being taken in the contest at the American standard target, under the National Rifle Association rules. The score of 136, made yesterday by B. Walther of the New York Zettler club, was beaten by three men. W. H. Beardsley of Bridgeport, Conn., O. N. Jewell of Boston, and H. W. Haws of Centre Valley, N. Y., each scored 138 points. Their individual scores in each shot were as follows: Beardsley, 45, 48, 45; Jewell, 47, 47, 43, Haws, who is a great fly caster, 47, 44, 47. Z. C. Talbot, a colored man from Springfield, Mass., made 49 out of a possible 50 points. He has got the chance to make $100. A. C. White of Worcester, Mass., scored 45 in one trial, and A. Braun of Jersey City shot twice and scored 46-42 out of a possible 50 each time.

July 11.—The third day of the fest brought fine weather but a very, very tricky wind, until wind gauges were of very little use. The shooting went on with vigor, however, and the racks were kept crowded with arms.

The first bull'seye in the morning was made by W. M. Wagner of Princeton, Ill., and the last at noon by G. Schalch of Pottsville, Pa. At the "honor" target, Charles Molter made 22, 16, 19, a total of 57, and J. Meyer, 15, 23, 16, a total of 54. E. Berg of Davenport, Ia., made 25 points out of 30 on a point target, the highest shot made on one ticket. M. Dorrler made 24 points. Gold medal winners who made 150 points yesterday morning were George Spangler, A. C. Gates, A. H. Kohlmetz, J. W. Rothwell, Frank Watts, F. Spetta, F. Landolt, W. F. Morris and his son, Windsor Morris, the boy wonder from Syracuse. The above named and the following won silver medals: E. Verdicksburgh, F. Schwelkert, Charles Struth, Edward Shackleton, J. Traudt, W. A. Roor, A. Meyers, James Jordon, Fred Armbrust, W. Stein, Jr., J. W. Schmidt, C. W. Karcher, C. H. Bieler, Jr., John Meyer, E. T. Stephen and Z. C. Talbot, the colored marksman from Springfield, Mass., who also made 108 on the American champion target. A. Hoffman has made on 27 tickets or 270 shots, 383 points, and has 30 more shots to fire. M. Gindele of Cincinnati, made 48 points on the American standard target yesterday forenoon. Very little has been done on the man target and only a few scores on the ring target. On the latter target probably 1,500 shots will be fired before Saturday night.

The scores made at the various targets were as follows:

Stich target, open only to members of the union, bullseye only to count.—M. Price 1, E. Travis 2, H. Hueber 1, F. Spacth 1, R. Rom 1, W. A. Ross 1, E. Halzman 2, H. Lehman 1, C. Reim 2, G. Schlecht 1, S. Meunier 1, J. Schneider 1, W. M. Wagner 2, H. Hoersh 2, C. W. Karchner 1, C. Judson 2.

Honor target, out of a possible score 75.—C. Molter 57, J. Meyer 54, C. Molter 57, H. Hoehn 53, J. Meyer 54, L. Eggleston 50, L. Landolt 61, W. D. Miller 50, R. Rom 60, W. A. Ross 63, E. Holtzman 58, H. B. Murphy 57, C. Reim 49, G. Schlecht 55, J. Schneider 52, F. Hecking 57, A. Meyers 54, H. Hoersch 51, A. Stein 62, J. Wanovier 57, W. Walther 58, M. Trapp 57, J. D. Cook 52, C. Harney 56, J. J. Mountjoy 61.

Man target, out of a possible 100.—R. Busse 89, T. E. Beck 89, F. Wiss 68, A. C. Gates 77, H. B. Murphy 74, W. Nunley 92.

Ring target, out of a possible 75.—H. B. Murphy 65, A. C. Gates 69, A. C. White 65, W. Morris 60, W. Rothart 60.

American champion target, out of a possible 150.—A. H. Merriman 68, F. Spaeth 104, E. T. Stephens 110, D. Eggleston 83, Z. E. Talbott 108, T. W. Heafell 90, C. E. Gensch 126, B. Walther 120.

At the American standard target, out of a possible 50, M. Gindele, of Cincinnati, made 48, and J. W. Newberry, of Coxsackie, N. Y., 43.

The first bullseye in the afternoon was made by C. F. Stewart, of Norwalk, N. Y., and the last of the day by T. J. Dolan, of New York.

The winners of gold and silver medals at the afternoon shooting were as follows:

Gold medals.—J. H. Higgins, P. Bernhardt, Otto Jaeger, E. Travis, J. Hetty, H. Blumenberg, J. Bell, W. Weber, E. M. Jewell, L. Brehr, B. Zettler, G. Schilling, J. M. Fulton, J. J. Mountjoy, C. Hoffman, J. F. Klein, C. Molter, W. Geize, W. Roos, J. B. Sutch, G. Schlecht, G. Krauss, F. Ambrust, C. Struth.

Silver medals.—M. Thorp, T. Elsen, J. Vanoni, B. Zettler, A. J. Lyon, V. Dittmar, C. Detlefson, J. Belcher, A. Klein, C. Gruber, W. H. Beardsley, J. G. Newberry, H. Schnaw, J. R. Blumenberg, C. L. Daily, H. Hoersch, W. Hahn, W. Seppenfeldt, F. Karl, J. F. Klein, W. Nunley, E. Hatz, C. Rehm, W. Klein, F. W. Hacfle, C. F. E. Rotter, E. J. Behrs, C. H. Gemehlin, C. Reinhardt, A. Ringler, M. B. Wheeler, C. H. Townsend.

The prizes for the highest number of bullseyes were divided as follows: George Gainor, of New York, and C. F. Stewart, of Norwalk, Ohio, showed first and scored with 21 bullseyes each; R. Rowe, of Milwaukee, and M. Doorler, of Greenville, third and fourth, with 20 bullseyes each, and A. Engel, of Milwaukee, took fifth money with 19 bullseyes to his credit.

July 12.—The park had a heavy mist over it this morning, making it difficult to see the bullseyes. The wind was easier, however, and scoring improved. Capt. John Dieul, with his forty men from the Independent Schuetzen Corps, of New York, arrived at the park about 11 o'clock. The corps is composed of rich New York brewers and mulsters. The corps will go to Berlin in 1890 to contest in the national festival there for prizes. William Hays, of Newark, and W. M. Farrow, of Holyoke, Mass., and B. Walther, of Hoboken, will join the corps and shoot in the great contest.

The first bullseye yesterday morning was made by H. Wiman, of Cincinnati. The last at noon by L. Vogel of New York; the first in the afternoon by W. D. Wheeler, of Bridgeport, Conn., and the last of the day by T. J. Tobler, of West Hoboken, N. J.

At the American standard target, out of a possible 150, G. F. Ellsworth, of Boston, Mass., made 42 points, and C. L. Daily, of Altoona, Pa., 44 on one ticket each. L. Flack, of New York, made 46 and 40 on two tickets. Appended are the scores made on the various other targets:

Stich target, open only to members of the union, bullseyes only to count—L. Enders 1, E. Gully 1, L. Brehm 2, J. Vercelius 2.

Honor target, out of a possible 75—L. Enders 53, O. Hinz 59, E. Gully 54, A. Knoepfli 51, A. Brehn 61, L. Reckert 34, J. E. Vescelius 46, P. Haehn 47, G. Meister 43, J. Luft 70.

Man target out of a possible 100—M. Dorrler 89, R. Bussee 89, M. Gindele 72, F. H. Harrison 84, C. Reim 82, J. W. Schneider 84, Q. C. Talbot 87, L. Flack 94, H. Andrus 80, F. Armbrust 88, T. E. Becks 89, J. B. Collins 77, F. Elsele 79, Engleston 80, G. Geindle 72.

Ring target out of a possible 75—H. Becker 64, J. M. Frye 65, A. Knoepfli 63, H. M. Pope 65, G. Shilling 52, F. Armbrust 70, T. E. Beck 67, T. Barry 64, T. Eisele 67, J. S. Case 67, W. Webel 51, J. Von Lehn 42, G. Muzze 67, W. A. Roos 64, G. Soeding 56, T. Schilling 62, E. Travis 44, J. E. Vescilius 56, J. H. Wagner 65.

American champion target out of a possible 150: L. Brehm 92, L. Flack 109, I. Luft 119, O. Sangsdorf 117, J. Buzzen 83, A. G. Hellwig 81, W. Hahn 63, F. Elsel 44, W. M. Wagner 73, L. Quanchi 94, H. Moehn 77, O. Jaeger 92, J. W. Rothwell 125, D. J. Lyon 107, A. C. Gatos 116.

The winners of gold and silver medals were as follows: Gold medals—Lewis Eggleston, D. Eggleston, S. J. Lyon, T. Wise, T. Swift, W. B. Neeeler, C. Horney, J. Zengner.

Silver medals—L. Enders, H. M. Pope, R. Faher, W. W. Tucker, L. Quanchi, E. Roggruiller, G. H. Bauerman, A. O. Zirchhaug, E. C. Stein, O. Hunz, S. Braun, A. Knoepfli, L. Vogel, T. F. Moore, M. Bulser, F. Elsele, F. R. Rand, C. Grosh, A. G. Helwig, P. Felgel, J. Schnitt, W. Lowe, G. Albig, C. M. Boland, C. E. Meier, M. Zinteft, M. Andruss, H. Shalk, F. Radie, A. Zenger, J. S. Case, E. J. Crane, W. Forkel, W. Wesel, I. Martin, V. Steinbach, C. Fraudman, P. Meier, L. Eernat, J. H. Keller, H. H. Hooneck, A. J. Gening, F. Meyer, W. H. Zettner, J. Kramer, J. Luft, W. Lieberum, J. Funk, H. Newman, A. J. Delman, H. Weller, O. Plangemann, A. W. Becker, G. Bauer, J. Gemehlin, C. Hennig, G. Steiber, F. W. O'Brien, E. Kuegler, F. Koch, G. Klingelhofer and J. F. Autenreith.

The prizes for the highest number of bullseyes were divided as follows: G. H. Hogans, first prize, 16; H. Lober, second, 15; H. W. Pope and W. Hahn tied on 13 bullseyes and divided third and fourth money, and F. H. Boyreu took fifth money with 9 bullseyes.

July 13.—The shooting to-day was sadly marred during the morning hours by the cold, changeable and heavy wind that swept along the ranges. The force of the blast was so variable that it was almost an impossibility to gauge it correctly.

The first accident of the festival happened, but although the wound received is painful, it is not serious. John Coppersmith, while holding a muzzleloading rifle while another man forced the bullet down the barrel, received the end of the ramrod with such force on his hand between the thumb and forefinger that it pierced the flesh almost through the hand. Medical attendance was at once procured and the injury dressed, but the would will interfere considerably with Mr. Coppersmith's shooting for a time.

Mr. Buscher of Hartford, Conn., won the prize for the first bullseye in the morning, and F. O. Young of California the prize for the last bullseye before the noon gun fired. The shooting was as a whole good, as many of the better known marksmen had laid off from the contests till now and had the wind behaved anything like decently there would undoubtedly have been many heavy scores. Numerically, the marksmen could not compare with those of Wednesday and Thursday, but the ranges were kept fairly busy.

The first bullseye in the afternoon was obtained by V. Deltmar of New York, and the last of the day by Mrs. G. Daums of Brooklyn, the only lady that shot at the targets during the festival. The greatest interest was exhibited in those who were nearest to obtaining the coveted position of Schuetzen King. The contest was led by W. M. Farrow of Holyoke, Mass., who has held the position since 1878. He made 517 points out of a possible 900 on the point target with one of his own make rifles. Mr. Dorrler of Greenville, N. J., came next with 509 points. J. Huggins of Pittsburgh made 499. These are the marksmen finished their scores early in the day, and those that came after were watched to see if their scores would be defeated. The only one that came up to these scores, however, was E. Berg with 596, and Farrow therefore remained king.

The scores made on the various targets were as follows:

American champion target out of a possible 150—J. Stahl 103, F. Schweickert 105, C. Schotte 97, H. Nieman 110, J. N. Frye 102, T. J. Dolan 125, F. O. Young 124, J. B. Sutch 119, J. H. Huggins 117, M. Dorrler 113.

Man target out of a possible 100—J. Coppersmith 74, C. E. Zettler 83, J. T. B. Collins 77, M. B. Engles 81, L. Flack 94, E. Holzman 77, C. Judson 91, H. W. Hawes 88, F. C. Watts 89, C. Reinhardt 96, J. J. Newman 89, G. Schalk 91, F. Armbrust 83, J. W. Rothwell 92, A. Begerow 88, O. Jaeger 85, O. Jaeger 86, Z. C. Talbot 87.

Ring target out of a possible 75—T. W. Haefele 64, J. Coppersmith 63, T. J. Dolan 64, W. M. Farrow 70, J. S. Case 67, M. Gindele 68, W. Hasenzahl 64, E. C. Henn 64, C. Judson 68, J. Luft 68, H. Rothart 68, F. K. Rand 65, W. Stein 61, A. C. White 67, W. F. Morris 72, W. Hayes 69, A. Lober 70, L. J. Lyon 66, J. Vogel 67, B. Walther 68, J. W. Rothwell 63.

Honor target out of a possible 75—E. Berg 62, C. Judson 70.

At the American standard out of a possible 150—Z. C. Talbot, of Springfield, Mass. made 140; C. L. Daily, of Altoona, Pa., 135; T. J. Dolan, of New York, 135; W. M. Farrow, of Holyoke, Mass., on two tickets, 82; L. Daum, of this city, one ticket, 45; L. L. Hubbard, of Boston, Mass., one ticket, 45.

The winners of gold and silver medals were as follows: Gold medals—F. W. Hofele, J. E. Vescelius, G. Berniens, V. Dittmar, R. Busse, J. Buxen, H. Haas, M. Pope, E. Holzmann, A. Meyers, J. Vononi, A. C. White, E. T. Kalb, W. V. Loure, J. H. Keller, H. Andruss, W. H. Zellner, J. E. Barnett, J. Brooke, A. G. Genez, D. Verdecksberg, C. Daily. Silver medals—G. Muzzie, M. Brierly, A. Booz, P. Blaum, A. Fisch, F. Dietz, L. Kutschler, J. Ludwig, A. Begerow, J. J. Diehl, A. Morgenweck, H. Korter, J. Larche, W. Van Oesen, J. Harburger, A. Christie, A. Schumacher, A. Roggenbrandt, W. W. Wilson, H. F. Lord, C. Klemlub, O. Langsdorff, Mrs. G. Daums C. Kaiser.

A meeting of delegates of the International Sharpshooters' Union was held in the evening with President Gottfrid Krueger in the chair. There were 86 delegates present, representing, with a few exceptions, all the societies that participated in the festival. The constitution was read, and with a few amendments adopted. It was framed after the constitution of the former North American Sharpshooters' Union, the only difference being in the mode of taxation. The former union taxed the local clubs according to their membership, no matter how many of the members took part in the festival. The new union proposes to tax only those who take an active part in a festival.

Mr. Schotte had an amendment adopted to the effect that the members of a club taking part should be taxed as follows: One to 5 members $5 each, 6 to 10 $4 each, 11 to 20 $3, 21 to 30 $2, 31 to 50 $1.

None of the societies represented was prepared to take charge of the arrangements for the next international shooting festival that is to be held in 1890. The society undertaking it will be responsible for any deficiency that might occur. On motion of W. A. Weber of the Independent New York Schuetzen, the union adjourned until December, when final action will be taken. It is thought one of the New York societies, probably the Independents, will undertake the next festival and have it held at Union Hill Shooting park.

The meeting adopted a resolution of thanks for William Hayes, the chairman of the shooting committee, for the splendid arrangement of the shooting stands.

July 14.—The Fest closed quietly with few on the grounds early in the day.

The team shooting was begun at 3 o'clock, and resulted as follows, five men comprising a team, and each man fired ten shots on the German ring targets, possible 250.

Zettler Rifle Club, of New York, first team—Barney Walther, 197; M. Dorrler, 219; C. Zettler, 210; B. Zettler, 191; L. Lober, 208. Total, 1,025.

Miller Rifle Club, of Hoboken, first team—Geo. Schlecht, 221; T. Fitzsimmons, 197; L. Vogel, 185; C. Judson, 197; D. Miller, 212. Total, 1,012.

Zettler Rifle Club, of New York, second team—G. Joiner, 179; G. W. Plaisted, 201; L. Flach, 208; Max Engel, 188; J. Coppersmith, 217. Total, 990.

Bull's Head Rifle Club, of New York—G. Zimmermann, 218; E. Holzman, 197; C. Gentsch, 195; J. W. Schroeder, 202; John Schneider, 209. Total, 1,003.

Miller Rifle Club, of Hoboken, second team—F. Landolt, 163; J. Tobler, 162; H. Lohman, 144; H. B. Murphy, 176; A. Meyns, 207. Total, 852.

THE RECORD OF THE TOURNAMENT.

Honor Target.—This target is the regular ring target, divided into 25 rings, three-quarters of an inch apart, making in one ticket of 3 shots a possible 75.

All prizes given by the different clubs belonging to the Union and by individuals shall be placed on this target. The Newark Shooting Society give $500 first prize.

On the honor target three men tied on 70 each for highest score, C. Judson of Hoboken, A. Homrighausen of Baltimore, and J. Luft of Milwaukee. They decided to divide the first three prizes, J. Luft taking $50 and the silver table set presented by the New York Independent Schuetzen Corps. Homrighausen and Judson each received $275. The fourth prize goes to W. Hasenzahl, 69; fifth, W. M. Wagner, 68; sixth, S. Mennier, 67; seventh, eighth, ninth and tenth prizes divided, A. C. Gates, M. Price, A. C. White, David Miller, 66 each; eleventh, twelfth, thirteenth and fourteenth, divided by E. C. Henn, William Hayes, C. G. Zettler and S. J. Lyon, 65 each; fifteenth, sixteenth and seventeenth prizes divided by T. Fitzsimmons, L. Flach and J. F. Schroeder, 64 each; eighteenth and nineteenth divided by W. A. Ross and Otto Jaeger, 63 each; twentieth, twenty-first, twenty-second and twenty-third prizes divided by C. E. Gentsch, Alex. Stein, Emil Berg and O. M. Jewell, 62 each; twenty-fourth to thirty-third, inclusive, divided by Matt Gindele, M. Dorrler, J. J. Mountjoy, A. Engel, W. Von Oesen, L. Brehm, W. Klein, J. A. Huggins, H. Andruss, L. Landolt, 61 each: 34th, 35th, 36th and 37th divided by R. Rom, E. Shackleton, A. H. Merriman and Geo. Spangler on 60 each; 38th to 50th inclusive divided by A. Hofman, Jos. Belcher, T. J. Dolan, Otto Heintz, F. T. Stevens, A. Zeugner, C. Gruber, W. Haefele, B. Zettler, H. Rothert, A. Loher, J. Coppersmith and G. Schalk on 59 each; 51st to 56th, divided by Windsor Morris, E. Holzman, B. Walther, W. M. Farrow, H. Neiman, on 58 each; 56th to 66th divided by H. B. Murphy, E. Hecklag, J. Vanoni, Aug. Ringler, M. Troppe, F. C. Rand, J. T. Tobler and F. S. Harrison, on 57 each; 67 to 76, inclusive, C. Harney, J. W. Rothwell, Wm. Tucker, J. Bartel, E. Stiher, H. Autenrieth, V. Blavin, G. H. Ellsworth, on 56 each; 77th to 81st, inclusive, divided by F. Dietz, Z. C. Talbot, G. Schlicht, S. Buzzini and W. Stein, Jr., on 55 each; 82d to 90th inclusive, divided by F. Wins, J. Meyer, A. Meyer, C. W. Kachner, Emil Gully, Fred Eisele, J. M. Fulton, L. L. Hubbard and Aug. Bergerow, on 54 each; 91st to 100th inclusive, divided by T. Barry, H. Haehn, L. Endert, B. Meyrs, E. Richter, J. Langsdorf, F. Karl, L. Martin, P. Schmidt and P. Schwinge on 53 each; 101st to 107th, divided by F. O. Young, John Schneider, J. D. Cook, George Funk, H. M. Pope, J. B. Sutch and L. Brodfish on 52 each; 109th to 116th, divided by Gus Zimmerman, H. Hoersch, A. Knoepfel, G. D. Weigman, W. Blumenburg, J. Thoelke, C. E. Tayntor and H. S. Seeley on 51 each; 117th to 124th, divided by L. Eggleston, W. D. Miller, E. Armbrust, L. Kutscher, G. W. Plaisted, John Keller, C. E. Overbaugh, August C. Zischaug.

Stich Target.—This target has a black of 12in. diameter. The shooter hitting nearest to center of bullseye shall take first prize, the shooter hitting second nearest shall take second prize, etc.; 3 shots per man.

The amount of $1,000 in 75 prizes was distributed. First prize, $75.

The following were the chief prize winners in the order named: V. Lechner, W. M. Wagner, W. W. Tucker, F. Schwickert, J. M. Fulton, F. Brandt, H. Hohn, H. Lohman, E. Holzman, R. Winckler, H. Witte, C. Rein, F. K. Rand, Emil Berg, E. Tully, A. Bergerow, F. S. Harrison, G. Joiner, J. A. Huggins, W. S. Riggs, C. Stein, J. B. Sutch, E. Thacketto, L. Flack, Chas. Beckman, W. Welber, L. Vogel, A. Hauck, J. E. Vescelius, A. Hoffman, L. Brehm, W. B. Engel, V. Ditmar, R. Rom, A. C. Zischaug, D. Eggleston, C. E. Gentsch, Geo. Spangler, W. Buhsen, V. Seppenfeldt, J. J. Tobler, B. Zettler, C. Schotte, C. W. Harney, P. Schwingle, Matt Gindele.

American Champion Target.—This target has a black of 10in., containing circles 1in. apart, counting from 15 down to 11, the balance of target is white, containing circles 1in. apart, counting from 10 down to 1. Open only to members using rifles under National Rifle Association rules, 10 shots per man, possible 150. Each shooter can obtain but one ticket.

Handsome gold medal and $25 cash given by Newark Shooting Society for first prize. $275 cash divided into suitable prizes, also all contributions from clubs, firms and individuals given for this purpose.

Geo. Joiner was first with the fine record of 129, C. E. Gentsch 126, T. J. Dolan, of 12th N. Y. Regt., 125, J. A. Rothwell 125, F. O. Young 124, L. L. L. Hubbard 124, O. M. Jewell 121, B. Walther 120, J. B. Sutch 119, J. Luft 119, O. Langsdorff 117, J. A. Huggins 117, Matt Gindele 117, A. C. Gates 116, M. Dorrler 116, A. C. White 110, H. S. Seely 115, H. Vieman 110, E. Stevens 110, L. Flach 109, J. T. B. Collins 109, T. C. Tabler 108, S. J. Lyon 107, S. E. Barnett 107, B. Zettler 105, J. S. Stahl 103.

Public Ring Target.—This target is the same as the target of honor, i. e., the regular three-quarter inch ring. Three shots per man, possible 75. Number of tickets unlimited. The amount of $1,500 in 125 prizes was distributed. First prize $150.

The leaders were: W. F. Morris 72, W. M. Farrow 70, G. Zimmerman 72, M. Dorrler 70, F. Armburst 70, H. Haehn 70, A. Lober 70, W. Hayes, F. C. Watts, J. Schneider, A. C. Gates, C. E. Gentsch, J. Luft, E. J. Stevens, Gus Saeding and G. Snellen, 69 each; W. H. Beardsley, J. Coppersmith, T. J. Dolan, C. E. Tayntor, Matt Gindele, E. Holzman, C. Judson, G. W. Plaisted, H. Rothert, C. Rein, J. F. Schroeder and B. F. Walther, 68.

Man Target.—This target represents the head and upper part of a man's body, the whole figure being black, divided in perpendicular lines 3/4in. apart, the center line counting 20, the numbers running down on each side to 1. Five shots, possible 100; number of tickets unlimited. The amount of $1,000 in 100 prizes was distributed; first prize, $100. Chris. Reinhardt of Newark, made the exceptionally high score of 96 out of a possible 100 in five shots. The other principal winners were as follows: L. Flach 94, G. Zimmerman 94, H. Hoehn 92, W. Nunley 72, J. W. Rothwell 92, C. Judson 91, Geo. Schalck 91, W. Hasenzahl 90, W. Haves 90, H. Rothert 90, M. Dorrler 90, R. Busse 89, T. E. Beck 89, H. Nieman 89, F. C. Watts 89, A. Begerow 88.

Point Target.—This target has a black 12in. diameter, divided into three parts, the inner circle, which constitutes the bullseye, being of 3in. diameter, counts 3 points; the next circle of 6in. diameter counts 2 points and the balance of black counts 1 point. Shots out of black do not count.

The shooter hitting the bullseye nearest the center shall take first prize, etc., same as on stich target. Number of tickets unlimited.

The amount of $1,000 in 100 prizes was distributed; first prize, $80.

The principal prizes for the best bullseyes on the point target were awarded as follows: August Engel, L. Vogel, G. Zimmermann, G. F. Ellsworth, S. J. Lyon, A. G. Geneg, Wm. Hasenzahl, E. Travis, H. J. Behrens, A. Stein, L. Flach, H. Neimann, W. V. Wheeler, E. F. Kolb, J. H. Huegel, M. Buliser, C. G. Zettler.

For the bullseyes on the point target W. M. Farrow received first prize, A. Hoffman second, J. Stein third, M. Dorrler fourth and L. Flach fifth.

Standard American Target.—Open to all comers using rifles under National Rifle Association rules. Number of tickets unlimited.

The amount of $850 in 50 prizes was distributed. First prize, $100.

Prizes won in following order, possible 150: O. M. Jewell 139, Z. C. Talbot 139, H. W. Hawes 138, Matt Gindele, W. H. Beardsley 138, B. Walther 136, C. F. Daily 135, T. J. Dolan 135, A. C. White 135, A. Braun 132, L. L. Hubbard 130, E. T. Stevens 130.

WASHINGTON HEIGHTS VS. ALGONQUINS.—New York, July 13.—There was a rifle match at 100yds. between teams representing the Washington Heights and Algonquin gun clubs, on the grounds of the former, at Fort Washington, 10 shots, possible 100:

Washington Heights.		Algonquin Gun Club.	
E A Davison	73	John Male	49
Hugh Harrison	49	G Rinn	22
Joseph Keppler, Jr.	54	Louis Brenner	11
Wm Snooks	54—230	C McClane	37—119

OTTAWA, July 9.—At the Ottawa Rifle Club competition at 800 and 900yds., 7 rounds at each, Martini-Henry rifles, shot in a gale of wiad, the following were the best scores:

	800	900	T'l		800	900	T'l
Dr G Hutchinson	24	24	48	R Pink	24	14	28
T McTanet	26	16	42	J Nutting	20	17	37
T Carroll	19	22	41	J D Taylor	12	23	35
W E Cook	19	20	39	F Lightfoot	22	13	35
W R Jamieson	22	17	39	H McKay	28	7	35

NEW ORLEANS, July 16.—That staunch organization of German and Swiss citizens, the New Orleans Rifle Club, has greatly increased its membership of late, and is now maturing plans to put up a handsome club house of its own. Reception and ball rooms and handsome play grounds for children will be among the features of the new premises. A series of entertainments is being talked about, which German citizens know so well how to make enjoyable. The principal officers of the club are Mr. Maximilian Herrmann, President, and Messrs. Winteler and Hoen, Vice-Presidents.

TORONTO, July 7.—The regular practice of the Toronto Rifle Association was held this afternoon. The weather was very trying to marksmen, the light being changeable and the wind gusty, which carried many a bullet just clear of the target. Following are some of the leading scores at 200, 500 and 600yds.:

	200	500	600	T'l		200	500	600	T'l
A D Crooks	25	31	26	83	J Knifton	26	24	18	67
Wm Harp	28	27	23	78	A G Ronan	28	26	11	65
Tom Mitchell	28	30	20	78	R Rennie	22	24	08	64
R McVittie	30	22	19	71	W G Fowler	21	20	18	60
G Thompson	29	20	21	70	Wm Jack, Sr.	24	26	10	60
A Cartwright	24	19	24	67					

GARDNER, Mass., July 12.—At a recent meet at Hackmatack Range of members of the Gardner Rifle Club the standard target was used, 200yds., off-hand. The totals were as follows:

D N Edgell	84	85—169	F B Edgell	66	67—133
W C Loveland	70	75—148	C J Crabtree	62	68—130

Members of the Haywood Guards, of this town, Co. F, 2d regiment Massachusetts Volunteer Militia, were out to the Hackmatack Range, and there was a shoot by a team of seven. The Creedmoor target was used with the following results:

C A Hinds	4553455—31	B F Thrasher	4524445—28
C N Edgell	4554453—30	F White	4444344—27
A E Knowlton	4445444—29	F B Edgell	4434443—26
G C Goodale	4435445—29		

The following individual scores were also made by members of the company:

Lieut Edgell	55545—24	F L Proctor	54444—21
A E. Knowlton	55554—24	Private Howe	33335—17
F B Edgell	45444—21	Joseph Dora	35432—15

FITCHBURG, Mass., July 12.—At the last regular meet of members of the Fitchburg Rifle and Gun Club at their range, the shooting was off-hand (o. h.) and at rest (r.). The work of each man in detail follows:

Match A.

A B Small	o h	8	7	6	7	7	10	8	7	10	8—78

* Full score.

LYNN, Mass., July 14.—A good attendance of military men made things lively at the Indian Hill range to-day. Sergt. Getchell of Company B, 5th regiment, won a bronze medal in the military match, and Corp. Packard of the 2d Cadets put in some fine scores to his credit for a silver medal. Lieut. Merritt, G. R. P., 2d Cadets, is showing up well at the 200 yard range. The score:

Military Creedmoor, 200yds.

W H Merritt	5	5	4	4	5	5	4	4	4	4—44
W Elmer	4	5	4	3	5	4	5	4	5	4—43

OWEN SOUND, July 13.—A rifle match between the Owen Sound and Elgin associations was fired to-day over the Owen Sound range, resulting in a victory for Owen Sound by 45 points. The wind and light were very unsatisfactory, and the scores generally rather light. The highest scores were made by Dr. Lang and Major Telford, each 82 points.

CLEVELAND, O., July 7.—The third squad of police took their turn at the practice shooting on the Cuyahoga Rifle Club range to-day. The conditions were 100ft. off-hand, at standard pistol targets. Erwin's score was beaten by 6 points by Deroslie. The score:

	Trial.	Contest.		Trial.	Contest.

SOUTHERN NEW ENGLAND.—Meriden, Conn., July 12.—At 6 o'clock last evening the final shot in the two days' tournament of the Southern New England Rifle Association was fired, and the most successful shoot ever held by the association closed. The Meriden Rifle Club had the arrangement of the affair and were highly commended for their work. During the 18 hours of shooting 2,765 shots were fired. Next year the shoot will be held in New Britain, when the officers of the club there will, by the rule of the asssociation, become the officers of the association. The Meriden Rifle Club will clear about $200 by the tournament. The scores were as follows:

Target of Honor.

Barthold, New Britain	67	Seibert, Meriden	55
Talbot, Springfield	65	Schwarderer, New Britain	54
Pope, Hartford	63	Feist, Meriden	53
Kutscher, Bridgeport	62	Drechler, Meriden	53
Allemeyer, Meriden	61	J Glasnapp, Meriden	52
Kintze, Bridgeport	60	Kron, Springfield	52
Helt, Bridgeport	60	Purps, Springfield	51
Neidl, Springfield	57	M Glasnapp, Meriden	51
Meincinger, Springfield	55	W Halm, Meriden	51

Twenty-five others made less than 50 and received smaller prizes.

General Prize Target.

Tucker, Hartford	70	Danekind, Meriden	61
Henn, Hartford	68	J Glassnapp, Meriden	61
Pope, Hartford	68	Kron, Springfield	60
C J Foster, Meriden	66	S W Foster, Meriden	59
Seymour, Hartford	66	Bubser, Hartford	58
Halm, Meriden	65	Talbot, Springfield	58
Stevens, Springfield	65	Huebler, Hartford	57
Rand, Hartford	63	Allen, Meriden	59

Cup Target.—Leuning, Meriden, three cups; Rohrbach, Bridgeport, two cups; Huebler, Hartford, two cups. In addition 48 single cups were delivered to those who made a score of 20 only once on this target. Phillip Rudolf made the most points on the 25 ring target and took a $5 silver goblet. He made 594 points. William Halm won the second prize, a $2 cup, with a score of 562. H. Schoeder, of Springfield, made 521 points and took a cup.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WORCESTER, Mass., July 14.—At the meet this week of members of the Worcester Sportsmen's Club, the principal attraction was the classification score and prize shoot, 20 or more in Class A, all others Class B, with a possible 30 in the classification and 10 in the prize. The results, with the prizes taken or divided, follow:

Classification Score—Class A.		Prize score
E T Smith	545555—29	10
E F Swan	545455—28	9
G J Rugg	333545—23	7
G W Russell	534545—23	7
Chas Rice	245335—22	7
L S Killburn	554352—23	7
C R B Claflin	525444—24	6
M D Gilmore	554544—27	6
W L Davis	444545—26	6
C H Howe	424435—22	6
J Kennedy	443423—20	3

Smith first, $7.50; Swan second, $4.50; Rugg and Russell divided third, $3; Claflin fourth, $2.

Class B.		
A L Gilmore	543223—19	7
H Colvin	322215—15	5
C A Parker	413315—17	4
Dr Frank	532432—19	2
C R Holman	162232—16	0
C H Morse	424331—17	0

There was also an event, a possible 10 pigeons from open traps, which resulted as follows:

E T Smith	0111111111—9	G J Rugg	0111101111—8
E F Swan	1111111011—9	H Colvin	0111100111—7
G W Russell	1111111101—9	C Rice	1010110011—6
M D Gilmore	1010111111—9	L S Killburn	0111101100—6
J Kennedy	1110101111—8	C R B Claflin	1001011110—6
C H Howe	1111110011—8		

Gilmore second.

UNKNOWN GUN CLUB.—Monthly shoot, July 12, at Dexter Park, L. I.—There was a large attendance of prominent wing shots from the Eastern District present and some first-class shooting was made. The full score is as follows:

C Ring (21yds.)	0111001—4	H Van Staden (23yds)	0111101—5
J Rankin (23yds.)	1110101—5	J Rathjen (28yds)	1111111—7
W Gilman (23yds.)	1011000—3	H Haas (24yds)	1101010—4
H Brown (25yds)	1010110—4	R Stillwell (22yds)	0011111—5
Dr Hopkins (25yds)	0100001—2	C Plate (26yds)	1111111—7
H Knebel, Jr (25yds.)	1011111—6	C Detlifsen (25yds)	0111110—5
H Housman (25yds)	1111111—7	R Munroe (28yds)	1110111—6
J Boyle (22yds.)	1101101—5		

Ties for badge and first—H Housman (25yds.), 1101—3, J Rathjen (28yds), 0110—2, C Plate (26yds.), 1100—2. Ties for second—H Knebel, Jr (25yds.), 111—3, R Munroe (28yds.), 10—1.

Referee and scorer—Mr. R. Stillwell. J. Rankin, J. Boyle, H. Van Staden, R. Stillwell and C. Detlifsen killed five each for third money and divided.

BROOKLYN, July 7.—The Fountain Gun Club met at Dexter's Park this afternoon to contest for the club badge and a handsome silver cup presented by Mr. Arthur Brown. The shoot was at 7 birds, with a rise varying from 23 to 26yds. The shooting was close, and resulted in the following score: M. Bowden 5, N. D. Cooke 4, H. Thorpe 2, Dr. Munn 6, C. A. Seddon 6, T. Loton 5. On shoot-off at 3 birds Seddon won club badge and Bowden the cup. The conditions under which the outside prizes are offered are that they cannot be won by other than a member who has not before won a prize this year, which accounts for Mr. Bowden being awarded the cup.

July 11.—The regular handicap shoot of the Coney Island Rod and Gun Club took place at Woodlawn, L. I., to-day, and turned out a day of large scoring. Eighteen members shot for the club prizes. The gold medal was won by C. Platte, with the fine score of 12 straight kills from the 26yds. mark, after tieing with three others. The second prize was divided between W. J. Stewart, R. Mousees and P. Pfaender, and Dr. Schwarz won the third, as the following score of ties will show: There were four ties for the first prize, each man killing 7 straight birds. In shooting off the ties C. Platte, 26yds., killed 5 straight; E. Ramft, 21yds., missed his fifth; G. Ayres, 25yds., missed his first and withdrew, and F. Anderson missed his fourth and withdrew. The ties for third prize resulted in a score of 8 for Dr. Schwarz and 7 for Dr. Green.

The return match between the Coney Island Rod and Gun Club rgainst the Glenmore Rod and Gun Club was arranged to be shot on Wednesday, the 18th inst., at Woodlawn Park, L. I. The following were the conditions of the match: Twenty-five or more a side, 25yds. rise, 7 birds each, the losers to pay for the birds. The Coney Island won last year by 9 birds, after a hard fought contest.

OTTAWA, July 8.—The St. Hubert Gun Club held a well-attended meeting on Saturday at the range, and in spite of the heavy wind some good scores were made. Sweepstake at 15 Peorias, 18yds. rise, 5 traps:

G White	12	Ed White	9
A Throop	11	J Deslauriers	6
Dr A Martin	11	R G Dalton	6
P Trudeau	10		

Sweepstakes at 10 Peorias:

R G Dalton	10	P Trudeau	7
Ed White	10	G White	4
A Throop	7	J Deslauriers	4
Dr Martin	7		

Shooting off ties Dalton won first money and Throop broke 7 out 10 and beat Dr. Martin.

HAMILTON, July 9.—The members of the Wild Fowler's Gun Club indulged in their regular monthly shoot for the club cup this afternoon. The shooting was at 18yds. rise, 25 Hamilton blackbirds to each man. The following are the scores:

T L Stephens	23	A Smith	15
John Bowron	23	W Fitch	15
John Smith	20	John Hunter	15
John Morris	20	W Smith	14
C Hunt	19	G Hore	12
John Smyth	19	Jos Smyth	11
H Graham	19	Wm Moore	10
G Brant	17	John Sullivan	9

In the shoot-off T. L. Stephens won. He and John Smith have won the cup twice each, but before either of them are entitled to it they will have to capture it again. W. Smith and A. Smith have both won it once.

JERSEYVILLE, Ill., July 11.—The scores at the regular club shoot Tuesday are as follows, 20 single standards, medal: Smith 11, Burleigh 12, Hutchison 11, Skelly 10.

Six pair standards, gold medal:

Burleigh	10 10 10 10 00 10— 5	Smith	10 11 11 10 11 01— 9
Hutchison	11 10 11 11 11 10—10	Skelly	10 00 00 00 10 10— 3

Sweepstake, five standards, two moneys:

Burleigh	00011—2	Smith	01111—4
Hutchison	11111—5	Skelly	10111—4

Ties, Smith 1, Skelly 2. H. R. H.

THE EUSTIS (FLA.) GUN CLUB was organized on June 28 with eighteen active members and the following officers: Dr. A. L. Brown, Pres.; Seth Valentine, Vice-Pres.; F. G. Hawley, Treas.; W. D. Kimball, Sec.; F. C. Keys, Captain. Considerable interest is being manifested and we hope to be able to send in a creditable report of progress. The club have secured grounds and will have a practice shoot Wednesday afternoon of each week, National Gun Association rules, Decatur blackbirds and traps.—PERITO.

LONDON, Eng., June 27.—There was a notable gathering at the grounds of the London Gun Club to-day to see the match between M. Journu, the popular French shot, and Capt. Brewer, the American; and, despite the good form shown by M. Journu during the International week, 2 to 1 was freely offered on Capt. Brewer. At the twenty-fifth round Capt. Brewer, who was leading by three birds, had 5 to 1 laid on him, but he gradually became a worse favorite, and although both shooters were level at the forty-second, fiftieth and fifty-seventh rounds, M. Journu gradually forged ahead, and the odds on the Frenchman increased in proportion, the match eventually being easily won at the ninety-fifth round by M. Journu. The winner shot with his usual gun by Guyot, and used Schultze powder. Capt. Brewer handled a full choke by Greener, with Bachman's cases, 4drs. measure of Schultze powder, and 1¼oz. shot. A sharp breeze blew across the traps to the left, and a rare sample of birds took a deel of stopping. The time occupied in shooting the match was two hours. The match was for £100 a side, 30yds. rise, Gun Club rules. In the opinion of those present Brewer's defeat was caused by his having practiced at inferior birds previous to the match.

Journu.	Brewer.
1111111111011111101001100—19	1101011111111111111011111—22

July 2.—The outcome of the match between M. Journu and Capt. Brower was a challenge from Merwyn Watts to shoot the winner, which was at once accepted by the Frenchman. The conditions arranged were: To compete for £200, at sixty birds, twenty at 31, twenty at 33, and twenty at 35yds. rise, and the contest was successfully brought to issue at this inclosure to-day. M. Journu led from the commencement, and was one bird to the good at the end of the twentieth round, having killed seventeen rocks to his opponents sixteen. However, in the next stage of the contest Mr. Merwyn Watts shot exceedingly well, and not only recovered his lost ground, but succeeded in securing an advantage, as at the fortieth "four" the score stood: Mr. Merwyn Watts, 32 kills; M. Journu 30. The last twenty rounds, at 35yds. rise, were watched with great interest, and Mr. Merwyn Watts, getting the worst of the birds, only stopped three out of his next ten, while his opponent, grassing eight, was leading at the fiftieth round by three rocks. The contest was now booked a certainty for the Frenchman, but Mr. Merwyn Watts, with defeat staring him in the face, shot in an exceedingly cool and collected manner and amid great excitement got on level terms with his adversary at the fifty-ninth round. With only one more bird each to be fired at, the excitement was intense, especially after M. Journu had failed to grass his bird. In breathless silence Mr. Merwyn Watts faced the traps, and a clever first barrel left him the winner of one of the most exciting matches ever seen. Scores:

Watts.	Journu.
0101111101101111111101—17	1101110111011111111—17

LEOMINSTER, Mass., July 10.—In the shooting tournament held here to-day the following were events and winners: 6 clay-pigeons, Burbank; 6 blue rocks, Cummings, Harris and Newton; 6 American clays, Eldridge; 3 pairs of clay, Burbank; 7 blue rocks, Trull and Holden; 6 blue rocks, Dodge; 6 blue rocks, Schaefer; 7 bats, Powers and Sampson; 6 blue rocks, Schaefer, Sampson and Longley; 6 blue rocks, Swan and Eldridge; 6 clay-pigeons, Sanborn; 3 pair clay-pigeons, Powers and Sanborn.

BOSTON, July 11.—In spite of the strong wind which prevailed during the day, the shotgun men who gathered at Walnut Hill to-day succeeded in putting up some creditable records. In the merchandise match the competition was especially sharp, and the scores made give some idea of the closeness of the struggle. The fourth competition in the current series of matches will be held on Wednesday, July 25, when the Climax diamond badge, now held by Mr. Wheeler, will be shot for. The summary of the day's shooting is as follows: Merchandise match, 10 clays and 10 standards: First Wheeler 19, second Chase, Snow 16, third Swift, Knowles 15, fourth Stanton, Bartlett, Rule, Hosmer 14, fifth Curtis, Crown 12, sixth Kennedy 11, seventh Lewis, Burt 10, eighth Webster 9, ninth Little 8; 6 standards, Swift, Wheeler, Kennedy; 5 clays, Stanton, Bartlett, Rule; 5 clays, Bartlett, Rule; 6 standards, Stanton, Curtis; 10 clays, Swift, Wheeler; 6 bats, Curtis, Stanton; 10 clays, Bartlett, Swift, Snow, Wheeler; 10 standards, Wheeler; 7 bats, Swift, Rule; 3 pair clays, Knowles, Crown, Curtis; 2 pair blackbirds, Snow, Crown; 5 clays, Wheeler, Rule; 6 standards, Stanton, Chase; 10 clays, Knowles: 6 clays walk-up match, Stanton; 6 pair clays, Kennedy Knowles; 5 clays, Swift, Knowles; miss and out, divided between Stanton, Chase and Snow; 5 clays, Stanton, Chase.

WELLINGTON, Mass., July 14.—There was a good attendance at the grounds of the Wellington Club to-day, and among those who participated in the sport were J. E. Miller, of Cincinnati, O., and J. E. Humphrey of Columbus, O. The winners in the sweepstake matches were: 6 clay-pigeons, Schaefer, Dan and Snow; 6 blue rocks, Schaefer, Bond and Moore; 6 blue rocks, Bartlett and Bond; 6 clay-pigeons, Schaefer and Bartlett; 6 blue rocks, Schaefer, Bond and Chase; 6 clay-pigeons, Bond, Dan and Schaefer; 6 blue rocks, Chase, Knowles and Adams; 6 clay-pigeons, Miller, Bond and Bartlett; 6 clay-pigeons, Sanborn; 6 blue rocks, Schaefer and Adams; 3 pair blackbirds, Schaefer. Miller won the Grimes prize.

LITTLE FALLS, N. Y., July 11.—The Rod and Gun Club held their annual meeting this evening at Ashenhurst & McDermott's store. The following officers for the ensuing year were elected: President, Watts T. Loomis; Vice-President, John H. Kane; Secretary and Treasurer, W. F. Ashenhurst; Standing Committee, Jonah May and J. W. Baker.

JAMAICA, L. I., June 10.—Acme Gun Club, of Brooklyn, match at 20 standard blue rocks, 16yds. rise, for gold medal:

M Schoettler	01011111101111101110—15

NEW YORK SUBURBAN GROUNDS.—The next meeting of the New York Suburban Shooting Grounds Association will be held at Taylor's Hotel, Jersey City, N. J., on Aug. 2, at 4 P. M. This date, it will be noted, is a change from that named in the notice sent out last Monday. The business of the meeting will be election of officers, adoption of by-laws, consideration of estimates on buildings, grounds, etc.

THE JERSEY CITY HEIGHTS GUN CLUB had a very successful two days' tournament on their grounds at Marion, N. J., July 10 and 11, which extended even over the 12th, as there was a private match at live birds on that day, and sweeps were had before and after. There were delegations from Bridgeport and New Haven, Conn., Albany, Troy, Cincinnati and Philadelphia; and Newark and Plainfield appeared in full force. Some 4,000 clay saucers were bursted, not to mention the live birds. One large sweep took place each day, and was well filled. Heritage (Old South Paw), Fred Quinlan and Milt Sinsley, of the wood powder celebrity, were the managers, and that they did the thing well, giving their time and brains to the work, the large surplus to the funds of the club will amply testify. We were pleased to see Mr. I. E. Miller, of Cincinnati (agent for the Peters cartridge), on the grounds. He not only shot well, but is a gentleman whom sportsmen like; but let us tell him that if he is going to face the Jersey mosquitoes he wants something stronger than pennyroyal when the wind blows Newarkway. We were glad indeed to see Uncle Billy Hughes, a pleased spectator, on the grounds. Old Reliable No. 1 is just recovering from a very severe sickness. He is hardly able to hold up his 9-pounder yet, but may the day be far distant when we shall miss his genial face from the grounds. Everything passed off in a very satisfactory manner. In the principal event, the score follows: S. Castle, Philadelphia, 10; Hedden 10; E. Mills, Springfield, 10; S. Smith, Plainfield, 10; Seigler, Montclair, 10; J. Von Lengerke, Jersey City Heights, 10; Vorhees, Jersey City Heights, 10; C. Smith, Plainfield, 10; McMurchy, Syracuse, 9; Manitz 9; Brientnall, Newark, 9; Tucker, New York, 9; Mitchell, New Haven, 9; Langdon, Philadelphia, 8; Winans, Albany, 8; Vogelsang, Long Branch, 8; W. F. Lindsley, Cincinnati, 7; Quimby, New York, 7; Covert 7, Forest 5. The private match was between Mr. Manitz and E. Smith, 50 birds a side, Hurlingham rules, for $100 each. The match was very close, Manitz winning by one bird. Smith has rechallenged Manitz and another shoot is on the tapis. The Essex Club shoot on the J. C. H. G. C. grounds on Thursday and will for some time to come. They are a good lot of fellows, from Hebe Brientnall, their president and crack shot, down the whole list, and the Jersey City Heights boys say there is nothing they have they cannot have a piece of.—JACOBSTAFF.

SPRINGFIELD, N. J. July 14.—The North End Gun Club, of Philadelphia, and the Union Gun Club, of Springfield, shot a ten-man team race on the latter's grounds here this afternoon, and the result was a victory for the home team. Conditions, 50 blue rocks per man, 3 screened traps, National Gun Club rules to govern.

TRANSPORTATION TO LAKE GEORGE.

Editor Forest and Stream:

The committee on transportation have reported as follows: The Trunk Line passenger committee authorize the issuing of return tickets first class at one-third fare to persons who paid full fare for the trip going, and had a blank for that purpose signed at the starting point. All persons wishing to avail themselves of this reduced fare must obtain blank forms for certificates from the secretary, F. L. Mix, 5 Beaver Block, Albany, N. Y., and get them signed by ticket agent where they purchase tickets.

ROBERT W. GIBSON, Commodore A. C. A.

REPORT OF THE COMMITTEE ON TRANSPORTATION.

To Commodore R. W. Gibson, A. C. A.:

SIR—I have the honor to report that the roads composing Trunk Line Association have made special allowance to and from Lake George, as per appended document marked A. Instruction for obtaining these rates and lists of roads appended marked B. Mr. F. L. Mix, Secretary A. C. A., has been designated to distribute necessary certificates, etc. I also append correspondence with various companies for your information.

ROBERT SHAW OLIVER, for Committee on Transportation.

The roads making the concession are: Baltimore & Ohio (east of Parkersburg, Bellaire and Wheeling), Baltimore & Potomac, Bennington & Rutland, Boston & Albany (on business between points in New England and points west of but not including Albany), Buffalo, Rochester & Pittsburg, Camden & Atlantic, Central Vermont, Delaware & Hudson Canal Co., Delaware, Lackawanna & Western, Elmira, Cortland & Northern, Fitchburg, Grand Trunk, Lehigh Valley, New York Central & Hudson River, New York, Lake Erie & Western, Norfolk & Western, Northern Central, Pennsylvania (except locally between Philadelphia and New York), Philadelphia & Erie, Philadelphia & Reading (except locally between Philadelphia and New York), Philadelphia, Wilmington & Baltimore, Rome, Watertown & Ogdensburg (except on Phœnix Line—stations between Syracuse and Oswego), Shenandoah Valley, Western New York & Pennsylvania, West Jersey, West Shore.

THE A. C. A. MEET.—Mr. Rushton has made arrangements to open a repair shop and store at the camp on Long Island.

ANNOUNCEMENTS

FROM THE A. C. A. REGATTA COMMITTEE.

1. It has been decided to call all the paddling races, and all other events on the programme except the important sailing races—events not dependent on wind—on Monday and Tuesday Aug. 20 and 21, in order that friends of the canoeists and those who wish to see the races can make early arrangements so to do. The sailing races pure and simple do not, as a rule, interest the general public, and therefore will be called Wednesday, Thursday and Friday at such times as suit the contestants best, and when the weather is most favorable.

2. Canoe gymnastics will be performed on Tuesday afternoon, beginning about 3 o'clock. Two prizes will be awarded. Tricks, deck sailing, upsets, etc., are always interesting to the visitors and the canoeists themselves, and all those who can do clever things are requested to report early to the chairman of the committee so proper arrangements can be made to make this exhibition specially interesting and amusing. The committee earnestly request a tournament performance by those who are willing to add to the sport.

3. The club sailing race—not on the programme—instituted last year, will again be sailed. Two contestants allowed from each club. The highest combined score to win the club flag. The individual winner of the race will also get a prize flag. Details of this event will be published later.

4. Every man who enters a race must sign a paper entering his canoe and giving the exact dimensions, and all necessary particulars. Only the canoes of the winners will be officially measured by the appointed measurer, after the races and before the prizes are awarded. This has been decided on to avoid unnecessary work, and to put upon the shoulders of the canoeists themselves the responsibility of having their canoes accurately measured before coming to the meet.

5. Every prize winner will be handed a paper to sign, stating that his canoe has been officially measured, found correct under the rules, and also guaranteeing that the race was sailed or paddled without fouls and in every way according to rule, thus entitling the canoeist fairly to the event prize. Such paper must be filed with the chairman before the prizes are awarded. The regatta committee have had to provide twenty first prize silk flags, twenty-five second prize silk flags and four large trophy first prize bunting flags. In addition to the above, they have provided two ('86 and '87) bunting trophy flags to award to the trophy winner of '86 and '87, so that he can fly them at this meet. The flags are 24×36in. in size. Four other large bunting flags have been provided to present to the Record winners of '84, '85, '86 and '87, so that they, too, as honor men, can show their colors at this meet. Therefore, the flags provided are 20 silk first prizes, 25 silk second prizes and 10 bunting first prizes. The generous subscriptions from many clubs have netted an amount covering all the first prizes. The committee do not wish to ask the Association for an appropriation, and therefore appeal earnestly to those clubs who have not yet subscribed to do so, even in small amounts, to make up the desired sum. About $40 more is needed. There is to be an international race this year and a specially interesting meet, and, therefore, we feel that our appeal will be generously answered.

THE REGATTA COMMITTEE A. C. A.

DIED.

VAN DEUSEN.—At Rondout, N. Y., July 12, Grant Van Deusen, in the 50th year of his age.

Grant Van Deusen began his canoeing in 1878, when he took a cruise down the Hudson in a borrowed canoe with a member of the New York C. C., an old personal friend of his. The year following he purchased a canoe, and from that time until he was taken seriously ill last autumn he was an enthusiastic canoeist. For several years he was obliged to do his canoeing alone, except when he attended the A. C. A. meets; for his friends in Rondout did not seem to take any interest in the sport. Later on a few hardy fellows got canoes and found an old shed in which to keep them along the bulkhead of the Rondout Creek. From this nucleus, by honest, hard work, Grant Van Deusen organized the Rondout C. C., and was the most influential member in bringing the club to its present most prosperous condition. He was the first commodore of the club, and has held every office in the gift of the club. He was a true canoeist in every sense of the word, enjoyed an outing thoroughly, was a skillful camper and sailor, and always a most charming companion. He was quiet, reserved, warm hearted—truly loyal to his friends—patient, always ready to lend a hand to help an acquaintance, and judged leniently the shortcomings of those about him. He spent last winter with his sister in Georgia in the hope of regaining strength, but it was not to be, and he accepted the fact even cheerfully, to the very last hour having a pleasant, bright and hopeful word for all those about him. Canoeists will miss him; all those who knew him will feel his loss keenly. The pastime of canoeing is so young in this country that as yet the ranks of those who early took it up, and stood shoulder to shoulder have hardly received any losses through death. This one makes a sad break in the front line, for that is where Grant Van Deusen stood, as man, canoeist, camper, cruiser, prize winner and thoroughly good fellow. The Rondout club cannot hope to supply his loss, and the place that he occupied in the affections of all those who knew him well must always remain unfilled.

CANOEING IN NEW HAMPSHIRE.—Hollis Station, N. H., July 11.—I am not altogether out of the world. Six canoeists have passed here within a week. Three gentlemen from Worcester in canvas Rob Roys came down on July 4, bound for Newburyport. It was their maiden cruise, and they were highly delighted as far as they had been. On July 7 three Boston gentlemen in a 16ft. open canoe hove in sight—Mr. R. H. Stoddard, Mr. B. P. Richardson and Mr. G. E. Stone. Their canoe, Gentle Wahoo, was a beauty. They swung two singles and a double blade, and were brown and happy. I find New Hampshire looks about as it did when I was here last. Have not sampled any of my old trout streams yet, but in my rambles through the woods I have started several grouse and hope to pick up one or two next fall. I think that will be the extent of my sporting, as I have no hopes of trout. Shall start on a cruise soon down the Merrimac and around to Boston. May have something to write you then.—TARPON.

THE A. C. A. BOOK.—The annual year book of the American Canoe Association is now ready and will be mailed this week. It makes a larger and neater volume than any of the previous issues and contains much additional matter, including a special map of Lake George by Stoddard, and portraits of ex-Commodores Alden, Longworth and Gibson, much to the surprise of the latter, who knew nothing about it till he received his copy. The constitution and race programme are given in full, also lists of members and canoes. The highest number on the list is 1277. The book is the work of Secretary Mix, and does credit to him by its completeness and neat appearance. The book will not be sent to members who have not paid their dues for 1888. As soon as the secretary is notified that their dues have been paid he will send them a year book for 1888.

A. C. A. MEMBERSHIP.—Eastern Division: F. C. Childs, Winchester; J. Arthur Gage, M. D., Ralph F. Brazer, Lowell; Chas. G. Stone, Hartford; S. W. Bowles, T. S. Homans, Herbert E. Lincoln, Sanford Lawton, F. H. Sturtevant, W. R. Hodgdon, A. P. Wright, L. H. Orr, Springfield, Mass.; J. S. Sanborn, St. Johnsbury, Vt.; W. A. Smith, Summerville, Vt. Atlantic Division: H. H. Smith, Silas Blaisdell, M.D., Brooklyn, N. Y. Blank forms of application may be had by addressing the purser of the Eastern Division.

A LONG CANOE CRUISE.—Messrs. Hugh Hartshorne, of London, Ont., and Allan W. Johnson, of Toronto, left the latter place on July 9 for a cruise to New York in a Rice Lak canoe, paddling to St. Catherines, taking steamer for Kingston, where two other London canoeists will join them. The four will paddle to Montreal, and thence by the Richelieu, Lakes Champlain and George to the Hudson.

ATLANTIC DIVISION.—The regatta committee return their thanks for the following contributions toward the prize fund: R. J. Wilkin, $5.00; Essex C. C., $10.00; Arlington C. C., $10.00; A. S. Pennington, $2.50; Chas. Cooke, $2.50; New York C. C., $10.00; also two very handsome flags from Mrs. Dr. Coe and two from the Knickerbocker C. C.

STURGEON POINT REGATTA.—Valuable prizes will be offered for canoe races at the regatta of July 21-22 at Sturgeon Point, Ontario.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

Winners: Class One, first prize, Mucilage; second, Surprise. Class Two, first, Wild Cat; second, Mist. Class Three, first, Eleanor; second, Dolly. Class Four, Bonnie Bairn. The B. Y. C. 188 rule of measurement was used two-thirds waterline plus beam Judge, A. H. Hardy.

BROOKYN Y. C.—The annual regatta of the Brooklyn Y. C., postponed from June 16, will be sailed on Sept. 3 over the usual courses. A cruise is proposed for the early part of August, starting from the club house at Gravesend Bay, thence to Fire Island, Block Island, Martha's Vineyard, Nantucket and New Bedford,

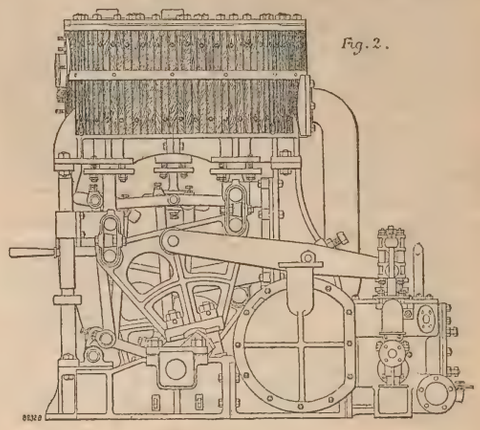

Fig. 3.

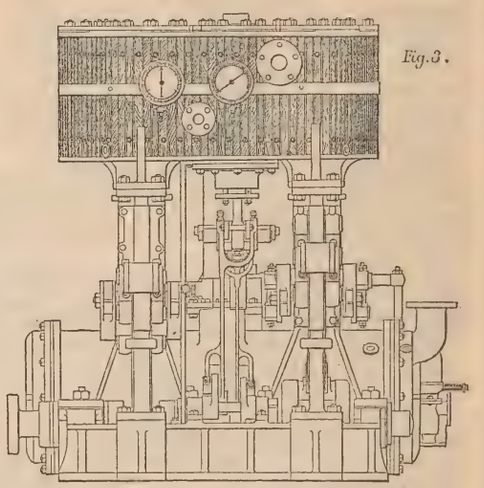

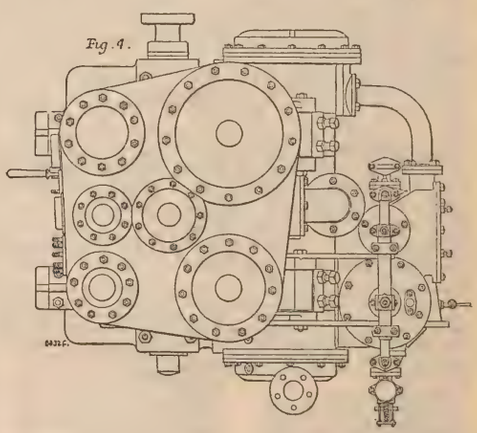

Fig. 4.

QUADRUPLE EXPANSION YACHT ENGINES.

THE accompanying drawings, for which we are indebted to *Engineering*, show a new four-cylinder compound engine lately built by Messrs. Fleming & Ferguson, of Paisley, Scotland, for the steam yacht Skeandhu, also designed and built by them. The yacht is of steel, 65ft. long, 10ft. 5in. beam, and 5ft. 2in. draft, 32 tons, Thames measurement, and schooner rigged. The engines are of 120 H.P., with cylinders 7, 9, 12½ and 18in. by 12in. stroke, the working pressure being 120lbs. The details are peculiar, the object being to secure compactness, low weight, easy access to each of the four cylinders, and simplicity of working parts. The four cylinders are placed one at each corner of the frame, consequently neither is over the crankshaft, which lies in a fore and aft middle line, as usual. To connect the piston rods to the crankshaft the ordinary connecting rods are replaced by two triangular frames, steel castings, shown in Fig. 2, the lower angle of each holding the crankshaft brasses, while a piston rod is connected by a link to each of the upper angles. A rock arm connected to the center of the upper side of the triangle serves as a guide and also operates the air pump. The two piston rods in each pair move up and down almost together, one being a little in advance, as shown, and the two cranks are balanced; while the result, it is claimed, is the same as with four cranks at right angles. The operation of the engine is as follows: "Steam is admitted to the high pressure cylinder by means of the piston valve placed between the first two cylinders. The steam passes first into the space between the flanges of the valve, and not into the steam chest. Thence it is admitted to the cylinder through the center cylinder port, and, having done its work, exhausts into the casing. It must now be explained that the valves to each pair of cylinders are placed one above the other on one valve rod, and work in one steam chest common to both. It will be seen, therefore, why it is necessary for the boiler steam to be admitted inside the valve, or, in other words, between the flanges, as otherwise the high pressure steam would pass into the second cylinder as well as the first, the valve chest space being common to both valves and cylinders. The steam, escaping from the first cylinder, fills the valve chest, and is admitted to the second cylinder in the usual way, the exhaust this time being carried by the inside of the valve. Steam is then taken to the next two cylinders, and the same action is gone through once more, until the steam escapes to the condenser in the usual way.

"The valves are worked by eccentrics and reversed by the link motion, but the arrangement is necessarily peculiar. The valves for the third and fourth cylinders are placed directly over the cylinders, and can be worked by eccentrics in the usual way. The valves for the first and second cylinders, however, are considerably on one side of the fore and aft center line. In order to work the valve rod common to these, an arm or connecting rod is taken from each of the eccentric straps, and these arms work the link motion by means of a bell crank lever attached to the engine bed. In Fig. 2 the arm of one eccentric can be plainly seen, together with the bell crank lever and the connecting rod carrying the motion to the solid bar link. The reversing links are placed one immediately in front of the other, and are pulled over by one lever and drag links. It will therefore be seen that only two eccentrics are used for all four cylinders, and only one would be required in a non-reversing engine." From its low weight and compact form the engine is specially adapted for war ships. The builders are now at work on an engine of 1800 H.P.

BABOON AND XARA.

A PRIVATE match was sailed between these two cracks on July 9, over a course 10 miles to leeward and return, off Marblehead. Baboon is 52ft. over all, 39ft. 6in. l.w.l., 13ft. beam and 8ft. draft, measuring 46.80 by E. Y. C. rules; while Xara is 48ft. over all (plumb stem), 39ft. 5in. l.w.l., 13ft. beam and 8ft. draft. Baboon was sailed by Messrs. C. F. and G. C. Adams, Mr. Agassiz, of the Zigeuner, and a crew of three; while Mr. Meers and Mr. Fowle, with Capt. Haff, Sr., and his son, besides a crew of three, sailed Xara. The wind was steady from S. W. during the race, with smooth water. The first whistle was blown at 1:38, with start at 1:43, Baboon crossing at 1:44:45 and Xara at 1:44:55. Both carried clubtopsail and spinaker, while Xara also set her balloon jibtopsail. Xara at first outran her rival, and at the end of half an hour was some 50yds. ahead, but then Baboon overhauled her and the two ran side by side for a time, Baboon finally going ahead. Both came to the turn together, Xara getting in her ballooner in good season and cleverly cutting the other boat out at the mark, crossing her bow and turning at 3:09:30 with 20 seconds lead.

Once on the wind Baboon speedily left the other, outpointing her, until Baboon's topmast stay parted suddenly. Xara soon passed her and took the lead, both going on starboard tack about the same time. Baboon fought for some time to regain the lead, and was finally successful. At 5:15 Xara, then astern, drew off her bobstay plate, being obliged to take in her jib and finish under main and staysail. The times were:

	Start.	Finish.	Time.
Baboon	1 43 00	5 25 50	3 42 50
Xara	1 43 00	5 30 45	3 47 45

COOPERS POINT CORINTHIAN Y. C.—*Editor Forest and Stream:* The seventh and combination (open to all) race of the season took place on June 26. Fitch wins in first class, closely followed by Wilkins, second class. Wind heavy from N.W. The 16 miles was covered by the Fitch in 1h. 56m. 30s. Eighth race, July 10, wind light N.E. Fitch wins again in her class. Almond in second class, winning club pennant for first boat over the course. Cook in third class. Eleven boats entered for the contest. The Coopers Point Corinthians were the first to accept the Quaker City Y. C. invitation to participate in their grand combination race on Sept. 27, open to all clubs and private boats. The Corinthins will sail their ninth race on July 24.—R. G. WILKINS.

QUAKER CITY Y. C.—*Editor Forest and Stream:* The cruise of the fleet to Trenton was a good up stream move, and pays a debt long since due to the contingent. Com. Middleton entertained the natives on board the flagship with true sailor-like hospitality. The combination race for Sept. 27, open to all clubs, is another progressive measure of the rejuvenated Q. Y. C. with its fine shore club house and city rooms. But I am sorry to say the club is assuming a social aspect detrimental to yachting. Probably three-fourths of the members are uninterested in the sport and would never learn to be sailors. The editorial in the FOREST AND STREAM recently on this subject should be posted up in every yacht club room and carefully studied.—R. G. WILKINS.

SEAWANHAKA C. Y. C. CRUISE.

THE fleet anchored over night on July 4 at Black Rock harbor' sailing next day for Morris Cove, and on July 6 for New London. Next day Newport was reached, and on Sunday the fleet lay at New Bedford. Vineyard Haven was reached on Monday, the fleet starting again on Wednesday for Bar Harbor. Only four yachts continued the cruise from this point, the flagship Sea Fox, Com. Canfield; Medusa, cutter, Vice-Com. Center; Miranda, schooner, Mr. G. H. B. Hill, and Gracie, sloop, Mr. J. P. Earle.

Sailing from Vineyard Haven at 7:30, the fleet was off Pollock's Rip at 1 P. M., with a falling barometer and ugly sky. At 3 P. M. the barometer stood at 29.90 on board the flagship, but at 1 A. M. dext day it was 29.30. At 2 A. M. a heavy gale set in, Sea Fox and Gracie running for five hours under bare poles. Miranda hove to for the same time under three-reefed foresail. The little cutter Medusa set her storm trysail with two reefs and a spitfire jib, and kept on her way. The gale was at its height from 2 until 7 A. M., when the wind fell, but the sea continued very heavy. The fleet kept on under double-reefed canvas, reaching Bar Harbor the same afternoon. While at Bar Harbor the secretary's prizes for seamanship and perfection of equipment were awarded, the first prize, $25, going to Capt. Petersen, cutter Medusa, and the second, $10, to Capt. Fish, schooner Miranda. On July 15 the fleet sailed for Portsmouth, N. H., from which port it will return to Newport and disband.

ONONDAGA Y. C. OPEN REGATTA, JUNE 19.—Courses, from buoy off O. Y C. club house to buoy off outlet jetties and return. Distance 10 miles. Weather clear. Wind light N.W.

	Length.	Start.	Finish.	Elapsed.
Sunbeam, Jesse Clark & Co.	34.00	2 39 00	5 46 30	3 07 30
Mistletoe, Com. C. N. Brown	27.00	2 36 05	5 21 15	2 45 10
Cricket, J. Manitz & Co.	26.00	2 35 35	5 24 05	2 48 30
Henrietta, Thos. Finch	20.00	2 40 30	5 22 50	2 42 20

Henrietta wins pennant. Regatta Committee, C. R. Nott, E. G. Hall, J. D. Wood, Wm. Newcity, Philip Lang, Chas. O'Donnell. Judges, Chas. O'Donnell, Wm. Newcity.

Regatta, July 4.—Course from buoy off Pleasant Beach to buoy off Liverpool; twice over this course. Weather, clear and warm. Wind strong and squally west.

	Length.	Start.	Finish.	Elapsed.
Pirate, Fritz Cooker	20.00	2 01 15	... ...	... ...
Mistletoe, Com. Brown	27.00	2 01 30	3 56 25	1 54 55
Sunbeam, Jesse Clark & Co.	34.00	2 01 32	3 43 00	1 41 28
Cricket, J. Manitz & Co.	27.00	2 02 30	3 52 30	1 50 00

Aimee, Klube Bros.	24.00	2 04 35	4 11 50	2 07 15

Sunbeam first, Pleasant Beach cup; Henrietta second, marine glasses; Cricket third, silver mug. Regatta Committee, C. R. Nott, E. G. Hall, J. D. Wood, Wm. Newcity, Philip Lang, Chas. O'Donnell. Judges, Wm. Newcity, J. D. Wood.

DAUNTLESS Y. C.—Officers 1888: Com., John Flaherty; Vice-Com., John Campbell; Sec., John T. Withers; Financial Sec., Edward Lawson; Treas., H. Lawson; Sergeant-at-Arms, W. E. Hoyt; Trustees, John Duffy, C. E. Reynolds, John Driscoll and E. Perine; Regatta Committee, John N. Bolen, C. Kelly, John McCracken and A. Jones.

HULL Y. C., FIRST CHAMPIONSHIP REGATTA, JULY 14.—Regular club courses for each class. Distance 6 miles. Weather clear. Wind N.E., light. Tide high 3:09 P. M. Summary:

THIRD CLASS CENTERBOARD, 22 FT. UNDER 25.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Posy, R. G. Hunt	22.02	3 15	4 36 58	1 21 58	1 00 43
Secret, E. F. Linton	22.06	3 15	4 41 00	1 26 00	1 05 00
Nora, E. P. Boynton	22.00	3 15	4 47 02	1 32 02	1 10 39

THIRD CLASS KEELS.

Thelga, H. L. Johnson	22.01	3 15	4 50 27	1 35 27	1 14 18

FOURTH CLASS CENTREBOARD, 19 AND UNDER 22.

Mabel, F. L. Dunne	19.11	3 20	5 10 57	1 50 57	1 27 50
Tartar, J. B. Forsythe	19.06	3 20	5 12 51	1 52 51	1 29 21
Niobe, G. W. Keates	20.02	3 20	5 12 27	1 52 27	1 29 33
Myrtle, R. C. Poor	19.02	3 20	5 15 10	1 55 10	1 31 22
Amy, H. H. Shaw	20.11	3 20	5 16 48	1 56 48	1 34 42

FOURTH CLASS KEELS.

Vaga, H. W. Friend	18.02	3 20	5 17 31	1 57 31	1 32 44

FIFTH CLASS JIB AND MAINSAILS, UNDER 22.

Em-Ell-Eye, P. M. Bond	19.04	3 25	5 05 38	1 40 38	1 16 59
Eureka, E. L. Rogers	20.00	3 25	5 09 07	1 44 07	1 21 04
Coyote, W. Abbott	20.03	3 25	5 13 56	1 48 56	1 26 07

SIXTH CLASS CENTERBOARD, UNDER 19 FEET.

Rocket, H. M. Faxon	16.02	3 30	5 26 10	1 56 10	1 29 13
Wildfire, H. A. Keith	17.03	3 30	5 25 52	1 55 52	1 30 08
Elsie, C. F. Hardwick	16.07	3 30	Withdrew.		

Winners of leg in championship—Class three, Thelga, keel; class four, Mabel, centerboard, Vaga, keel; class five, Em-Ell-Eye; class six, Rocket. First prize in third class centerboard not awarded as yet on account of yacht Nora putting in protest against her other competitors for carrying wrong sails. Second prize in fourth class not awarded, as the Myrtle and Mabel protested Tartar for measurement. No second prize in fifth and sixth classes as there were not four or more yachts started. Regatta Committee—J. A. Stetson, chairman; R. C. Poor, secretary; C. S. Waldo. Judges, J. J. Souther, secretary; B. W. Rowell, E. Lombard, J. R. Chadwick.

MONTGOMERY SAILING C.—Seventh weekly regatta, July 4.—Course, Norristown to Indian Creek and return, distance five miles. Wind fresh southwesterly.

	Length.	Start.	Finish.	Corrected.
Playford, tuckup	15.00	1 40 00	3 04 50	1 24 50
Sadie, canoe	16.00	1 34 40	3 05 15	1 25 15
Igidious, tuckup	15.00	1 40 00	3 07 00	1 27 00
Ino, ducker	15.00	1 30 00	3 09 00	1 29 00
Priscilla, tuckup	15.00	1 40 00	3 09 53	1 29 53
Bowers, tuckup	15.00	1 40 00	3 11 00	1 31 00
Gracie, skiff	12.03	1 30 40	3 11 38	1 31 58
S. H. Querner, tuckup	15.00	1 40 00	5 14 10	1 34 10
Volunteer, tuckup	15.00	1 40 00	3 14 50	1 34 50
Warren, ducker	14.00	1 30 00	Withdrawn.	
Princess, canoe	15.00	1 31 40	Withdrawn.	

Winner first prize, Playford. Judge, Wm. Alcorn.

Eighth weekly regatta, July 8.—Course, Norristown to Indian Creek and return, distance 5 miles. Wind fresh westerly:

	Start.	Finish.	Corrected.
Playford	1 40 00	2 58 42	1 18 42
Igidious	1 40 00	3 02 45	1 22 45
Bowers	1 40 00	3 04 10	1 24 10
Flying Eagle	1 40 00	3 04 25	1 24 25
S. H. Querner	1 40 00	3 05 00	1 25 00
Volunteer	1 40 00	3 07 30	1 27 50
Elsie	1 30 00	3 12 55	1 32 55
Cocktail	1 40 00	3 13 00	1 33 00
J. S. Frith	1 40 00	3 13 45	1 33 45
Iola	1 30 00	3 14 27	1 34 27
Gracie	1 30 40	3 14 29	1 34 29
Ino	1 30 00	3 15 02	1 35 02
Sadie	1 34 40	Withdrawn.	

Three-fourths of a mile from the start the leading boats, the skiff Gracie and the ducker Ino were in collision, and half a dozen boats passed them before they got separated. Judge, William Alcorn.

STATEN ISLAND ATHLETIC CLUB.—On July 11 the Staten Island Athletic Club held its rowing and sailing races, with an entertainment at the club house in the evening. The light wind prevented the larger boats from finishing. The summary was:

SECOND CLASS.

	Length.	Start.	Finish.
Æolus	44.00	9 57 30	. . .
Hope	40.00	9 52 00	. . .

THIRD CLASS.

Siesta	31 00	9 57 00	. . .
Dora	34.06	9 54 30	. . .

FOURTH CLASS.

Tarpon	22.08	10 06 30	2 22 45	
O. T. P.	23.00	10 05 20	. . .	
Sea Gull	25.06	10 05 20	2 30 25	

FIFTH CLASS.

Sea Shell	18.06	10 04 30	1 09 30	
Playmate	20.00	10 06 30	12 48 00	
Phœnix	20.00	10 06 20	. . .	
Lillian	19.00	10 03 20	12 53 00	

SIXTH CLASS.

Bon Ton	18.00	10 03 00	12 48 30	
Florence	18.00	10 03 20	1 23 30	

OCONOMOWOC Y. C.—Opening regatta, July 9. Courses, triangular course marked by buoys on LaBella Lake, distance eight miles, weather clear, wind northeast, brisk and steady.

FIRST CLASS—SLOOPS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Tarpon, F. W. Peck	27.06	11 02 28	11 56 59	0 54 31	0 54 31
Yolaha, W. L. Peck		11 02 52	11 59 04	0 56 11	0 56 11

SECOND CLASS—SLOOPS.

Arline, F. S. Peck	22.07	11 01 02	11 58 55	0 57 53	0 57 53
Naiad, C. I. Peck	20.08	11 02 32	12 03 02	1 00 51	0 59 53
White Cap, C. Sutton	20.08	11 01 30	Withdrew.		

THIRD CLASS—CAT-RIGGED.

Qui Vive, C. Sutton	20.06	10 42 25	11 51 25	1 09 02	1 08 38
Ethel, P. Agelesto	20.03	10 43 09	11 47 02	1 04 53	1 04 23
Marion, Hartshorn	20.02	10 40 45	11 47 32	1 06 47	1 06 15
Gladys, W. Simmons	20.00	10 41 39	11 47 16	1 05 37	1 04 59

Winner in first class, Tarpon; second class, Arline first, Naiad second; third class, Ethel first, Marion second. Gladys fouled Ethel in turning upper stake boat and was ruled out. Regatta Committee, Commodore F. W. Peck, Vice-Com. Sutton, C. I. Peck, E. C. Simmons and C. B. Draper. Judges, Col. John Cooper, H. H. Kohlsaat and H. F. Griswold, all of Chicago.

EASTERN Y. C. CRUISE.—The fleet left Marblehead July 14 in a flat calm at first, the yachts being towned by their boats for a time. The wind was light all day, but at 3:30 P. M. the fleet anchored off Star Island, Isle of Shoals. The following yachts are in the fleet: Flagship Gitana, Rebecca, Adrienne, Nokomis, Norna, Silvie, Volunteer, Meta, Ambassadress, Wanderer, Clytie, Iroquois, Baboon and Pappoose. After lying at anchor over Sunday off Appledore, the fleet started on Monday at 8:30 with little wind, arriving about 3:30 P. M. at Portland.

CHELSEA Y. C.—Second regatta, July 14. Course, from buoy opposite club house to Whidden's Point and return, twice; 5 miles. Weather clear. Wind N.E., light breeze.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed
Lillie, Wm. Marshall	18.06	3 50 00	4 16 55	0 42 55
Trident, F. S. Tufts	17.00	3 34 00	4 31 29	0 57 29
Sue, C. R. Fisher	16.08	3 34 00	4 18 39	0 44 39
Oleata, Brazier & Seward	17.00	3 34 00	4 17 13	0 43 13
Gilt Edge, H. K. Freeman	16.04	3 34 00	4 10 28	0 36 28
Laurel, C. L. Smith	17.01	3 34 00	4 09 18	0 35 18
Maud, W. H. Murphy	19.06	3 34 00	4 19 44	0 45 44

SECOND CLASS.

Minnie, M. Hansom	12.02	3 34 00	Withdrawn.	
Little Devil, E. B. Brann	11.11	3 34 00	4 23 34	0 49 34
White Wings, T. G. Hughen	13.09	3 34 00	4 18 08	0 44 08

Winners: First Class, Laurel; Second Class, White Wings. Next regatta, Aug. 18. Regatta Committee—C. L. Smith, G. E. Wall, F. S. Tufts, C. R. Fisher. Judges—G. E. Walls, J. Wolstenholm, Jr., C. F. McLean.

PLEASANT BAY Y. C.—A race was sailed over a six-mile course off Chatham on July 14, resulting as follows:

	Elapsed.	Corrected.
Triton, J. E. Jones	1 29 50	1 22 32
Ha Ha, J. H. Nickerson	1 32 31	1 24 32
Nellie May, T. J. Young	1 33 36	1 25 18
Vivian, R. F. Nickerson	1 34 08	1 25 55
Harold, J. W. Jerauld	1 32 53	1 25 58
Keublah, Nickerson	1 33 35	1 26 24
Superior, F. M. Nickerson	1 33 17	1 26 25
Victor, F. W. Nickerson	1 33 14	1 26 35
Playmate, B. B. Nickerson	1 34 13	1 26 45
Echo, A. W. Baker	1 33 57	1 27 02
Famous, D. Eldridge	1 35 34	1 28 39
Puritan, W. E. Burchell	1 33 11	1 30 01
Eureka, H. Doane	1 39 14	1 31 19

The judges were G. W. Nickerson and Osborn Nickerson.

PUT-IN-BAY REGATTA.—On July 10 a race was started, but failed for lack of wind. On the following day the sweepstakes race was sailed, resulting as follows:

	Elapsed.	Corrected.
White Wings, Hamilton, Ont., 1st	2 45 33	2 37 09
Cora, Detroit, 2d	2 37 52	2 37 52
Cyprus, Hamilton, 3d	3 08 21	2 44 52
Enright, Toledo, 4th	3 08 01	2 45 45
Lulu B., Detroit, 5th	3 10 09	2 53 00
Fanchon, Toledo, 6th	3 11 57	2 53 10
Scud, Toledo, 7th	3 13 23	2 56 02
Vera, Ft. Dover	3 19 47	3 01 37
Oberon, Toledo	Time not taken.	

The class C race resulted thus: Alice Enright, 3.02.54; Lulu B., 3.10.09; Fanchon, 3.10.19; Scud, 3.43.23. In class E Iris won, and in class F Cyclone. On July 12 the class A race was won by Cora and the class D by Cyprus.

MONTGOMERY SAILING CLUB.—Ninth weekly cruise July 15, Norristown to Indian Creek and return, 5 miles, light westerly wind:

	Length.	Start.	Finish.	Corrected.
Bowers, tuckup	15.00	1 40 00	4 01 24	2 21 24
Sadie, canoe	16.00	1 34 40	4 03 07	2 23 07
Querner, tuckup	15.00	1 40 00	4 03 25	2 23 25
J. S. Frith	15.00	1 40 00	4 03 52	2 23 52
E. C. Potts, tuckup	15.00	1 40 00	4 04 10	2 24 10
Gracie, skiff	12.00	1 30 40	4 05 45	2 25 45

Iola, Starlight, Eagle, Playford, Priscilla and Volunteer withdrew. Starlight is a new canoe, Notus model, and never had a sail on her before. Her rudder chains stretched to such an extent that the slack could not be taken up by the turnbuckles, and she could not be steered accurately. Judge, Wm. Alcorn.

AMERICAN Y. C.—The final race of the first series of the American Y. C. of Newburyport was sailed on July 14, being almost a drifting match, with but few entries. The times were:

	Length.	Elapsed.	Corrected.
Hazard	23.0	2 46 19	2 40 07
Budge	19.3	3 08 18	3 08 18
Puzzler	19.6½	3 32 09	3 32 09

White Cloud withdrew. Hazard wins first prize in the series, a marine glass, Budge wins second, an engraving of Puritan and Genesta, while Puzzler wins third prize, a sporting rifle. Another series of races for all classes will be arranged. An open regatta will be held on August 13.

ATLANTIC Y. C. CRUISE.—The fleet of the Atlantic Y. C. met at Whitestone on July 13, sailing on the following day for Black Rock, the arrivals being timed as follows:

Enterprise	5 44 00	Ariadne	6 24 00
Anaconda	5 47 30	Gevalia	6 44 00
Nimrod	5 52 25	Rival	6 41 30
Olga	5 59 45	Amaranth	6 46 30
Wayward	6 13 30	Haze	7 26 10
Nirvana	6 22 20	Domino	8 03 00

Waiting in the harbor were the Wivern, Fanny, Roamer, Azalea and Arab. Com. Marcellus, with the flagship Stella, is in command.

ROYAL CANADIAN Y. C.—On July 7 a race was sailed in a strong N.W. wind, the times being:

	Elapsed.	Corrected.
Verve	2 36 15	2 36 15
Yolande	2 58 10	2 45 10
Molly	3 10 30	2 30 30
Daisy	4 10 00	3 10 00

LARCHMONT Y. C.—At the regular meeting on July 7 amendments to the constitution were passed, increasing the limit of membership to 600, an addition of 100, and also raising the initiation fee to $100. Fifty-six new members were also elected.

SIPPICAN Y. C. OFFICERS, 1888.—Jasper Whiting, Commodore; James De Kay, Second Vice-Commodore; J. H. Clark, Jr., Secretary and Treasurer; Dr. John Whiting, James Austin, 2d, Geo. L. Luce and Eben Holmes, Directors.

TORONTO Y. C., July 14.—Two races were sailed, one for fifth class only, and the other for fourth and fifth class keels, sweepstakes. The first race was a failure and was postponed until July 21. Ruby won in the second race.

CLUB BOOKS RECEIVED.—We are indebted to the Seawanhaka C. Y. C., the Corinthian Y. C. of Marblehead, the Larchmont and Rhode Island clubs, for copies of their annual club books.

VICTORIA Y. C.—The annual regatta of the Victoria Y. C. was sailed off Montreal on July 14, the winners being Minnie A., Sea Gull, Minerva, St. Elmo, Mermaid and Wildcat.

GREAT HEAD.—A race was sailed on July 14, the winners being E. D. W., Great Scott, Zoe and Modoc.

LAKE Y. R. A., KINGSTON, JULY 13.—The L. Y. R. A. round was marked by several accidents which spoiled the first day's racing at Kingston. The strong wind delayed the Oswego fleet, so that none of the yachts arrived. The race was started on July 13 with the following entries: Second class, Garfield, of Kingston; Cygnet, of Toronto; Madge, of Rochester. Third class, Iolanthe, of Belleville; Gerda, of Kingston. Just prior to the start Garfield carried away her bowsprit, disabling her entirely. When the first leg was covered it was found that the buoy had drifted ashore, so the yachts returned. A new course was marked out, and at 1:30 the four started again in a very strong wind, running free. When coming home on the wind the four were closely bunched, and a collision occurred between Cygnet and Gerda, the former striking the latter squarely amidships and breaking her boom, tearing her mainsail and cutting the planking through. The steamer Maud took the injured yacht in tow, and she was kept afloat by bailing until the harbor was reached. Madge finished at 4:16 and Iolanthe at 4:28; the latter being protested for not crossing the line at the start. On her way to Kingston Verve met with heavy weather, losing her mast on the night of July 10, drifting for three nights and two days, and being finally towed into Kingston. The damage to Gerda is estimated at $250 to $300.

A CAPSIZE AT BALTIMORE.—On July 4 the death trap Otto Duker, by courtesy a cabin sloop yacht, capsized in a moderate breeze near Baltimore, with a large party of ladies and children on board. Fortunately the U. S. sloop of war Jamestown was near at hand and boats were at once sent to the rescue. Some of the ladies were in the cabin and it was necessary to dive for them. All were taken on board the Jamestown and the boat was righted and bailed out. The Duker is about 42ft. over all, 35ft. l.w.l., 14ft. 6in. beam and only 3ft. depth, with a large rig and paving stone for ballast. As yet there are no yachts about Baltimore, but with the Chesapeake so near yachting should flourish there. Such occurrences as this, however, can but bring discredit on the sport and hinder its development. The usual crop of July capsizes is fully up to the average; two gentlemen and a lady drowned on July 5 near St. Paul, Minn., from a sailboat; two ladies drowned from a similar craft on July 4 in Lake Massabesic, N. H., with many capsizes about New York, Boston and other places, some terminating fatally but not reported fully.

AMERICAN Y. C.—The fourth regatta of the American Y. C. will be held on July 21, over the new 80 knot course, from a buoy off the club house, Milton Point, Rye, N. Y., east half north, passing Stratford Shoal Light about half a mile to the southward, and return. Prizes will be the Commodore's cup, the Atalanta challenge cup, three cups under the Emery and one under the Haswell system of allowance. The entries thus far are as follows: Tillie, Commodore W. H. Starbuck; Orient, J. A. Bostwick; Susquehanna, Joseph Stickney; Stranger, George L. Scott; Narwhal, C. H. Osgood; Restless, William M. Singerly; Viola, J. P. Kennedy, and Nereid, F. L. Osgood.

A CHALLENGE FROM NEW YORK TO BOSTON.—The following challenge has been sent to the Boston *Herald*: I hereby offer to match my boat Lady Glenmore against any boat in Boston harbor from 18 to 22ft. sailing length, with time allowance according to the Herreshoff tables, the Glenmore being 20ft. 6in. long. Boats to sail as follows: Five miles or more to windward and back, cat rig, shifting ballast, no limit to crew. Will match her for from $500 upward to $1000; $100 to be allowed for expenses, to sail in New York or Boston harbor. Challenge open until Aug. 10, 1888.—HUGH LITTLEJOHN (Canarsie, L. I., N. Y., July 14, 1888).

NEW YORK Y. C. CRUISE.—Arrangements have been made for a regatta off Martha's Vineyard, for prizes given by the Martha's Vineyard Club, amounting to $1500. The date fixed is Aug. 13, the course being from the Seaview House to a stakeboat off Capogue, thence, passing Oak Bluffs and Vineyard Highlands, to a turning boat near Nobska, and thence returning and finishing near the Seaview House. Arrangements have also been made to supply ice and stores to the yachts at reasonable prices. Mr. Alexander Taylor, Jr. has resigned from the regatta committee.

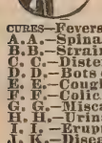
A BRITISH YACHT IN AMERICAN WATERS.—Dr. Healy of New Haven, who lately purchased a small steam yacht, the Nautilus, formerly owned by the Marquis of Lorne, in Canada, is in trouble over the refusal of the inspectors to inspect his yacht on the ground that she was an English vessel. The owner has paid $400 duty on his yacht, besides harbor and light dues, but has been obliged to lay her up, as he can get no inspection certificate.

ALGA AND VIXEN.—A match is reported between the new Burges cutter Alga, built for Mr. Charles Longfellow, and the sloop Vixen, formerly owned in New York by Mr. Lawrence; to be sailed this month at Boston. Mr. Longfellow is still abroad with Fortuna, and will not return before Sept. 1, but Mr. Burgess will race his boat. The course will be 20 miles to windward and return. It is also possible that Fanita may enter, all being nearly of the same length, 45 ft. l.w.l.

NEW SHARPIES.—Mr. Clapham is now at work on a large sharpie for a New Jersey gentleman who will take her south as soon as she is completed, in October. She will be 57ft. beam, 18 to 20in. draft, with 6ft. headroom under deckbeams. Below there will be two staterooms and four berths in the cabin. The model is the Nonpareil sharpie, but with clipper stem and long counter; to be yawl rigged. Mr. Clapham has an order for a similar craft 45ft. long.

SOUTHERN Y. C. CRUISE.—The following yachts started on the annual cruise of the Southern Y. C. on July 7, at 7 P. M.: Stella, Susie B., Hope, St. John, Frolic, Zoe, Carrie V., A. Courrin. The wind was very light and the anchorage at Cat Island was not reached until 12:48 P. M., on July 8, Zoe arriving first and winning the Commodore's prize. The fleet sailed at noon for Louisiana Keys.

WEST LYNN Y. C.—The championship regatta was sailed on July 14, Blanche and Isabel being the winners.



Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. J. C., Philadelphia.—We will serve you in the matter as requested.

C. A. K., Baton Range, La.—The sneakbox is not suitable for such work as you describe in rough, open waters. A boat with more underwater body and less projecting top would be better. Either the flat-bottomed sharpie or cruiser described in FOREST AND STREAM of Nov. 3 and 10, 1887, would be faster, abler and more comfortable than the ordinary sneakbox of the same over-all length, and would draw no more water.

PRICE, $1.00.
FOR SALE AT THIS OFFICE.

Among the Many Novelties

Introduced by us last spring were the

Dead Finish, Waterproof, Braided Silk Fly Lines,

FOR SALMON, TROUT AND BLACK BASS.

These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff*, but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.

Also a new style **LANDING NET**, made of *waterproof braided linen line*, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

IN THE STUD

To a limited number of approved bitches,

THAT GRAND MASTIFF DOG

Sears' Monarch

(A K.R. 6637).

A Prize Winner Every Time Shown.

Fee $50.00.

An excellent litter of puppies by Monarch now ready for delivery. If taken at once $25 each.

WYOMING KENNELS,
Melrose, Mass.

AT STUD. FEE $50.

The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS,
Niles, Mich.

Morningside Kennel.

BRANDON

Royal Rock (E. 10,163) ex Lewis Nellie (A. 4555). Remarkably strong, compactly built lemon belton, great fielder, rapid, courageous, enthusiastic worker. Winner 3d, Members' Stake, E. F. T.
